[illegible] The marital relations also offer little that is new. Polygyny exists only to a limited extent; most of the people are too poor to acquire and support more than one wife; only a few have two wives, and if a man has three or more he is a rarity. Betrothal to mature children seem to be more frequent here than among the Ibeno, but no more binding and without legal consequences. As a rule after circumcision the youth is betrothed to a girl eight to ten years old, after his father has prepared for him to live parents. As among the Ibeno, the [illegible] betrothed parents live apart and only see one another. The bridegroom lives with a girl in the one camp, and in the other, the bride with another youth. If the bride becomes pregnant before the wedding, dissolution of the betrothal does not always take place, as among the Ibeno, but rather the one who made her pregnant must reimburse the bridegroom by the payment of a head of cattle.

Here, just as among the Ibeno, the young men of an age class together decide upon their entering the wedding of the married, and their fellow companions receive the invitation by a boat consisting in the [illegible] of [illegible], to which friends and neighbors participate. They are served palm and honey beer, the latter of which, however, the marriage candidates may not yet drink. They like to eat the meat for the day after a successful elephant hunt, so that the guests can feast heartily on meat.

Before marriage can be entered into, the bride price is to be paid. The bridegroom usually gives the father of the bride, even before her circumcision, five pots of honey and five bundles, and, soon after her circumcision, half of a slain female elephant with the rest that belongs to its fellowmen, two head of cattle, which

[illegible]

[illegible]

[illegible]

[illegible]

[illegible] clothing and adornment. — Cloth materials. — The ordinary articles of clothing and adornment, compared with those of the Ibibio. — Head and body hair. — Nails. — Painting. — Tattooing.

[illegible] cloth materials, such as are the needs of the coarser people in the Ibibio country, have been adapted only to an extremely slight extent among the Ibo. The principal reason for this is that they only rarely come into [illegible] contact with the coarse cotton, quite possess from the Ibibio. [illegible] they are forced to deliver to them their yield in elephant tusks, hippopotamus teeth, and loads of Malagasy bryonia for a small [illegible] compensation. There is no question of a legal barter under the latter [illegible] they agree [illegible] with them, as the coastal people so aptly designate the [illegible] type of trade.

The Ibo have [illegible] the Ibi shown solely in their original native clothing [illegible] carried into fashion, mapanding, mapanding, which, in its last necessity of wear, is identical with that of the Ibibi, but [illegible] passes out often [illegible] appear. This poverty is particularly noticeable in the boys and [illegible] girls, called [illegible] and [illegible] by the Ibibi, which the [illegible] [illegible] wear the mbo, and which here are also worn by older men [illegible] because in leaving the [illegible] of girls is not [illegible] because [illegible] of its length. The following observe do not generally wear the [illegible] mbo, [illegible] mbo also as [illegible] made of cast bales, which they buy from the [illegible] older men often have it made out of the bale of the female [illegible] to [illegible] envelope. The [illegible] of the women is here called [illegible] [illegible], or in the upper part of it [illegible] of the Ibibi by [illegible], while the lower one is worn after the Ibibi fashion [illegible] [illegible] [illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

When a man is ill and dies, it is said that he left [illegible] goats, [illegible] sheep, [illegible] cattle, and [illegible] donkeys. The dwellings are made to the left side.

There is also a regular belief in a future life. A man's spirit is said to go underground to the home of [illegible], a land of the spirits, which is under the earth, and is a fine place.

Origin.

There are [illegible] [illegible] of gods, [illegible] who are [illegible], and who govern people from getting food by means of their gifts. There are also [illegible] [illegible] of animals, [illegible]. There is an institution of the medicine [illegible] system of "white water" or milk by a multitude.

Architecture and Houses.

(a) *Architecture.*—The native [illegible], the [illegible] of the [illegible] has to work, almost only the [illegible] of a species of [illegible], called "[illegible]" ([illegible]), and [illegible]. This [illegible] is utilized as the [illegible] post, and is [illegible] to [illegible]. The [illegible], a [illegible] called "[illegible]" is burned; this is used for all their [illegible].

(b) *Houses.*—Children [illegible] a house to [illegible] of the [illegible]. [illegible], which is similar to that [illegible] by [illegible]. [illegible] of [illegible] of [illegible] of [illegible] [illegible] [illegible]

[illegible]

[illegible]

[illegible]

The parts played by the grandfather or grandmother, and by the father's brother and the wife are directed largely towards intervention in behaviour and morality, though a young married pair may often help in teaching boys the elements of woodcraft and hunting. And although the father and mother teach their children to distinguish between right and wrong, and love to behave in their relations, the grandparents in particular have a great deal to do with this aspect of education.

The part played by ancestors or strangers is in general limited, for it depends upon the type of settlement and the number of them with whom the child is able to have contact. Where the settlement is a purely family affair there will be no ancestors immediately at hand, and it is only in the settlements that their influence can be at all effective. In Kikuyu there was in 1939 a settlement consisting of two elementary families and two unmarried elementary; and at Tokaanu a widow with two small children might have to live which elsewhere for help in bringing up her children, as well as to have other children and a young girl. In such circumstances children will have more to do with elements than with relatives. This is very different from the Kikuyu, who do not live in the settlements and among whom elements are much less important than relatives in their matters.

5. The age-set system

In all forms of training, a proper standard of behaviour is insisted upon, because without the attention to this, no cohesion of clan or family is possible, and hence there can be no basic solidarity. Theoretical ties of kinship cannot bind the behaviour of members towards each other to any carefully prescribed and strictly regulated, and as behaviour is the keystone of social life. It must be considered not only from the point of view of a man's dealings with his relatives, but with regard to the different generations with which he comes in contact, and the effect of the age-set system on these relationships must therefore be taken into account. Age-sets and kinship rules may actually be in conflict, and so it is necessary before going any further into the subject of behaviour to see how the age-set system works among the Kikuyu.

Age-sets, grade, plus ceremonial, are an African institution adopted by the Kikuyu and Masai, and borrowed from the Kikuyu by the Kikuyu. The principle of the system is that the males of the tribe or locality are divided into a number of groups or sets of individuals whose ages all fall within certain limits, and the sets are set progressive like the age-grades or stages through which the individual passes from birth to death. Thus a Kikuyu man passes through the successive stages of boy, circumcised man, and old man; and a woman through those of girl and woman. But age-sets are more than this: for a man is born into a set, and in that set he remains all his life irrespective of his age in years; women, however, do not have age-sets, but on marriage refer to themselves as belonging to their husbands' age-sets.

[illegible]

[illegible]

[illegible]

6:Huntingford E-5 (1938-1939) 1953 FL6 Dorobo FL6

435 1 bundle of tobacco (about 1 lb.) for 1 bagial of honey.
1 large earthenware pot for 1 large prepared antelope skin.
1 small earthenware pot for 1 small prepared antelope skin.
2 baskets of cereal seed for 1 basket (*kevpat*).
1/- worth of trade beads for 1 gourd full of honey.

[404] The bag used as a measure for honey is the smaller size of *kevpat*, measuring 7 or 8 ins. by 6 ½ or 7 ins. The gourd is about 10 ins. long. The large pot stands about 20 ins. high, the small, about 10 ins., and the large antelope skin is usually a bushbuck, the small one a duiker.

437 There are no special market places or places of exchange. The Dorobo
434 go to the nearest smith or potter and make a bargain, returning later with
[443] the exchange equivalent to collect the goods. There is no language difficulty
[197] in these transactions, for the Dorobo language is no more than an easily understood dialect of Nandi. Getting iron or pottery means going into the Reserve, but to get seeds, tobacco or beads they need only go to the nearest friendly Nandi who has what they want and is willing to make the exchange. Sometimes plant material of medicinal value (i. e. what they think is medicinal value) is substituted for some of the regular exchange articles, but the above list represents the ordinary practice. When Dorobo have money with which to buy what they want instead of exchanging goods, they have the choice of going to the shops at either Songhor in the south, or else at Aruwa in the Nandi Reserve, where there is a collection of Indian shops. The men do not
[562] like their womenfolk to go to these places unescorted, but occasionally some of the bolder ones try to slip away unobserved to Aruwa; they seldom go to Songhor, as it is in the European area.

476 No human group can exist without some form of co-operation, and even when a man lives alone, as he may have to among the Dorobo, he is not because of that cut off from or unable to share in the activities of his horde. Within the family people are interdependent, and in the settlement they help each other. The main activities in which people normally co-operate are four in number: 1. House-building; 2. Hunting; 3. Digging earth; 4. Cultivation.
[462] (1) Building huts is women's work, which a man will do if he has no wife, and
[224] for which he will get help from a relative or clansfellow. (2) When people
[317] hunted game they usually went out in parties, and the kill was shared among them. (3) Digging earth means a journey of anything up to 10 miles round the edge of the forest and into country where nowadays there are strangers, so people find it both safer and more convenient to go in parties, for though they are in no danger of being attacked, their unconquerable shyness demands numbers to give confidence. (4) In a family or clan group, though each individual has his own shamba, he will expect both to help and to be helped by the other members.
[241]

[276] Together with the spirit of co-operation is the rule of joint consumption. We have already seen how meat is shared according to definite rules; and among the Dorobo certain other things which are hard to come by must also be shared. The chief of these is tobacco, of which when a man has acquired even a small supply, he is supposed to give some to his father, to his wife's

/246 cont./

000 /footnote 1 continued/ be a substantial therapeutic advance to be recorded here." From "Uber Acocanthera Schimperi als Mittel bei Herzkrankheiten/On Acocanthera Schimperi as a Remedy for Heart Ailments." By L. Lewin and E. Stallmann. From a report delivered to the Berliner medizinischen Gesellschaft /Berlin Medical Society/. Berlin, 1906).

278 824 Although the tree is not rare in the steppe around Kilimandscharo, its poisonous nature nevertheless generally seems to be known only to the Wandorobo, since other tribes do not manufacture the poison themselves. Thus the former sell it, for example, to the Wadschagga, the [479] Wakahe, the Wakuafi of Aruscha tschini and of Meruberg /Mt. Meru/, the Wapare, etc. To brew the poison two Wandorobo always go a few thousand meters away from the camp into the bush. After they have collected branches and roots of Acocanthera abyssinica, they split them into thumb-thick sticks and prepare for the cooking in separate places. The wood is boiled for several hours in an earthen pot that is half filled with river water. Then it is removed, and the liquid obtained is thickened by further cooking to a viscous porridge-like consistency. The finished poison is black and looks like pitch. 278 During its preparation no woman may come either in the vicinity of • 562 the poison pot or in that of the man doing the cooking. The woman 834 who brings food and firewood therefore places these objects within [784] calling distance. They believe that the effect of the poison is weakened or entirely destroyed through the contact or even merely the presence of a woman, whose person they, in their naïve beliefs, are unable to separate from the idea of sexual intercourse -- since the latter, according to their view, is an element acting against the poison. The same would be the case if the wife had intercourse with another man during the time the husband is busy preparing the poison, or if the husband cooked the poison while his wife was pregnant. The [415] finished poison is stored in a wooden pot (madjé) or in a leather bag /347/ (amóta), and, to be sure, like the quivers with the poisoned arrows, not in the hut, but hung on a tree not far from the camp.

/247 cont./

278 562 834 [888] arrows, not in the hut, but hung on a tree not far from the camp. Only in rainy weather do they bring the things into the kraal and keep them there in the hut of an old woman who herself, in their view, can no longer come into consideration in the above respect. They even make themselves responsible, relative to the intensity of the sexual intercourse, for the slow dying of the animal struck by the poisoned arrow. The poison is smeared on the arrow point with a wooden spatula, and, in order to protect the dried substance from crumbling or from dissolving in damp weather (since it is very hygroscopic), it is wrapped with a strip of thin antelope skin that is dehaired and made soft by being rubbed with fat. The poison acts very quickly, and, to be sure, by suddenly stopping the heart activity. In the case of a genet shot in the abdomen, breathing difficulty set in after five minutes, along with rapid movements of the nostrils and violent, crampllke muscle twitchings of the body and limbs. With brief interruptions of a quarter to a third of a minute the symptoms were repeated and increased in intensity. The pupils dilated to a circle. Nine minutes and 10 seconds after the shot the pupils, up to then blue-black, suddenly became sea-green, and, with violent twitching, death came. With quite fresh poison death is supposed to come in even a shorter time. In the steppe the poison is tested by shooting an antelope with an arrow newly poisoned. If on the trail of the fleeing animal one finds fresh urine and excrement, the poison is regarded as acting too weakly. Good poison put in the foot of a live turtle must lead to its death before it has crawled five or six steps away. Neither the Aasá nor the Wandorobo are acquainted with a physiological antidote. For smaller, simple, and penetrating flesh wounds immediate washing with fresh urine is supposed to help. Aged Wandorobo often showed me scars on their own bodies, especially on arms and legs, which are supposed to have been caused by shots with poisoned arrows two to four centimeters deep. Both the appearance of the scars and the corresponding statements of people, which were separated in time and place from the former, corroborate this information.

278 411 224 [230] [281]

278 752

/255 cont./

XII.

Character of the Asá, compared with that of the Masai.

In character the Asá in general greatly resemble the Masai, except that the tribal arrogance seems to be considerably lessened as a result of their poverty, though it still also always appears in their contempt of the ol mgg[1]a whom they call mondo. It is not possible to give a general opinion about their attitude toward Europeans, since they have actually come into contact with them personally only in exceptional cases and otherwise are acquainted with them only from the accounts of the Masai. On the whole, the Asá living independently stand out favorably from those who have joined the Masai, in that the former seem to be more modest and less crafty, whereas the latter are a match for the Masai in audaciousness. The relationship of the two tribes to each other rests on the complete subjugation of the Wandorobo, who see in the Masai their masters and, in major legal disputes, also their judges.

Exceptions to this are the Masai blacksmiths, who stand as low in the estimation of the Wandorobo as in that of the Masai. The ol lononi is also completely without rights before the ol donyoni. The Wandorobo appear peaceable toward passing caravans and sedentary Negroes. When they once shot at the former with poisoned arrows, without having been attacked themselves, they seem /256/ to have acted in presumed self-defense; in any case one cannot accuse them of a lust either for war or for murder. With these reservations, what has been said above about the Masai holds concerning their character traits, their solidarity against the members of all foreign tribes, the position of their women, etc. Something new to be mentioned here is the custom that I found several times according to which a woman, just because of her inferior position, may not walk through a group of men.

In greeting, the Wandorobo use the same words and formulas as the Masai and accompany them with the same gestures.

The farewell of the one going runs alja matida. The answer to it, adi, is said to mean "go!" To the objection that this is not very courteous, an aged Asá replied: "We are poor people, when the visitor has gone we no longer need give him any of our food!"

1. [A Masai word meaning "the unbelievers"--Analyst]

/263 cont./

695 besides the ordeals, the bier test also prevails as a means of convicting the one accused. In contrast to the Masai, here the innocent one accused receives no compensation.

562 694 695 Women may appear as witnesses before the court, but they are not entitled to make a complaint; rather, their husbands make the complaint for them.

672 934 Here, too, the mentally ill occupy an exceptional position in legal matters, /264/ in that they remain unpunished for offenses that are atoned for by fines. They are not chained, but are allowed to go about freely, and, as long as they are harmless, they are given shelter and food. This is denied to the mentally ill who are dangerous, because of which they quickly perish.

XVI.

000 The story of the discovery of arrow poison. -- Other stories and fables.

538 The stories of the Wandorobo describe for the most part their own hunting experiences, especially, of course, those of a peculiar nature and with large, dangerous game. It is probably to be taken for granted that in this "hunter's yarns" also run through them.

The Discovery of Arrow Poison

539 224 278 411 A poor widow, whom no one wanted to take in and feed, roamed steppe and bush daily, in order to appease her hunger miserably with roots, berries, and tree bark. One day she chewed on a small piece of bark that was distinguished by a very bad taste. Soon afterwards vomiting set in so violently that she was sick for a few days. She thought: "I should probably have died if I had eaten any more of it; since I can not hunt game, perhaps I can kill it with this." When she was well again, she went with her pot to the place in the steppe where in a rocky basin there was water to which the wild animals came to drink. Here, for several days in succession, she boiled the wood of the poison bush and kept pouring the liquid into the little pool. Finally one morning she found ten dead buffalo lying in its

9:Hobley G-5 (ca. 1900) 1903 FL6 Dorobo FL6

000 Africa, East. Hobley.

Notes concerning the Elderobo of Mau, British East Africa. 17
By C. W. Hobley, Assoc.M.I.C.E., Local Correspondent of the Anthropological Institute.

10 To the east of Nandi country, in the Mau Forest north-east of Mount Tinderet, live
[294] a tribe of so-called Elderobo people, who, like other branches of their race, exist solely
[233] by hunting, and possess neither flocks nor herds, neither do they cultivate the soil.
[241]
648 By the Nandi they are called the Ogginik, and they call themselves the Omotik.
[191] They have intimate relations with the Eastern Nandi, and generally speak the Nandi
[663] language: in fact, members of the young Nandi men, for whom the free hunting life has
a charm, leave their homes and go and settle among these people for some years, and
probably marry Ogginik women. It is thus difficult to discover what is the true
142 aboriginal type of the race. The representatives with whom I have come in contact
had, however, redder complexions than the majority of the Nandi, and had very peculiar
eyes, which reminded one somewhat of the Mongolian type. In height they averaged
5 feet 8 inches to 5 feet 10 inches.

583 Their marriage customs are very simple: the suitor merely presents the father of
the girl with some beer made from the sap of the "mkindo," or wild date palm, and a
few monkey-skin cloaks, or "kwenon," and takes away his bride.

10: Hobley G-5 (ca. 1900) 1905 FLA Dorobo FL6

depths of the forests on that mountain. The incident was referred to in a description of the journey in the *Proceedings of the Royal Geographical Society*, August 1892 and August 1894. During thirteen long years nothing was heard of these people, nor does any other traveller seem to have referred to them; it was therefore with some interest that a representative of these people was discovered in a Dorobo colony found on the north-east side of the Aberdare range in the vicinity of Fis swamp, and it was then elucidated that the bearded people are the Digiri clan of the Oggiek tribe, and that they acknowledge as their ruler a chieftainess named Ongiboro who lives near Nyuri Sto. She is married to one Silkirui, who is also said to be one of the bearded people. Needless to remark, the possession of beards and their acknowledgment of a female ruler are features of great rarity in Central Africa. Although the information is still very scanty, it has been considered advisable to communicate it in the hope that it may prove an incentive to further research. I append short comparative vocabularies of these dialects of the Oggiek language, and at the same time give in separate columns the Nandi and Masai equivalents for purpose of comparison. It will at once be seen that some words are the same in Oggiek language as Nandi, and other words are the same as Masai. At first sight it might appear that the Oggiek had borrowed these words from Nandi and Masai, but it is rather remarkable to find the Digiri clan of Oggiek, whose great haunt is the Kenia forest, using many Nandi words when practically the only languages spoken in that region are Masai and Kikuyu.

They all speak Masai because there are a number of poor Masai living among them—people who lost all their cattle in the plague of 1891 and after that took to a hunting life. It therefore seems to me highly probable that the so-called Nandi words used by the Digiri people may be true Oggiek words gradually borrowed by the Nandi and now incorporated with the Nandi language; in the same way a few Oggiek words may have become incorporated with Masai. The subject is one of great interest, and it is to be regretted that our opportunities of studying these people are so infrequent.

The following is a list of the Oggiek clans:—

Clan.	Chief.	Clan.	Chief.
Oggiek of Kamilio or Tindwit	Elposegtian.	Oggiek on the Mau range, west of Nakuru	Kiptuwosk.
Oggiek, east of Lumbwa country	Pikshem.	Do. do.	Kamiek.
Oggiek in Eldama Ravine	Kshimengirin.	Oggiek, south-west Kenia and also Fis swamp	Digiri.
Oggiek, north of Kenia	Shiiwek.	Oggiek of Kisima, north of Enasa Nyiro	Lalarick.
Oggiek of Loldiani	Kaivatet.	Oggiek, south of Ndabibi plain, south-west of Naivasha	Saleta.
Oggiek on the Mau range, west of Nakuru	Chitcharwasek.		

The head Laibon of the Oggiek is said to be one Lamondo, who lives with the Masai at Ngong loi Mariko, a hill in the region of the Lower Kedong.

The Digiri have a chieftainess named Ongiboro who is said to live near Nyuri or Kakuyu in North Kikuyu. I would mention that I am indebted to Mr. A. C. Hollis for the Masai equivalents in the vocabulary.

K
425 used the word uthoni to express the principle of the bond, and still
196 so use it, but with a narrowed application, at least among the young,
571 who generally apply it to the marriage bond between two families and to nothing else. Thoni is a very widespread stem in Bantu languages and has the essential meaning "shyness," usually rendered "shame" (1). Thoni itself means shame or shyness in Kikuyu. In

1. Cf. Johnston, op. cit.: "this, which is one of the most widespread and universal of the Bantu word-roots, seems to be connected with a root meaning "eye," "face," coupled with the -ni locative—'in the eyes', "in the face'

the form uthon it implies the attitude to be adopted to one's relatives-in-law, that is, the people of other groups to whom one is bound by a spiritual bond. This attitude is an aspect of the common custom of "avoidance," which implies a regulation of behavior to suit the circumstances, rather than evasion. The relationship involves an intinate acquaintance, but requires reciprocal respect as well—a proper balance must be struck between the two. Formerly exchanges in the continuity-enabling class always entailed uthoni; mutuality of function was imperative. Co-operation was the essence of uthoni, a co-operation based on an actual [p. 137] need of continuity in which both parties played their part. The "seller" of a girl expected her to become a wife and mother, not just a
K cultivator or a plaything; it was her prospective children who were
425 really "sold" and their begetting meant co-operation. Even a cow
571 could not be sold outright; when she had borne a heifer sired in the
D buyer's herd and borne it "in the buyer's hand" she had to be re-
425 turned. (1) When a Dorobo "bought" a piece of land he could not
571

1. This does not apply to all the tribes. There are two forms of uthoni cattle-exchange in the Unit. But in neither could a cow be sold outright.

"buy" it just for speculation or accumulation of a form of wealth

D
425
571
K
571
425

he fancied; on the contrary he had to use it, put up honey-barrels, set his traps and dig his game-pits, occupy it beneficially and send a share of all its produce to the group-in-law who "sold" it to him.

In theory an uthoni never ceases unless for any reason it is found to be unworkable. (2) If there remains some continuity-enabling

> 2. As when a marriage is dissolved through incompatibility or barrenness, for instance.

object in the "buyer's" hands—the children of a marriage or a heifer calf or land—the uthoni still remains intact, although it weakens with the memory of the link which first conjoined the parties, and finally, of course, fades out entirely with that memory. (3) As an

> 3. The function of memory (individual or group or tribal—"traditional") is of importance in the formulation of beliefs and customs in primitive illiterate peoples. There is a relationship between the remembrance of a thing and its existence. We have already noticed this relationship in its effect on spiritual ideas. It has a similar effect on the idea of reincarnation—the rebirth of a deceased grandfather as a child, for instance, is much more real when its parents see a likeness; a general theory is less impressive. In this paragraph we see the effect of the relationship on the duration of continuity-enabling bonds. A similar effect can be perceived in the rules pertaining to exogamy in many tribes; if the pooled memory of the groups concerned reveals no common blood the marriage can proceed.

active principle it tends to vanish when the formal payments have been made in full and the object in the continuity-enabling class first "purchased" is no longer there. When the uthoni cow has been returned the uthoni might be deemed to cease, because the link between the parties is too slight a one to last; when a woman

/261 cont./

000 is present at all. The heir of the warrantor is also liable. The giver
D is offended by a refusal to accept a gift. A counter-gift of approxi-
431 mately the same value follows gift-giving. The giver spits upon the
8 gift when he hands it over. The Wandorobo never conclude into
• 572 blood friendships among themselves, but only -- and, to be sure,
very rarely -- with members of other tribes. The ceremony observed
D for this resembles the one described above among the Masai. If a
[177] stranger has bought ivory from him and paid only part of the price,
[426] the ol doroboni often likes to conclude blood friendship with him
because he thinks that then the debtor must die if he does not repay
the debt as quickly as possible (1).

D
[177]

1. This view is in general rare; it was not originally peculiar to the Asá, but adopted.

D
682
628
[171]
[672]

As among the Masai, the legal view makes no distinction between murder and manslaughter, but indeed between the latter and negligent homicide. A murderer caught in the very act is subject to blood revenge, for the execution of which every man belonging to the family of the one murdered and in some districts also any of his friends and campmates are justified. If the avengers do not succeed in capturing the murderer on the day of the murder, /262/ the latter is safe from blood revenge, for people see in the unsuccessful search for him a command of God to let him live. To atone for his deed, however, he must pay the principal heir of the deceased one large and two small ivory tusks. Negligent homicide is punished by the payment of a medium-sized ivory tusk. If the perpetrator and the one who was killed belong to the same lineage, the punishment is considerably
D less than if they are from different lineages of the same tribe. On
[648] the other hand, if the two belong to different tribes, the ones entitled to blood revenge often hand over the execution of it to the Masai, who kill the perpetrator, even if they do not capture him until after several months. Up to the completed payment the perpetrator is
D regarded as puni-andet, corresponding to the ol oikobani of the Masai.
M If an Asá kills a Masai blacksmith, the deed remains unpunished
682 because the blacksmiths are too weak for revenge and the Masai would
648

patronymic from their father's porridge name. Younger sons generally take their patronymic from the father's nickname, or else from some circumstance in their own lives.

Circumcision

Boys are circumcised at the same intervals as the Nandi, and the Dorobo keep watch for the opening of the Nandi circumcision. Occasionally boys are circumcised in Nandi with other Nandi boys, but more often in the forest, as in the circumcision of 1926–30. Sometimes a Dorobo acts as operator for the Nandi. The whole procedure of circumcision (*tiem*) is identical with that of the Nandi. Girls undergo the operation of clitoridectomy whenever there are enough ready to be done, and not at any stated intervals.

Age-sets

The Dorobo have borrowed the whole age-set system from the Nandi, and it works exactly as among the Nandi, with the same set-names and 15-year intervals synchronized with those of the Nandi. The reader may therefore be referred to the account of the Nandi system, p. 31. A slight difference in the sub-divisions called *mat* may be noted: the Dorobo have only three, called *Cegimich*, the senior; *Taparik*[1] or *Kipilkonyek*, the middle; and *Rorokenik* or *Kipimimik*, the junior. A more significant difference is that the sets have no military or political force, for the Dorobo are not fighters, and the practical effect of the system is to introduce further behaviour patterns, as well as to modify the traditional rules of hospitality; for while no Dorobo would refuse to shelter one of his own horde, the degree of hospitality varies according to the age-set situation.

Political Structure

Land Divisions

The Dorobo live mainly in clan settlements divided between a number of districts or parishes (*koroneik*, sing. *koret*). Till about 1930 these settlements were in small clearings inside the forest; after 1937 they were spread round the outer edge of the forest.

The Clan

The clan, *oret*, is an exogamous patrilineal group with a name and a totem, *tiond ap oret*, the animal of the clan. The existence of eight clans is attested by genealogies and the census; three others are reputed to exist or to have existed, though none occurred in my records; they were, however, mentioned to me in 1927 as well as in 1938–9. Each of these clans has one totem, except Moi which has three, one of which it shares with another clan; it is not the totem which is important, but the group itself, the clan being a social group, not a group of people mystically related through their totem. The emphasis is therefore on the clan name and not on the animal, though marriage, nevertheless, is forbidden within the clan. An exception to this rule is found in the case of Moi, where intermarriage is allowed between people of different totems, an anomalous feature due possibly to the influence of the Nandi, among whom Moi marriages are common between people of different totems. (See p. 27.) There seem to be no restrictions either on marriage between clans (as among the Nandi), or on killing or eating the clan animal, which suggests that originally the Dorobo clans were non-totemic, and that their present totemism is a feature borrowed from the Nandi along with the clan names, which except for one of the reputed clans are all Nandi.

[1] The Nandi occasionally use *taparik* for this *mat*; it is a Nandi word meaning "the turves."

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

are *kesendo* to each other and equals, being of the same generation. So too are the sons of the father's brother, also *Kaplalac* and *Kimanyiki*, who are *macokor* to Ego. But Ego will be circumcised at the same time as his brother A and his *macokor* C, when his other brother B and *macokor* D are too young to be circumcised; B and D will therefore belong to junior age-sets, and when Ego, A, and C have been circumcised and are allowed to marry and indulge in other male pursuits, B and D will still have the inferior status of *natik* or boys and be subordinate to their brothers as regards behaviour and social position.

Each generation is therefore liable to be stratified in two layers comprising two age-sets which cut across the relationship system; and where the kinship behaviour patterns conflict with those of the age-set, the latter will prevail. Both sets in Ego's generation, for instance, will behave in the same way to father, father's brother, and father's father; but D and B cannot behave to Ego as C behaves to Ego, because they are merely boys who do not count for much, while Ego and C are men. Similarly, in the first descending generation all will behave in the same way to Ego's generation, but K and G must give to H, E, and F the respect that H, O, and F do not give to each other or to K and G. And the principle is the same with the second descending generation.

First ascending generation	JUNIORS	SENIORS	Generation as a whole
Own generation	JUNIORS	SENIORS	Generation as a whole
First descending generation	JUNIORS	SENIORS	Generation as a whole
Second descending generation	JUNIORS	SENIORS	Generation as a whole

The effect of the age-set on behaviour is to strengthen the traditional code of behaviour by emphasizing the disparity between seniors and juniors.

Age-sets also affect hospitality, for while no Dorobo would normally refuse to shelter one of his own horde, the degree of hospitality and of the intimacy to which he is admitted vary according to whether the visitor is an age-mate or not. If he is of the same age-set as his host (no matter what their respective *mostinuek* may be), he will sleep along with the host and his wife, though he will not be given the host's wife to sleep with as among the Nandi. But if he belongs to a different age-set, the wife will

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

normally go elsewhere for the night, leaving the hut to the men. In the matter of hospitality, relationship by blood, marriage, or clan is a deciding factor in the length of time for which a man may expect to be put up by his host. Thus, no matter what the age-set situation may be, a man who is neither a relative nor a clansman cannot claim more than two nights' hospitality on account of necessity, and will not be given honey-wine; while a relative or clansman may be fed for a week or even longer, and the host will give him honey-wine if he has any.

3. Behaviour

A brief summary of the modes of behaviour towards important relatives was given by a Dorobo in the following words: *Makicupe papa ne kosica a kopire lakwat*; *makicupe kokwey papa*; *makimuuci korkat ak siyo nalek ce somis, amu ya, ngut nalek ap kumisiat*; *kiarrerecinkei lakwat*. ("A man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we all play together, i. e. we are on terms of friendliness and 'clean fun'.") Generally speaking, seniority is a matter of age, except with respect to the father's brother and men of senior age-sets.

It is unlikely that any Dorobo ever sees his father's father's father, and the father's father is seen only by small children. The father's father is regarded much as one's own father. But the father's mother helps in the care of the children, and so becomes an object not only of familiarity but of affection as well to the children. To all of the father's generation a man should show respect and obedience. He must not insult them, nor use unsuitable language in their presence. Corporal punishment may be inflicted on a rude or disobedient child with the hand or with a stick, by father, mother, and father's brother. Verbal correction is also a common method of dealing with naughty children, and though a man would not as a rule say to a naughty child who had made him angry anything as drastic as *Amin celulei* (may you die of dysentery), in case the spirit-world took him at his word, he might go so far as *Iam piat* (eat dirt), an expression which if used by a child to a senior would certainly earn a beating.

Most Dorobo are fond of their parents, and treat them in old age with much kindness and consideration. Wherever I found aged parents living with their sons it was the same; and the more helpless the parent, the greater the trouble taken to make them comfortable. The old father of Pilo, to whom I have already referred, was such a one. Bent double, hardly able to move without help, he spent his time lying outside in the sun when it was warm, and indoors beside the fire when it was cold. He had to be helped in and out, and fed and looked after like a child; but it was all done cheerfully by Coimim and his wife, in whose hut the old man lived, and if they could not attend to him, Pilo and his wife did.

6:Huntingford E-S (1938-1939) 1953 FL6 Dorobo FL6

father (if he lives nearby), to his brothers, and lastly, if there is any over, to his clansmen in the settlement; so that a man who gets a pound or so of Nandi tobacco does not keep much of it for himself.

Drink, mainly in the form of honey-wine, is prepared not so much for private consumption as for social gatherings. It is used in various magico-religious performances, and as part of the bride-payment. When a man is visited by a friend or two, he gives them honey-wine; when there is a clan council, honey-wine is drunk; and when men and women meet for a wedding or a naming they drink honey-wine. It is thus an indispensable part of Dorobo social life. When a man wants to relax, he lies down and goes to sleep; but his amusement is composed of social gatherings. Visiting, ceremonials, and clan councils in fact provide him with his entertainment, and conversation and gossip seem to take the place of games and dances. I saw no sign whatever of the game called *kerwiak* by the Nandi, which is played with seeds or pebbles in holes in the ground or in a board, and never heard it mentioned. I neither saw nor heard of a dance, and I never once heard a Dorobo of either sex singing.

The principal standard of wealth is really a man's skill as trapper, hunter, and bee-keeper. But the products of this skill are perishable, and formerly the only way in which tangible wealth could be accumulated was in the form of weapons, honey-barrels, and dogs. Now that the old hunting conditions have gone, it is becoming possible for a man to accumulate wealth to a very limited extent in cattle or goats, which he can get by purchase, gift-exchange, or through bride-payment. The use of money has just become familiar, and a certain number of Dorobo earn wages; but except for one or two who have joined the Police, wages are not high, and the average in 1939 was 7 to 10 shillings a month. So far the Dorobo have had little inducement to work for wages, except that by signing on as squatters for a small wage they can acquire a temporary right to live on what was their own land. Beyond the fact that money enables them to buy a little extra food, our idea of wealth means little or nothing to them, and they have not yet advanced far enough into the transitional stage for it to be anything more than a small supplement to their traditional way of living. It is all that they can do to maintain themselves, let alone accumulate reserves or surplus wealth.

The transitional stage which the Dorobo had reached by 1939 is that from hunting to agriculture, with at the same time a strong desire to acquire cattle. It is sometimes suggested that hunting peoples like the Dorobo are really agriculturalists or pastoralists who have had to give up their agricultural or pastoral way of life and take to hunting. This may be true of some, such as the 'false Dorobo' in parts of Kenya who are merely outlaws and fugitives from various tribes. But it is quite clearly not true of the real Dorobo [1], like those who form the subject of this paper, who are unmistakably non-pastoral and non-agricultural. Their basic hunting tendency is shown by their character and behaviour, by their hunting techniques and skill, by

[1] Cf. my remarks in JRAI for 1939, p. 378.

[P. 196, A]

Economic life to-day is centred more and more on the *shamet* than on hunting. 241 423

The family group is interdependent: the men trap, make tools, protect the family; the women look after house and children, and prepare food; the children, while dependent on their parents for existence, help them with the *shamet* and livestock, and in various other small ways. 592

There is little specialization, since all men can make traps and honey-barrels, and all women can make baskets. Joint-production occurs in (1) house-building, when the whole family takes part; (2) cultivation; (3) in hunting and in digging coloured earth. Food produced by the family is shared by husband, wife, and children, and also by the husband's and the wife's parents. Meat caught by trapping is divided between the trapper's family and the other people living in the settlement. Vegetable foods are not shared thus, since they can be got by all. Hospitality is given to visiting relatives, classmen, age-mates (though they do not sleep with their host's wife), and even to stray travellers, once their good faith is established. Beer is drunk at social gatherings of men or women, at clan councils, and on ceremonial occasions. And just as meat is distributed in a particular way (p. 193), so with tobacco: a man who acquires some gives it first to his father, then to his wife's father, and lastly to his brothers and classmen, if it will go so far. [342] [241] [224] [344] 574 273 276 [231]

The typical Dorobo hut, *kuberget*, is extremely simple, being no more than a framework of sticks covered with leaves, and a hide on top. They are now building larger and better huts of Nandi type, sometimes with unplastered walls; and an intermediate form may be seen, with a nearly flat roof. 312 [171]

D. THE MAGICO-RELIGIOUS ASPECT OF ECONOMIC

That the Dorobo had hunting magic is certain: old men say that some had it, while others had none; my friend Arap Misiq, for example, says he was one of those who had none. Since hunting is the one phase of Dorobo life that appears to be gone for ever as a result of government action (in spite of sporadic individual activities), this [224] [78] [45]
[illegible]

/339 cont./

IV.

000 Marital relations. -- Polygyny. -- Betrothal. -- State of being betrothed. -- Conversion of the young men to the state of the married. -- Bride price. -- Forcing the consent of the father of the bride. -- Exchange of wives. -- Obstacles to marriage. -- Entering into marriage. -- Dissolution of the marriage.

595 The marital relations also offer little that is new. Polygyny exists only to a limited extent; most of the people are too poor to acquire and support more than one wife; only a few have two wives, 584 and if a man has three of them it is a rarity. Betrothal in earliest 191 childhood seem to be more frequent here than among the Masai, but no more binding and without legal consequences. As a rule after circumcision the youth is betrothed to a girl eight to ten years old, after his father has proposed for him to her parents. As among the Masai, the /340/ betrothed persons live apart and may not even see each other. The bridegroom lives with a girl in the one camp, and (836) in the other, the bride with another youth. If the bride becomes (948) pregnant before the wedding, dissolution of the betrothal does not (845) always take place, as among the Masai, but rather the one who made her pregnant must reimburse the bridegroom by the payment of a head of cattle.

561 Here, just as among the Masai, the young men of an age class 582 together decide upon their entering the standing of the married, and 974 their fellow companions confirm this intention by a feast corresponding to the ol gonó i ol ké, in which friends and neighbors participate. (273) They are served game and honey beer, the latter of which, however, the marriage candidates may not yet drink. They like to set the (224) feast for the day after a successful elephant hunt, so that the guests can feast heartily on meat.

583 Before marriage can be entered into, the bride price is to be (439) paid. The bridegroom usually gives the father of the bride, even before her circumcision, five pots of honey and five beehives, and, soon after her circumcision, half of a slain female elephant with the rank that belongs to it; furthermore, two head of cattle, which

/251 cont./
224 262 they particularly value the entrails and also do not scorn the meat of fallen or stricken animals; indeed, even the skin of elephant, rhinoceros, and hippopotamus is eaten roasted. As huntable, i.e., here [223] [439] edible, the Wandorobo regard elephant, rhinoceros, hippopotamus, pigs, zebras, all cloven-footed animals from the giraffe to the tiny dwarf antelope, hares, rock rabbits, and, of the birds, the ostrich, which, however, they shoot only on account of its feathers, which the Masai like to buy for the manufacture of the war head-ornaments. They do not hunt monkeys and lower animals, because they do not relish their meat.

224 On the day before the new moon, and in places also on the seventeenth day, the ol onjugi, no one goes hunting because, according to popular belief, one would not kill anything on the former day, [825] [777] whereas on the latter the bow would break. The red-headed Anaplectes melanotis is regarded as unlucky for the hunter. If the hunter sees it along the way he returns to camp immediately and does not leave it again until several hours later, in order to try his luck anew.

561 224 171 [178] Like the warriors of the Masai, the dobonog of the Wandorobo also hold their meat meals in the forest. Whereas among the former, however, these are a result of the food rules, according to which the warrior may not eat meat in the kraal, among the latter it is only a matter of observing an ancient custom for which there is no longer any reason today, since the unmarried man usually eats his meat food in the hut. On the other hand, there is greater justification for retaining the en dorok, where they strengthen themselves by a plentiful [262] [224] eating of meat for a larger hunting expedition for more distant and at the same time dangerous game, such as elephants and buffalo. The [263] many spices and stimulants that we became acquainted with among [276] the Masai are also used by the Wandorobo, but to a far lesser extent. They do not divide up into fellowships for the meals in the bush, but 561 224 only for the hunting expeditions. Each company, as a rule, consists of four men and is called e sirigi, in which one recognizes the present Masai word en sirit. The booty is divided among the participants in equal parts. If an individual hunter or an e sirigi spends the night in [574] a strange camp, the host is given a foreleg and a hind leg of the hunting booty.

/230 cont./

782 796 842 From time to time the people celebrate a supplication feast for
UÑA, which they call kurodjig or kurugg. For a kurugg a kawa, a
feast to ask God for children, the married women station themselves
in a circle around a small fire into which, just as for every other
supplication feast, they strew the residue of the honey beer, consisting
chiefly of wax particles, so that its fragrance will rise up to God. While
an aged, respected man goes around the circle and sprinkles those present
with honey beer, they sing: UÑÑ ngo kawa! After this has gone on for a
quarter of an hour, they start to dance, continuing to sing the same words.
[824] [873] The dance is followed by a meal at which meat and honey beer are con-
sumed. At a kurugg e ngo they ask God for meat. Beside a small fire
782 796 224 they place upright a straight branch with several forks at the top, the
twigs of which are cut off short. The empty stick is supposed to show
God that they do not have any meat. All the campmates station them-
selves around the fire and sing: UÑÑ ngeri' magat (magat = game). The
next morning the hunters set out, and as soon as they bring home meat,
a small piece is placed on each twig of the forks of the branch. Again
all surround the newly kindled fire and now sing: UÑÑ urag kaing ara,
which is to say: God, give us still more food. The men celebrate
another supplication feast before a larger hunting expedition. In the
middle of the camp a small fire is made, around which the men stand
[824] in a circle. Each one has the bow in the left hand, a twig of the olti
tree (Acacia mellifera) in the right one. Then, going around to the left,
they walk around the fire four times, during which they sing: UÑÑ ngeri'
magat. They maintain that they have never yet prayed in this way in
vain, but that after a kurugg e ngo they always returned from hunting
789 with rich booty. The Wandorobo do not have a feast corresponding to
[796] the ol ngur i ol gereti.[3] Rather, without special ceremonies, they cut
a strip out of the hide of an animal just slain and wear it as an amulet
[822] around the right middle finger. As soon as they meet something along
the way that makes them afraid, be it a predatory animal or an enemy,
they blow on the hide strip, which is the equivalent of a prayer for
protection. Other amulets are seen extremely rarely. The author saw
only one, which they called turuno and which consisted of a small
piece of root. It was worn on the neck ring and was supposed to pro-
tect one from predatory animals. If individual persons spend the night

3:Huntingford E-5 (1921-1928)1929 FLA Dorobo FLA

Names.

Before a child is born, the spirit of an ancestor is called upon, and the child receives the name of that ancestor, which he retains throughout his life.[1] At circumcision, a man becomes *Arap* (anom), "Son of (So-and-so)," *e.g.* a boy named Kipoo, whose father's name is Kiminiig, becomes Kipoo arap (Ki)miniig, and is known as Arap (Ki)miniig. Both the masculine and feminine names are mostly Nandi.

Circumcision. (Tum.[a] N.)

The customs connected with circumcision seem to be very similar to those of the Nandi. Boys are circumcised at intervals of about ten years; the ceremony takes place after harvest, about October, when extra food is bought from the Nandi; the actual operation is performed in the early morning. In the case of girls, a circumcision is held when there are sufficient girls in a district of an age to be circumcised; only the clitoris is removed. Circumcision, as among the Nandi, and in ancient Egypt, is a form of initiation into manhood or womanhood, and is preparatory to marriage.

Marriage.

It is usual for Dorôbo to have only one wife, as they are unable to support more. The price of a wife is paid chiefly in honey-wine. Before marriage the suitor gives to the girl's father as much honey-wine "as four women can carry." He also gives the parents honey-wine year by year after marriage, and he must give the father caps (*sembut*, pl. *sembwisiek*) made of the skin of the tiniest monkey (*Cercopithecus albigularis*). Nowadays, if a Dorôbo has any cattle, he sometimes takes a second wife.

Death.

When a Dorôbo dies, his body is taken out into the forest, about 200 to 300 yards from his hut, and left for the hyænas (*kimarudet*) to devour.

Miscellaneous.

When a Dorôbo thanks a person, he spits in the direction of the person, with or without saying "*Kongoi*," N. ("Thanks").

The Dorôbo call each other in the forest by blowing horns of water-buck (*ibondit*, N.).

Salutations:—

(*a*) Of greeting:—To men, "*Sopai*"; answer, "*Chem-le*" (health). To girls and women, "*Tôkwenga*"; answer, "*Ipô*."

(*b*) Of farewell:—"*Saisere*" (good-bye); answer, "*Saisere ok inge*" (good-bye to thee), or, "*Saisere ok okwek*" (good-bye to you).

Except "*Chem-le*" as the answer to "*Sopai*," these are the same as in Nandi.

[1] The Nandi also give children "spirit-names" (*koiset ap oiik*), which, however, are seldom used.

/255 cont./

XII.

Character of the Asá, compared with that of the Masai.

D 181 [086] In character the Asá in general greatly resemble the Masai, except that the tribal arrogance seems to be considerably lessened as a result of their poverty, though it still also always appears in their contempt of the el mgg,[1] whom they call mondo. It is not possible to give a D [077] general opinion about their attitude toward Europeans, since they have actually come into contact with them personally only in exceptional cases and otherwise are acquainted with them only from the accounts of the Masai. On the whole, the Asá living independently stand out favorably from those who have joined the Masai, in that the former seem to be more modest and less crafty, whereas the latter are a match for the Masai in audaciousness. The relationship of the two tribes to M D 648 each other rests on the complete subjugation of the Wandorobo, who see in the Masai their masters and, in major legal disputes, also their judges.

M [326] [564] Exceptions to this are the Masai blacksmiths, who stand as low in the estimation of the Wandorobo as in that of the Masai. The ol kononi is also completely without rights before the ol doroboni. The Wandorobo D [829] appear peaceable toward passing caravans and sedentary Negroes. When they once shot at the former with poisoned arrows, without having been D 648 attacked themselves, they seem /256/ to have acted in presumed self- 181 defense; in any case one cannot accuse them of a lust either for war or for murder. With these reservations, what has been said above about D 181 the Masai holds concerning their character traits, their solidarity 171 against the members of all foreign tribes, the position of their women, [562] etc. Something new to be mentioned here is the custom that I found several times according to which a woman, just because of her inferior position, may not walk through a group of men.

In greeting, the Wandorobo use the same words and formulas as the D • 576 Masai and accompany them with the same gestures.
171

The farewell of the one going runs aija matida. The answer to it, adi, is said to mean "go!" To the objection that this is not very courteous, an aged Asá replied: "We are poor people, when the visitor has gone we no longer need give him any of our food!"

1, [A Masai word meaning "the unbelievers"--Analyst]

2: Maguire G-5 (ca. 1926) 1927-28
FL6 Dorobo FL6

covered with a strip of soft hide—often that of reedbuck or impala—worked to a state of pliability resembling that of chamois leather. The barb is never coated with poison under any circumstance.

A small supply of fresh poison (*ngwane*) is sometimes carried in the heel of the quiver. This poison is a black, sticky mass made by boiling the leaves of a certain tree and is manufactured exclusively by the Wakamba. The Dorobo know nothing about it, hold it in considerable awe, and have never attempted to make poison of their own.[1]

In the quiver is also carried a fire-stick (*Ol-kiriañgeti*) and a fire-block (*sasamda*). The Dorobo are experts at making fire and scorn to use matches. A small flat spoon (*kanuléuandee*) for smearing poison on the arrow-heads is also carried—this spoon is made from the same wood as the bow; and a small knife for smoothing and rounding the arrow-shafts. This knife is called *orueta siléléd*.[2] A wooden tube about twelve to eighteen inches long and a quarter of an inch in diameter, not unlike a peashooter, will always be found in a Dorobo quiver. This tube, called *endulee*, is used for drinking from pools which are shallow or which have a dirty, scummy surface. (It is a point of honour with every Dorobo and an unwritten bush law that a man should not stir up the mud in any water at which he drinks.) The *endulee* is also used to induce, by blowing through it, a blaze or clouds of smoke from lighted grass put into a hive to drive the bees away from the honey.

A Dorobo quiver, as we have seen, contains a large number of objects essential to the bush life that the Dorobo leads. It is scarcely to be wondered at, therefore, that it is next to impossible to purchase a furnished one. A Dorobo once told me (I am sure he meant it) that he would not exchange his quiver and its contents for five oxen. The price habitually paid to the parents of a girl taken in marriage is from two to five arrows, and a demand on the parents' part for a full quiver would be regarded as extortionate.

The Dorobo may be seen sometimes with a small axe which

[1] That is, arrow poison. The Dorobo are reputed to have a powerful poison they mix with snuff. When inhaled, it is stated to have a fatal result. I have been unable to obtain a specimen of this poison and doubt its existence.

[2] Literally, "*Small knife.*"

2; Maguire G-5 (ca. 1926) 1927-28
FL6 Dorobo FL6

have lived in the country of the Kitēto Masai, since they are stated to have been the precursors of the Masai in this part of the world.

I was unable to elicit any folk-tales from the *Aramanik*, who say that they know no stories or legends except those they have learned from the Masai. It is possible that further efforts in this direction might meet with better success. The *Aramanik* are not as friendly or as ready to discuss their own affairs as are the cheerful, happy-go-lucky *Mósiro*.

Many Masai superstitions and superstitious practices are to be found among the Dorobo. There are, however, certain customs and observances of a superstitious nature practised only by the Dorobo. Of the following three examples, the last two given are in this category.

The *Mósiro* will not kill a python. They say it is a hunter of meat, as are they themselves. Furthermore, if it be killed, the ground where it dies and where its blood is split is ever afterwards fatal to cattle grazing there.[1] No explanation is given of this, and it would seem worthy of note that the Dorobo are exceptionally quick and skilful killers of all other snakes.

When following a native path or a road, if a Dorobo comes to the place where the track of a snake crosses the path, he will never step over it without first kicking up the sand or earth in order to break the continuity of the snake's track. This is done in order to avert evil, and is stated to be the only efficacious way of ensuring that the snake in question will not eventually kill the man who has crossed its path.[2]

If a Dorobo has been robbed and if the thief cannot be found, the following procedure is sometimes resorted to. The man who has suffered the loss heats his sword in the fire until it is red and then, plunging it into the earth, he says: "The thief shall die to-morrow." This is regarded as a very bad practice and is seldom indulged in, as the injured party, no matter how much he may have lost, knows that he will become extremely unpopular as a result of his action.

It seems likely that in a few years' time there will be no *Balañga* and no *Kinyalañgat* Dorobo. As I have said elsewhere, it is now almost impossible to find *Balañga* or *Kinya-*

[1] See Hollis: *The Nandi*, p. 80.

[2] *Ibid.*, p. 79.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

the other hand, there should be no *ureriat*, just greeting and a minimum of conversation, as between strangers. The children of his wife's brother and sister are treated as his own. A woman regards her husband's brother and sister and their spouses much as he regards her brother and sister.

When the father's mother does not live with her son, she may perhaps be in the next settlement. She will then visit her grandchildren, and they will go to see her. This interchange of visits teaches children a good deal about the treatment of important people like grandmother. Interchange of visits with the mother's mother also takes place, especially when the man is getting older. Thus, Cesikirikat the mother of Arap Mining used to visit her daughter Cesunguny who was married to a *Nyongi* called Ngueses and had three sons. She would stay a few days with her daughter (during which time Ngueses would live in another hut) and then go home. Presently Cesunguny would bring her children to see Cesikirikat, and while the children were all still young (before they had reached puberty) they slept together in Cesikirikat's hut. After reaching puberty they slept in the *sikiroinet* with Arap Ruto. Girls visiting their father's mother sleep in her hut whatever their age.

Children are generally fond of their father's mother, partly because she makes it her business to be nice to them, "for they are the children of her child, and people do not hate their grandchildren". But if they do not visit her as often as she would like and bring her presents of food, she will be annoyed and shows her anger by saying, *Sere opeku lakocu ce mooipua omituakik* ("Peace, die you children who have not brought me food"), a curse which is not dangerous because it is neutralized by the word 'peace', and because she takes care to say it in the hearing of someone who will report it to the children, when some such conversation as this will take place:

Friend:	*Kaami kapkoko amut, konereket, amu maoipcin omituakik arauek ce cau, kocupok, kole, "Sere, opekun lakocu".*	I was at Grandmother's place yesterday, and she is angry because you have not brought her food for many months, and she cursed you and said, "Peace, die, you children".
Children:	*Woi, awendi ono, eiyo! Kokocupei koko, kole, "Sere, opekun".*	Alas! where shall I go, mother? Grandmother has cursed us and said, "Peace, die!"
Mother:	*Moomuen, lakocu, mawecok koko, kocamok, a mutai kipendi olinnyin si kiipcin melekto.*	Do not be afraid, children, grandmother does not hate you, she loves you; but to-morrow we will go to her place to take her a present.
Friend:	*Weiis, miye noto, si kocam koko.*	Yes, that's the best thing to do, so as to please grandmother.
Children:	*Weiis, kepe korun, . . . Kiipcin ne, si kocam?*	Yes, let's go to-morrow, . . . What shall we take her, so that she shall be pleased?
Mother:	*Kipendi korun, si kiipcin nyanyait ok lokomek.*	We'll go in the morning, and take her some meat and some honey and water.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

603 754 598

Next day the mother and the offending children hasten to grandmother's with food. The old woman accepts the food and spits on the children, saying at the same time, *Sere kaanutok ako ra opaipaiitun* ("Peace, I spit on you and to-day you will flourish"), thus both forgiving them and removing any possibility that her curse may have an ill effect. The mother's mother may do the same sort of thing, if she lives near enough for the children to visit her.

603 606

Arap Mining's wife's mother and father lived at Kipkorom, and his children used to visit them there, always taking presents with them. When Arap Mining visited the old people, as he did sometimes in the company of his children, he met them on ordinary terms, entered their hut, and sat down inside, *si keam lokoi* ("to talk of our affairs"), and his mother in law gave him food to eat. By this time, the strictness of avoidance had been much relaxed, for he was a staid and respectable man of forty or so. But though his children may sleep in this hut, he may not do so on any account, and if he stays too long to be able to return home before dark, he must sleep in a neighbour's hut. His father in law Kaola used to live at Cepkunyuk in Nandi, a good two hours' walk from Kipukua; but in July 1939 he moved to Kipkorom, as his son Leii was working on Kapchorua Farm close by. A small hut was built for Kaola and his wife in a maize *shamba* belonging to some Nandi, and the old Dorobo were allowed to live there in return for guarding it. Leii, a *Maina*, is Arap Mining's wife's brother, and therefore 604 *mama* to his children; but though his sister's children do not go to see him, he sometimes goes to Kipukua to see them. This was one of the few instances of a mother's brother being at all intimate with his sister's children; and Cepkumuren taught her children to like Leii, who would greet them by saying *Sopai, lakocu* ("greetings, children"), and then spitting on them and saying *Sere, lakocu* ("Peace, children") to which they would answer *Epa, mama* ("Blessing, uncle"). But in spite of this friendly intercourse, Leii never played the part in their lives that Arap Mining's brother Kimutai did; and his share in their training was very small.

IV. The Clan

614

The clan, *ord*, plural *ortinuek*, is an exogamous patrilineal group with a name and a totem, *tlond ap ord*, or simply *tlondo*, "the animal (of the clan)". Of the eleven clans listed, the existence of eight is attested by genealogies and the census; the remaining three are reputed to exist or to have existed. All but one of these clans have but one totem each; the exception has three, the principal of which it shares with another clan, an unusual feature in that it is the group not the totem that is important, the clan being a social group rather than a group of people mystically related through the clan animal. All the clan names but one are taken from Nandi clan names; the exception seems to be of Dorobo origin. Some of these [177] names are taken from the principal name of a Nandi clan, others from subsidiary names, for the Nandi clan has (1), a principal name by which it is generally known, and (2) a subsidiary name or nickname which is

4:Sandford C-4, 5 (1918) 1919 FL12 Masai FL12
Dorobo FL6

M 648* 579 72-1

under the aegis of the medicine-man Sendeu, with their stock, numbering some 2,000 head of cattle, and ten to twelve thousand sheep. These Masai were subsequently found to be in the possession of seven rifles, the property of Herr Seidentopf, which were recovered and destroyed by the Assistant District Commissioner, Narok.

Cattle theft by the Masai from the Kikuyu.

48. In June, 1916, a series of eleven cattle thefts from the Kikuyu were reported as having taken place, presumably by Masai, between June, 1915, and April, 1916. In three of these instances, the persons implicated were arrested and convicted, but, in the majority, the looted stock was traced to the Masai Reserve and not recovered. Sixty-nine head of cattle had been taken altogether, but only six head had been returned, and the Provincial Commissioner of the Ukamba Province considered that compensation should be paid to the Kikuyu in consideration of their losses. As the information respecting these alleged thefts was too scanty to admit of any fine being imposed on the Masai without further investigation, Mr. Hobley was instructed to hold an enquiry into the circumstances of each case. As a result of his investigations, he considered the case against the Masai to be strong enough to warrant the imposition of a fine under the Collective Punishments Ordinance, and in this opinion the Attorney-General concurred, adding that, in view of the large number of stock stolen from the Kikuyu, the fine might be of an exemplary character. He suggested that the amount and the incidence of the fine might be decided after consultation with the Officer-in-Charge.

Mr. Hemsted, however, thought that insufficient evidence had been forthcoming to prove the complicity of the Masai tribe as a whole, and recommended that a fine of Rs. 1,000 be imposed on the village of Kithendu, and of Rs. 500 on the village of Lokorio, to which villages, situated in the Kedong Valley, stolen cattle had actually been traced. He also suggested that the proceeds should be distributed to the Kikuyu in compensation for lost cattle. This course received the support and approval of the Governor-in-Council on the 11th of September, 1916.

Murders on the Kisii road, July, 1916.

49. Two porters were killed on a road between Kisii and the Masai Reserve, in July, 1916, and some rupees were stolen. An application for the imposition of a collective fine on the Kisaruni "Sirit" of the Purko Muran, based on the ground that these Muran were the only warriors near the scene of the outrage, was disallowed on account of the fact that the road in question was much frequented, and that there was nothing to show that any members of the Masai tribe were responsible for the murders.

D 648 579

Raids by Wandorobo.

50. In September, 1916, it was ascertained that the Wandorobo had committed a number of stock thefts in the Ikoma district, after the Intelligence Officers had left the border. Several Wandorobo were killed in one attempted raid. The Wandorobo concerned were arrested and punished by the District Commissioner, Mara.

M 648* 579

Murder of two natives near Narok, November, 1916.

51. On the 19th of November, 1916, two Indian traders, travelling on the main road some seven miles from Narok, found two bodies of Kikuyu natives lying near the road. These Kikuyu had been murdered and were quite dead when found. They had several wounds on their persons, evidently inflicted by spears and knives. One of the murdered Kikuyu was recognized immediately as the servant of an Indian trader, at Narok, and both had been carrying loads when they met their death. Investigations were immediately instituted by the District Commissioner, Narok, but nothing definite was discovered. In February, 1917, evidence was brought against two Muran, who had been wandering in the vicinity at the time of the crime, but this was insufficient to justify further proceedings being taken against them.

At the end of April, the headmen of the Muran living in the neighbourhood were called on to explain what steps they had taken to find the murderers. The scene of the murder was greatly frequented by the Muran of the three Purko "Sirita," named Kisaruni, L'Aimer and Mejuali, and, as no evidence was brought by any members of these "Sirita," respecting the murders, the District Commissioner recommended the imposition of a fine under the Collective Punishments Ordinance on all three companies.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

597 [848] Adoption is also practised when an unmarried girl has a baby. In such cases it may be adopted by a childless couple, i. e. who have lost their children, or whose children have grown up and left them, but mostly (on the rare occasions when it occurs) the former. An adopted child has the status of a man's own child. Adoption may in certain cases be by previous arrangement. It has happened, I was told, that a person who has cattle or means of getting milk may hear that a certain girl has got pregnant, and gives notice that he will adopt the child when it comes. The mother of the girl accordingly tells him when the girl "enters the hut", and the adopter's wife fetches the baby to her own home as soon as it born. She feeds it with milk from a small horn, and the Dorobo reckon that such babies will do all right, for they say, "such a child need not suck for very long". Illegitimate children are killed if nobody can be found to adopt them. [848] [847]

5. Adultery and divorce

684 Adultery may be punished by a husband who catches his wife with another man, by shooting the male offender with an arrow. If he kills him, he has to pay the normal compensation for homicide. He may also beat his wife, after which he "waits till she has got sense", as they put it, when he buys a goat for her, which they eat together. A man does not divorce his wife for a single act of adultery, but only if she is a bad and neglectful wife who is continually caught with other men.

586 When a man has, after much thought, made up his mind to divorce his wife, he calls in one of his relatives to help him perform the divorce ceremony. Taking a piece of liana, he rubs earth on it and gives one end to his relative to hold, taking the other end himself, the wife being present and looking on. They then break the liana in two, the man saying to his wife, *Kaail katunisiet kuu kiil poroanni, ui ka, pakaktan* ("I have broken our marriage as this liana has been broken: go home and leave me"). He can then claim the return of the live stock which he paid to her father. But only a woman who has not borne her husband a child can be divorced; once there has been a child, no divorce is possible, for the birth of a child completes the union, which once completed is indissoluble. [581]

6. Polygyny

595 In theory a Dorobo can have as many wives as he can pay for, which means that usually a man has but one wife at a time. Polygyny may therefore be said to be non-existent. The only thing that does occur is the 587 occasional re-marriage of a man after the death or desertion of his wife, of which I recorded three cases. Widows, again, seldom re-marry, living normally either with their husbands' brothers, returning to their parents, or even living alone. In one genealogy, however, I found a woman who was married to four successive husbands, none of whom was her husband's brother, and having as issue but one daughter. The Dorobo themselves remarked upon this succession of marriages as being a most unusual occurrence.

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

tree," *retinet* (*kigelia æthiopica*); and *maiyek*, cheusine beer, made, though seldom, in the Nandi way. They also drink a mixture of honey and water called *lokomek*.

Trade and Exchange

The inability of the Dorobo to produce many of the things they need has led to the development of a system of exchange with the Nandi, who till recently were almost the only people with whom they had dealings. Relations between Dorobo and Nandi have been such that, though maintaining their complete independence, the Dorobo have not only obtained goods by trade, but have acquired and assimilated much Nandi culture, including language, clan-names, agriculture, and many material features like dress and ornaments. Their relations are in general friendly, for the Nandi like honey and furs which they get most easily from the Dorobo, and there has been an increasing number of marriages of Dorobo men with Nandi women, as well as of Dorobo women with Nandi men. But neither side takes liberties with the other: the Dorobo fear the physical superiority of the Nandi, and the Nandi fear the close-to-nature life of the Dorobo, as well as a certain mystical force as rain-makers which they attribute to them.

From the Nandi the Dorobo get objects of iron, pottery, beads, tobacco, cattle (see below, p. 61), and the seed of cereals for planting. The Nandi get skins and honey from the Dorobo. There are no special places for trade, but the Dorobo go to the nearest smith or potter or other person who can supply them, and make their bargains. This means a journey into the Nandi Land Unit, but other things can be got from the nearest friendly Nandi. The exchange values in 1939 were:

1 axe for 1 bagful of honey;
1 bundle of tobacco (about 1 lb.) for 1 bagful of honey;
1 arrowhead for 1 gourd full of honey;
1s. worth of trade beads for a gourd full of honey;
1 knife for a day's weeding in the smith's garden;
1 large earthenware pot for 1 large prepared buck skin (usually bush-buck)
1 small earthenware pot for 1 small prepared buck skin (usually duiker);
2 baskets of seed for planting for 1 new basket.

The bag, *motoket*, is made of skin and measures about 8 ins. by 7 ins.; the gourd is about 10 ins. long; the large pot is about 20 ins. high, the small pot about 10 ins. high; and the basket is about 6 ins. deep and 6 ins. wide.

Cattle

The Dorobo interest in cattle is probably due to their long contact with the Nandi; but though they desire cattle, they have not the land for them. Yet they have speculated about cattle inheritance, and by 1939 had worked out theoretical rules which they had scarcely had opportunities of testing. When they were evicted from the forest in 1937 they were officially credited with about 2,000 head of cattle; but no census of either people or stock appears to have been made in preparation for this event, and most of these cattle did not belong to real Dorobo. In 1938–9 the numbers of stock which I counted during the compilation of my census were:

	Cattle	Goats	Dogs
Koret of Kipkorom ..	25	15	4
Koret of Sosoiyo ..	54	19	3
Koret of Kelpui	11	0	0
	90	34	7

Methods of cattle-management are based on those of the Nandi.

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

561 [304] [582] [880] [589]

Life Cycle

Dorobo men pass through three stages: *getik*, uncircumcised boys; *marenik*, circumcised men; and *apaiinik*, elders. Boys are circumcised between the ages of 15 and 18 years, and may marry at any time after circumcision when their circumstances allow. Some men in fact never marry at all, but live alone, getting occasional help from women in the settlement, and depending for sexual satisfaction on surreptitious affairs with wives of age-mates. Women are first *tipik*, girls; then *yoonik*, married women; and finally, when they begin to look old, *ragitokinik*, old women. Girls marry soon after they have been circumcised.

602 [171]

Kinship and Behaviour

The existing Dorobo relationship system, *tiliet*, is structurally similar to that of the Nandi, and uses a number of Nandi terms; but it is less regular and includes in the *tiliet* a larger number of persons than does the Nandi. Moreover, the collective term *macokor* (which I did not find in use as a true relationship term in Nandi) is used by the Dorobo as the proper term for a number of people terminologically differentiated by the Nandi.

601

Within the *tiliet* the chief terms are: In the third ascending generation, all males are *macokor* and all females *makibai*; in the second ascending generation, all males are *kuko* or *akui* and all females *koko*.

In the first ascending generation, the terms are: *papa* = father, father's brothers, and mother's sister's husband; *aiyo* = mother, mother's sisters, and father's brother's wife; *pukot* = father's sister; *konyit* = father's sister's husband; *mama* = mother's brother and his wife. Terms used by women are *sindet* = father's sister and father's brother's wife; *apulaiyo* = mother's brother; *niyo* = mother's brother's wife; and *konyit* = mother's sister's husband.

In a man's own generation, his brothers, sisters, and mother's sister's son and daughter are *kesenda*; mother's brother's son and daughter, *mama*; and the son and daughter of his father's brother and father's sister are *macokor*. Women's terms which differ from these are: *apulaiyo* = mother's brother's son and daughter; *niyo* = mother's sister's son and daughter.

In the first descending generation, *apaa* includes son, daughter, brother's son and daughter; *mama*, sister's son and daughter, and mother's brother's son and daughter; *macokor*, father's brother's children's children, and father's sister's children's children. In the second descending generation, both sexes are *akui*, except mother's brother's children's children's children, which are *mama*; and mother's sister's children's children's children, *kesenda*.

Among affines, wife's father is *pamoyo*; wife's mother, *poker*; wife's brother, *konyit* and his wife, *poker*; wife's sister *pukot* and her husband, *kipukotiet*; wife's brother's son and wife's sister's son, *apaa*; wife's brother's daughter and wife's sister's daughter, *pakuo*. Husband's father is *pakuo* and his mother, *poker*; husband's brother *konyit* and his wife, *sindet*; husband's sister, *komati* and her husband, *poker*; husband's brother's children, *lakuet*; and husband's sister's children, *apulaiyo*.

602 604

In the *tiliet* it is the *father's brother* who stands out and occupies the special place in family life that the mother's brother does among the Nandi; not a few Dorobo did not know their mother's brother's name. Owing to the nature of Dorobo life, the father's brother is continually in contact with his brother's children, and his relations with his nephews are even closer than those of the Nandi *mama* with his nephews.

A striking difference between the Dorobo and Nandi systems is that whereas Nandi may not marry any person in the sibet, the Dorobo were insistent that a man might marry his father's sister's daughter's daughter, the girl whom he calls *mamkor*, a person definitely in the sibet. This type of marriage does not seem to occur now, but did in the past. Marriage with a wife's sister is considered objectionable.

Behaviour patterns may be summed up in a statement made by a Dorobo that "a man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we are all on terms of friendliness and 'clean fun.'" Generally speaking, seniority is a matter of age, except with respect to the father's brother. Between a man and members of his own generation considerable latitude is allowed; but elders must always be shown respect. Where the claims of relatives are concerned, the amount of contact is important, for even a close relative who lives a long way off and is seldom seen cannot expect and will not receive as much respect as one who lives nearby and is well known. On a husband's part, there should be complete avoidance of his wife's mother, though this may be relaxed by degrees as he gets older; conversation with the wife's father should be limited to greetings.

Pre-marital Sex-life

Owing to the small number of Dorobo and the consequent shortage of women for wives, men have little in the way of pre-marital sex-life; and if a man does manage to acquire a lover, he often marries her.

Bridewealth

This varies according to circumstances, and Dorobo statements about it are conflicting. In 1927 it was said to consist of large quantities of honey-wine and of monkey-skin caps; but in 1930 the standard was one cow (with calf if still suckling), one ox, and four grain. The number of grain varied in the recorded cases from two to six, and in one case the cattle amounted to four oxen. A man also gives his father-in-law presents of honey-wine and a fur cap or two; thus marriage is more of a drain on a man's resources than formerly.

Betrothal

A man chooses his wife himself, and arranges the preliminaries with the girl's father during two visits at which he gives him presents of honey. After the second visit the father calls the clan council together and publicly gives his consent to the marriage.

Marriage

The marriage ceremonies are conducted by an elder known by the time as *paiyon*, who brings the bride to her future husband's house, where the guests are already assembled feasting. The girl enters the hut in which the ceremony is to take place, and in the presence of witnesses the *paiyon* gives her to the man, saying, *Kaipenete ainin*, "you now belong to this man." He then kindly ties *sebukiet* grass on the man's right wrist, and an old woman binds some of the same on the girl's right wrist. They are now married. The *paiyon* then sets up an erection of *sebukiet* grass called *kendo* which is smeared over with cow-dung; this the wife has to knock down and tread upon. After this, the pair are left alone, and the marriage is consummated. Next day the *kendo* is trodden into the floor and plastered over with cow-dung, for it must not be seen. The pair are then shaved, he by the *paiyon*, she by the old woman, and the hair is buried in cow-dung under an erection of sticks called *kwonist*, which is set up in great secrecy by the *paiyon*. It is essential

Hillsborough R-4, 5 (1938-1939) 1953 FLA Dorobo FLA

that one thing be used for both the female and harmful, and if there are no cattle in the bridegroom's settlement it must be procured from neighbours also. Marriage is prohibited.

Marriage with Kamâ

Eighteen marriages were recorded in genealogies between Dorobo and Kamâ or members of the Kamâ group:

Dorobo and Kamâ women: 9	Dorobo and Kamâ men: 7
Dorobo and Nandi women: 1	Dorobo and Nandi men: 1
Dorobo and Turkana women: 1	

Marriage of Dorobo women to outsiders seems to be due to the poverty of the Dorobo, which in these cases would have meant that the women would have remained unmarried; such marriages also mean the accession of stock to the Dorobo.

Polygyny

Although there is no objection to polygyny, Dorobo seldom have the means of acquiring more than one wife at a time, though several men accounted of re-marriage after a wife's death or desertion. In one genealogy a woman had as few than four successive husbands, none of them her husband's brother, and her only issue was one daughter.

Re-marriage of Widows

Unlike the Kamâ, the Dorobo recognize the re-marriage of widows in the normal manner on payment of bridewealth to their fathers, brothers, or other representatives; it is, however, unusual. Widows normally live with their husband's brothers, return to their parents, or else live alone.

Divorce

Divorce is rare, and is of one kind only—permanent. The husband can claim the return of the bridewealth. But a wife who has borne a child cannot be divorced for any cause whatsoever.

Birth

Intercourse between husband and wife stops at the fourth or fifth month of pregnancy, and is not resumed till the child is about six months old. Birth takes place in the husband's hut, the husband going to live elsewhere meanly. The wife is attended by a midwife, experienced, and her mother is present if possible. She stays in the hut for six or seven days after the birth, and the child's body must be kept covered for several weeks, even the latter being allowed to see only the face. The mother must be purified by her husband, who kills a goat (which he must acquire somehow if he has none of his own) and rubs the fat and undigested grass (chyme) from the stomach on her face, breasts, and body. Children are weaned at the age of about a year. Twins are not liked, and the mother's ritual uncleanness caused by their birth must be removed by the killing of a goat which is eaten by the mother and her women friends. The Dorobo say that if a man has an ox a day or two since his wife bears twins, the ox will never again catch an enemy.

Children receive their first name, the *ngirik-name*, soon after birth, as among the Kamâ, this name is not used, but links the child with a preceding spirit. The second or principal name is given before the child can walk, at the time when it is first given solid food, and is called "*porridge name*" in imitation of the Kamâ custom. Children may also be given nicknames which often refer to some physical peculiarity. After circumcision, boys become *dorgi*, men of, others now taking their

patronymic from their father's guardian name. Younger sons generally take their patronymics from the father's clan-name, or else from some circumstance in their own lives.

Circumcision

Boys are circumcised at the same intervals as the Nandi, and the Dordos keep watch for the opening of the Nandi circumcision. Occasionally boys are circumcised in Nandi with other Nandi boys, but more often in the home, as in the circumcision of 1936–37. Sometimes a Dordos acts as operator for the Nandi. The whole procedure of circumcision (save in identical with that of the Nandi. Girls undergo the operation of clitoridectomy whenever there are enough ready to be done, and not at any stated intervals.

Age-sets

The Dordos have borrowed the whole age-set system from the Nandi, and it works exactly as among the Nandi, with the same set-names and 15-year intervals synchronized with those of the Nandi. The reader may therefore be referred to the account of the Nandi system, p. 31. A slight difference in the sub-divisions called *mut* may be noted: the Dordos have only three, called *Cogetuech*, the senior; *Taiyotik* or *Kipkilionyek*, the middle; and *Kwondamik* or *Kipsiwanik*, the junior. A more significant difference is that the sets have no military or political force, for the Dordos are not fighters, and the practical effect of the system is to introduce further behavioural patterns, as well as to modify the traditional rules of hospitality; for while an Dordos would refuse to shelter one of his own lords, the degree of hospitality varies according to the age-set situation.

Political Structure

Land Division

The Dordos live mainly in clan settlements divided between a number of districts or *pororiet* (*koroonet*, sing. *koret*). Till about 1930 these settlements were in small clearings inside the forest; after 1937 they were spread round the outer edge of the forest.

The Clan

The clan, *ent*, is an exogamous patrilineal group with a name and a totem, *kind ap ent*, the animal of the clan. The existence of eight clans is attested by genealogies and the census; three others are reported to exist or to have existed, though none occurred in any records; they were, however, mentioned to me in 1937 as well as in 1936–8. Each of these clans has one totem, except Mut which has three, one of which it shares with another clan; it is not the totem which is important, but the group itself, the clan being a social group, and a group of people mystically related through their totem. The emphasis is therefore on the clan name and not on the animal, though marriage, nevertheless, is forbidden within the clan. An exception to this rule is found in the case of Mut, where intermarriage is allowed between people of different totems, an anomalous feature due possibly to the influence of the Nandi, among whom Mut marriages are common between people of different totems. (See p. 27.) There seem to be no restrictions either on marriage between clans (as among the Nandi), or on killing or eating the clan animal, which suggests that originally the Dordos clans were non-totemic, and that their present totemism is a feature borrowed from the Nandi along with the clan names, which except for one of the reported clans are all Nandi.

* The Nandi occasionally use *ngorok* for the *ent*; it is a Nandi word meaning "the horns."

3:Huntingford E-S (1921-1928)929 FLA Dorobo FLA

Where a man is ill and dies, it is said that bad milk (milk she-goat, K.) have killed him; if he recovers, a good milcher has saved him. No offerings are made to the bad milk.

There is also a vague belief in a future life. A man's spirit is said to go on death to the forest up hill (K.), or land of the spirits, which is under the earth, and is a bad place.

Magic.

There are magicians (*pwolindet*, pl. *pwoik*, K.) who are bad, and who prevent people from getting food by means of their spells. There are also diviners (*arkolget*, pl. *arkoik*, K.).[1] There is no equivalent of the modern Nandi system of "arkwinet" or rule by a medicine-man.

Medicines and Charms.

(a) *Medicines.*—For snake-bite, the gum of the tibet tree is used, mixed with the honey of a species of bee, called "kosomyet" (K.), and rust's fat. This concoction is rubbed on the affected part, and a little is also eaten. For coughs, a plant called "epsito" is chewed; this is used for all chest complaints.

(b) *Charms.*—Children wear a charm to ward off the evil-eye (*sakut*, K.), which is similar to that worn by Nandi children. It consists of a necklace of seeds of the kepuyweet tree (K. *kepuswik*) strung on a cord, the seeds being separated by short pieces of bamboo (Text-fig. 20). Old men wear a charm to keep away circumcision (*kimokwopet*, or *kwosito* (*kwosiss*), K.); it is made of two small pieces of the chemoket tree,[2] about 1 in. long, which are tied to the belt (Text-fig. 19).

V.—Social Institutions.

Social Divisions.

The male sex is divided into boys (*kpetik*, K.), warriors (*murenik*, K.), and old men (*pwiinik*, or *epwiinik*, K.); the female sex, into girls (*kipili*, K.) and women (*kwomik*, or *okipiniik*, K.). At circumcision, a boy becomes a warrior and a girl a woman.

Married and unmarried people sleep separately. Married people and small children may sleep in the same hut, while unmarried men sleep elsewhere, often in the *sigiriet* (K.), or "warriors' hut," where they cohabit with the unmarried girls. Though free-love is practised, it is not carried to such an extent as among the Nandi, and although girls sleep with warriors, they like to preserve their virginity till circumcision. Warriors frequently marry their sweethearts (*murenik*; K. *murenik*), whereas in Nandi they usually marry someone else.

The position of women is the same as it is among the Nandi, that is, they wait on the men, do all the menial work, and are their husband's property.

[1] This word is not used with the same sense in Nandi, originally it seems to have meant simply "medicine-man" (Swahili, *mganga*).

[2] *Euphorbia candelabrum.*

3:Huntingford E-5 (1921-1928)929 FLA Dorobo FLA

Names.

Before a child is born, the spirit of an ancestor is called upon, and the child receives the name of that ancestor, which he retains throughout his life.[1] At circumcision, a man becomes *Arap* (*asoon*), "*Son of (Bo-and-so),*" *e.g.* a boy named Kipon, whose father's name is Kimoiliy, becomes Kipon arap (Ki)poiniliy, and is known as *Arap* (Ki)poiniliy. Both the masculine and feminine names are mostly Nandi.

Circumcision. (Tom,* K.)

The customs connected with circumcision seem to be very similar to those of the Nandi. Boys are circumcised at intervals of about ten years; the ceremony takes place after harvest, about October, when extra food is bought from the Nandi; the actual operation is performed in the early morning. In the case of girls, a circumcision is held when there are sufficient girls in a district of an age to be circumcised; only the clitoris is removed. Circumcision, as among the Nandi, and in ancient Egypt, is a form of initiation into manhood or womanhood, and is preparatory to marriage.

Marriage.

It is usual for Dorobo to have only one wife, as they are unable to support more. The price of a wife is paid chiefly in honey-wine. Before marriage the suitor gives to the girl's father as much honey-wine "as four women can carry." He also gives the parents honey-wine year by year after marriage, and he must give the father caps (*sambut*, pl. *sindwinik*) made of the skin of the black monkey (*Cercopithecus albigularis*). Nowadays, if a Dorobo has any cattle, he sometimes takes a second wife.

Death.

When a Dorobo dies, his body is taken out into the forest, about 200 to 300 yards from his hut, and left for the hyænas (*kimarokat*) to devour.

Miscellaneous.

When a Dorobo thanks a person, he spits in the direction of the person, with or without saying "*Kongoi*," K. ("Thanks").

The Dorobo call each other in the forest by blowing horns of water-buck (*Aondi*), K.).

Salutations:—

(a) Of greeting:—To men, "*Supai*"; answer, "*Chow-ke*" (health). To girls and women, "*Tilimoya*"; answer, "*Iyô.*"

(b) Of farewell:—"*Sainoo*" (good-bye); answer, "*Sainoo ak inge*" (good-bye to thee), or, "*Sainoo ak ahwak*" (good-bye to you).

Except "*Chow-ke*" as the answer to "*Supai*," these are the same as in Nandi.

[1] The Nandi also give children "spirit names" (*kotosi ap sith*), which, however, are seldom used.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

and (3) *Maruket*, the sons and daughters of both his father's brother and his father's sister. There is thus a sharp distinction between cousins on the father's and the mother's side, and a divergence from the Nandi usage. That the mother's brother's children count as *mama* may be due to Nandi influence, for, as we shall see, the mother's brother is not the relative of importance to the Dorobo that he is to the Nandi. *Kesenda* is a word meaning 'brother, sister' which occurs in other Nandi dialects, though not in Nandi itself, and may possibly be derived from the verb *kesen* 'carry a child', it being one of the duties of a child, especially of a girl, to carry about its small brother or sister.

(woman speaking)

According to feminine terminology, these relatives are grouped in four classes, with a change of term: (1) *Kesenda*, brother and sister; (2) *Apulaiyo*, mother's brother's children; (3) *Maruket*, the children of both father's brother and father's sister; (4) *Eiyo*, the children of mother's sister.

8. The First Descending Generation

(man speaking)

The children of a man and his brothers are all called *apas*; but the children of his sister and of his mother's brother's children are *mama*, his sister's son having also the alternative term *of wairil ap cepto*, which means 'son of the girl', and is applied in Nandi to father's sister's son who is otherwise called *mama*. The Dorobo grouping which places the sister's children in the mother's brother's category is unusual and there is here a wide divergence from the Nandi rule.

(woman speaking)

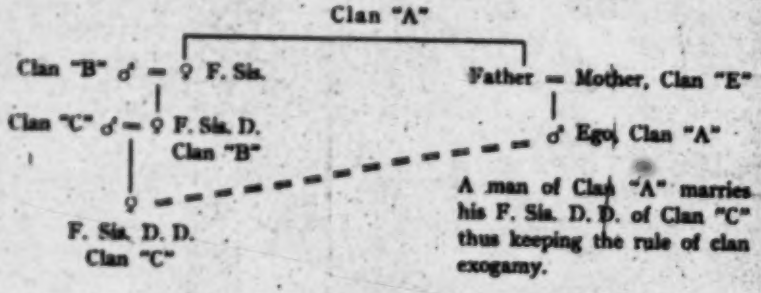
A woman calls her children *laiuet*, 'child'; her brother's and sister's children are *senge*; the children of her mother's brother's children, *akui*; and the children of her mother's sister's children are *eiyo*. The term *senge* in Nandi means 'sister of a parent', and refers to the father's sister; in Dorobo it is applied to the reciprocal, the brother's son, and is extended to the sister's son. It is also used, as in Nandi, as a term of endearment to small children.

We now return to the children, male and female, of the father's brother's children and of the father's sister's children, all of whom are called *maruket*. According to statements made independently by four different Dorobo elders, a man may marry one of the girls whom he calls *maruket*, that is, his father's sister's daughter's daughter (the daughter of his cross-cousin).

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

601

[605]
[589]



This statement was not supported by any of my genealogies; but this does not necessarily mean that the practice was never followed, and my informants insisted that this type of marriage was not only allowed, but actually took place in the past. On the other hand, they said that marriage with any other kind of cousin within the *tiliet* was "very bad". In actual fact, however, marriage with the father's sister's daughter's daughter was probably not common, even in the past, and to-day would be quite impossible, partly from disparity of age (though this is not in itself a serious bar), and partly from the shortage of women and lack of wealth. If a man was a *Nyongi*, he might be about forty years old, and his *macokor* would be perhaps ten, uninitiated, and too young to cohabit; she would therefore be suitable only as a second wife, a luxury out of the reach of most Dorobo. An equally serious objection lies in the fact that owing to the small number of clans, a man's *macokor* may often be of his own clan and thus barred from marriage with him.

6. The Second Descending Generation

(man speaking)

The term *akui* covers most of this generation: it includes the children of one's own children (grandchildren), children of brother's and sister's children, children of father's brother's grandchildren, and children of father's sister's grandchildren. The children of mother's brother's grandchildren are *mama*, and of the mother's sister's grandchildren, *kesenda*. [603] Thus a man's own grandchildren are classed as grandparents.

(woman speaking)

Grandchildren are *apaa*; grandchildren of brother and sister are *senge*, and of mother's sister, *eiyo*; the rest are *akui*.

AFFINALS:

(man speaking)

Wife is *muroriat*; wife's brother, *konyit*, and his wife, *pôker*; wife's sister, *pukot*, and her husband, *kipukotiet*. Wife's parents are *pamono* (m.) and *pôker* (f.). Wife's brother's and sister's children are *apaa* (m.) and *pakuo* (f.).

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

a Nandi, and her husband is spoken of with less respect than Kicoti's, though both men are referred to as *konyit*. Their children are called *mama*.

His father's sister Cepulpul and her husband Turiepuku are both dead, and if he speaks of them it is by the terms *pukot* and *konyit*; but her son Kipkoiec is, as *macokor*, on the same footing as Leii and Kimaiyo, the sons of his father's elder brother Kaola, allowing for the difference of age-set. Pilo is a *Nyongi*, as also is Leii; but Kimaiyo is a *Maina*. On the other hand, Kimaiyo is a policeman, which somewhat outweighs the difference. Cepkemoi and Cerob, the daughters of Pilo's father's younger brother Kiptoo have lessened themselves to a certain extent in old-fashioned Dorobo eyes by marrying Nandi (though Dorobo-Nandi marriage has been practised for a long time), and they live at a distance. The wife of Leii and the husband of Cepkumuren, Pilo's other *macokor*, are both Dorobo, and although they live near the forest, there is a good deal of intercourse between their families. All these people are spoken of as *macokorennyon*, and addressed as *macokoronni*, *macokor*, or by name. Their spouses are spoken of as *konyit*. Though Kimopo Arap Mining, the husband of Cepkumuren, is *konyit* to Pilo, his relatives are outside the *tiliet* as far as Pilo himself is concerned (though not of course for Cepkumuren), and this applies also to the relatives of his sisters' husbands; such people when on terms of friendship and visiting are addressed and referred to by name, or they may be spoken to by the word *leiye*, a general term of address to any person of either sex with whom one is friendly. An old woman like Cesikirikat, Arap Mining's mother (not named in the genealogy), would not be addressed as *leiye*, however, but as *koho* "grandmother" or *cepiosonni*, "old woman", though not related in any way, but out of respect because Pilo is a friend of Arap Mining, and often meets his relatives, including Cesikirikat.

Kaola and Kiptoo, the brother's of Pilo's father, lived for many years at Cepkunyuk, four miles from Kiptarakon, close to and inside the boundary of the Nandi Reserve; but in 1939 they went to live in Sosoiyo near the forest. At that time, both of them were more active than their brother Kipkatam (Pilo's father) who, if he had been a European, would have been described as "bed-ridden"; and for practical purposes Kaola took the place of a father to Pilo and his brothers and sisters. Kipkatam was deaf, nearly blind, almost speechless, and hardly able to move; so when Pilo wanted to consult anyone, he turned to Kaola, or if he was away, to the slightly younger Kiptoo.

It will be seen that a sister's children are not *apaa*, like a brother's, but *mama*. Pilo's sister's children are a typical case. They live at a distance, and so are as remote from him as all the descendants of his mother's brother (*mama*) Nekoi who, with his wife and his son in law Kilanya and his family, lives at Ngatepkong on the far side of the forest and has little to do with Pilo. Moreover, the only link between Pilo and Nekoi, his mother Keuarie, is there no longer, for she died some years ago; so Nekoi and his family are just spoken of as *mama* — when it is necessary to speak of them at all, for though they exist they count very little in Pilo's life.

Between Pilo and his brother Coimim there is a good deal of inter-

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

arap Ruto. There were also two old women, Cesikirikat mother of Arap Mining, and Cepkatet mother of Cesundil. With these lived Cesundil's young sister Cepkoiec, aged about 15, who helped her brother's wife to look after the two children, and slept either in her mother's hut, or in the hut of Cesikirikat, eating with her mother or with Cesundil and his wife. The three men Malakuen, Kipsang, and Kimutai lived together, eating with either of the old women (contributing their share of the food), while Kipungei lived alone, eating with his mother. Cepkoiec could marry none of these young men, since they were all her clansmen. Such an arrangement seems to be quite usual when a girl has reached puberty but has not yet been circumcised. At Sosoiyo a somewhat younger girl named Cepotip lived in a small hut (*sikiroinet*) with her youngest brother Kimitei (a *juma*). When she went visiting to the neighbouring settlement Ndoroton she stayed with women there who, when they came to Sosoiyo, slept in Cepotip's hut, the boy going out to sleep elsewhere.

Where other relatives are concerned, the age-set behaviour patterns tend to replace those of kinship, and even when people are related and within the *tilil*, they are for practical purposes little more regarded than fellow-clansmen. Indeed, in a clan settlement, such people have more influence and effect on their neighbours' children than blood-relatives who live at a distance.

In a primitive people like the Dorobo there is little formality in the educational system, which consists largely of training in obedience, behaviour, and techniques, which are learned from the parents and others with whom the child comes into contact. These contacts are not large owing to the nature of the country and the social system, and thus the relatives with whom a child is seriously concerned are but few. This narrow range of contact must be considered in the light of such important factors as the absence of tracks through the forest, the scattering of relatives, and the abnormal shyness and suspicion of the Dorobo.

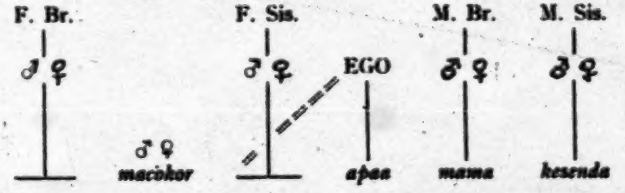
Up to the age when a child can be of some help to its parents, both boys and girls are mainly with their mother, who teaches them the business of eating and living in a hut. She corrects childish bad habits and makes them familiar with the ordinary customs and precautions of every day life that have to be observed in Dorobo surroundings. The father corrects improper behaviour towards himself and the mother.

But at the age of usefulness, which comes a little before the onset of puberty, and depends on the child's growth and intelligence, there is a division of duties between the parents. The father begins to teach his son the elements of hunting and trapping, how to make things of wood, how to skin animals, and how to use a bow and arrow, in short, how to behave like a man and do man's work. The mother teaches her daughter how to manage a home, how to look after small children, and how to perform the normal tasks of a Dorobo woman. At this stage both boys and girls are in one respect general servants of the family; they have to herd any stock their father may possess, and make themselves useful about the homestead.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

Between a man and the members of his own generation considerable latitude is allowed. As the Dorobo put it, *Kicupakei, kiurenencinkei, kiilencinkei, 'Kumin kon, ngut kum kamat', amu ki lakok.* ("We use bad language to one another, we play together, we say to each other, 'May your father lie with you, or may you lie with your mother', because we are children", i. e. we are all of the same age.) These rude phrases, however, must never be used to elders, and to do so is very shameful; but spoken to members of one's own age-set or generation they are quite harmless and have no sinister implications. Between the sexes of the same generation there may be a perfectly innocuous intimacy, between brother and sister, between *macokor, mama,* and *kesenda,* which allows any kind of joking and language but stops short of actual sexual intercourse; and in spite of this license, such evidence as there was indicated that incest was not common. Between members of the same generation, especially in youth and early middle age, there is also a strong bond in the shape of mutual help and support among those who live near each other, extending to all departments of home life. The effect of propinquity must not be overlooked, and the claims of even a close relative who lives a long way off and is seldom seen may be reduced to insignificance.

The general attitude of a man's own children to the children of his *macokor,* his *mama,* and his *kesenda,* is the same, in that they are all like his own children, who may be played with or reproved when necessary, but without the use of any bad language or abuse. To those children to whom he is 'father's brother' there is of course the special attitude that I have already described. But between members of this generation there is a marked terminological difference:

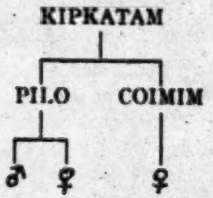


so that by classification all the children on the father's side are *macokor,* while those on the mother's side are both *mama* and *kesenda*; and a man's own children are *apaa,* while those of his sister are *mama.* When the children are small these differences are merely nominal and not apparent; but as they grow older a distinction tends to arise between those on the father's side and those on the mother's side, especially between *macokor* and *mama*; and this is emphasized by the possibility that a man might marry his *macokor* (father's sister's daughter's daughter), even if he seldom or never does so in fact.

Between a man and the second descending generation there is a relationship of respect, for terminologically his grandchildren are equated with his grandfather. In practice, however, this generation counts as far as he

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

603 is concerned, as little as its reciprocal owing to his age, for when his grandchildren are growing up he will be as old as his own grandfather when he himself was a child.



. . . . . 1st descending generation

. . . . . 2nd descending generation

[588] Kipkatam in this diagram is too old, decrepit, and blind even to notice his grandchildren, and he cannot therefore keep an eye on them when their mother goes to the *shamba*. In fact, all the men of this generation whom I saw among the Dorobo were too old to do anything for their grandchildren, though in certain cases grandmothers are able to give a good deal of help to their sons' wives, since women are usually younger than their husbands, [589] even if the disparity in age is but small.

606 Between a man and his relations by marriage, behaviour tends to be much more formal and intercourse to be more restricted, than between blood-kindred. A man is not supposed to converse with his wife's father, in whose presence he must watch carefully his speech and actions, though he may greet him when they meet; if they should happen to be together, the son in law should sit silent out of respect. Before marriage, however, a man may visit the parents of his intended bride to make the necessary arrangements with her father. With his wife's mother a man should have nothing to do at all; he should not only refrain from speaking to her, but should go out of his way to avoid her, both if he meets her out of doors and if he finds her in a hut. This rule of complete avoidance is usually relaxed as he grows older, and the time comes when he may even sit and talk to her, as Arap Mining did to the mother of his second wife Cepkumuren. Relations between a woman and the mother or father of her husband, however, are of necessity different. She may have to live with them, or at least in close proximity to them, whereas her husband may seldom come into contact [591] with her parents; and therefore she cannot be expected to avoid her husband's parents. Her attitude to his father is one of respect due to a senior, with such converse as is inevitable when two people have to live together, and with a certain amount of familiarity arising from the fact that the old man may be in need of physical help from her. Her relations with his mother are greatly affected by her children and the consequent need for co-operation between the two women in seeking their welfare.

607 Between a man and his wife's brother and his wife's sister and her husband, there may be what the Dorobo call *ureriet*, "play", which means that they may greet each other, make fun of one another, and behave in fact in a normal friendly manner; but there must be no loose talk, dirty jests, or sexual allusions. Between him and his wife's brother's wife, on

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

614 177 11. Kongot, the only true Dorobo clan-name left, and apparently corresponding to Nandi Kipkoiiting; totem, *kipsekeriet**.

The clan-animals are: *kouonyot*, crested crane, called the same in Nandi; *soiet*, buffalo, called *soet* in Nandi; *kipkamoiet*, a small red bird, called the same in Nandi; *konokcot*, baboon, called *moset* in Nandi; *uemuuyo*, duiker, Elgon Nandi *uemuiyon*, Nandi *ceptirkicet*; *toraet*, bush pig, Elgon Nandi *toraet*, Nandi *toret*; *ropta*, rain, called the same in Nandi; *kimaroket*, hyaena, called *kimaketiet* in Nandi; *sombit*, lion, called *uetundo* in Nandi; *cauweretiet*, partridge, called *taiynet* in Nandi; *asista*, the sun, called the same in Nandi; and *kipsekeriet*, snake, called *erenet* in Nandi.

The clan is referred to simply as *oret* and not, as among the Nandi, by the phrase *tiond ap oret*; and when asking a man his clan the expression is *Ne ornuuau*? "what is your *oret*?" whereas in Nandi the question is nearly always put in the form *Ne tiond ap ornuuau*? "what is the animal of your oret?" Clansfellows are considered as *tilionutik*, relatives; marriage [582] within the clan therefore is not allowed, with one apparent exception which will be explained later. Clansmen are addressed commonly as *Ornuyon*, or else as *Ar t apa*, the latter meaning "father's brother's son", and emphasizing the theoretical relationship between clansfellows.

[267] There seems to be no sort of restriction on the killing or eating of the clan animal, for as the Dorobo say, *Cito makiome kitio, kiome tiouik tukul* ("It is only man that we do not eat, we eat all (other) animals"), and there is not even the half-hearted apology such as that made by a Nandi when he kills his totem by mistake or intention. This negative attitude to the clan animal suggests that the Dorobo clans were originally non-totemic, and that they borrowed the totem idea along with the clan-names and other cultural features.

614 588 Marriage within the clan is forbidden, except in the case of Moi. This exception was explained by three senior elders in the following terms: *Cii nepo Moi kiituni cepto nepo Moi ingo po kot ake ne menye koret ake a mekomi tiliet*; *ngut kiitun nepo tiond ake, mapile* ("A man of Moi may marry a girl of Moi if they are of a different house, live in a different parish, and are not related, provided their clan animals are different"). This is because the Moi clan has three totems, so that

one whose totem is Kongonyot may marry one with Soiet or Kipkamoiet;
one whose totem is Soiet may marry one with Kongonyot or Kipkamoiet;
one whose totem is Kipkamoiet may marry one with Soiet or Kongonyot.

The rule of exogamy can therefore be preserved by calling the clan by its animal-name, though ordinarily emphasis is on the clan as a group and not on its animal. This may be due to Nandi influence, among whom Moi-Moi marriages are common when the parties have different animals. But though permitted by the Dorobo, I found only one actual instance of such a marriage, where a Kongonyot man married a Soiet girl.

[177] There appear to be no restrictions on marriage between clans such as occur among the Nandi. Korapor, for instance, may marry Kapsekoi, though in Nandi such a marriage is forbidden.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

though in Nandi such a marriage is forbidden. This statement is based on the evidence of genealogies, which show as well that (1) a man may marry into the clan of his mother or his mother's mother, (2) a man who marries two wives may take both from the same clan, and (3) two brothers may marry women of the same clan.

V. Marriage

1. Circumcision

Circumcision is a preliminary to marriage; but since the whole process is almost identical with that of the Nandi, it is not necessary to describe it, and the reader may be referred to HOLLIS's description for the details [14]. It is probable that the practice was borrowed from the Nandi along with the age-set system with which it is closely connected. The fact that the Nandi sometimes use a Dorobo to perform the operation on their boys, and that the Masae in the past normally did so might suggest that the Dorobo practised it before they came in contact with the Masae or Nandi. But in view of the close resemblance of the Dorobo to the Nandi procedure, and the use of Nandi terms, there seems to be nothing particularly significant in the employment of Dorobo as operators; and since the operation of clitoridectomy which is performed on the girls is undoubtedly of Hamitic origin, we may be justified in assuming that the Dorobo have borrowed the whole business from the Nandi [15].

Dorobo boys are often circumcised in Nandi along with Nandi boys by an operator who may be either Nandi or Dorobo. Arap Mining was circumcised at Cepkunyuk together with another Dorobo named Arap Eirusi and eight Nandi, the operator being a Dorobo. The periods of circumcision correspond with those of the Nandi, for the Dorobo have not worked out a method of time-reckoning of their own, but contented themselves with watching the doings of the Nandi. When they saw that they were preparing for circumcision, they collected their boys between the ages, roughly, of 15 to 18 years, and made the necessary arrangements. Although boys are sometimes circumcised in the Nandi country, the Dorobo prefer to do it on their own, and the circumcision of 1926-1930 was done in the forest. No Nandi initiates take part in a forest circumcision, but Nandi assemble as spectators, both to see the fun and to get some free honey, a good deal of which has been collected beforehand in readiness for the circumcision. As well as collecting honey, the initiates' parents do a round of visits to both Dorobo and Nandi friends in order to beg or buy food for their sons to live on after the operation.

In both sexes the effect of the circumcision (*tum*) is that it makes

[14] See his book „The Nandi, their language and folk lore", pp. 52-60.

[15] This use of outsiders to circumcise is perhaps analogous to the employment by the Somali of Yibir women to perform clitoridectomy on their girls, the Yibir being one of the non-Somali outcast groups.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

881 them complete adult members of the horde, and no male could get a wife if he was uncircumcised; but it is possible for an uninitiated girl to get married, though few in fact are married without being circumcised.

2. Pre-marital sex-life

836 [885] Having attained manhood through circumcision, the Dorobo is free, subject to the restrictions inevitably imposed by a small population, to enter into legitimate sex-life. But unmarried men often have to go without a great deal of sexual experience before they marry, and some in fact never [589] marry at all because of the shortage of women. Even in the old days few girls were available, and there were only married women with whom they could not consort unless prepared to be shot by injured husbands if found 589 out. This state of affairs has led to some men living alone and unmarried, helped in their household tasks by women of the settlement. Some even did everything for themselves. The shortage of women, and the shyness of the Dorobo has resulted in a definite habit sufficiently in evidence to justify the application of a special term, for which I suggest the word monōsis. And it is to be noted that the Dorobo have accepted the condition of monōsis as something quite natural, whereas by many other peoples the unmarried state in a grown man is considered unnatural.

836 Young Dorobo to whom life without love does not appeal therefore wander about a good deal, going to places where they know there are girls, or women with whom they can have surreptitious affairs, such women often being the wives of age-mates, for although this is not openly allowed, a [837] woman will sometimes, when her husband is away, oblige one of his age-mates and say nothing about it. In favourable circumstances, however, when there are girls available, unmarried circumcised men build small huts called *sikiroinet* close to their fathers' huts, where they may sleep with uncircumcised girls, each man choosing a girl and associating with her till she is married. A Dorobo, unlike the Nandi, often marries his premarital [814] lover. Uncircumcised boys caught by the men playing with girls who are sexually mature are beaten, for love affairs are the privilege of manhood.

3. Marriage

● 582 Dorobo generally marry women of an age fairly near their own, and do not by preference marry women very much younger than themselves.

584 A man chooses his wife for himself, and himself makes the preliminary arrangements. After making his choice, he takes the first step, by "going the journey" (*wendi koito*), to the hut of the girl's parents, or if they are dead, of a responsible relative, and hands over a large bag of honey, saying, "I want your daughter", to which the father answers, "Very well, take her presently". This ready acquiescence is due to the fact that the father already knows what is going on, for the suitor has been making enquiries about the girl, and such things always reach the ears of those concerned. Later

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

551 (4) The patronymic. This is the equivalent of a surname, and consists of the father's porridge-name preceded by the word *Arap*, "son of", though sometimes a nickname is used instead of the porridge-name. Younger sons, however, do not as a rule take their father's porridge-name, though they may take his nickname, but often choose a name alluding to some circumstance in their life, as in the case of Arap Mining's younger brother Kimutai, who, having had to make a long journey to be circumcised, called himself Arap Ruto, "son of 'he made a journey'". The complete series of names (not always borne, nor always obtainable) belonging to the father of Pilo, who was generally known as Arap Ngamngam, was Pasikirio Ndulii Kipkatam arap Ngamngam, the first being his spirit-name, the second his porridge-name, the third his nickname, and Arap Ngamngam his patronymic.

[553] On the subject of naming children, Arap Mining said in 1939, "My wife gave birth to a child about three months ago, it is true, but we have not named it yet, because we have not sought for a name, and we shall not do so till she has had another child. When the next child has been born, we shall give this one a name about seven days after the birth of the new one. If she does not have another child, we shall wait till this one can walk, and then we shall name it. But everybody does not do like this nowadays, for Arap Keter (Cesundil) has a daughter only six months old, and they have already named it Cepkasi, and his wife has not yet had another child. This baby was called Cepkasi because the father was working on a farm". (*Kasi* from Swahili *kazi* = work).

8. Marriage with Nandi

●582 197 Circumstances are forcing Dorobo to marry Nandi women to a greater extent than formerly, and Nandi are also, unreasonable as it may seem, marrying Dorobo women. We do not know the frequency of such marriages in the old days, but some figures for the present day can be obtained from my census and genealogies. Of 18 recorded marriages of Dorobo with Nandi and other tribes of the Nandi group,

5 were of Dorobo men with Nandi women;
2 were of Dorobo men with Keyo and Terik women;
10 were of Dorobo women with Nandi men;
1 was of a Dorobo woman with a Keyo man.

Of six Dorobo who married Nandi and Terik women, three lived in Nandi; and of ten Dorobo women who married Nandi, three lived in Nandi. There is thus a tendency on the part of Dorobo men to look for wives abroad owing to shortage at home, and on the part of Dorobo women to marry Nandi because of the poverty of the Dorobo and their occasional inability to find the material for bride-payment, with the result that even the women cannot get married in some cases unless to Nandi.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

in material culture. The Nandi keep cattle, till the soil, make pottery, and work iron, none of which the Dorobo did; and they have passed on to the Dorobo a number of things which have now become an inseparable part of Dorobo culture without receiving much from the Dorobo in return. Although the Nandi have never lived in the forest, they occupied and grazed their cattle till 1906 on the open ground to the west and southwest of the forest — the original Nandi divisions of Kamelilo and Kapcepkendi — and so contact was inevitable. There has been no fusion of the Dorobo with the Nandi; the few intermarriages have not resulted in anything like even partial fusion, and Dorobo who have lived for years in Nandi, like Arap Ngamngam and his sons, are regarded as nothing but Dorobo. Although KRAPF said that the "Wamau people are Wandurobo whose duty it is to hunt elephants for the Masai" [1], there are no indications whatever that the Kipkurerek ever had any "duties" to perform for the Nandi, and the occasional employment of a Dorobo as circumcisor by Nandi or Masae does not constitute "subjection". The Dorobo and Nandi have in fact lived their own separate lives, though they now share a good many cultural features which have been voluntarily adopted by the Dorobo.

A good deal, in fact, of their existing culture has been adopted from the Nandi, and among these adopted features we may include the following:

1. Clan names and possibly the totem idea, though not the clan system.
2. The method of dividing the country into districts or parishes (the Nandi *koret* system), and the resulting *koret* council (which is the basis of Nandi government).
3. Some relationship terms.
4. The age-set system, and circumcision.
5. Certain features of material culture like dress, ornaments, the use of iron objects, pottery and tobacco, and a certain type of hut. It is these features which give the Dorobo a superficial but misleading resemblance to the Nandi.
6. Language and time-reckoning.

The existence of Nandi clan-names, relationship terms, and time-reckoning may be accounted for by the use of the Nandi language. Circumcision and age-sets are definitely an Hamitic feature, and obviously borrowed from the Nandi complete with names and intervals. But the clan system is so fundamental a part of Dorobo organization that it must have existed before contact was made with the Nandi.

From the Dorobo point of view, their reception of Nandi culture may be expressed thus: Certain elements forced on them by economic pressure, like agriculture and stock, lead to economic advantage, as of course does the voluntary adoption of iron weapons and tools. Female dress and ornaments adopted voluntarily lead to prestige, while clan names, relationship

[1] Vocabulary of the Engutuk Eloikob (1854), p. 28. KRAPF seems to have been the first to suggest that the Dorobo were serfs of the Masae, a notion which I think is just as mistaken with regard to other Dorobo as it is to the Kipkurerek.

/64 cont'd/
a statement made by Kivoi and recorded by Krapf in his Travels and Missionary Labours in East Africa to the effect that he (Kivoi) was going to "Muea, in the Wandurobo country". 648 101

73. The Tharaka say that they used to see Dorobo in the old days, but they seem to have had little if any contact with them. They call them Antorobo, the singular of which is Ntorobo, or, using the common convention for the recording of Meru names, M'Robo, that is, Muntu wa Robo, "person of Robo".

74. Dorobo and Gaki Kikuyu

A note in the Nyeri Political Record, referring to January 1911, states:

> "The District is divided up into agricultural, pasture and forest land. The agricultural portion is densely populated with natives. The West Kenya farms comprise the greater part of the pasture land while the forests are at present the home of the Dorobo."

It was by the clearing of the forest that the Nyeri Kikuyu obtained their agricultural land and they must certainly have met the Dorobo in the process. This is borne out by another note of the same date in the same record: "The Kikuyu may not intermarry with the Dorobo". This injunction may have been operative at the time it was recorded but there seems to have been considerable intermarriage in earlier times. [582]

The Nyeri Kikuyu, however, told the 1929 Committee that the Dorobo were among the Masai, not among themselves. Yet there were men present at the baraza who knew perfectly well that the Dorobo had quite recently lived just north of them and had had considerable intercourse with them from time to time and that, in fact, there was quite a lot of Dorobo blood in their own veins. The evidence, native and non-native, given to the Land Commission makes this quite clear. Mr. K.G. Lindsay's memorandum refers to the Dorobo called Ndigiri, who, he says, claim to be of pure Dorobo descent and

/67 cont'd/

The people call themselves Ogiek. The Keriita section has nine clans, as follows: Kapkibotome, Kamwibu, Kapgwathiru, Kapleldegwa, Kabumbuit, Kapchoiro, Kamuri, Kabiaiya, and Kaplogwe. These are said to be exogamous. The prefix kap suggests that they were at one time territorial. The Kikuyu mbari ya is sometimes heard in place of this prefix, thus mbari ya Kibotome, mbari ya Mwibu, etc. There are said to be other clans which are not represented at Keriita. 614 [582]

If one asks an old man what his clan is he will very likely name one of the following instead of one of those given above: Il-mogethenithiek, Ilugumonithiek, Il-mulelionithiek, Iraitheriek, Il-bargenetithiek, Il-taretheru, Il-kiboronithiek, Il-aitaiyuk, and Il-giringishu. It will be noticed that most of these have both the Masai and the Nandi (Dorobo) articles. The first eight correspond to the Masai clans or sub-clans Il-Mokesen, Il-Lughumae, Il-Molelyan, 'L-Aiser, Il-Parkeneti, Il-Tarosero, Il-Kiporon and 'L-Aitayok respectively, and the ninth is clearly a Masai name. Sometimes a more Bantu-sounding variation is heard, Mugethe instead of Il-mogethenithiek and Ndaruthiru instead of Il-taretheru for instance.

/68/ Occasionally an old man will name one of the nine Kikuyu major clans as his clan, and I was told that there is a correspondence between the nine Kikuyu major clans, the nine named Masai clans, and the nine Dorobo clans, but lists of such alleged correspondences vary with the informant and no informant that I discovered could give a complete list. This is not surprising, for the Masai correspondences are said to be based on friendship and the Kikuyu correspondences on blood-brotherhood, both of which probably affected individual families rather than whole clans.

The word used for "clan" is olgelatait (pl. ilgelataithiek), which has both the Masai and Nandi (Dorobo) articles. The former is frequently omitted. This word may be the same as the Masai ol-ng'elata, which Hollis translates as "the plain between two hills". This again suggests clan-territoriality, as the word may have been used by the Dorobo to mean a stretch of country inside natural boundaries, e.g. rivers.

[P185,B]

applied also to the husbands of F. Br. D., F.Sis.D., Sis., M.Br. D., M.Sis.D., and to W.Br. It is therefore the male equivalent of *puhot*. 601

Second Ascending Generation.

(1) F.F., F.M., and M.F., M.M.=*KUKO, koko*, and also *AGWI, agwi*, the latter applied by courtesy to F.F.Br., M.F.Br., F.F.Sis., M.F.Sis., and their children.

Third Ascending Generation.

(1) F.F.F., F.F.M., F.M.F., F.M.M., M.F.F., M.F.M., M.M.F., M.M.M.=*MACHOKOR, makikat*.

Ego's own Generation.

(1) Br., Sis., M.Sis.S., M.Sis.D.=*KESENDA, Kesenda*, linking these two groups in a br.—sis. relationship.

(2) M.Br. S., M.Br. D.=*MAMA, mama*, as M.Br.

(3) F.Br. S., F.Br. D., F.Sis. S., F.Sis.D.=*MACHOKOR, machokor*.

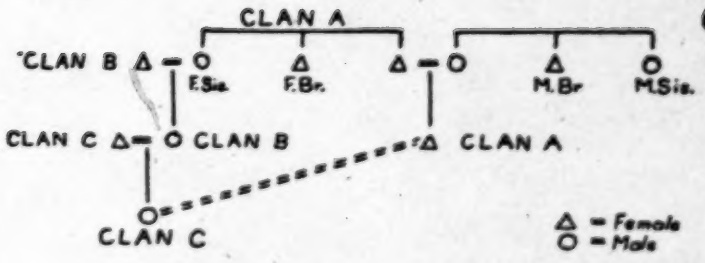
There is here a sharp distinction between cousins on the father's and the mother's side, the former being linked with 3rd ascending and 1st descending generations, the latter with one's brothers and sisters. [605]

First Descending Generation.

(1) Children both ♂ and ♀ of F.Br.S. and D. and of F.Sis. S. and D. are *MACHOKOR*, the same as their parents. According to Dorobo statements, a man is allowed to marry his F. Sis. D.D.—his *machokor*—, but no other woman whom he calls by a relationship term. [582]

[P.185, C]

582
601
614



THEORETICAL MARRIAGE WITH E.Sis.D.D.

This statement is not supported by any of my genealogies, but this does not necessarily mean it has never occurred, and my informants were unanimous in asserting it. A man can therefore in theory marry his classificatory grand-daughter; he would not be likely to do so in fact on account of the shortage of women, and the lack of wealth. [595]

582 602

[Text continues top of p. 186, B-Analysis]

(2) Ego's S. and D., and Br. S. and D.— *APAA, apaa.* 601

(3) Children both ♂ and ♀ of Sis., and of M. Br. S.—*MAMA, mama*, placing them in the M.Br. category, an unusual feature, since the Nandi (and ? Masae) group M.Br. and M.Br. S. together, but have no term for M. Br. S.S., who is outside the *tiliet* or relationship.

(4) M.Br.D.S. and D.—*MAMA, mama*, again different from the Nandi, who regard them as outside the *tiliet*.

(5) Children both ♂ and ♀ of M.Sis. S. and D.— *KESENDA, Kesenda*, placing them in the same category as Br., Sis., and M.Sis.S. and D.

Second Descending Generation.

(1) Son's S. and D., Dau's S. and D.— *AGWI, agui*, i.e. they call ego *agui*—grandfather; and all of this generation are *agui* to ego, i.e. all children of *mackakav, apaa*, and *mama*, though not of M.Sis.S.S., who are *kesenda*.

[Text continues middle of p. 186, B-Analysis]

[P 186, B]

for if, e.g. a man was forty years old, and his 582
mankoker was only ten, he could marry her only 602
as a second wife, a luxury which few Dorobo can [579]
attain. And again, owing to the small number of
clans, the F.Sis. D.D. is often of the same clan,
and so barred from marriage, as in the following
case:—

A'

Functional analysis of terms: 9 speak- 601
ing. (W.S.)

First Ascending Generation.

(1) F.Br., M.Sis. are *BABA*, *ejw*, the same as when a man is speaking.

(2) M.Br.—*APULAITO*, <Maasi *apule*, <*ejw*, M.Br. (M.S.); M.Br.W.—*ejw* as M.S.

(3) M.Sis.Hus.—*KONYIT*, the ordinary term for a male relative by marriage, i.e. "husband," and applied also to the same other categories as M.S.

(4) F.Sis., F.Br.W.—*Sisabi*.

Terms for second and third ascending generations are the same as M.S.

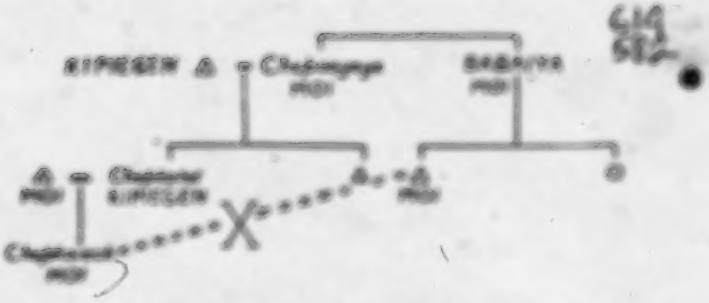
Ego's own Generation.

As when M.S., there is a distinction between [602]
the paternal and maternal sides. The children of
F.Br. and F.Sis. are all grouped as *MACHO-KOR*, *mankoker*, while on the maternal side
we have:—

(1) M.Br.S. and D.—*AGWI*, *agwi*.

(2) M.Sis.S. and D.—*EIYO*, *ejw*:—

[P.186,C]



CLAN - BAR TO

D K 4[illegible]

Dorobo got a right to meat-meat and the Kikuyu a right to cultivate, because they had become brothers in one family. But according to Dorobo law it did not give the Kikuyu any right to purchase land (in any sense at all) belonging to the group, though by Kikuyu law it gave the Dorobo the right to place a piece of land with the Kikuyu as security for any goats he needed, provided the Kikuyu and the other elders (Dorobo) both agreed. In view of the fact that Dorobo law contemplated one way only ("marriage" which was "exogamous") by which land could be transferred in anything approaching perpetuity and that transferor and transferee could not be members of the same cohort, I regard the Kikuyu statement that an adoption-rite was a preliminary to (and part and parcel of) a sale of land as a recent interpretation of what came to pass years later, rather than what was actually intended at the time, and I consider any clauses of the adoption vow which purport to refer to such a sale as sheer interpolations introduced to make the theory fit the fact of final irredeemability. Brotherhood and outright sale were incompatible. The Dorobo interviewed (some of whom had apparently taken part in adoption rites) were definite that the vows referred to brotherhood and mutual protection—nothing else.

But a redeemable "sale" of land between Dorobo and Kikuyu cannot be ruled out, I think, although not contemplated in Dorobo law. One must suppose that some degeneration of Dorobo principles would naturally set in; while they could get the meat they wanted so much more easily the Dorobo would be loath to use the somewhat strenuous methods of their culture; their moral fibre would be weakened. However, we have said that the brotherhood was unilateral, there being nothing very forceful in the evidence (Kikuyu or Dorobo) or indeed in the recorded vows to suggest that such was not the case, and this would mean a gradual supersession of Dorobo by Kikuyu law. But the change would only bring Dorobo law into closer harmony with Kikuyu; it would not involve new principles opposed to those of both, or principles repugnant to the cult of spirits, such as outright unconditional sale. Redeemable exchange, in theory, was no exchange at all, and, though apparently unknown to the Dorobo, would scarcely violate the spirit of their laws nor yet their law of spirits.

D K [illegible]

Inter-marriage is another of the methods mentioned. The marriage of a Kikuyu to a Dorobo girl, being a matrilocal marriage,

D K 4[illegible]

5:Lambert--124 G-5 (ca. 1935-1950) 1950 FL10 Kikuyu FL10

would confer no rights in land except perhaps a meagre one of cultivation only. The marriage of a Dorobo to a Kikuyu girl, the "bride-price" being paid in land, would in theory be impossible because it would mean a double ithumi and that was contrary to both Kikuyu and Dorobo custom, though marriage by exchange of girls between two groups is not a concept [B. 145] quite unknown in primitive society (1), and some of the Fort Hall elders say that many

DK [[71]]

1. Cf. Akiga's story: the Tiv tribe as seen by one of its members transcribed and annotated by Rupert East, 1939. Of the practice of exchange marriage Dr. East remarks, "It is, or has been, an institution of paramount importance, and lies at the base of the whole present tribal organization." According to the Tiv theory of exchange, daughters bear children to their father's family by proxy. Dr. East says, "The most probable explanation ... is that it represents an unconscious attempt to reconcile the patrilineal and matrilineal principles." Cf. also C.K. Meek in "Marriage by exchange in Nigeria," Africa, January 1936: "... it may be said generally that one of the main reasons for the abandonment of marriage by exchange is that women now claim the right to marry anyone they please."

years ago, land being plentiful and goats scarce, a girl was rarely handed over as the "purchase-price" of land among Kikuyu; others declare that this could not be done at all. But I doubt if we can rule this method, which would sometimes mean alliance with a family rich in goats, completely out, although it would entail an infringement of the strict Dorobo law. We have seen that such a union would become a matrilocal marriage. It would serve to keep the husband close at hand and make him something of a drone, dependent, leading a lazy life and liable to degeneration. As a long-range method of absorption it would be of some effect.

DK 425

Another method of acquiring land was that of compensation for a homicide—"blood-money." Theoretically the land would be

600 Marital relations. -- Polygyny. -- Betrothal. -- State of being betrothed. -- Conversion of the young man to the state of the married. -- Bride price. -- Forcing the consent of the father of the bride. -- Exchange of wives. -- Obstacles to marriage. -- Entering into marriage. -- Dissolution of the marriage.

595 The marital relations also offer little that is new. Polygyny exists only to a limited extent; most of the people are too poor to acquire and support more than one wife; only a few have two wives, and if a man has three of them it is a rarity. Betrothal in earliest childhood seems to be more frequent here than among the Idomi, but no more binding and without legal consequences. As a rule after circumcision the youth is betrothed to a girl eight to ten years old, after his father has proposed for him to her parents. As among the Idomi, the /[illegible]/ betrothed persons live apart and may not even see [illegible] in the other, the bride with another youth. If the bride becomes pregnant before the wedding, dissolution of the betrothal does not always take place, as among the Idomi, but rather the one who made her pregnant must redeem the bridegroom by the payment of a head of cattle.

Here, just as among the Idomi, the young men of an age class together decide upon their entering the evening of the married, and their fellow companions confirm the intention by a feast corresponding to the at gorok I at 18, to which friends and neighbors participate. They are served goats and heavy beer, the latter of which, however, the marriage candidate may not yet drink. They like to eat the beer for the day after a successful elephant hunt, so that the guests can beat heartily on meat.

593 Before marriage can be entered into, the bride price is to be paid. The bridegroom usually gives the father of the bride, even before her circumcision, five pots of honey and five hoeknives, and, soon after her circumcision, half of a male female elephant with the rest that belongs to its fathersmen, two head of cattle, which

/340 cont./

583 are bought from the Masai for ivory, and finally half of the meat of
[439] a slain female head of game approximately the size of a zebra. The mother of the bride and each of her brothers receive from the bridegroom a beehive apiece. Instead of the beehives the parents-in-law in some regions, especially where the Wandorobo live in close contact
[40] with the Masai, receive iron wire. After receiving the gifts, the bridegroom and father-in-law reciprocally call each other ba-gatad, bridegroom and mother-in-law ba-gw, bridegroom and the brothers of the bride ba-suben, according to ancient Masai custom.

583 For beauties no higher price is paid. For a childless widow
587 the usual price is paid, but only after the birth of the first child and after her father has returned to the heirs of her deceased husband the price received for her before her first marriage. For a widow who gave birth to girls only, no bride price is paid; instead, however, the heir of her deceased husband keeps her daughters. Likewise
583 nothing is paid for a woman driven out by her husband. If the bridegroom dies before the marriage, his brother takes the bride.
[590] If the bride dies before the marriage or if the betrothed prevents dissolve the betrothal, the portion of the bride price already paid is returned. A bridegroom who is too poor to be able to pay the full price serves the father-in-law for a few months as herder for the remainder owed.

584 If the father of the girl has stubbornly opposed the courtship, he is finally forced to consent by means of a divine judgment. The lover stealthily creeps into the hut of the old man and ties a
[584] rope of grass around the wooden honey pot. The father is said /341/
[584] to give his consent regularly then, since otherwise the punishment
[584] of God would kill him. In place of this custom, it also happens
[591] that the lover secretly takes the girl away, or the latter -- as among the Masai -- flees to him without her parents' knowledge.

587 Wife exchange occurs, but legal marriage does not arise from it. The woman does not remain with the other man for longer than a half to a whole year. If she feels pregnant before this time, she returns to her husband.

• 582 Among the Asá the same marriage obtains held as among the
171 Masai, but the great distances between the individual tiny camps

/241 cont./

582 often necessitate a more lenient interpretation, so that there has
[71] often come about a practice according to which the bridal couple may not be related more closely than the third degree.

585 After the completed paying of the bride price, the bride is handed over to the bridegroom, and the latter either takes her along immediately or leaves her for two or three weeks to learn housekeeping with his mother, so that the latter will instruct her in housekeeping.

[71] There is nothing new to be said about the wedding customs. A jus p. n. /jus primae noctis/ also exists here, and, to be sure, in the same form as among the Masai.

586 Divorce, as among the Masai, comes about if the husband
[71] drives out the wife or if the latter runs away from him. What was said about the possible return of the bride price there also applies. With the divorce all the children remain with the father. The woman keeps the infant only until the end of the nursing period, which she usually spends with her parents, whereupon the father also takes this child to live with him. If a pregnant woman runs away from her husband, he may demand the child, without compensation, after the weaning. Husband and wife may remarry immediately after a divorce, though a woman who is nursing a child is supposed to wait until its weaning. Divorced couples may reinstate the marriage by mutual consent, without any formalities. What was said of the M[illegible]
[587] [71] about the dissolution of a marriage through the death of one par[illegible] and about the remarriage of the other marriage partner applies.

l; Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

Means by which the Dorobo can acquire stock are: (1) By bridewealth: when a Nandi marries a Dorobo girl, her father gets the normal Nandi payment of one cow, one ox, and a varying number of goats. (When a Dorobo man marries a Nandi girl he has to find somehow the same amount of cattle.) (2) By gift exchange: a Nandi makes friends with a Dorobo, mainly to get honey, and after the first step towards friendship has been taken, the Dorobo gives him some. Later the Nandi gives a goat, and the way is thus paved for the exchange of cattle. This exchange is independent of the honey, which is given by the Dorobo from time to time. This process of acquiring cattle is of course a form of payment, but it is purchase under the peculiar conditions of forming a friendship by a previous exchange of gifts, for the Nandi do not readily part with their cattle, and it is necessary to lead up to the final stage by a preparatory exchange of other things. So far the Nandi have been willing to exchange male stock only in this way; to get cows the Dorobo have had to rely on bridewealth. (3) The Nandi will sell goats for cash, but not (at least up to 1939) cattle. The Dorobo do not seem to want sheep; they had none in 1939, nor when I first knew them in 1927.

Inheritance

The general rule is that when a man dies, his goods are kept by his wife for handing over to his children if they are small, or they pass straight to them if grown up. When a man has neither wife nor children, his heirs are his brothers, his father's brothers' sons, or his mother's brothers' sons. Women do not inherit stock. Land rights in the forest pass to the eldest son, or to a brother, or to one of the relatives termed *macokor* (see below, p. 62). Weapons are left to a brother, to a *macokor*, or to a clansman. Dogs are left to sons, or else to a brother or *macokor*. Goats are divided proportionately between sons, or pass to a brother or *macokor*. The proportion is roughly as follows, assuming that a man left seven goats and three sons: to eldest son, three; to second son, two; to youngest son, one; to his wife, one, this and its offspring going eventually to the youngest son. The theoretical division of cattle is approximately thus: to eldest son, two; to other sons, one each; to wife, one, which reverts to the youngest son.

Division of Labour

Everything connected with hunting, bees, and weapons is done by men; domestic work by women. The main occupations are divided thus:

Men:	Women:
Making fire.	Building houses.
Hunting.	Collecting vegetable food.
Trapping.	Getting water and firewood.
Putting meat on to cook.	Looking after meat cooking.
Making honey-barrels.	Cooking other food.
Collecting honey.	Milking when there are cows.
Making weapons.	Making baskets.
Trading with the Nandi.	Preparing skins.
Getting coloured earth.	Making clothes, etc.
Cutting wood.	Care of the children.
Making fences.	Sweeping huts.
Preliminary heavy work in the *imbaret*.	Cultivation, all stages.

Children of both sexes help in weeding and herding stock; girls help with the housework and milking, though boys are allowed to milk till they are circumcised. This division is followed strictly with regard to the first nine male activities; but with the last three there is some overlapping; and the essential domestic work and cultivation are often done by men, especially when they are unmarried or live quite alone.

1; Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

A striking difference between the Dorobo and Nandi systems is that whereas Nandi may not marry any person in the *tiliet*, the Dorobo were insistent that a man might marry his father's sister's daughter's daughter, the girl whom he calls *macokor*, a person definitely in the *tiliet*. This type of marriage does not seem to occur now; but did in the past. Marriage with a wife's sister is considered objectionable.

Behaviour patterns may be summed up in a statement made by a Dorobo that " a man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we are all on terms of friendliness and ' clean fun.' " Generally speaking, seniority is a matter of age, except with respect to the father's brother. Between a man and members of his own generation considerable latitude is allowed; but elders must always be shown respect. Where the claims of relatives are concerned, the amount of contact is important, for even a close relative who lives a long way off and is seldom seen cannot expect and will not receive so much respect as one who lives nearby and is well known. On a husband's part, there should be complete avoidance of his wife's mother, though this may be relaxed by degrees as he gets older; conversation with the wife's father should be limited to greetings.

Pre-marital Sex-life

Owing to the small number of Dorobo and the consequent shortage of women for wives, men have little in the way of pre-marital sex-life; and if a man does manage to acquire a lover, he often marries her.

Bridewealth

This varies according to circumstances, and Dorobo statements about it are conflicting. In 1927 it was said to consist of large quantities of honey-wine and of monkey-skin caps; but in 1939 the standard was one cow (with calf if still suckling), one ox, and four goats. The number of goats varied in the recorded cases from two to six, and in one case the cattle amounted to four oxen. A man also gives his father-in-law presents of honey-wine and a fur cap or two; thus marriage is more of a drain on a man's resources than formerly.

Betrothal

A man chooses his wife himself, and arranges the preliminaries with the girl's father during two visits at which he gives him presents of honey. After the second visit the father calls the clan council together and publicly gives his consent to the marriage.

Marriage

The marriage ceremonies are conducted by an elder known for the time as *patum*, who brings the bride to her future husband's home, where the guests are already assembled feasting. The girl enters the hut in which the ceremony is to take place, and in the presence of witnesses the *patum* gives her to the man, saying, *Keipuncin cicoto*, " you now belong to this man." He then binds some *sekutiet* grass on the man's right wrist, and an old woman binds some of the same on the girl's right wrist. They are now married. The *patum* then sets up an erection of *sekutiet* grass called *tumdo* which is smeared over with cow-dung; this the wife has to knock down and tread upon. After this, the pair are left alone, and the marriage is consummated. Next day the *tumdo* is trodden into the floor and plastered over with cow-dung, for it must not be seen. The pair are then shaved, he by the *patum*, she by the old woman, and the hair is buried in cow-dung under an erection of sticks called *korosiot*, which is set up in great secrecy by the *patum*. It is essential

THE DOROBO OF KIDOŊ (KERIITA)

History

The group described by Lambert as living at Keriita on top of the escarpment, on the edge of the Forest Reserve 10 miles north of Limuru, is that classed as Kidoŋ in *Anthropos* 1951.[1] It was seen by Thomson in 1883 at the place known to the Swahili as Mianzini (" place of bamboos ") where, he says, a Dorobo village was established for selling food bought from the Kikuyu to the Masai and the traders.[2] This group is part of the Kikuyu Dorobo who occupied the land before the Kikuyu came. The process by which the Dorobo had completely lost their land by 1887 when Teleki passed through is summed up by the Kenya Land Commission as one " partly of alliance and partnership and partly of adoption and absorption, partly of payment, and largely of force and chicanery."[3]

Organization

There are no chiefs, control being in the hands of a council of elders, with a leading elder called *kiruokindet*, as among the Kipkurerek. Marriage is patrilocal, and descent patrilineal. Polygyny is permitted. Boys are circumcised, and girls are subjected to clitoridectomy. There appears to be some sort of age-set system, but Lambert's statement is not very clear on this point.

There are said to be nine clans, with Nandi-looking names beginning with the prefix *kap-* (which does not imply territoriality, but simply means " group of "). These clans are sometimes referred to by Masai clan names, or even by Kikuyu clan names. The word for clan is *ol-gilatait*, derived from the Masai *oil-gilata*, " clan," and not, as Lambert suggests, from *ol-gelata*, which means not " plain," but " side path."

Religion

A so-called supreme being called *Tururit*[4] is recognized; and the statement describing ancestral spirits as " active members " of a lineage implies the existence of an ancestor cult.

covered with a strip of soft hide—often that of reedbuck or impala—worked to a state of pliability resembling that of chamois leather. The barb is never coated with poison under any circumstance. 411

A small supply of fresh poison (*ngwane*[1]) is sometimes carried in the heel of the quiver. This poison is a black, sticky mass made by boiling the leaves of a certain tree and is manufactured exclusively by the Wakamba. The Dorobo know nothing about it, hold it in considerable awe, and have never attempted to make poison of their own.[1] [278] [439]

In the quiver is also carried a fire-stick (*Ol-kiriañgeti*) and a fire-block (*sasamda*). The Dorobo are experts at making fire and scorn to use matches. A small flat spoon (*kanuléuandee*) for smearing poison on the arrow-heads is also carried—this spoon is made from the same wood as the bow; and a small knife for smoothing and rounding the arrow-shafts. This knife is called *orueta siléld*.[2] A wooden tube about twelve to eighteen inches long and a quarter of an inch in diameter, not unlike a peashooter, will always be found in a Dorobo quiver. This tube, called *endulee*, is used for drinking from pools which are shallow or which have a dirty, scummy surface. (It is a point of honour with every Dorobo and an unwritten bush law that a man should not stir up the mud in any water at which he drinks.) The *endulee* is also used to induce, by blowing through it, a blaze or clouds of smoke from lighted grass put into a hive to drive the bees away from the honey. 372 410 [577] 207

A Dorobo quiver, as we have seen, contains a large number of objects essential to the bush life that the Dorobo leads. It is scarcely to be wondered at, therefore, that it is next to impossible to purchase a furnished one. A Dorobo once told me (I am sure he meant it) that he would not exchange his quiver and its contents for five oxen. The price habitually paid to the parents of a girl taken in marriage is from two to five arrows, and a demand on the parents' part for a full quiver would be regarded as extortionate. 415 [583]

The Dorobo may be seen sometimes with a small axe which 412

[1] That is, arrow poison. The Dorobo are reputed to have a powerful poison they mix with snuff. When inhaled, it is stated to have a fatal result. I have been unable to obtain a specimen of this poison and doubt its existence. [278]

[2] Literally, "*Small knife.*"

3:Huntingford E-5 (1921-1928)1929 FL6 Dorobo FL6

Names.

Before a child is born, the spirit of an ancestor is called upon, and the child receives the name of that ancestor, which he retains throughout his life.[1] At circumcision, a man becomes Arap (anum), "Son of (So-and-so)," *e.g.* a boy named Kipoo, whose father's name is Kimiñiñg, becomes Kipoo arap (Ki)miniñg, and is known as Arap (Ki)miniñg. Both the masculine and femine names are mostly Nandi.

Circumcision. (Tum,* N.)

The customs connected with circumcision seem to be very similar to those of the Nandi. Boys are circumcised at intervals of about ten years; the ceremony takes place after harvest, about October, when extra food is bought from the Nandi; the actual operation is performed in the early morning. In the case of girls, a circumcision is held when there are sufficient girls in a district of an age to be circumcised; only the clitoris is removed. Circumcision, as among the Nandi, and in ancient Egypt, is a form of initiation into manhood or womanhood, and is preparatory to marriage.

Marriage.

It is usual for Dorôbo to have only one wife, as they are unable to support more. The price of a wife is paid chiefly in honey-wine. Before marriage the suitor gives to the girl's father as much honey-wine "as four women can carry." He also gives the parents honey-wine year by year after marriage, and he must give the father caps (*sambut*, pl. *sambuisiek*) made of the skin of the tisiet monkey (*Cercopithecus albigularis*). Nowadays, if a Dorôbo has any cattle, he sometimes takes a second wife.

Death.

When a Dorôbo dies, his body is taken out into the forest, about 200 to 300 yards from his hut, and left for the hyænas (*kimarokat*) to devour.

Miscellaneous.

When a Dorôbo thanks a person, he spits in the direction of the person, with or without saying "*Kongoi*," N. ("Thanks").

The Dorôbo call each other in the forest by blowing horns of water-buck (*ikondit*, N.).

Salutations:—

(*a*) Of greeting:—To men, "*Sopai*"; answer, "*Cham-ke*" (health). To girls and women, "*Tákwenya*"; answer, "*Igó.*"

(*b*) Of farewell:—"*Saisere*" (good-bye); answer, "*Saisere ok inye*" (good-bye to thee), or, "*Saisere ok okwek*" (good-bye to you).

Except "*Cham-ke*" as the answer to "*Sopai*," these are the same as in Nandi.

[1] The Nandi also give children "spirit-names" (*kainet ap oiik*), which, however, are seldom used.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

on, the suitor goes again to the girl's father with another bag of honey, and makes his request again. After a short time, perhaps two or three weeks, the father calls the clan together, and tells the suitor to attend. To the assembled council, the father says, "Here is my daughter, and here is the man who wants her to be his wife", thereby giving publicly his consent.

Next, the bride-payment is settled. This is not absolutely fixed, but varies slightly according to circumstances. Statements about its nature and amount in the old days are somewhat conflicting. In 1927 I was told it consisted chiefly of honeywine in fairly large quantities, and of monkey-skin caps, a statement probably true of the very old days when few of the forestdwellers had any live stock at all. But since those days, the introduction of even a small amount of live stock has changed the nature of bride-payment. People said in 1939 that in the old days (*keny*) a man had to provide four oxen for slaughtering at the marriage feast as well, but I could find no instance of this. In 1939, the standard bride-payment was one cow, with its calf if still sucking, one ox, and four goats, subject to slight variation according to the circumstances of the father in law; other amounts that I recorded were: 1 cow, 1 ox, 6 goats; 1 cow, 1 ox, 2 goats; 2 cows, 6 goats; 4 oxen and 2 goats. As well as the stock, a man gives his father in law honey wine and one or more fur caps, thus combining the old bride-payment with the new, and making the acquisition of a wife more of a drain on a man's wealth than it used to be.

Payment of the bride cattle need not be made before the marriage ceremony, but the first instalment should be handed over within a few months, and the rest at such intervals as may be agreed upon. If the husband dies before completing payment, his brother takes the widow and completes the payment; in such cases it is not necessary for the pair to go through the marriage ceremony, for the formal acceptance of responsibility by the brother before the clan council legalizes the status of any children she may bear him. If the husband has no brothers, the procedure depends on whether the woman has borne a child or not. If she has not, she returns to her father, and the animals already paid are handed back to the husband's people, and she is free to marry anyone she pleases; if she has had a child, she stays with her husband's group, and some member of the family (who this is, depends upon what men are available) takes charge of her and the child, and completes payment of the bride cattle.

Having settled the matter of bride payment, the suitor has next to arrange for the marriage ceremony. He gets an old man, of any clan, with whom he is on terms of fairly close friendship, to act as master of the ceremonies. This old man is called *Pa-tum* [16] by the bridegroom and *Pa-muai* by the bride. His first job is to collect the friends and clansmen of the pair. They gather round the hut where the ceremony is to take place: this is in the settlement of the suitor's father. On the chosen day, the bride

[16] *Pa-tum* is used also in connexion with circumcision, which is called *Tum*. Though the Nandi word *tum* means primarily „circumcision" (cf. *Luo thumo*, „excise"), in Dorobo it seems to have acquired the meaning of „ceremony".

6:Huntingford E-5 (1938-1939) 1953 FL6 Dorobo FL6

313 *Rerendet* (euphorbia candelabrum) : honey-barrels.
824 *Mocet:* honey-barrels.
Oltamiyoit or *Yemdit* (olive, olea chrysophylla) : fire-wood.
Enyasiek: fire-wood.
Cornet (ficus sp.) : fire-sticks.
Teet (cedar, juniperus procera) : fire-sticks.

824 (B) Plant material. The following trees and plants provide material for food, salt, medicines, and utensils[6] :

[372] *Sasiat* (dry grass) : tinder for making fire with fire-sticks.
[285] † *Tapariet:* fibre for baskets.
Sosiot (phoenix reclinata palm) : fibre for baskets.
[278] † *Tiinet:* medicine.
† *Opeito:* medicine.
Rerendet: medicine.
Lepuyuwet: medicine.
Sitotuet: medicine.
Seketet: medicine.
Usuet (ardisia sp.) : medicine.
[263] *Tepenguet* (aemilia integrifolia) : salt.
Serenguet: salt.
[273] *Rotinuet* or *Rotiot* (kigelia aethiopica) : making honey-wine.

825 (C) Skins and animal products. These include :

237 † Monkey : food ; clothing.
[291] † Antelope : food ; clothing ; bags ; quivers.
[411] Pig-gut : bow-strings.
Feathers : arrows.
† Honey : food ; wine ; ritual purposes.
Ram's fat : ritual purposes.
[583] Goats : bride-payment ; ritual purposes.
Cattle : bride-payment ; milk ; dung ; hides.
[412] Bush-buck : tails for brooms.

285 The basket most commonly made by the Dorobo is the small *kerepet*, about 6 inches deep and 6 ½ inches wide at the top. This kind of basket is used a good deal by the Dorobo themselves, and is also a frequent article [439] of sale or exchange to the Nandi : *kinapci kereponik Nandi*, "we make baskets [461] for the Nandi", as an old woman said. Dorobo women make baskets when they have nothing particular to do, just as European women knit. The materials used are fibre from the midrib of the *sosiot* palm, which is split into thin strips, and bast from a plant called *tapariet* which is used for sewing the coils of fibre with the aid of a small needle (Fig. 1).[2] The basket maker starts by splitting the *sosiot* fibre, preparing a certain length and biting it off as she

[439] [6] Things marked with a dagger † are used in the preparation of objects given to the Nandi in exchange for their products.

[2] [i.e. see category 116 & 617 - ANALYST.]

6:Huntingford E-5 (1938-1939) 1953 FL6 Dorobo FL6

father (if he lives nearby), to his brothers, and lastly, if there is any over, to his clansmen in the settlement; so that a man who gets a pound or so of Nandi tobacco does not keep much of it for himself.

Drink, mainly in the form of honey-wine, is prepared not so much for private consumption as for social gatherings. It is used in various magico-religious performances, and as part of the bride-payment. When a man is visited by a friend or two, he gives them honey-wine; when there is a clan council, honey-wine is drunk; and when men and women meet for a wedding or a naming they drink honey-wine. It is thus an indispensable part of Dorobo social life. When a man wants to relax, he lies down and goes to sleep; but his amusement is composed of social gatherings. Visiting, ceremonials, and clan councils in fact provide him with his entertainment, and conversation and gossip seem to take the place of games and dances. I saw no sign whatever of the game called *kecuiek* by the Nandi, which is played with seeds or pebbles in holes in the ground or in a board, and never heard it mentioned. I neither saw nor heard of a dance, and I never once heard a Dorobo of either sex singing.

The principal standard of wealth is really a man's skill as trapper, hunter, and bee-keeper. But the products of this skill are perishable, and formerly the only way in which tangible wealth could be accumulated was in the form of weapons, honey-barrels, and dogs. Now that the old hunting conditions have gone, it is becoming possible for a man to accumulate wealth to a very limited extent in cattle or goats, which he can get by purchase, gift-exchange, or through bride-payment. The use of money has just become familiar, and a certain number of Dorobo earn wages; but except for one or two who have joined the Police, wages are not high, and the average in 1939 was 7 to 10 shillings a month. So far the Dorobo have had little inducement to work for wages, except that by signing on as squatters for a small wage they can acquire a temporary right to live on what was their own land. Beyond the fact that money enables them to buy a little extra food, our idea of wealth means little or nothing to them, and they have not yet advanced far enough into the transitional stage for it to be anything more than a small supplement to their traditional way of living. It is all that they can do to maintain themselves, let alone accumulate reserves or surplus wealth.

The transitional stage which the Dorobo had reached by 1939 is that from hunting to agriculture, with at the same time a strong desire to acquire cattle. It is sometimes suggested that hunting peoples like the Dorobo are really agriculturalists or pastoralists who have had to give up their agricultural or pastoral way of life and take to hunting. This may be true of some, such as the 'false Dorobo' in parts of Kenya who are merely outlaws and fugitives from various tribes. But it is quite clearly not true of the real Dorobo [1], like those who form the subject of this paper, who are unmistakably non-pastoral and non-agricultural. Their basic hunting tendency is shown by their character and behaviour, by their hunting techniques and skill, by

[1] Cf. my remarks in JRAI 59. 1929. p. 378.

6:Huntingford E-5 (1938-1939) 1953 FL6 Dorobo FL6

they have been stock-owners for too short a time, and on too small a scale to have formulated or developed any cattle customs of their own; they do not think (like the Nandi) in terms of cattle; and their main efforts are at present concentrated on trying to acquire cattle. For the last, three ways are open to them, all slow and laborious: bride-payment, gift exchange, and purchase.

Bride-payment. A Dorobo whose daughter is married to a Nandi receives for her the number of stock that a Nandi would give for a girl of his own tribe, i. e. 1 cow and 1 ox or bull, together with a variable number of goats; and when a Dorobo marries a Nandi woman he has to pay at the same rate. Arap Keter acquired his cattle from the marriages of his three sisters: the eldest, Kapotikuany, was married while his father was still alive, and on the old man's death he inherited the cattle paid for her; the other two, Cesum and Taprandic were married after their father's death, and the cattle for them (amounting in the case of Taprandic to 1 bull, 1 cow, and 5 goats) was paid to Arap Keter.

Gift exchange. Nandi from time to time make friends with Dorobo, chiefly for the purpose of getting honey. The first move after two men have come to regard each other as friends, *cornet*, is for the Dorobo to give the Nandi some honey, without expectation of any immediate return. After a time, the Nandi gives the Dorobo a goat, and thus the way is prepared for the handing over of cattle. Arap Minin became the friend of a Nandi at Ollesos called Kapkile, and eventually got from him an ox in exchange for a fur cloak; and on another occasion he got an ox in exchange for seven goats which he bought with his wages for working on a farm. Arap Korucu in his youth hunted at Kapiyet in Nandi, and shot *tisiet* monkeys, from which he made fur cloaks which he exchanged for cattle. To-day he has five head of cattle which are herded for him by a Nandi named Kipkorir arap Serem on Farm 1479: the Nandi looks after them in return for the use of their milk, Arap Korucu being given a small amount of it. This process of acquiring cattle is, of course, a form of purchase, but it is purchase under the peculiar conditions of forming a friendship by exchange of gifts first. The Nandi do not readily part with their cattle, and it is therefore necessary to lead up to the final stage, as the Dorobo regard it, by the preparatory exchange of other things. And as a method of acquiring cattle it is limited by the fact that the Nandi seem willing to exchange only male stock in this way, so that for female stock the Dorobo have to rely on bride-payment.

Purchase. The Nandi do not sell cattle to the Dorobo except as just described, that is, in the form of bride-payment or by exchange. But they will sell goats for cash. The Dorobo do not seem to care about sheep, for in 1939 none possessed any.

At the time of their move in 1937 the Dorobo were credited officially with a large number of cattle, some 2000 head in fact. But in 1939 the actual numbers that I saw and counted (and I have reason to believe that these were practically all they had) were very much smaller. The following list, while it may not be perhaps completely accurate, gives a truer idea of the real numbers. It will be noticed that there were few goats; some were undoubtedly

9:Hobley G-5 (ca. 1900) 1903 FL6 Dorobo FL6

000 **Africa, East.**

Notes concerning the Eldorobo of Mau, British East Africa.

By C. W. Hobley, Assoc.M.I.C.E., Local Correspondent of the Anthropological Institute.

101 [224] [233] [241] To the east of Nandi country, in the Mau Forest north-east of Mount Tinderet, live a tribe of so-called Eldorobo people, who, like other branches of their race, exist solely by hunting, and possess neither flocks nor herds, neither do they cultivate the soil.

By the Nandi they are called the Oggiek, and they call themselves the Omotik. They have intimate relations with the Eastern Nandi, and generally speak the Nandi language; in fact, numbers of the young Nandi men, for whom the free hunting life has a charm, leave their homes and go and settle among these people for some years, and probably marry Oggiek women. It is thus difficult to discover what is the true aboriginal type of the race. The representatives with whom I have come in contact had, however, redder complexions than the majority of the Nandi, and had very peculiar eyes, which reminded one somewhat of the Mongolian type. In height they averaged 5 feet 9 inches to 5 feet 10 inches.

[6A8] [191] [563] 142

Their marriage customs are very simple: the suitor merely presents the father of the girl with some beer made from the sap of the "mkindu," or wild date palm, and a few monkey-skin cloaks, or "kaross," and takes away his bride.

583

14:Huntingford E-5 (1938-1939)1942
FL6 Dorobo FL6
[P.191,A]

Apart from the rule of exogamy, there are certain other marriage regulations: 614

1. A person may not marry anyone who comes into the *tiliet* or relationship (except F. Sis. D. D.), that is, anyone addressed by a relationship term, or as *oroyon*.
2. A man may not marry his wife's sister because such unions are thought to be sterile. [842]
3. A person may marry into the clan of his or her M., M.M., Br.W., or Sis.H.

Pre-marital intercourse with anyone in the *tiliet* is forbidden; but with a clansfellow condoned, though not approved of. [836]

The shortage of women and the lack of wealth have resulted in the Dorobo being largely monogamous, though if a man has the wealth, he may have more than one wife. The *hedua* (bride-price)[1] is said to have been formerly 4 oxen for slaughtering; today it is 1 cow, 1 ox and 4 goats, which go to the bride's father and become his personal property. This *hedua* is high for a people who own little or no stock, but by means of gift exchange cattle can be obtained from the Nandi (See below, p. 192.) Rarity of divorce is another result of this shortage, and since a wife is something comparatively hard to come by, she is more cherished than is usual among other peoples where women are plentiful. The inability to get wives has produced a tendency to what may be called *mandeis*, that is, unmarried men (some of whom never marry) live entirely alone, and do all their domestic work, as well as hunting and cultivation, without assistance. 596 [556] 583 [131] [648] 586 589

III

ECONOMIC LIFE.

A. Environment.

The home of the Kapchepkendi Dorobo is the western end of the high ground which occupies the country between Eldama Ravine and the Nandi escarpment. The greater part of it is covered with dense forest, and is crossed on the S. W. corner by two parallel paths from Kipkorom in the north to Ndoroton in the south. The forest begins about the 8,000 ft. contour, and to reach it from any side entails a steep climb of 131 [137] [487] 193

[1] On this term, see "Bride-price in antiquity," *MAN*, 1931, 187.

D
K

174 not addicted to the digging-stick, the use of which, Kikuyu husbands
425 thought, was what a wife, apart from bearing more Kikuyu, brewing
682 beer, and being generally a willing slave, was mainly married for.
But he might take her, being satisfied that long before the harvest of her first attempt at growing things was in he would have got more land in lieu of her, and she would be happily at home again. Or he could argue that, her father having failed to provide more land and she refusing steadfastly to stay, the marriage must be deemed a matrilocal one and he be given cultivation rights in her father's land and bring along a relative to do the digging she declined to do. One can imagine endless sophistry along such lines and understand how in the end the slayer's kin would have to yield the only kind of property they had at their disposal that their Kikuyu creditors would deign to take in compensation, that is, virgin land.

[p. 117] Payment in girls

174 Another way in which the Kikuyu have alleged that they acquired
425 Dorobo land is mentioned in the records; this was paying for it, not
583 in goats, but girls. The evidence before the Land Commission gave instances of this, or at least of payments said to have been made in both, partly goats and partly girls. The Kiambu Kikuyu told the 1929 Committee: "Sometimes he (the 'seller') accepted a Kikuyu girl instead of stock in which case he had to stay." They had previously (in 1920) told Colonel Ainsworth much the same. Colonel Watkins in his note of 1920 considered the arrangement similar to that between the Giriama and the Sanya, of which he said:

> "The Wa-Giriama, driven like most immigrants by the desiccation of their former haunts, are drifting to better watered and better timbered areas. They naturally clear ground first where timber is thin, on the outskirts. To the family soon comes a Sanya who through sickness or scarcity, complains of hunger and asks for a goat. This is given on condition he brings in ivory when recovered. Thus trade relations are established, and he becomes a hunter to the agricultural community, on no fixed wage, but friendly and vaguely attached to it. Later on perhaps he builds a hut near and accepts, in trade, girls of the agricultural community (1), possibly in return for permission to clear more

1. But the "Dorobo Committee" of 1929 recorded: "Their social standing (i.e. of the Sanya, Dahalo and Boni) is so inferior that it seems very unlikely that they can be absorbed with either the Galla or the Giriama. Intermarriage between them and either of those tribes is unknown."

of his hunting land."

Mr. A.R. Barlow wrote in 1926:

"Kikuyu girls in some cases were bought in marriage by the Aathi (hunters) who then settled among the Kikuyu. The Aathi having no stock, they surrendered areas of forest to their fathers-in-law as bride-price." (2)

2. Quoted by the 1929 Committee.

This puts the transaction in its proper light: it is incorrect to talk of girls as currency with which to "purchase" land; land, possibly, in default of goats, was currency with which to "purchase" girls. Girls did not merely take the place of goats as currency, although the phraseology of certain witnesses (both white and black) suggests that they did. For instance, girls could not be used in lieu of goats in payment for the lands their fathers or their brothers (according to the Kikuyu story) had arranged to "purchase" from Dorobo who had joined their groups by being made blood-brothers for the purpose of the "sales." That would be tantamount to ritual incest, for each group, including its new members, was exogamous. Or, if there had been reciprocal blood-brotherhood between two groups instead of joint adoption by the parties to the "sale" the marriage would annul the husband's status as a ritual brother of the "buyer's" group (3). But

DK
[[71]]

3. There are forms of so-called blood-brotherhood among some tribes which do not involve exogamy, e.g. the Zande of the Sudan, where it is thought desirable for a man to marry his blood-brother's daughter. But this does not apply to forms in which the blood-brother is "treated as the son of one's own mother."

S:Lambert--90 G-S (ca. 1956-1960) 1960 FL10 Kikuyu FL10
Dorobo FL6
DK 174 425 S83

if we note these limitations there is no great harm in doing as the witnesses have done and speaking of a land-and-marriage deal the wrong way round, for the transaction was in any case reciprocal and girls were certainly alleged to be the medium of exchange in certain instances of acquisition.

(p. 115) The fact that when a girl was taken as the "purchase"-price or part of it the "seller" "had to stay" requires some explanation, for when the payment had been made in grass he nearly always "wandered off" or "moved away." A nomad's life with nothing to the nature of a settled home with gardens of her own to cultivate would not suit the bride, and she would certainly desert her husband if he tried to force the habit on her. No doubt her father would return her once or twice (a costly business if it went on very much longer), but in the end there would be nothing for it but divorce, and that would mean her father's group would have to hand back the wife-deposit, that is land. One can imagine that the angry father would tell his disobedient daughter what he thought of her in no uncertain terms, but native girls, as every native father of a daughter knows (or husband of a wife), can stand a lot of that and show no sign of more submissive conduct. So the only answer to the general problem in the end was that any Dorobo who disposed of land in payment of his wife-deposit "had to stay." This would entail a somewhat curious form of matrimony. All the preliminary negotiations leading up to such a marriage would not differ much from normal patrilocal ones, but the moment it was determined it would become a patri-matrilocal one, the husband staying where his group-in-law—not he himself—would establish their fields and homestead. It would be a patrilocal patri-matrilocal marriage, though possibly exploited matrilineally, by using practices pertaining to a "seller of the sword" as precedent or analogue.

K 174 Possibilities of tribal acquisition

Three long-range possibilities of acquisition of stretches of Dorobo land must have occurred to the imaginative minds of the Kiambu Kikuyu immigrants. There were, first, annihilation of a small and scattered rival; second, expulsion of such as lived in the stretch of land the immigrants wanted to acquire; and third, absorption into the Kikuyu tribe. Having regard to the overwhelming

"sale" in which no girl changed hands should enter the European as bizarre, as being possibly a penny rope for nothing more than fun, the picturesqueness idiomatic of a savage tongue, but lacking actuality or force in function.

In general the exchange, direct or indirect, of men for men or girls for girls is necessary in every tribe in which exogamy is practiced, and in a patrilineal system girls for girls would naturally be or tend to become the rule, and where the spirits of the gens continue themselves with gentile land the patrilineal principle would rule the girls away from home. In the immediately pre-British Ojibwa system in Ishcome girls could be exchanged for stock and stock for stock, and stock for girls, but land could never be exchanged in perpetuity or sold, possibly by reason of its clustering with kindred, dead and living. In the Dandee system girls could be exchanged for ivory and ivory for girls. This took the girls away from home, the Dandee being patrilineal and patrician, but the girl remained a member of her gens; the gentile spirits kept an interest in her, and the marriage bond is not a bond between her and her husband only but between her gens and his; the spirits of the gentes were included in the bond. The groups, inheriting two different kinds of land, were bound together by the marriage rite, which was a continuity-enabling rite binding the living and the dead of both, and so, in a sense, by reason of the land-rite bond, the land of both. The Dandee gave this principle in force to native logic. Land itself could be exchanged for spiritual currency, provided the exchange entailed a sacramental bond. The essence of the bond in land-exchange or marriage was that it bound the living and the dead of both the groups for ever or at least as long as there was visual evidence of it, that is, just so long as what was "purchased" with the currency continued in existence, whether as itself or as its offspring, with the "buying" group. The "buying" group was, in the case of land, as much the "seller" group-in-law as was the group which "bought" their girl for marriage with its son.

"Ojibwa"

All the relationships covered by exchanges in the continuity-enabling rites were continuous and lasted at least as long as the object transferred remained in the "buyer's" hands. The Ojibwa

600 marital relations. -- Polygyny. -- Betrothal. -- State of being betrothed. -- Conversion of the young man to the state of the married. -- Bride price. -- Paying the consent of the father of the bride. -- Exchange of wives. -- Obstacles to marriage. -- Entering into marriage. -- Dissolution of the marriage.

915 The marital relations also offer little that is new. Polygyny exists only to a limited extent; most of the people are too poor to acquire and support more than one wife; only a few have two wives, and if a man has three of them it is a rarity. Betrothal in earliest childhood seems to be more frequent here than among the Ideal, but no more binding and without legal consequences. As a rule after circumcision the youth is betrothed to a girl eight to ten years old, after his father has proposed for him to her parents. As among the Ideal, the /[illegible]/ betrothed persons live apart and may not even see each other. The bridegroom lives with a girl in one camp, and in the other, the bride with another youth. If the bride becomes pregnant before the wedding, dissolution of the betrothal does not always take place, as among the Ideal, but rather the one who made her pregnant must reimburse the bridegroom by the payment of a head of cattle.

Then, just as among the Ideal, the young men of an age class together decide upon their entering the standing of the married, and their fellow companions confirm this intention by a feast corresponding to the ol gumdi [ol ti], to which friends and neighbors participate. They are served gruel and honey beer, the latter of which, however, the marriage candidates may not yet drink. They like to eat then for the day after a successful elephant hunt, so that the guests can feast heartily on meat.

Before marriage can be entered into, the bride price is to be paid. The bridegroom usually gives the father of the bride, even before the circumcision, five pots of honey and five beehives, and, soon after the circumcision, half of a dark female elephant with the calf that belongs to it; furthermore, two head of cattle, which

/540 cont./

583 [439] are bought from the Ideal for ivory, and finally half of the meat of a slain female head of game approximately the size of a zebra. The mother of the bride and each of her brothers receive from the bridegroom a headless spiare. Instead of the headless the parents-in-law in some regions, especially where the Wandomba live in close contact with the Ideal, receive iron wire. After receiving the gifts, the bridegroom and father-in-law reciprocally call each other ka-ganak, bridegroom and mother-in-law ka-ge, bridegroom and the brothers of the bride ka-ndeng, according to ancient Ideal custom.

[540]

583 587 For beauties no higher price is paid. For a childless widow the usual price is paid, but only after the birth of the first child and after her father has returned to the heirs of her deceased husband the price received for her bridewe her first marriage. For a widow who gave birth to girls only, no bride price is paid; however, the heir of her deceased husband keeps her daughters. Likewise nothing is paid for a woman driven out by her husband. If the bridegroom dies before the marriage, his brother takes the bride.

583 [584] If the bride dies before the marriage or if the betrothed parents dissolve the betrothal, the portion of the bride price already paid is returned. A bridegroom who is too poor to be able to pay the full price serves the father-in-law for a few months as bonus for the remainder owed.

584 If the father of the girl has stubbornly opposed the courtship, he is finally forced to consent by means of a divine judgment. The lover stealthily creeps into the hut of the old man and ties a rope of grass around the wooden honey pot. The father is said /541/ [784] to give his consent regularly then, since otherwise the punishment [583] of God would kill him. In place of this custom, it also happens [171] that the lover secretly takes the girl away, or the latter -- as among the Ideal -- flees to him without her parents' knowledge.

837 Wife exchange occurs, but legal marriage does not arise from it. The woman does not remain with the other man for longer than a half to a whole year. If she feels pregnant before this time, she returns to her husband.

582 171 Among the Aak the same marriage obstacles hold as among the Ideal, but the great distances between the individual tiny camps

[illegible]

90.

Interment of the corpse. -- Hereditary succession.

The interment of the corpse differs from the practice customary among the Ibbesi only insofar as the poverty of the dad affects it. They neither hold a funeral feast nor do they anoint the corpse with [illegible]. Wealthy people, i.e., those rich with numerous progeny, are [illegible] buried by women, and, to be sure, in the bush near the hut, so that after death they may hear the conversations of their children and enjoy the fragrance of their meals. All other corpses are simply dragged out of the bush and put down approximately [illegible] paces from it. If the corpse has not already been devoured by hyenas the first night, which, moreover, is said not to happen only rarely, since in reality these carrion-eaters roam about the usually foul-smelling corpse every night, [illegible] then one hears as an offering the recital of the heavy lees, consisting of one particle, beside the corpse. A burial of corpses outside the camp is not customary anywhere. The prayer beside the corpse of a freshly fallen man runs [illegible], [illegible], [illegible] - God, father, give advice, give meat. What one said above about the Ibbesi holds for the remaining.[1]

In the right of succession the same principles hold as among the Ibbesi. The insignificance of the goods left behind, however, often makes a division among those qualified to inherit impossible, and one can therefore very often observe in practice that the eldest son [illegible] of the principal wife receives the entire inheritance consisting of [illegible], women, and [illegible]. The latter form the principal part of the estate and, after the death of a man, are distributed among the sons in the same way as the cattle among the Ibbesi. Just as the latter gives each of his wives a number of cattle to care for and enjoy the use of, the [illegible] brother each of his wives a part of his [illegible], which the son of the wife in question then [illegible]. Widows as a rule join a man of their age class and live with him. Surviving daughters pass into the possession of the eldest son insofar as the [illegible] price is to be paid to him upon their marriage.

1. [See Ibbesi PLS?, 10 Abstract, Ambagory 'Ibb--dissipat.]

423 /NO com./

The individual person does not have an exclusive right to land or to the use of hunting grounds. Rather, both are common property.

229 421 Only one half of any game down to the size of a medium antelope belongs to the hunter and his companions together, while the other half of a male animal is given to the members of his lineage. Those of a female one to the relatives of his wife or wives in both cases insofar as those entitled to receive it live in the immediate vicinity. Of the two tusks (Ugerok, Ngamit) of the elephant each receives half. Recently, the large teeth of the hippopotamus have been shared in the same manner, whereas formerly /NO/ they were left lying, along with the bones. For the horns (Ewoloi, Lwikonyi) of the rhinoceros the hunter must go to exchange points and then distribute them among the people who previously were to share the meat of the animal. The hides of the game belong to the hunter.

All smaller game belongs entirely to the hunter and his companions.

421 Property belongs to the single individual, not to the family community. A lost article is returned to the owner, without the finder's

425 claiming a reward. There is no punishment for the appropriation of found articles.

43 There is no general medium of exchange. Money has not yet been adopted anywhere. Goods are always exchanged for goods. For ivory the caravan people pay cattle, goats, sheep, iron wire, beads, fabrics. In the individual barter connection the Wandorobbo never want one kind of goods alone, but always several, and of the heaviest ones as many different kinds as possible. The exchange takes place with immediate delivery and is made valid by spitting on the objects. Only exceptionally is a brief delay granted for a

432 small part of the payment. The creditor seeks to have himself paid by a dilatory debtor through self-help, and only if he has no success with that does he make a complaint. It not infrequently happens

• 434 that the creditor takes a small daughter of the debtor as security, and a marriageable one as a wife; in the latter instance, he delivers the

436 animal of the debt from the bride price. The debtor's heir is liable, and, so he says, for the entire debt. With the debtor's inability to pay, the successor is liable. If — which is seldom the case — one is present at all. The heir of the successor is also liable.

A striking difference between the Dorobo and Nandi systems is that whereas Nandi may not marry any person in the clan, the Dorobo were insistent that a man might marry his father's sister's daughter's daughter, the girl whom he calls *mwenkor*, a person definitely in the clan. This type of marriage does not seem to occur now, but did in the past. Marriage with a wife's sister is considered objectionable.

Behaviour patterns may be summed up in a statement made by a Dorobo that "a man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we are all on terms of friendliness and 'chest bon.'" Generally speaking, seniority is a matter of age, except with respect to the father's brother. Between a man and members of his own generation considerable latitude is allowed; but elders must always be shown respect. Where the claims of relatives are concerned, the amount of contact is important, for even a close relative who lives a long way off and is seldom seen cannot expect and will not receive as much respect as one who lives nearby and is well known. On a husband's part, there should be complete avoidance of his wife's mother, though this may be relaxed by degrees as he gets older; conversation with the wife's father should be limited to greetings.

Pre-marital Sex-life

Owing to the small number of Dorobo and the consequent shortage of women for wives, men have little in the way of pre-marital sex-life; and if a man does manage to acquire a lover, he often marries her.

Bridewealth

This varies according to circumstances, and Dorobo statements about it are conflicting. In 1927 it was said to consist of large quantities of honey-wine and of monkey-skin caps; but in 1930 the standard was one cow (with calf if still suckling), one ox, and four goats. The number of goats varied in the recorded cases from two to six, and in one case the cattle amounted to four cows. A man who gives his father-in-law gourds of honey-wine and a fur cap or two, does marriage is more of a drain on a man's resources than formerly.

Betrothal

A man chooses his wife himself, and arranges the preliminaries with the girl's father during two visits at which he gives him gourds of honey. After the second visit the father calls the clan council together and publicly gives his consent to the marriage.

Marriage

The marriage ceremonies are conducted by an elder known for the time as *poiton*, who brings the bride to her future husband's home, where the guests are already assembled feasting. The girl enters the hut in which the ceremony is to take place, and in the presence of witnesses the *poiton* gives her to the male, saying, *Kaipenete ninte*, "you now belong to this man." He then binds some ochred grass on the man's right wrist, and an old woman binds some of the same on the girl's right wrist. They are now married. The *poiton* then sets up an erection of ochred grass called *tendo* which is smeared over with cow-dung; for the wife has to touch down and stand upon. After this, the pair are left alone, and the marriage is consummated. Next day the *tendo* is trodden into the floor and plastered over with cow-dung, for it must not be seen. The pair are then shaved, by the *poiton*, also by the old women, and the hair is buried in cow-dung under an erection of sticks called *kwonion*, which is set up in great secrecy by the *poiton*. It is essential

881 them complete adult members of the horde, and no male could get a wife if he was uncircumcised; but it is possible for an uninitiated girl to get married, though few in fact are married without being circumcised.

2. Pre-marital sex-life

836 [885] Having attained manhood through circumcision, the Dorobo is free, subject to the restrictions inevitably imposed by a small population, to enter into legitimate sex-life. But unmarried men often have to go without a great deal of sexual experience before they marry, and some in fact never [589] marry at all because of the shortage of women. Even in the old days few girls were available, and there were only married women with whom they could not consort unless prepared to be shot by injured husbands if found out. This state of affairs has led to some men living alone and unmarried, 589 helped in their household tasks by women of the settlement. Some even did everything for themselves. The shortage of women, and the shyness of the Dorobo has resulted in a definite habit sufficiently in evidence to justify the application of a special term, for which I suggest the word *monosis*. And it is to be noted that the Dorobo have accepted the condition of *monosis* as something quite natural, whereas by many other peoples the unmarried state in a grown man is considered unnatural.

836 Young Dorobo to whom life without love does not appeal therefore wander about a good deal, going to places where they know there are girls, or women with whom they can have surreptitious affairs, such women often being the wives of age-mates, for although this is not openly allowed, a [837] woman will sometimes, when her husband is away, oblige one of his age-mates and say nothing about it. In favourable circumstances, however, when there are girls available, unmarried circumcised men build small huts called *sikiriaat* close to their fathers' huts, where they may sleep with uncircumcised girls, each man choosing a girl and associating with her till she is married. A Dorobo, unlike the Nandi, often marries his premarital [824] lover. Uncircumcised boys caught by the men playing with girls who are sexually mature are beaten, for love affairs are the privilege of manhood.

3. Marriage

584 Dorobo generally marry women of an age fairly near their own, and do not by preference marry women very much younger than themselves.

●584 A man chooses his wife for himself, and himself makes the preliminary arrangements. After making his choice, he takes the first step, by "going the journey" (*wendi keito*), to the hut of the girl's parents, or if they are dead, of a responsible relative, and hands over a large bag of honey, saying, "I want your daughter", to which the father answers, "Very well, take her presently". This ready acquiescence is due to the fact that the father already knows what is going on, for the suitor has been making enquiries about the girl, and such things always reach the ears of those concerned. Later

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

on, the suitor goes again to the girl's father with another bag of honey, and makes his request again. After a short time, perhaps two or three weeks, the father calls the clan together, and tells the suitor to attend. To the assembled council, the father says, "Here is my daughter, and here is the man who wants her to be his wife", thereby giving publicly his consent.

Next, the bride-payment is settled. This is not absolutely fixed, but varies slightly according to circumstances. Statements about its nature and amount in the old days are somewhat conflicting. In 1927 I was told it consisted chiefly of honeywine in fairly large quantities, and of monkey-skin caps, a statement probably true of the very old days when few of the forestdwellers had any live stock at all. But since those days, the introduction of even a small amount of live stock has changed the nature of bride-payment. People said in 1939 that in the old days (*keny*) a man had to provide four oxen for slaughtering at the marriage feast as well, but I could find no instance of this. In 1939, the standard bride-payment was one cow, with its calf if still sucking, one ox, and four goats, subject to slight variation according to the circumstances of the father in law; other amounts that I recorded were: 1 cow, 1 ox, 6 goats; 1 cow, 1 ox, 2 goats; 2 cows, 6 goats; 4 oxen and 2 goats. As well as the stock, a man gives his father in law honey wine and one or more fur caps, thus combining the old bride-payment with the new, and making the acquisition of a wife more of a drain on a man's wealth than it used to be.

Payment of the bride cattle need not be made before the marriage ceremony, but the first instalment should be handed over within a few months, and the rest at such intervals as may be agreed upon. If the husband dies before completing payment, his brother takes the widow and completes the payment; in such cases it is not necessary for the pair to go through the marriage ceremony, for the formal acceptance of responsibility by the brother before the clan council legalizes the status of any children she may bear him. If the husband has no brothers, the procedure depends on whether the woman has borne a child or not. If she has not, she returns to her father, and the animals already paid are handed back to the husband's people, and she is free to marry anyone she pleases; if she has had a child, she stays with her husband's group, and some member of the family (who this is, depends upon what men are available) takes charge of her and the child, and completes payment of the bride cattle.

Having settled the matter of bride payment, the suitor has next to arrange for the marriage ceremony. He gets an old man, of any clan, with whom he is on terms of fairly close friendship, to act as master of the ceremonies. This old man is called *Pa-tum* [*] by the bridegroom and *Pa-musi* by the bride. His first job is to collect the friends and classmen of the pair. They gather round the hut where the ceremony is to take place: this is in the settlement of the suitor's father. On the chosen day, the bride

[*] *Pa-tum* is used also in connexion with circumcision, which is called *Tum*. Though the Nandi word *tum* means primarily „circumcision" (cf. *Lu-tumo*, „razor"), in Dorobo it seems to have acquired the meaning of „ceremony".

7: Wayland N-5 (ca. 1926) 1931 FL6 Dorobo FL6

Social Organization.—The Tribe.—The Wanderobo are very few in number, and are divided among three sections, each of which has its own habitat as follows (according to the Chief, who was my informant on this point):— 631 618

Section.	Habitat.	Approximate Numbers.
Kokuoro	Kokuoga	40
Ulugum	Maumugum	60
Luteren	Luturiu	40

Each section lives in a single village of its own, similar in structure to that already described. The sections are not totemic, but they are exogamous, and descent is in the male line. The tribe has but one chief, who lives at Kokuoga (north of Kameon). Chieftainship is hereditary, and no woman is ever permitted to wield the powers of a chief. The Ulugum and the Luteren are each presided over by a headman (paterfamilias). 643 622

Birth.—When a child is born the mother is assisted by female relations. There are no official *deliveries*, as among the Lalwor. The Wanderobo allege that there are no special ceremonies connected with birth. Should a child come feet foremost into the world he will be lucky throughout life. It is stated that the afterbirth is thrown away with the rubbish. After weaning, a child occupies his father's hut, if a boy, and her mother's if a girl. 844 858

Betrothal and Marriage.—The rules for betrothal seem to be very similar to those usual among the Lalwor, except that the prospective husband goes to the girl's people direct, without representation in the first instance. The consent of the girl and of the parents on both sides is necessary, and the number of gifts is not specified as it is among the Lalwor. 584

Marriage is celebrated by a feast in which the people of the two sections to which the contracting parties belong take part. There is no dance peculiar to the marriage feast. After marriage a man lives for two days and nights in the hut of his betrothed, after which she returns with him to his own village, there to occupy a new hut already built for the newly married couple by the male partner, after he has consulted the wizard with regard to the luckiest time for erecting it. 585 591 342

Burial.—All the dead are buried without special ceremony.[1] There is no special burial ground, but graves are dug "out in the bush," well away from the village. 764

Age Classes.—These appear to be quite unknown. 561

Crime and Punishment.—The chief offence is adultery. This, however, is a private affair, and is dealt with privately, for it is not a sin against the community. A woman who is guilty in respect of this is cast out by her husband, who seeks the offending man with a view to slaying him. Murder is, however, a tribal affair, for which the punishment is death. The Lalwor practice in this respect is not followed. 684 682

[1] This statement was subsequently contradicted, in so far as it was stated that the wizard attends at all burials.

l: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

A striking difference between the Dorobo and Nandi systems is that whereas Nandi may not marry any person in the *ališet*, the Dorobo were insistent that a man might marry his father's sister's daughter's daughter, the girl whom he calls *masokor*, a person definitely in the *ališet*. This type of marriage does not seem to occur now; but did in the past. Marriage with a wife's sister is considered objectionable.

Behaviour patterns may be summed up in a statement made by a Dorobo that "a man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we are all on terms of friendliness and 'clean fun.'" Generally speaking, seniority is a matter of age, except with respect to the father's brother. Between a man and members of his own generation considerable latitude is allowed; but elders must always be shown respect. Where the claims of relatives are concerned, the amount of contact is important, for even a close relative who lives a long way off and is seldom seen cannot expect and will not receive so much respect as one who lives nearby and is well known. On a husband's part, there should be complete avoidance of his wife's mother, though this may be relaxed by degrees as he gets older; conversation with the wife's father should be limited to greetings.

Pre-marital Sex-life

Owing to the small number of Dorobo and the consequent shortage of women for wives, men have little in the way of pre-marital sex-life; and if a man does manage to acquire a lover, he often marries her.

Bridewealth

This varies according to circumstances, and Dorobo statements about it are conflicting. In 1927 it was said to consist of large quantities of honey-wine and of monkey-skin caps; but in 1930 the standard was one cow (with calf if still suckling), one ox, and four goats. The number of goats varied in the recorded cases from two to six, and in one case the cattle amounted to four cows. A man also gives his father-in-law presents of honey-wine and a fur cap or two; thus marriage is more of a drain on a man's resources than formerly.

Betrothal

A man chooses his wife himself, and arranges the preliminaries with the girl's father during two visits at which he gives him presents of honey. After the second visit the father calls the clan council together and publicly gives his consent to the marriage.

Marriage

The marriage ceremonies are conducted by an elder known for the time as *paiuon*, who brings the bride to her future husband's home, where the guests are already assembled feasting. The girl enters the hut in which the ceremony is to take place, and in the presence of witnesses the *paiuon* gives her to the man, saying, *Kaipuecie ciuoio*, "you now belong to this man." He then binds some *sebeliet* grass on the man's right wrist, and an old woman binds some of the same on the girl's right wrist. They are now married. The *paiuon* then sets up an erection of *sebeliet* grass called *tumdo* which is smeared over with cow-dung; this the wife has to knock down and tread upon. After this, the pair are left alone, and the marriage is consummated. Next day the *tumdo* is trodden into the floor and plastered over with cow-dung, for it must not be seen. The pair are then shaved, he by the *paiuon*, she by the old woman, and the hair is buried in cow-dung under an erection of sticks called *kowoiet*, which is set up in great secrecy by the *paiuon*. It is essential

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

585 [237] [591] that cow-dung be used for both the *tumdo* and *koruiot*, and if there are no cattle in the bridegroom's settlement it must be procured from somewhere else. Marriage is patrilocal.

Marriage with Nandi

582 [248] Eighteen marriages were recorded in genealogies between Dorobo and Nandi or members of the Nandi group:

Dorobo and Nandi women: 8	Dorobo and Nandi men: 10
Dorobo and Keyo women: 1	Dorobo and Keyo men: 1
Dorobo and Turik women: 1	

Marriage of Dorobo women to outsiders seems to be due to the poverty of the Dorobo, which in these cases would have meant that the women would have remained unmarried; such marriages also mean the accession of stock to the Dorobo.

Polygyny

595 [587] Although there is no objection to polygyny, Dorobo seldom have the means of acquiring more than one wife at a time, though several cases occurred of re-marriage after a wife's death or desertion. In one genealogy a woman had no less than four successive husbands, none of them her husband's brother, and her only issue was one daughter.

Re-marriage of Widows

587 Unlike the Nandi, the Dorobo recognize the re-marriage of widows in the normal manner on payment of bridewealth to their fathers, brothers, or other representatives; it is, however, unusual. Widows normally live with their husband's brothers, return to their parents, or else live alone.

Divorce

586 Divorce is rare, and is of one kind only—permanent. The husband can claim the return of the bridewealth. But a wife who has borne a child cannot be divorced for any cause whatsoever.

Birth

843 [834] 844 846 852 845 [824] Intercourse between husband and wife stops at the fourth or fifth month of pregnancy, and is not resumed till the child is about six months old. Birth takes place in the husband's hut, the husband going to live elsewhere nearby. The wife is attended by a midwife, *apaiyoyoit*, and her mother is present if possible. She stays in the hut for six or seven days after the birth, and the child's body must be kept covered for several weeks, even the father being allowed to see only its face. The mother must be purified by her husband, who kills a goat (which he must acquire somehow if he has none of his own) and rubs the fat and undigested grass (*siyat*) from the stomach on her face, breasts, and belly. Children are weaned at the age of about a year. Twins are not liked, and the mother's ritual uncleanness caused by their birth must be removed by the killing of a goat which is eaten by the mother and her women friends. The Dorobo say that if a man has set a trap at the time when his wife bears twins, the trap will never again catch an animal.

753 [916] [802] Children receive their first name, the spirit-name, soon after birth; as among the Nandi, this name is not used, but links the child with a protecting spirit. The second or principal name is given before the child can walk, at the time when it is first given solid food, and is called "porridge name" in imitation of the Nandi custom. Children may also be given nicknames which often refer to some physical peculiarity. After circumcision, boys become *kwap*, men of, eldest sons taking their

4:Huntingford E-5 (1938-1939) 1951 FLÁ Dorobo FLÁ

on, the suitor goes again to the girl's father with another bag of honey, and makes his request again. After a short time, perhaps two or three weeks, the father calls the clan together, and tells the suitor to attend. To the assembled council, the father says, "Here is my daughter, and here is the man who wants her to be his wife", thereby giving publicly his consent.

Next, the bride-payment is settled. This is not absolutely fixed, but varies slightly according to circumstances. Statements about its nature and amount in the old days are somewhat conflicting. In 1927 I was told it consisted chiefly of honeywine in fairly large quantities, and of monkey-skin caps, a statement probably true of the very old days when few of the forestdwellers had any live stock at all. But since those days, the introduction of even a small amount of live stock has changed the nature of bride-payment. People said in 1939 that in the old days (*dowɔ*) a man had to provide four oxen for slaughtering at the marriage feast as well, but I could find no instance of this. In 1939, the standard bride-payment was one cow, with its calf if still sucking, one ox, and four goats, subject to slight variation according to the circumstances of the father in law; other amounts that I recorded were: 1 cow, 1 ox, 6 goats; 1 cow, 1 ox, 2 goats; 2 cows, 6 goats; 4 oxen and 2 goats. As well as the stock, a man gives his father in law honey wine and one or more fur caps, thus combining the old bride-payment with the new, and making the acquisition of a wife more of a drain on a man's wealth than it used to be.

Payment of the bride cattle need not be made before the marriage ceremony, but the first instalment should be handed over within a few months, and the rest at such intervals as may be agreed upon. If the husband dies before completing payment, his brother takes the widow and completes the payment; in such cases it is not necessary for the pair to go through the marriage ceremony, for the formal acceptance of responsibility by the brother before the clan council legalises the status of any children she may bear him. If the husband has no brothers, the procedure depends on whether the woman has borne a child or not. If she has not, she returns to her father, and the animals already paid are handed back to the husband's people, and she is free to marry anyone she pleases; if she has had a child, she stays with her husband's group, and some member of the family (who this is, depends upon what men are available) takes charge of her and the child, and completes payment of the bride cattle.

Having settled the matter of bride payment, the suitor has next to arrange for the marriage ceremony. He gets an old man, of any clan, with whom he is on terms of fairly close friendship, to act as master of the ceremonies. This old man is called *Fa-tawa*[*] by the bridegroom and *Fa-mani* by the bride. His first job is to collect the friends and classmates of the pair. They gather round the hut where the ceremony is to take place; this is in the settlement of the suitor's father. On the chosen day, the bride

[*] *Fa-tawa* is used also in connection with circumcision, which is called *Tawa*. Though the Nandi word *tawa* means primarily „circumcision" (cf. *Lau tkwon*, „mother"), in Dorobo it seems to have acquired the meaning of „ceremony".

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

585 is dressed and oiled during the morning at her own home by the old women of her family and settlement. When she is ready the bridegroom's mother and the *Pa-tum* come for her, accompanied by a small boy or girl known as the *mistoi* or "herdsman", who acts as page or bridesmaid. It does not matter whether the *mistoi* is a boy or girl: the choice depends entirely upon who is available. The function of the *mistoi* is obscure; he or she merely walks with the bridal party, doing no specific duty. The bride is led to the bridegroom's place, where the guests are assembled drinking the beer and eating the food which has previously been prepared by the bridegroom's family. By now it is evening, and the bride on her arrival is called, together with the groom, by the *Pa-tum* to the hut where the ceremony is to take place. In this hut, in the presence of some old men, the *Pa-tum* says to the bride, *Koipuncia cicuto, maiowuti* ("you belong to this man, do not go from him"). The old men then leave, and when they are alone the *Pa-tum* binds a bracelet of *sokoiot* grass (*lpurukuta*) on the bridegroom's right wrist, while an old woman of the girl's clan binds a similar bracelet on the girl's right wrist. This act and the words *'koipuncia'*, etc. constitute the essential part of the ceremony, for they bind the woman to her husband. After this, an erection of grass called *tumdo* is set up in the middle of the hut by the *Pa-tum*. It consists of a bundle of *sokoiot* grass tied together and set up in a hole in the floor, having been made in secrecy beforehand by the *Pa-tum* and the old woman who assists him. The *Pa-tum* makes a hole in the floor with a pointed stick and lines the hole with dung. The bundle of grass is then stood upright in it and the hole is plastered over with a small mound of dung, and dung is also smeared all over it so that the grasses stick together; the dung must be cow-dung. When it is ready, the husband says to his wife, *Nyoo tin*, "come and tread on it". She does so, whereupon the *Pa-tum* sets it up again, and the action is then repeated three more times, after which it is left lying on the ground and remains there all night, while the newly married couple consummate the marriage beside it. The *tumdo* seems to be a fertility symbol, erectile phallic, and is perhaps left on the floor during the first marriage-act to ensure a fertile union. In the morning it is trodden well into floor and dung is plastered over so that it cannot be seen. It is particularly important that children should not see it. Next day the pair are shaved, by the *Pa-tum*, also by the old woman, and the hair is buried under an erection called *kerenisi*, which is made by the *Pa-tum* of five or six sticks about 5 feet long cut from *olawiyuti* (olive), *ceptai'yat*, or *mamita* trees, and tied together at the bottom with liana and set upright in a hole in the ground somewhere in the forest or in thick bush. The hair is placed against the liana binding, and a small mound of cow-dung is made over it. The *kerenisi* is then left untended till it falls down. No children or unmarried people may see it, and it is made with the utmost secrecy by the *Pa-tum*, none but he knowing where it has been set up, in order to prevent the hair from getting into the hands of a witch. The use of cow-dung is essential for both *tumdo* and *kerenisi*, and if there are no cattle in the bridegroom's settlement, somebody must go beforehand and bring some in.

7: Wayland N-5 (ca. 1926) 1931 FL6 Dorobo FL6

Social Organization.—The Tribe.—The Wanderobo are very few in number, and are divided among three sections, each of which has its own habitat a follows (according to the Chief, who was my informant on this point):— 631 618

Section.	Habitat.	Approximate Numbers.
Eshesenge	Eshesenge	40
Chepon	Kamagambo	40
Lutecho	Lutecho	40

Each section lives in a single village of its own, similar in structure to that already described. The sections are not intimate, but they are congenerous, and descent is in the male line. The tribe has but one chief, who lives at Eshesenge (north of Kisumu). Chiefainship is hereditary, and no woman is ever permitted to wield the powers of a chief. To Chepon and the Lutecho 643 622 are each provided over by a headman (*gutelkuliet*).

Birth.—When a child is born the mother is assisted by some relations. There are no 844 official deliverers, as among the Luhyia. The Wanderobo allege that there are no special ceremonies connected with birth. Should a child come feet foremost into the world he will be lucky throughout life. It is stated that the afterbirth is thrown away with the rubbish. After weaning, a child recognizes his father's hut, if a boy, and her mother's if a girl. 858

Betrothal and Marriage.—The rules for betrothal seem to be very similar to those usual 584 among the Luhyia, except that the prospective husband goes to Orgut's people direct, without representatives in the first instance. The consent of the girl and of the parents on both sides is necessary, and the number of gifts is not specified as it is among the Luhyia.

Marriage is celebrated by a feast in which the people of three sections to which the 585 ● contracting parties belong take part. There is no dance peculiar to the marriage feast. After 591 marriage a man lives for two days and nights in the hut of his betrothed, after which she returns with him to his own village, there to occupy a new hut already built for the newly married 392 couple by the male partner, after he has consulted the wizard with regard to the luckiest time for erecting it.

Burial.—All the dead are buried without special ceremony.* There is no special burial 764 ground, but graves are dug "out in the bush," well away from the village.

Age Classes.—These appear to be quite unknown. 561

Crime and Punishment.—The chief offence is adultery. This, however, is a private affair, 684 and is dealt with privately, for it is not a sin against the community. A woman who is guilty in respect of this is cast out by her husband, who seeks the offending man with a view to slaying him. Murder is, however, a tribal affair, for which the punishment is death. The Luhyia 682 practice in this respect is not followed.

* This statement was subsequently contradicted, to a far as it was true that the wizard attends at all births.

/241 cont./

582 (971) often necessitate a more lenient interpretation, so that there has often come about a practice according to which the bridal couple may not be related more closely than the third degree.

• 585 After the completed paying of the bride price, the bride is handed over to the bridegroom, and the latter either takes her along immediately or leaves her for two or three weeks to learn housekeeping with his mother, so that the latter will instruct her in housekeeping.

(971) There is nothing new to be said about the wedding customs. A jus p. n. /jus primae noctis/ also exists here, and, to be sure, in the same form as among the Masai.

586 (971) Divorce, as among the Masai, comes about if the husband drives out the wife or if the latter runs away from him. What was said about the possible return of the bride price there also applies. With the divorce all the children remain with the father. The woman keeps the infant only until the end of the nursing period, which she usually spends with her parents, whereupon the father also takes this child to live with him. If a pregnant woman runs away from her husband, he may demand the child, without compensation, after the weaning. Husband and wife may remarry immediately after a divorce, though a woman who is nursing a child is supposed to wait until its weaning. Divorced couples may reinstate the marriage by mutual consent, without any formalities. What was said of the Masai about the dissolution of a marriage through the death of one partner and about the remarriage of the other marriage partner applies.

587 (971)

[illegible]

[illegible]

[illegible]

payment and a man has but few shells) have induced a real affection of husband for wife, and a cavity of divorce. This is reflected in the husband's behaviour to his wife, and in the absence of the custom found among the Iatmul of betting a wife away with a visiting agreement. A wife being a scarce and very valuable property, a man tends to do all he can to keep her, and to make her well, with such kindness and consideration as one to display to an inferior, giving her all the inducements to a contented life that are within his power. Although a man may be somewhat afraid of her as a boss, the general attitude and behaviour to his wife form a good example for the sons to copy.

Children then grow up under the authority of two people who are more important to them than anyone else in the family, their father and mother. The father has authority over the wife because he provides food for her and her children by his own skill, and a primitive woman cannot exist without the support of a man. In the old days a bad wife had continually to go if her husband brought himself to the pitch of throwing her, except back to her parents, who would not welcome an extra mouth to feed. Over his children a man has that authority which is based on the respect felt for a person whose duty it is to discipline. Incidents of the kind that I saw one day at the home of a man named Lawaiiß are not uncommon. A child was pulling kernels from her hair. Tigwaiiß the mother told it to be quiet. It merely pulled harder. Lawaiiß then said quietly but firmly, the behaviour (he said), and it was silent immediately.

As Driver-Farnham has pointed out, the behaviour of father to mother must influence the attitude of a son to his mother[1]. It is the mother and other women who look after a child till nearly the age of puberty, and he stays on in the past, though the father is no longer wholly occupied in hunting and therefore much more at home, the traditional pattern still holds good. I have more than once seen a man left in charge of his small children while his mother was away and treating them in the busy way of one that one would expect of a man not very sure of the ground — sure of his authority, which was not being called in question, but not at all sure of his ability to deal with children problems which the mother or her sisters see arise at once. It is the mother who gives the children immediate comfort and protection; she it is who teaches them the elementary rules of conduct and decency, who improves upon them that they meet they father, because he is father, and who sees that as they grow older they help her with such small tasks as they are enough. It is to their mother that children run when hurt or frightened, and it is by her that they are moved when ill. She thus has a large share in their affection, but this could be reduced if they saw her disrespectfully treated by their father. In the child, the state is reinforced among the Iatmul by the way men treat their wives. And in old age a mother is taken care of by her sons, and whereas she brought him up in his infancy, so now in her old age she

[1] Man, 1929, 119.

Adoption is also practised when an unmarried girl has a baby. In such cases it may be adopted by a childless couple, i.e. who have lost their children, or whose children have grown up and left them, but usually (as the case considered above is unusual) the former. An adopted child has the status of a man's own child. Adoption may in certain cases be by previous arrangement. It has happened, I was told, that a person who has cattle or means of getting milk may hear that a certain girl has got pregnant, and gives notice that he will adopt the child when it comes. The mother of the girl accordingly tells him when the girl "enters the hut", and the adopter's wife fetches the baby to her own home as soon as it is born. She feeds it with milk from a small horn, and the Dorobo reckon that such babies will do all right, for they say, "such a child need not suck for very long". Illegitimate children are killed if nobody can be found to adopt them.

5. Adultery and divorce

Adultery may be punished by a husband who catches his wife with another man, by shooting the male offender with an arrow. If he kills him, he has to pay the normal compensation for homicide. He may also beat his wife, after which he "washes till she has got over", as they put it, when he buys a goat for her, which they eat together. A man does not divorce his wife for a single act of adultery, but only if she is a bad and neglectful wife who is continually caught with other men.

When a man has, after much thought, made up his mind to divorce his wife, he calls in one of his relatives to help him perform the divorce ceremony. Taking a piece of lava, he rubs earth on it and gives one end to his relative to hold, taking the other end himself, the wife being present and looking on. They then break the lava in two, the man saying to his wife, *Kumi kakoroset kwa kit yaroset*, or in, *pukuliton* ("I have broken our marriage as this lava has been broken: go home and leave me"). He can then claim the return of the live stock which he paid to her father. But only a woman who has not borne her husband a child can be divorced; once there has been a child, no divorce is possible, for the birth of a child completes the union, which once completed is indissoluble.

6. Polygyny

In theory a Dorobo can have as many wives as he can pay for, which means that usually a man has but one wife at a time. Polygyny may therefore be said to be non-existent. The only thing that does occur is the occasional re-marriage of a man after the death or desertion of his wife, of which I recorded three cases. Widows, again, seldom re-marry, living normally either with their husbands' brothers, returning to their parents, or even living alone. In one genealogy, however, I found a woman who was married to four successive husbands, none of whom was her husband's brother, and having as issue but one daughter. The Dorobo themselves remarked upon this succession of marriages as being a most unusual occurrence.

[P 191, A]

Apart from the rule of exogamy, there are certain other marriage regulations:

1. A person may not marry anyone who comes into the affinal or relationship [illegible] relationship terms, or an orphan.
2. A man may not marry his wife's sister because such unions are thought to be sterile.
3. A person may marry into the clan of his or her M., M.M., B.W., or Un.H.

Pre-marital intercourse with anyone in the affinal is forbidden; but with a classificatory sweetheart, though not approved of, [illegible]

The shortage of women and the lack of wealth have resulted in the Dorobo being largely monogamous, though if a man has the wealth, he may have more than one wife. The [illegible] price is said to have been formerly 4 cows for slaughtering; today it is 1 cow, 1 ox and 4 goats, which go to the bride's father and become his personal property. This [illegible] is high for people who own little or no stock, but by means of gift exchange cattle can be obtained from the Masai (See below, p. 192.) Rarity of divorce is another result of this shortage, and since a wife is something comparatively hard to come by, she is more cherished than in most agricultural peoples where women are plentiful. The inability to get wives has produced a tendency to what may be called [illegible], that is, unmarried men (some of whom never marry) live entirely alone, and do all their domestic work, as well as hunting and cultivation, without assistance.

III

ECONOMIC LIFE.

A. Environment.

The home of the Kapchepkendi Dorobo is the western end of the high ground which occupies the country between Elgon Nyiro and the Masai escarpment. The greater part of it is covered with dense forest, and is crossed on the S. W. corner by two parallel paths from Kipkoreon in the north to Nikowau in the south. The forest begins about the 8,000 ft. contour, and as much it from any side entails a steep climb of [illegible] ft.

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

...that one thing he said for both the hands and females, and it does not as cattle in the Commissioner's settlement to grant he promised them restrictions also. Sayings of goodness.

Sayings with Youth

Eighteen sayings were recorded in gossiping between Chenbo and Youth or members of the Youth group:

Chenbo and Youth women: 8 Chenbo and Youth women: 1 Chenbo and Youth women: 1	Chenbo and Youth men: 10 Chenbo and Youth men: 10

Sayings of Chenbo women to outsiders were to the to the poverty of the Chenbo, which by these same would have report that the women would have considered an excellent, such sayings who were the existence of work to the Chenbo.

Polygamy

Although there is no objection to polygamy, Chenbo seldom have the means of supporting more than one wife at a time. Ningpo proved more successful of re-sayings with a wife's death or desertion. In one gossipings a women had as few than five secondary husbands, some of these her husband's brothers, and her only there was one daughter.

Re-sayings of Widows

Unlike the Youth, the Chenbo recognize the re-sayings of widows to the normal manner as members of households to their sisters, brothers, or other representatives, in a domestic manner. Widows normally live with their husband's brothers, wives to their parents, or else live alone.

Divorce

Divorce is rare, and is of one kind only: consensual. The husband may divide the wives of his brothers. But a wife who has been a child cannot be divorced for any cause whatsoever.

Sons

Intercourse between husband and wife ends in the family on fifth month of pregnancy, and is not resumed till the child is about six months old. Many sayings place in the husband's but the husband going to the Western country. The wife is provided by a midwife, sometimes with the mother to prevent if possible. She stays in the hut for six or seven days after the birth, and the child's body given its best covered the several months with the latter being different in sex only its face. The mother must be purified by her husband, who kills a goat instead its male progeny ceremony in the two eyes of the child and with the hut and judgmental gives priest from the stomach of the two breasts, and belly. Children are weaned at the age of about 3 years. Twins are not liked, and the mother's usual performance except by twin birth must be observed by the killing of a goat which is eaten by the mother and her nearest friends. The Chenbo say that if a man has an ox and he has sons who has two heads, the ox will drive each child an inheritance. The Youth has sons a son and has only by child with a preceding spirit. The grown a principal spirit is given before the child was born, at the time when it is five years old and is called 'guardian spirit' in relation of the Youth animal. Children may also be given nicknames which often refer to some physical peculiarity. After circumcision, boys become men of other and calling their

A/Huntingford E-1 (1938-1939) 1951 FLA Dorobo FLA

ox, the suitor goes again to the girl's father with another bag of honey, and makes his request again. After a short time, perhaps two or three weeks, the father calls the clan together, and tells the suitor to attend. To the assembled council, the father says, "Here is my daughter, and here is the man who wants her to be his wife", thereby giving publicly his consent.

Next, the bride-payment is settled. This is not absolutely fixed, but varies slightly according to circumstances. Statements about its nature and amount in the old days are somewhat conflicting. In 1937 I was told a standard ability of honeycombs in fairly large quantities, and of monkey-skin rugs, a statement probably true of the very old days when few of the householders had any live stock at all. But since those days, the introduction of even a small amount of live stock has changed the nature of bride-payment. People said in 1939 that in the old days [illegible] was had to provide four cows for slaughtering at the marriage feast as well, but I could find no instance of this. In 1939, the standard bride-payment was one cow, with its calf if still suckling, one ox, and four goats, subject to slight variation according to the circumstances of the father in law; other amounts that I recorded were: 1 cow, 1 ox, 6 goats; 1 cow, 1 ox, 5 goats; 1 cow, 4 goats; 4 cows and 3 goats. As well as live stock, a man gives his father in law honey wine and one or more hut rugs, thus combining the old bride-payment with the new, and making the acquisition of a wife more of a drain on a man's wealth than it used to be.

Payment of the bride cattle need not be made before the marriage ceremony, but the first instalment should be handed over within a few months, and the rest at such intervals as may be agreed upon. If the husband dies before completing payment, his brother takes the widow and completes the payment; in such cases it is not necessary for the pair to go through the marriage ceremony, for the formal acceptance of responsibility by the brother before the clan council legalises the status of any children she may bear him. If the husband has no brothers, the procedure depends on whether the woman has borne a child or not. If she has not, she returns to her father, and the animals already paid are handed back to the husband's people, and she is free to marry anyone she pleases. If she has had a child, she stays with her husband's group, and some member of the family (who this is depends upon what men are available) takes charge of her and the child, and completes payment of the bride cattle.

Having settled the matter of bride payment, the suitor has next to arrange for the marriage ceremony. He gets an old man, of any clan, with whom he is on terms of fairly close friendship, to act as master of the ceremonies. This old man is called *Pa-kwa*[1] by the bridegroom and *Pa-mwet* by the bride. His first job is to collect the friends and relations of the pair. They gather round the hut where the ceremony is to take place. This is by the settlement of the suitor's father. He the shows the bride

[1] *Pa-kwa* is used also in connexion with circumcision, which is called *kwa*. Though the Dorobi could not supply philological information on the matter, *pa-* is thought to be a causal prefix, *pa-kwa-mwet* (or *mya-kwa*, *-mwet*) = 'causes a man to have acquired the meaning of „ceremony"'.

4(Huntingford E-S (1926-1939) 1951 FLA Dorobo FLA

Adoption is also practised when an unmarried girl has a baby. In such cases it may be adopted by a childless couple, i.e. who have lost their children, or whose children have grown up and left them, but usually (as the rule nowadays where it occurs) the former. An adopted child has the status of a man's own child. Adoption may in certain cases be by previous arrangement. It has happened, I was told, that a person who has cattle or means of getting milk may hear that a certain girl has got pregnant, and gives notice that he will adopt the child when it comes. The mother of the girl accordingly tells him when the girl "enters the hut", and the adopter's wife fetches the baby to her own home as soon as it born. She feeds it with milk from a small hole, and the Dorobo reckon that such babies will do all right, for they say, "such a child need not suck for very long". Illegitimate children are killed if nobody can be found to adopt them.

5. Adultery and divorce

Adultery may be punished by a husband who catches his wife with another man, by shooting the male offender with an arrow. If he kills him, he has to pay the normal compensation for homicide. He may also beat his wife, after which he "waits till she has got sense", as they put it, when he buys a goat for her, which they eat together. A man does not divorce his wife for a single act of adultery, but only if she is a bad and unfaithful wife who is continually caught with other men.

When a man has, after much thought, made up his mind to divorce his wife, he calls to one of his relatives to help him perform the divorce ceremony. Taking a piece of lawa, he cuts each on it and gives one end to his relative to hold, taking the other end himself, the wife being present and looking on. They then break the lawa in two, the man saying to his wife, *Kiseli kotonyat ben bili gurumoi*, or in, *gudubiton* ("I have broken our marriage as this lawa has been broken: go home and leave me"). He can then claim the return of the live stock which he paid to her father. But only a woman who has not borne her husband a child can be divorced; once there has been a child, no divorce is possible, for the birth of a child completes the union, which once completed is indissoluble.

6. Polygamy

In theory a Dorobo can have as many wives as he can pay for, which means that usually a man has but one wife at a time. Polygamy may therefore be said to be non-existent. The only thing that does occur is the occasional re-marriage of a man after the death or desertion of his wife, of which I recorded three cases. Widows, again, seldom re-marry, living normally either with their husbands' brothers, returning to their parents, or even living alone. In one genealogy, however, I found a woman who had been married to four successive husbands, none of whom was her husband's brother, and having as issue but one daughter. The Dorobo themselves remarked upon this succession of marriages as being a most unusual occurrence.

/Tai cont./

583 are bought from the Masai for ivory, and finally half of the meat of
(439) a male female head of game approximately the size of a zebra. The
mother of the bride and each of her brothers receive from the bride-
groom a beehive apiece. Instead of the beehives the parents-in-law
in some regions, especially where the Wandorobo live in close contact
[40] with the Masai, receive iron wire. After receiving the gifts, the
bridegroom and father-in-law reciprocally call each other be-gerai,
bridegroom and mother-in-law be-gor, bridegroom and the brothers
of the bride be-oshon, according to ancient Masai custom.

583 For beauties no higher price is paid. For a childless widow
• 587 the usual price is paid, but only after the birth of the first child and
after her father has returned to the heirs of her deceased husband
the price received for her before her first marriage. For a widow
who gave birth to girls only, no bride price is paid; instead, however,
583 the heir of her deceased husband keeps her daughters. Likewise
nothing is paid for a woman driven out by her husband. If the
bridegroom dies before the marriage, his brother takes the bride.
(534) If the bride dies before the marriage or if the betrothal persons
dissolve the betrothal, the portion of the bride price already paid
is returned. A bridegroom who is too poor to be able to pay the
full price serves the father-in-law for a few months as herder for
the remainder owed.

584 If the father of the girl has stubbornly opposed the courtship,
he is finally forced to consent by means of a divine judgment.
The lover stealthily creeps into the hut of the old man and ties a
[719] rope of grass around the wooden honey pot. The father is said /[719]/
to give his consent regularly then, since otherwise the punishment
[720] of God would kill him. In place of this custom, it also happens
[721] that the lover secretly takes the girl away, or the latter -- as among
the Masai -- flees to him without her parents' knowledge.

587 Wife exchange occurs, but legal marriage does not arise from
it. The woman does not cohabit with the other man for longer than
a half to a whole year. If she feels pregnant before this time, she
returns to her husband.

584 Among the Arsi the norm marriage ceremonies hold as among the
[71] Masai, but the great distances between the individual clay camps

/541 cont./

often necessitate a more lenient interpretation, so that there has often come about a practice according to which the bridal couple may not be related more closely than the third degree.

After the completed paying of the bride price, the bride is handed over to the bridegroom, and the latter either takes her along immediately or leaves her for two or three weeks to learn housekeeping with his mother, so that the latter will instruct her in housekeeping.

There is nothing new to be said about the wedding customs. A *jus p. n.* /*jus primae noctis*/ also exists here, and, to be sure, in the same form as among the Masai.

Divorce, as among the Masai, comes about if the husband drives out the wife or if the latter runs away from him. What was said about the possible return of the bride price there also applies. With the divorce all the children remain with the father. The woman keeps the infant only until the end of the nursing period, which she usually spends with her parents, whereupon the father also takes this child to live with him. If a pregnant woman runs away from her husband, he may demand the child, without compensation, after the weaning. Husband and wife may remarry immediately after a divorce, though a woman who is nursing a child is supposed to wait until its weaning. Divorced couples may reinstate the marriage by mutual consent, without any formalities. What was said of the Masai about the dissolution of a marriage through the death of one partner and about the remarriage of the other marriage partner applies.

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

Kikuyu men pass through four stages: youth, undifferentiated boys; warrior, circumcised men; and elderly, elders. They are circumcised between the ages of 18 and 25 years, and very rarely at any time after circumcision when their fathers become elders. Some men in fact never marry at all, but live alone, getting occasional help from women in the settlement, and depending for sexual satisfaction on casual affairs with wives of age-mates. Women go by four ages, girls, boy-friends, married women, and finally, when they begin to look old, unpleasant, old women. Girls marry soon after they have been circumcised.

Kinship and Relationship

The existing Dorobo relationship system, also, is structurally similar to that of the Kikuyu, and uses a number of Kikuyu terms; but it is less regular and includes in the other a larger number of persons than does the Kikuyu. Moreover, the collective term *mwanake* (which I did not find to use as a true relationship term in Kikuyu) is used by the Dorobo as the proper term for a number of people terminologically differentiated by the Kikuyu.

Within the other the chief terms are: in the third ascending generation, all males are *mwanake* and all females *mukiritu*; in the second ascending generation, all males are *baba* or *ahe* and all females *koko*.

In the first ascending generation, the terms are: *baba* = father, father's brothers, and mother's sister's husband; *ahe* = mother, mother's sisters, and father's brother's wife; *gukui* = father's sister; *kwayo* = father's sister's husband; *mama* = mother's brother and his wife. Terms used by women are similar = father's sister and father's brother's wife; *ahekuyo* = mother's brother; *ajuo* = mother's brother's wife; and *kwayo* = mother's sister's husband.

In a man's own generation, his brothers, sisters, and mother's sister's son and daughter are *kwendu*; mother's brother's son and daughter, *mama*; and the son and daughter of his father's brother and father's sister are *mwanke*. Women's terms which differ from these are: *ahekuyo* = mother's brother's son and daughter; *ajuo* = mother's sister's son and daughter.

In the first descending generation, also includes son, daughter, brother's son and daughter; *mama*, sister's son and daughter, and mother's brother's son and daughter; *mwanke*, father's brother's children's children, and father's sister's children's children. In the second descending generation, both sexes are also, except mother's brother's children's children, which are *mama*, and mother's sister's children's children's children, *kwendu*.

Among affines, wife's father is *mwanke*; wife's mother, *gukui*; wife's brother, *kwayo* and his wife, *gukui*; wife's sister *gukui* and her husband, *kwayo*; husband's brother's son and wife's sister's son, also; wife's brother's daughter and wife's sister's daughter, *gukui*. Husband's father is *gukui* and his mother, *gukui*; husband's brother *kwayo* and his wife, *mama*; husband's sister, *kwayo* and her husband's brother's children, *mama*; and husband's sister's children's children, *kwendu*.

In the other it is the father's brother who stands out and occupies the special place in kinship. Not the mother's brother who stands out and occupies the special place in kinship. Not the mother's brother who stands out and occupies the special place in kinship. Not the mother

4/Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

over couple adult members of the horde, and no male could get a wife if he was circumcised; but it is possible for an uninitiated girl to get married, though few in fact are married without being circumcised.

2. Pre-marital sex-life

Unorganized manhood through circumcision, the Dorobo is free, subject to to restrictions inevitably imposed by a small population, to enter into intimate sex-life. But unmarried men often have to go without a great deal of sexual experience before they marry, and some in fact never marry on account of the shortage of women. Even in the old days few girls were available, and there were only married women with whom they could not court unless prepared to be shot by injured husbands if found out. This sex of affairs has led to some men living alone and unmarried, helped in the household tasks by women of the settlement. Some even did everything for themselves. The shortage of women, and the shyness of the Dorobo has resulted in a definite habit sufficiently in evidence to justify the adoption of a special term, for which I suggest the word mutilate. As it is to be noted that the Dorobo have accepted the mutilation of mutile as something quite natural, whereas by many other peoples the unmarried state in a grown man is considered unnatural.

Young brides to whom life without love does not appeal therefore wander about a good deal, going to places where they know there are girls, or women on whom they can have surreptitious affairs, such women often being the wife of age-mates, for although this is not openly allowed, a woman will sometimes, when her husband is away, oblige one of his age-mates and is nothing about it. In favourable circumstances, however, where there a girls available, unmarried circumcised men build small huts called ekimet close to their fathers' huts, where they may sleep with uncircumcised girls, each man choosing a girl and associating with her till she is married. A Dorobo, unlike the Nandi, often marries his premarital love. Uncircumcised boys caught by the men playing with girls who are sexually mature are beaten, for love affairs are the privilege of manhood.

3. Marriage

Dorobo normally marry women of an age fairly near their own, and do not by preference marry women very much younger than themselves.

A man comes his wife for himself, and himself makes the preliminary acquaintance. After making his choice, he takes the first step, by "going the journey" (amak kobi), to the hut of the girl's parents, or if they are dead, of a responsible relative, and hands over a large bag of honey, saying, "I want your daughter", to which the father answers, "Very well, take her presently". This ready acquiescence is due to the fact that the father already knows what is going on, for the suitor has been making enquiries about the girl, and such things always reach the ears of those concerned. Later

14.Hawkingland E-6 (1938-1939)1962
FLE Dwelbo FLE

[P 191, A]

Apart from the rule of exogamy, there are certain other marriage regulations:

1. A person may not marry anyone who comes into the relationship (except F. Sis. D. D.), that is, anyone addressed by a relationship term, or an enyon.
2. A man may not marry his wife's sister because such unions are thought to be sterile.
3. A person may marry into the clan of his or her M., M.M., Br.W., or Un.H.

Pre-marital intercourse with anyone in the above is forbidden; but with a classificatory enemband, though not approved of.

The shortage of women and the lack of wealth have resulted in the Dwelbo being largely monogamous, though if a man has the wealth, he may have more than one wife. The kadoo (bride-price)[1] is said to have been formerly 4 cows for slaughtering; today it is 1 cow, 1 ox and 4 goats, which go to the bride's father and become his personal property. This kadoo is high for a people who own little or no stock; but by means of gift exchange cattle can be obtained from the Nandi (See below, p. 192.) Rarity of divorce is another result of this shortage, and since a wife is something comparatively hard to come by, she is more cherished than in rural among other peoples where women are plentiful. The inability to get wives has produced a tendency to what may be called sandals, that is, unmarried men (some of whom never marry) live entirely alone, and do all their domestic work, as well as hunting and cultivation, without assistance.

III

ECONOMIC LIFE.

A. Environment.

The home of the Kapchepkendi Dwelbo is the western end of the high ground which occupies the country between Eldoret Station and the Nandi escarpment. The greater part of it is covered with dense forest, and is crossed on the S. W. corner by two parallel paths from Kipkaren in the north to Tidoretet in the south. The forest begins about the 8,000 ft. contour, and as much is from any side reveals a steep climb of

[1] On this term, see "Bride-price in Kenya," J.R.A.I., 1935, 197.

child,' is being one of the duties of a young girl to carry her small brother or sister.

AP'AA—children of ego and ego's Br. May be connected etymologically with Nandi *apa* —M.Sis.H., F.Br.S. (*an'-t apa,*) meaning "father," and used allusively in Dorobo to mean "(children of) father."

APULAITO—M.Br. < Masai *ajulo* < *aja.*

ILYOOT—F.Sis., F.Br.W. < *eiyot* found in Masai-*ekidoti,* 'sister-in-law.' *Dodoi*(W.S.) is thus the equivalent of *pakot* (M.S.) and must mean "one to whom respect is due."

The Dorobo normally live in family groups, either one or more elementary families or domestic families[1] forming an extended family, or one or more elementary or domestic families of fellow clansmen, e.g.:

1. (a) *Fraternal group:* three brothers

"Definitions of 'family':

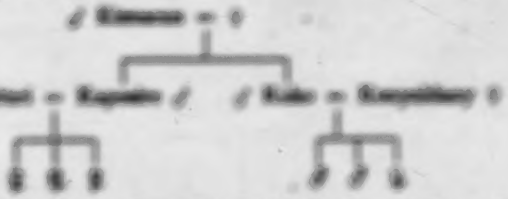
Elementary family=F., M. and children. (S.F.)

Domestic family=a group of people living together in one house or dwelling. It need not be elementary family, e.g. one husband, two wives, and the children of each wife. (S.F.)

Extended family=a group of families related by ancestors or adoption living together in a defined unit, e.g. Father, mother and his wives and children from a previous extended family. (Stat 1.)

[illegible] [illegible] [illegible] [

[illegible] mother, also, has a similar position, and if the father's mother is not alive, or living far away, she takes the grandmother's place in helping her husband's brother's wife, and being younger than the grandmother, can give more active assistance. This was the case with two brothers both married, whose mother was dead:



To Kapaiko's children, Kanyabiwy took the place of the grandmother, and Nahiri did the same for Koko's children. The father's brother is the equivalent, as an authority in the lives of children, of the mother's brother among the South and elsewhere, and is as near as possible a second father. Patrilineal institutions as well as other factors are doubtless answer for this, and the effect is that the father's brother is someone to be ordered with, a man with whom a boy should keep on good terms, and one of whose permission must be obtained before a boy is circumcised. Kimawa says Koko is Aney Maiwig's brother. He lived in the same settlement at Kipinikwa, and saw the brother's children every day. When he greeted them, he said, Kapei, kiya, and they answered, Eja, jaga. (Here kiya is used loosely as a term of familiarity.) The father's brother gives the children food and other things, he teaches them much of what it is necessary for them to know, and when they ask him questions, like what is this grass called? what are you going to do with that piece of wood? what mark does marks on the ground? and so forth, he answers them in such a way that question and answer become part of their education. He shows them his bow, arrows, and spears, his knives, his tobacco bags. He takes them into the forest and tells them how people look after their bees, how they make honey-barrels, and how they take honey. He teaches them to use throwsticks, and explains the magical observances connected here and there.

The mother's brother, unless the father's sister, parted and their spouses (I mean, as [illegible]) are in a different category from the father's brother. Not only do they live in different settlements, but the mother's brother has no special position of authority. And while all trouble to whom I talked knew their father's brother, many did not know their mother's brother, either by name or by sight. Others knew his name, but had never seen him, and in one or two cases when I was talking from genealogies was had to ask them friends what their mother's brothers' names were. It is thus quite clear that the mother's brother is of little account, and that the father's brother is a much more important person.

For an example the mother's brother is essential a vague that is not too necessary due. Aney Maiwig was a great follower of traditions, but

[425] is concerned, as little as he reciprocal owing to his age, for when the grandchildren are growing up he will be as old as the new grandfather when he himself was a child.

[426] Whatever is the degree is too old, though, and what one is active like grandchildren, and for reason therefore long as can as there when their mother goes to the theatre. In fact, all the men of this generation whom I met among the Swedes were too old to do anything for their grandchildren, though to remain many grandmothers are able to give a good deal of help to their adult wives, since women are usually younger than their husbands, even if the disparity in age is not great.

[427] Between a man and the relations he marriage, behaviour tends to be much more formal and ceremonial to be more restricted than between blood-relations. A man is not supposed to converse with his wife's father, in whose presence he must watch carefully his speech and actions, though he may greet him when they meet. If they should happen to be together, the son in law should sit about out of respect. Before marriage, however, a man may visit the parents of his intended bride to make the necessary arrangements with her father. With his wife's mother a man should have nothing to do at all: he should not only refrain from speaking to her, but should go out of his way to avoid her, both if he meets her out of doors and if he finds her in a hut. This rule of complete avoidance is usually relaxed as he grows older, and by the time sisters when he may even sit and talk to her, as long fitting did to the mother of his second wife (Lagbemannen). Avoidance between a woman and the mother or father of her husband, however, are of necessary difference. She may have to live with them, or at least in their proximity to them, whereas her husband may seldom come into contact with her parents, and therefore also cannot be expected to avoid her husband's parents. Her attitude to his father is one of respect due to a senior, with such reverence as is inevitable when two people have to live together, and with a certain amount of familiarity arising from the fact that the old man may be in want of physical help from her. The relations with his mother are greatly affected by her children and the consequent need for co-operation between the two women in working their strips.

[428] Between a man and his wife's brother and his wife's sister and her husband, there may be what the Swedes call social "play", which means that they may greet each other, make fun of one another, and behave in fact in a normal friendly manner. Yet there must be no love talk, dirty jokes, or sexual allusions. Between him and his wife's brother's wife, as

[illegible]

Social Organization.—The Arikara and the Waxkanaka are very few in number, and are divided among three moieties, each of which has its own kahikan or fathers (according to the Hidatsa, who are very interested in this point):—

Arikara			Arikara			Approximate Numbers
[illegible]			[illegible]			[illegible]

Each moiety lives in a single village of its own, similar in structure to that already described. The moieties are not intimate, but they are cooperative, and interact a lot in the work line. The wife has her own shelf, also from a Kahikanga (lordly or Supreme). Notwithstanding a hereditary, and no instance is ever considered to exhibit the grooves of a shelf. The Pilgrims and the Lamentations are each presided over by a hereditary grandmother.

Birth.—When a child is born the mother is isolated by female relations. There are no special [illegible] observances, as among the Iuchiens. The Waxkanaka allege that there are no special ceremonies connected with birth. Should a child cease from incessant pain the mother is left to be lucky throughout life. It is feared that the afterbirth is thrown away with the evidence, often revealing a child evangelist the likelihood that it is boy and that newborn is a girl.

Betrothal and Marriage.—The rules for betrothal exist as in the very similar to those existing among the Iuchiens, except that the prospective husband goes to the girl's people (more ordinary representations to the Irish fantasies). The consent of the girl and of the parents or kinsmen is necessary, and the question of gifts is not ignored as it is among the Iuchiens.

Marriage is celebrated by a feast to which the people of the two moieties to which the contracting parties belong are given. There is no dance peculiar to the marriage feast. After marriage a man lives for two days and nights in the hut of his betrothed, after which he remains with him in his own village. Here a woman's own hut already built for the newly married couple by the male partners, after he has established his consent with regard to the fortune then for marrying in.

Morals.—All the Irish are hostile children against [illegible]. There is no special feeling towards girls, but parents are fond of "one to the body," and away from the village.

Age Classes.—These appear to be quite unknown.

Crime and Punishment.—The Irish always a problem. This, however, is a private affair, and is dealt with privately, for it is not a sin against the community. A woman who is guilty of adultery with another woman of her husband's [illegible] and the offending man, [illegible] this. Neither is homicide a tribal affair, for which the grandparents or friends. The Iuchiens practice in this regard is not different.

The ceremonies are subsequently [illegible] and [illegible] the Irish [illegible] [illegible] [illegible].

/97 cont'd/

Succession is patrilineal and marriage patrilocal. Polygyny is practiced. The lineage is a functional continuum, including ancestral ghosts as active members while they are still remembered by the persons responsible (or so great) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation included a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age grading is based on male initiation. There are no generation age groups except in so far as the Double initiated or joined in the initia of the Kikuyu and the nuomo of the Masai. The moiety are so far the leading exogamous recognized divisions. Alternating age or generation are distinguished as mori ya ira (the right hand) and mori ya kenye (the left hand). When the Kikuyu speak is referred to kiraring'o is the former and kiyio the latter. But the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups.

There are no religious chiefs, the judiciary and legislature being a council of elders. Each of these is called kiregindet (pl. kiregini). A kiregindet has much the same function as a Kikuyu muthamaki. There is an athoni but formerly the Double owed allegiance to the laibon of the Masai.

They recognize one supreme being, called Ngai (compare the Nandi Asis). There appears to be no cult of ancestral but worship. The second term, used in prayer to Ngai, are, to ask the benison of military strength, to keep the nation, and, in connection with circumcision ceremonies, the mutiso and the thingithia.

It is little or nothing is known of the relationship of the Double or Kumam tribes with other Double nations. The "Double Committee" called them the Kikuyu Development group, and remarked that they were first found in the Nandi-Kavirondo hut here and there in the Masai Reserve, whence they were ejected. At the time the Committee of this group was living as farm squatters in the

Plan and arrangement of the camp. -- The huts. -- Household equipment. -- Daily life, food, work. -- Earthen pots. -- Baskets. -- Leather dressing. -- Market trade. -- Honey extraction. -- Manufacture of bows and arrows. -- Spears. -- Dance and song.

The Aaí roam the steppes as hunters, in that they wander with the game, whose meat gives them food and out of whose skins they make their clothing. This circumstance brings along with it the fact that they can not live together in large bands, but rather, divided into small bands, are forced to stay here today and in a distant place a few weeks later. Accordingly, their camps (aiji) only consist of hastily built small huts (mwaka) that are made out of branches and grass. The camps as a rule are hidden in dense bush and have no special enclosure. The paths and game runs leading to them are carefully barricaded with thorn branches and thus made inaccessible. Only the practiced eye of the Aaí will find the wonderfully concealed entrance to the camp.

Only two or three families, rarely a few more, usually live in one camp. Next to their huts are found those in which the unmarried circumcised men (dahoong) live with the young girls. As among the Masai, each young man has his favorite girl. He calls her meyan nan, she calls him meyan nan, words in which one again finds the Masai word nanjo. These huts are designated as nyeng

843 /342 cont./
pendants, beads, chains, or even a head of small livestock.

During the last two months before her confinement the woman is given only a meager diet, so that the birth will be easier. Then, too, as among the Mbuti, the pregnant woman wears no ornaments.
[801] [971] On the day of the confinement the husband may not leave the camp.
844 His mother or mother-in-law acts as midwife. Besides the obscure
[991] methods of the Mbuti, there also exist here the custom that the husband, to increase the labor-pain activity, perhaps sometimes with his wife's the chest, abdomen, and back of the woman giving birth and then massages them gently with circular movements. While doing so, he several times calls out the words "Mighty God, let the child come out!" The umbilical cord (ne ama) is severed with a razor-knife (kamey) and then, together with the placenta, buried in the hut. It is not the object of superstitious customs. It is regarded
[991] as unlucky if the child's upper incisors come through before the lower
[856] ones; it is believed that this will cause illness or death in the family.
846 The young mother may not leave the hut until five days after her confinement, out of consideration for her health, not for superstitious
853 reasons. The suckling period lasts one and a half to two years. Besides mother's milk, the little one is stuffed with a great deal of the fat of game, of which that of the large pachyderms is particularly valued as infant food.

845 Deformed newborn children are killed by strangulation by the
849 midwife immediately after birth. The highest figure known to me
163 /343/ of childlessness of one woman was 11. From 57 aged and women questioned, 154 children were born, which gives an average of 3.7 per woman. Of these, 81, therefore 52.6 per cent, were
165 girls, and 73, therefore 47.4 per cent, were boys. Before their circumcision 72 = 46.8 per cent had died, in which the stillbirths
• 591 are included. Until their circumcision the children live in the hut of the mother.

Economic life in day to normal seem and seem
as the different from as hunting.

The family group is interdependent: the men
hog, make tools, protect the family; the women
look after house and children, and prepare food;
the children, while dependent on their parents for
existence, help them with the different and lim-
ited, and in various other small ways.

There is little specialization, since all men can
make traps and heavy barrels, and all women can
make baskets. Joint production occurs in (1)
house-building, when the whole family take part;
(2) cultivation; (3) in hunting and in digging
cultivated earth. Food produced by the family is
shared by husband, wife, and children, and also
by the husband's and the wife's parents. Meat
caught by trapping is divided between the trapper's
family and the other people living in the same
room. Fingerskin foods are not shared thus, since
they are to go to all. Hospitality is given to
visiting relatives, age-mates (though here
do not sleep with their host's wife), and many in
many localities, even their good faith is established.
Food is drunk on social gatherings of men or
women, or two mixedly, and on ceremonial occa-
sions. But just as meat is distributed to a
particular way (p. 172), so with tobacco: a man who
acquires some gives it first to his father, then to
his wife's father, and lastly to his brothers and
classmates, if it will go so far.

The typical Dorobo has, heritages, a economic
despite, living no more than a framework of skills
covered with bones, and a little no lap. They are
now building large and better huts of thatch upon
foundations with supplemental walls, and as bam-
boo from may be seen, with a sturdy like mat

[illegible]

[illegible]

a Dorobo, and her husband is spoken of with less respect than Kimnit's, though both men are referred to as Asiapik. Their children are called asowa.

Ole Sekut's sister Loyalpul and her husband Tumoyaka are both dead, and if the spirits of these two be by the name pulul and Asiapik, but her son Ngidokin is an exception, as the same feeling as Lok and Kimaiyo, the sons of Ole Sekut's other brother Kaelu, allowing for the difference of age and Ole is a Purupi, as she is Lok; but Kimaiyo is a Worian. On the other hand, Kimaiyo is a pilikimisi, which somewhat corresponds the difference. Loyalpul and Kaelu, the daughters of Ole's father's younger brother Ogieno have inherited themselves to a certain extent to old-fashioned Dorobo ways by marrying Asiapik (though Dorobo-Asiapik marriage has been practised for a long time), and they live as a Dorobo. The wife of Lok and the husband of Ngidokimaiyo, Ole's other relatives, are both Dorobo, and although they live with the Worian have to a great deal of intercourse between their families. All these people are spoken of as pendimoroyoto, and addressed as asowa (woman) pendimi, or by name. Their spouses are spoken of as Asiapik. Though Kimaiyo may belong, the husband of Ngidokimaiyo, is known to Ole, his relations are outside the other as far as Ole himself is concerned (though son of course for Ngidokimaiyo), and Ole applies also to the relatives of the above husbands. Such people others as terms of friendship and nothing are addressed and referred to by name, or they may be spoken to by the Worian they a general term of address to any person of either sex with whom one is friendly. So did Kimaiyo Ole Lenkoilbut, long Kimaiyo's mother-law married to the grandfather). Asiapik are the addressed as Worian, however, that as Ndo 'grandfather' (a relationship, 'old woman', though are objects to any way, but use of respect towards Ole is a friend of long Kimaiyo, and often stays his neighbour, including Lenkoilbut.

Supeki and Supeya, the brothers of Ole's father, lived for many years in Lenkoilbutiok, but after their Kipsandiben, close to and beside the house. Also of the Oldoll Poiyeni, that is 1930 they went to live in Kapiyan near Mt Kenia. In that new tenth of these were seven sisters Kipa Sokk brother Sukkaiyan (Ole's father) who, if he had been a Kamogisio, would have been described as 'Sokk father' - and the proportion exemplars Supeki took the place of Father to Ole and his brothers and sisters. Sukkaiyan was their mother's eldest brother, and hardly able to assist, as when Ole learnt to assist mother, to herself in Supeki, as if he was away, to his slightly younger brother.

It will be seen that a person's children are not alone. Ole's brother's two sisters Ole's sister's children are a typical case. They live at a distance, and so can in reason have little or no part the responsibility of his brother's brother Sokk Ole's wife and the one to live Kiliaiyo and the family. This is Supeki's duty to the two sets of his house and has little to do with Ole. Moreover, his wife has numerous Ole and Sukkai, his brother Supeki, to them as Supeki. So his duty some years ago, as Sukkai and his family are still settled in Ol Lenkoilbut — where it is necessary to speak of them as all the Supeki, they could they would only think to Ole's life.

Moreover Ole and his brother Lenkoilbut there is a good deal of inter-

who stands to the relation of father's brother to the younger members of the group, as in the diagram of Pilo's family above, in which both girls of children have a father's brother living close at hand. In a few cases there might be no father's brother actually in the settlement, but often he would not be far off, for the tendency is to settle in distinct groups and not scattered to the same extent as among the Kwoli, where a family may live alone without forming part of a settlement though still a member of the parish. This point is important, for the father's brother plays the same part in a person's life that the mother's brother does among the Kwoli.

The family, consisting of father, mother, and children, lives in close contact with one or more families, and sometimes includes the husband's father or mother if none survive or can share both (see also Appendix). Three families give the Ibanda child the first experiences of human beings. Kinship ranges are determined to a certain extent by environment and way of life, for under these conditions and a hunting economy the father is of necessity away from home a good deal, and young children are much in the society of their mothers and the other women of the settlement. This of course is true of other types of society, but in a pastoral society such as the Kwoli, for instance, the father is not under conditions of working for day to day food supply, obliged to go away from his homestead if he is to be successful, and there is no doubt that a Kwoli child of twelve years old would live of his father than a Ibanda child. While food might be given to a pastoral, and often is a means of attachment, the father, on whom falls the duty of getting it, tends to play much more than the mere role of food, or whose cultivation produces a crop which is not given.

The child is weaned, which may be at the age of twelve months or thereabouts, it is to sleep almost with its mother than previously did, and its father leaves it alone a few days. When the mother has to go out to the fields of hoeing, the child is left at home in charge of its elder sister if it has one, or with its father's mother, failing these, some woman or girl of the settlement will look after it. A Ibanda mother cannot take her baby with her when searching for vegetable food in the forest, for it cannot conveniently be carried on the back in such surroundings, nor can she, for the same reason, leave it alone in a tree while she busily engages in search and its cries do not reach her ears. This both prevents hunting and even often a woman gives no birth to her child, for the baby is left behind to constant care. The [illegible] hunting is also much more arduous than a man's hunting, and she is away from home. We already see in all the ways that the women get back to the child quickly it must be.

The amount of a man in the life is particularly affected by physical and environmental conditions. The shortage of women and the difficulties of getting a wife (especially when wives are becoming the monopoly of [illegible]

1. Children and grandchildren of mother's brother's son and daughter (cousins, cousin)
2. Children and grandchildren of mother's sister's son and daughter (cousins, cousins)

3 Fourth Ascription, may marry any person in groups 1 and 2 provided they are not in the line.

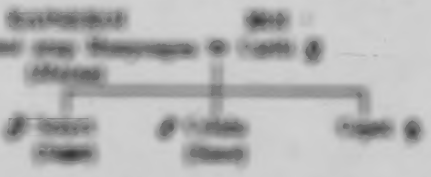
The children of the father's brother and father's sister are taboo and come to Fourth, and their children are taboo and also, whereas to Cousins of our native country. The marriage with the father's sister's daughter's daughter is not allowed to Fourth, where there is an interaction of the with-spoken marriage within the tribe. But, on the other hand, the Fourth has a certain number of people who are biologically allowed to this though are classed as relatives, and therefore prevented since. The Fourth and that there are many as cross for the third ascending generation, as a man cannot have, but it is desirable for example of them, the same date (male) and wife (this) per land, whereas the corresponding females cross per member and marriage.

III. The Family and Relatives

1. Family life

Family life and social structure are based on the elementary family within the tribe, the family living a unit consisting of father, mother, and children. The elementary family is sometimes enlarged into the domestic family, which is a group of people based on an elementary family living in one homestead and cultivating more than one garden. In an elementary family with one or both of the husband's parents. A further development is the extended patrilocal family, where two or more elementary families attached by genealogy or adoption live together on a defined area.

A typical elementary family living in the town is formed when the following, consisting of a man, his wife, and their three children[1]:



A domestic family living on the edge of the town of Tshaya comprised the following people: a man, his mother, his wife, and his children.

[1] In the genealogical diagrams, circle or symbol indicates male, and square or rectangle denotes female.

who stands to the relative of father's brother to the youngest members of the group as to the daughter of Ego's family above, in which both sets of children have a father's brother living close at hand. In a few groups there might be an father's brother actually in the settlement, but often he would not be at all, for the tendency is to settle in different groups, and not believed to the same extent as among the Yuendi, where a family may live alone without having part of a settlement though still a member of the parish. The point is important, for the father's brother plays the same part in a person's life that the mother's brother does among the Yuendi.

The family, consisting of father, mother, and children, lives in close contact with one or more families, and sometimes includes the husband's father or mother (I once came on man where both were alive together). These families give the Ilanda child his first experiences of human beings. Kinship usages are determined to a certain extent by environment and way of life, for under these conditions and a hunting economy the father is of necessity away from home a good deal, and young children are much in the society of their mothers and the other women of the settlement. This of course is true of other types of society; but in a pastoral society, such as the Yuendi, for instance, the father is not, under conditions of ordinary life day to day food supply, obliged to go away from the homestead if he has dependants, and there is no doubt that a Yuendi child of tender years see much less of his father than a Ilanda child. When food must be got or it is wanted, and when it is scarce or difficult to store, the father, on whom falls the duty of getting it, must be away much more than the man whose crops are close at hand, or whose cultivation produces a crop which he can store.

Till a child is weaned, which may be at the age of twelve months or thereabouts, it is in closer contact with its mother than anybody else, and the father learns to leave it alone when it is with its mother. When the mother has to go out to do her share of food-getting, the child is left at home in charge of its elder sister if it has one, or with its father's mother, failing these, some woman or girl of the settlement will look after it. A Ilanda mother cannot take her baby with her when searching for vegetable food in the forest, for it cannot conveniently be carried on the back in such surroundings, nor can she, like the agriculturalists, lay it down under a tree while she works, because it would not be safe to do so in the forest. This habit permits ecstasy, and even when a woman goes to work in her shamba* the baby is left behind in somebody's care. But a woman's food-getting is done much more quickly than a man's hunting, and she is soon back at home. The shamba, too, is not so far away that she cannot get back to the child quickly if need be.

The attitude of a man to his wife is profoundly affected by physical and environmental conditions. The shortage of women and the difficulties of getting a wife (especially when cattle are becoming the medium of barter

* My Swahili word shamba = cultivated land, field, farm, a convenient word to have. There is no a shorter and simpler word than the English equivalent. I shall use it in the sense of a piece of cultivated land.

Gillhaughout B-5 (1936-1939) 1951 FLA Dorobo FLA

The economic unit in the family, of whatever kind, elementary or domestic, living alone or within a group. The unit formed of a man, his wife, and their children can actually provide itself, under normal conditions, with most of the necessary subsistence, with a certain amount of help from those to whom they are entitled to turn for it. The first necessity is of course food. This is of two kinds, meat and vegetable, and the second sort is now both wild and cultivated, though formerly the Dorobo ate but little in the way of cereals; restrictions on hunting have now forced them to do so. In the old days meat and honey were the principal foods, vegetables being eaten as a relish. The foods now eaten may be classed under the following heads in order of (relative) importance:

1. Meat: got by hunting and trapping.
2. Honey: from their honey-barrels.
3. Wild plants: collected.
4. Salt: made or bought.
5. Drink: made from honey.
6. Cereals: *eleusine* and maize, grown; maize, bought.
7. Milk: for those who have cows.

Almost any kind of meat, except that of scavengers like jackal, hyaena, mongoose, etc., was and still is eaten, including antelope, monkeys, and bigger game. Of antelope they eat the following:

*Ngamuyoni**, the common duiker (*sylvicapra Grimmi*).
Kipeshani, the blue duiker (*C. monticola*).
Mirabi, the red duiker (*C. ignotus*).
Kurumeti, the bushbuck (*Tragelaphus scriptus*).
Imbaiti, the roanbuck (*Cervicapra arundinum*).
Kongoni, the gnu (*Gorgon taurinus*).
Kipeneuni, the waterbuck (*Cobus ellipsiprymnus*).

Of monkeys they eat:

Sarati, the colobus (*Colobus guereza*).
Tiriti, hybrid monkey (*Cercopithecus albogularis*).
Tumati, grey monkey (*C. griseo-viridis*).
Kwenkwi, the baboon (*Papio cynocephalus*).

And of other animals they eat:

Tumati, the wild pig or wart-hog (*Phacochoerus aethiopicus*).
Tumata, the giant pig (*Hylochoerus Meinertzhageni*).
Ilchilili, the leopard.
Imeiti, the lion.
Inoti, the buffalo.
Tembi, the elephant.

There are, however, no elephant in the Dorobo country to-day, nor have there been within living Dorobo memory; but buffalo still occur in the

455 the absence of pastoral and agricultural industries and technology, by their myths, and in fact by everything about them. To-day it is true that they are becoming agriculturalists, as the following analysis of their economic activities will show:

			Part :	—	Part :	—	Total :
Family	Men :	Trapping game in the forest					
		Making weapons, honey-barrels, etc.			Cultivation of shambas		
		Some : working for wages					
	Women :	Preparing the results of trapping					Bush
		Making baskets, skin clothes, etc.			Cultivation of shambas		
		Housework and food collecting					
	Children :	Minding					
		Housework					
Men Living Alone :		Trapping					
		Making things					
		Preparing the results of trapping			Cultivation of shambas		Bush
		Cooking, housework					

Dembo life Consists exclusively on cultivation, with a hunting background and stock in view as the ultimate achievement. For though the hunting instinct is still very much alive, and though a great deal of time is now spent on cultivation, there is no doubt that the Dembo (in 1939 at least) had a pastoral economy in their minds as the ultimate goal.

3. Economic Activities

a) Beekeeping

Honey is to the Dembo what milk is to the Nandi. It is much-sought and has a high ritual value, in consequence of which certain rules must be observed lest the supply fail. A person must not eat fruit or blood on the same day that he has eaten honey, though he or she may eat meat. After eating honey, bits of the comb must not be left lying on the ground, but must be hidden in the undergrowth. Anya Minio said, somewhat unconvincingly, that the reason for this was "that other people shall not see them and so be led to your honey-barrel". But this is probably not the true reason, which may be either simply respect to the honey, from a fear that if treated disrespectfully the supply will fail; or else fear of a witch putting a spell on the bees or honey

[illegible] marital relations. — Polygyny. — Seduction. — Rape of young betrothed. — Conversion of the young man to the clans of the married. — Bride price. — Paying the esteem of the father of the bride. — Exchange of wives. — Obstacle to marriage. — Severing the marriage. — Dissolution of the marriage.

[illegible] The married women are after bride fee a son. Polygyny exists only to a limited extent, most of the people are too poor to provide and support more than one wife; only a few have two wives, and if a man has three or more it is a rarity. Seduction of unchaste childhood were to be more frequent here than among the Ibibio, but on more binding and efficient legal consequences. On a rule after circumcision the youth is betrothed to a girl eight or ten years old, after he is taken has prepared for him to her parents. On crossing the Ibibio, the [illegible] betrothed persons live apart and may not even see each other. The bridegroom lives with a girl in his own county, and in the other, the bride with another youth. If the bride becomes pregnant before the wedding, dissolution of the betrothal does not always take place, as among the Ibibio, but rather the one who made the pregnant even reimburse the bridegroom by the payment of a head of cattle.

[illegible] Here, just as among the Ibibio, the young men of an age class together decide upon their entering the wedding of the married, and their future companions watches the ceremony by a feast consequently to the [illegible] to which friends and neighbors participate. They are served goats and heavy food, the latter of which, however, the marriage candidate may not yet drink. They like to eat the meat for the day after a successful elephant hunt, so that the guests can feast heartily on meat.

[illegible] Before marriage can be entered into, the bride price is to be paid. The bridegroom usually gives the father of the bride, even before the circumcision, five pots of heavy and five bottles, and, even after the circumcision, half of a male female elephant with the rest that belongs to [illegible] fathercows, two head of cattle, which

4. Birth

Intercourse stops at the fourth or fifth month of pregnancy, and 834
normally is not resumed till about six months after the birth of the child. 843
When the woman's time has come, she *cuti ka*, "enters the hut", and the husband must then lodge elsewhere, either building himself a rough shelter or living with one of his neighbours in the settlement. During the act of 844
birth the woman is helped by a midwife, *ngaiteyonit*, and her mother is present if possible. She stays for six or seven days in the hut after giving birth, 846
and may then see her husband for the first time since she "entered the hut". The child's body must be kept covered for several weeks after its [854]
birth, and only its face may be seen, even by the father. At this stage the mother must be purified by her husband, who kills a goat (which he [983]
must buy or steal if he has none of his own), and rubs the fat and undigested grass from its stomach (*siyat*) over her face, breasts, and belly. After about three months the husband may come back to live in his own hut.

The birth of twins is not liked, for they are abnormal, and the old 845
men say, *yaaere amo aaasii kamat* ("they are bad because they make the mother unclean"). If the father should have set a trap at the time when twins are born to him, it is believed that that trap will never catch an animal. The ritual uncleanness caused by the birth of twins is removed by [983]
the killing of a goat (which the husband must get by any means if he owns none) to be eaten by the mother and her female friends.

A girl who has a child before marriage is called, as among the Nandi, 848
ceurpuut, and becomes unclean ritually as a result. She may be purified, [983]
however, by the man responsible or one of his male relatives who must kill a he-goat. The meat is eaten by the men and women of the settlement, but not by the girl; and the *siyat* or undigested grass from the stomach is rubbed by one of the women over her face, neck, and breasts, and then washed off. By this means she becomes clean again, unlike such people among the Nandi, who remain unclean all their lives.

A baby is suckled as a rule until the mother is well advanced into 853
her next pregnancy: the standard period was given as "twelve months". If the mother has no milk, or not enough, she goes about begging for milk, *sumii cake*; but as often as not in such cases the baby dies of starvation. It is weaned by being slapped when it tries to suck, and by the application 869
to the nipples of something bitter, generally a concoction made from the root of a bush called *kenkenit* (Nandi, *ketrwet*). At this time it is fed with milk from a small gourd, and if no milk can be got, it is given honey instead. It is also given bits of meat cut up small and fed from a spoon made of a piece of gourd; and gruel made from maize or eleusine meal mixed with honey.

If the mother dies in child-birth, her husband's mother or some other 853
female relative takes charge of the baby and feeds it with milk from a 868
small horn: if milk cannot be got, honey and gruel are tried; but very small babies fed in this way seldom live. Sometimes the child may be adopted [591]
by a married couple.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

Adoption is also practised when an unmarried girl has a baby. In such cases it may be adopted by a childless couple, i. e. who have lost their children, or whose children have grown up and left them, but mostly (on the rare occasions when it occurs) the father. An adopted child has the status of a man's own child. Adoption may in certain cases be by previous arrangement. It has happened, I was told, that a person who has cattle or means of getting milk may hear that a certain girl has got pregnant, and gives notice that he will adopt the child when it comes. The mother of the girl accordingly tells him when the girl "enters the hut", and the adopter's wife fetches the baby to her own home as soon as it born. She feeds it with milk from a small horn, and the Dorobo reckon that such babies will do all right, for they say, "such a child need not suck for very long". Illegitimate children are killed if nobody can be found to adopt them.

5. Adultery and divorce

Adultery may be punished by a husband who catches his wife with another man, by shooting the male offender with an arrow. If he kills him, he has to pay the normal compensation for homicide. He may also beat his wife, after which he "waits till she has got sense", as they put it, when he buys a goat for her, which they eat together. A man does not divorce his wife for a single act of adultery, but only if she is a bad and neglectful wife who is continually caught with other men.

When a man has, after much thought, made up his mind to divorce his wife, he calls in one of his relatives to help him perform the divorce ceremony. Taking a piece of liana, he rubs earth on it and gives one end to his relative to hold, taking the other end himself, the wife being present and looking on. They then break the liana in two, the man saying to his wife, *Kooil hatwaisiat hun hil paroonni, ni ha, pakahtaa* ("I have broken our marriage as this liana has been broken: go home and leave me"). He can then claim the return of the live stock which he paid to her father. But only a woman who has not borne her husband a child can be divorced; once there has been a child, no divorce is possible, for the birth of a child completes the union, which once completed is indissoluble.

6. Polygyny

In theory a Dorobo can have as many wives as he can pay for, which means that usually a man has but one wife at a time. Polygyny may therefore be said to be non-existent. The only thing that does occur is the occasional re-marriage of a man after the death or desertion of his wife, of which I recorded three cases. Widows, again, seldom re-marry, living normally either with their husbands' brothers, returning to their parents, or even living alone. In one genealogy, however, I found a woman who was married to four successive husbands, none of whom was her husband's brother, and having as issue but one daughter. The Dorobo themselves remarked upon this succession of marriages as being a most unusual occurrence.

get his relations to help with the purchase price so as to avoid having any other than relations as neighbors. Each lily planted as boundary had its [p. 89] roots first smeared with tatha. If a tree was the boundary mark it was blazed with an axe and tatha smeared on the blaze. When the boundary had been marked they would go and sit down, and the Ndorobo claimed 1) the knife which had cleared the tract, 2) the axe which had blazed the trees, 3) a branding iron used for marking honey-barrels; the latter indicated that he was going to move his honey-barrels, 4) a young ewe, which had not yet borne a kid. This ewe was called the mwati ya njegeni (the ewe of the stinging nettles). The latter was to compensate him for the stings sustained in marking out the boundary. The ewe and the ram sealed the contract; 5) a pot of honey. Up to the time when the Europeans came Wanderobo at Kijabe were still selling land there in that way. There were Dorobo in this District as far as the Chania. We always bought them out and never drove them out. If we had driven them out there would have been a curse on the land. Moreover purchase gave right of possession against others. The purchases were made by individuals. The Ndorobo always moved off the land which he sold. The adoption ceremony was as follows. The Kikuyu called the Ndorobo to his village in his own country and in the presence of witnesses they sat down on an ox-hide. Then there were brought 1) an ewe (mukuha), 2) a branding iron (ruoro), 3) a razor (ruenji), 4) a cattle-breeding arrow (ndia). There was also fat, 5) ira (white diatomite), 6) oil. All these things were passed seven times round the rukwaro and the cooked breast of a ram, to make the pledge binding and put a curse on any who broke it. Then the adopter and the adoptee ate the meat and put on the rukwaro which was cut by two old men. Next an old woman brought oil and the ira and rubbed it on the hands of the two parties. Then each party put his thumb into the ira and marked the other right down the nose. Each adjured the other by that mark not to break the proposed contract of sale and not to harm the other. Then an old woman took castor oil mixed with ugembe (grain) and rubbed the marks off their noses. The Kikuyu was bound by this oath to be a protector of the Ndorobo. The Kikuyu used the land for cultivation only. They were not hunters.

K
425 Individual Kikuyus, therefore, entered into negotiations with
597 Wanderobo families and having offered goats and sheep as purchase price and found sellers, they then would propose a ceremony of mutual adoption as a preliminary to the negotiations that were to follow.

"From the point of view of the European it would seem to be quite unnecessary that a sale of land by a member of one tribe to a member of another tribe should be preceded by a ceremony of adoption, and it is therefore necessary to try to obtain a clear idea of the reasons which made the Kikuyu insist upon such a ceremony as the preliminary to such a transaction, as well as the reason why the Wanderobo so readily acceded to such a condition being instituted. The tribal law and custom of both tribes is, of course, responsible.

K
425 "Within the Kikuyu tribe any person who stole the property of
597 any other member of the tribe, or who killed, wounded or otherwise harmed any other member of the tribe, became liable by
673 law to criminal proceedings involving the payment of fines or other punishments. This law applied not only to members of the tribe by birth, but to all who had become members of the tribe by adoption, so that if any Kikuyu were to kill or harm any adopted Wanderobo he would be held responsible by Kikuyu law and would be punished.

"On the other hand, if a member of the Kikuyu tribe were to kill, harm or steal from a member of any other tribe, he was not responsible by Kikuyu law, and he was not legally liable for the damage done. He was, however, likely to be punished by any means possible by the members of that other tribe and also by the departed spirit of the deceased in the case of having caused death.

oD
K
425 "When a Kikuyu adopted a Wanderobo as a member of his family
● 597 ... he bound that Wanderobo and his family to him with very special ties, and he also bound himself to protect, not only the Wanderobo, but also all his property. At the same time, the

D
K
425
597

Wanderobo, who had very similar laws to those of the Kikuyu on such matters as these, bound himself to treat the Kikuyu who had adopted him as a brother and a fellow Wanderobo. In other words the adoption ceremony was founded on mutual safeguard and guarantee of good faith. By the oaths which the Kikuyu took when he performed the adoption ceremony he laid himself open to both supernatural and judicial punishment if he failed in any of his obligations to the Wanderobo when he adopted him, or when he proposed to buy land, [p. 95] but he also obtained in exchange oaths from the Wanderobo which bound him to act fairly and justly in all his dealings with the Kikuyu. Not only so, but the adoption ceremony which took place in the presence of many witnesses from both sides bound both parties to avenging the death of either. This meant that once the adoption ceremony had taken place the Kikuyu purchaser of the land of the Wanderobo could go into the forests he had purchased without fear of being attacked or killed by any other Wanderobo, for they all knew that he had been adopted by one of their own tribe. Similarly, the Wanderobo who had been adopted could, after this, come and go freely in Kikuyu country without fear of molestation, for as a member of a Kikuyu family he was a member of the Kikuyu tribe and any person who killed him would at once become liable to a fine of 100 goats and sheep by Kikuyu law.

K
[682]

"Moreover, if, after the adoption ceremony was over, the Wanderobo failed in his obligations the Kikuyu, as an adopted Wanderobo, could claim against him in the Wanderobo judicial courts, and similarly if the Kikuyu failed to recover his obligations he could be sued by the Wanderobo in the Kikuyu courts, for the Wanderobo, as an adopted member of the family and tribe was then entitled to make use of the Kikuyu courts. If a land transaction were to take place between Kikuyu and Wanderobo without a preliminary ceremony of adoption, neither party would feel in any way bound to honour the agreement, and there would be no legal support to either party in the case of breach of contract, for the whole proceedings would be outside the jurisdiction of either the Kikuyu or Wanderobo courts. By means of the

adoption ceremony the transaction was placed on a legal basis for both parties and became absolutely binding." (1)

Meaning of words used

By the European investigators of the Kikuyu method of acquiring land whose statements we have recorded we find a very general use of words which usually mean to us some form of outright, irrevocable exchange (Boyes: 'purchased'; Routledge: 'paid for the land'; Talbot-Smith: 'sold'; Lawford: 'bought or bartered'; McClure: 'ceded'; Tate: 'bought out'; Northcote: 'purchased'; Dundas: 'bought'; Beech: 'purchased'; Ainsworth: 'paid'; Watkins: 'purchased'; Canon Leakey: 'bought'; 1929 Committee: 'payments'; Land Commission: 'succeeded the Dorobo'; Dr. Leakey: 'bought'). Several of these investigators qualified the expressions they used to an extent which affirmed or suggested that they did not necessarily mean thereby an outright irrevocable transfer of land in the European sense (Northcote: 'the right to fell trees and to cultivate and the right to live in peace'; Beech: 'as price of peace'; Ainsworth: 'in respect of disturbance'; Watkins: 'obviously a later interpretation'; 1929 Committee: 'exact implication not defined'; Land Commission: 'by a process partly of alliance and partnership, and partly of adoption and absorption, partly of payment, and largely of force and chicanery'). There is a lack of definition in the recorded statements of Boyes, Routledge, Talbot-Smith and McClure. Lawford's account appears to imply outright purchase but is not entirely clear on the point. Tate and Dundas seem to have understood their informants to refer to outright purchase, and Canon Leakey and Dr. Leakey are both absolutely certain that the payments to the Dorobo involved an irredeemable transfer of land ownership, equivalent to a transfer of the freehold in our own system.

[p. 967] Difficulties in assessing value of evidence

There were and are obvious difficulties confronting enquirers. It is probable that in the early days the main difficulty was simply one of interpretation. Latterly the chief problem has been a political one—it has become necessary to assess the value of

The oaths

It is not suggested that the Kikuyu deliberately sat down and set about devising an adaptation of the rites of aggregation known to them and kindred tribes with the express intention of discovering a formula to suit their book; nor is it suggested that an astute Kikuyu brain would be incapable of inventing some new system which would give them in one transaction what they wanted. But the Dorobo had to be reckoned with, and they were a people certainly no less conservative than the average tribe; any startling innovation or any pattern of behavior not readily related to established custom would be rejected. If the Kikuyu had in fact invented some new rite which gave them absolute and unconditional ownership of land, and if the Dorobo had in fact accepted it, we should certainly expect the detail of the rite to make it clear that outright purchase was an essential part of it and understood by both. But there is nothing in the wording of the oath the parties swore (as recorded and translated by Dr. Leakey in his study of the Southern Kikuyu) which clarifies this point. The Kikuyu party swore as follows: —

"1. As for me, if any man draws blood of this my Mwathi and kills him, and if I do not make him pay me a full hundred (goats and sheep understood) may I break this (1).

1. Presumably a misprint for "may I break thus," i.e. "may I be broken like this." The Kikuyu is ndirotuika ugwo.

2. As for me, if I should ever call him a Mwathi, or suggest that he is not a Kikuyu like myself, may I break this.
3. As for me, if I should fail to treat him as the son of my own mother, may I break this.
4. As for me, if I should ever seek out someone and get them to kill him in order that I may acquire his land from him without paying for it to the full, may I break this.
5. As for me, if any other family should try to enter illegally the land that I am going to buy from this Mwathi who is performing this adoption ceremony with me, and if I fail to sue him for so doing, may I break this.
6. As for me, if I should fail to give him a present of so many

5:Lambert--83 G-5 (ca. 1935-1950) 1950 FL10 Kikuyu FL10

goats and sheep (here he makes a gesture with his hands to indicate the numbers in terms of units of ten) in order that you may all know that he is now my mother's son, may I break this.

7. As for me, if when a child of mine marries I fail to invite him to come and share in the meal of the Ngoima of the family, may I break this."

The Kikuyu having taken these seven vows the Dorobo also took seven vows as follows:

[p. 108] "1. As for me, since now I have come to this man, if now I am not his, may I break this.

2. As for me, in respect of the promises I am making to him, if I should break them, may I break this.

3. As for me, if I should betray him so he is killed by another Mwathi or by a Masai through me, may I break this.

4. As for me, though I still remain a Wanderobo, if I am not now also a Kikuyu, may I break this.

5. As for me, if any other Wanderobo should kill this my own Kikuyu and if I should fail to help you to spy out his homestead so that we can kill (the murderer), may I break this.

6. As for me, if any man should bring an action against this man in connection with the land (I am selling him), if I fail to take part or show the boundaries that I fixed, may I break this.

7. As for me, if I shall resume the Wanderobo habit of moving my homestead about and should thus abandon this man with whom I have been through the mutual adoption ceremony, may I break this."

We must examine the clauses of these two sets of vows which specifically refer to land. In Kikuyu vow No. 4, the phrase "that I may acquire his land from him without paying for it to the full" is a translation of ndimutunye githaka giake itarihite," which means literally "that I may take his land from him by force without paying" and could refer to a redeemable transaction just as easily as to an irredeemable one. In Kikuyu vow No. 5, the expression "the land that I am going to buy from this Mwathi" is a translation of "githaka giki ngugura kuri Mwathi uyu" and the use of the word -gura renders the precise meaning of the transaction unascertainable.

-DK 174 425 597

Certainly in Meturne, where the Kikuyu came from, the meaning of the word in regard to land transactions was not "buy outright" but rather "hold as security against a loan." At the same time it must be remembered that when Dr. Leakey recorded the vows his informants had probably already become completely accustomed to the new meaning of -gura in relation to land transactions. None the less one would have expected so radical a change to be reflected either in the use of a new word or in some qualifying phrase which made the intention clear, and that that new word or qualifying phrase would have been retained as part of the formula used and remembered. In Dorobo vow No. 6, the phrase "in connection with the land (I am selling him)" is a translation of "ni undu wa githaka kiu" which means "on account of that land (previously mentioned)," and the phrase "if I fail to take part to show the boundaries that I fixed" is a translation of "ndaaga gucira na mundu ucio ndimwonie kuria twahakanite nake," which means "if I fail to take up the matter (legally) with the said person and show him where, together with him, I marked out the boundary." This vow does not necessarily imply any outright sale, nor indeed any sort of sale at all.

The simplest explanation of the whole transaction is that the Kikuyu were acquiring rights in land hitherto inoccupation of another tribe, and that these rights were meant to supersede those previously vested in the "sellers"; and that the ceremony of adoption was intended as a guarantee of good faith between the two, to minimize the possibility of double-dealing, and put the transfer on a business footing. That is the simplest explanation to the European mind, but the transaction was not between two Europeans but between two Africans; we should probably be wrong [p. 109] if we allowed our preconceived ideas to color our interpretation of the facts, and we should almost certainly be wrong if we neglected customary canons which we have every reason to believe were still the only principles, reinforced by centuries of use, known to the Africans concerned. In native custom it is rare indeed that one can settle in another tribe's domain merely by inveigling members of it to disavow their law and custom and their way of life, abjure their tribe and take one's own instead, and even dispossess themselves of land and livelihood, and all for nothing of more worth by way of recompense than mutton on the menu for a time. We cannot but conclude that

D
K in those early days the Kiambu Kikuyu started running true to later
174 form (1), and that the principle of outright purchase was afterwards
425
597

1. cf. the Kiambu Handing Over Report, 1943: "... the principle of interpenetration has as yet brought slight relief to Kiambu's excess of landless people. Interpenetration, to the average native mind, involves adoption, full absorption into family, clan, and tribe, but the Kikuyu, when his numbers and the wiles his twisted mind creates, afford him, in his own opinion, safety, treats it as infiltration in a foreign land from which the foreigners in time will be expelled. When Kiambu Kikuyu congregate outside their tribal lands they are, wherever they may be, Kikuyu first and last and all the time, but not from any patriotic sense or tribal pride but simply that they see therein a chance to oust the indigenes and gain their pooled but egoistic ends by common effort and, when that is done, begin the final phase of ousting one another."

invented to obscure the things they did rather than describe the
K things they swore to do. It is perhaps significant in this respect that
[114] Mr. Jomo Kenyatta in his very clear account of acquisition and tenure in Facing Mount Kenya, talks consistently of purchase but nowhere mentions brother-adoption as a pre-condition.

The things they did were related to me by one old Kikuyu man as follows: "There was first a ceremony of adoption, not the ordinary son-adoption well known to the Kikuyu, by which a young man could be adopted as a son by an older man and so become one of his mbari and renounce his own, but a brother-adoption (-chiarana, instead of -chiara). The Kikuyu and the Mwathi then became as brothers. They adopted one another, so each became as it were both father and son to the other. As the father he would be expected to give something to the other, just as in the ordinary son-adoption he would give his son a place to cultivate and even 'buy' a wife for him. The Mwathi had nothing but land so he gave the Kikuyu a

D
K
174
425
597

place to cultivate. The Kikuyu gave the Mwathi some goats. The Kikuyu could also buy land from the Mwathi, paying goats for it. But the Mwathi had been made a Kikuyu by adoption and so the sale of land would be redeemable because the sale of land between two Kikuyu was always redeemable at that time. The Mwathi, having got his goats, moved off. If he had been an adopted son he could not have done that. But because he was an adopted brother he could do it. He came back from time to time for more goats, but never came back to settle. His son did the same thing. The first transactions with the Athi had no end in sight. But in the time of the Maina generation the Kikuyu got tired of supplying goats for land they had by then occupied for some considerable time (2) and they

> 2. cf. H.E. Lambert: "The Constitution and Personnel of Statutory Institutions in the Meru Native Reserve," 1939: "(Reciprocal blood-brotherhood) produces its factual avoidances of friendship as well as its juridical abstentions from enmity, and implies not merely unwilling submission to extortion but tacit sanctuary for criminals."

said that the matter should be brought to an end by smearing tatha round the boundary and planting itoka lilies where necessary. [p. 110] The Dorobo did not like this but had to agree. But when it came to the point they would only do a piece and then refuse to go on. So they got more goats. They were very reluctant to close the boundary completely and nearly always left a gap for a very long time. So the Kikuyu had to go on paying goats. But in the end they got the descendants to come and finish it off."

A great deal of evidence before the Land Commission suggested much the same thing, that is, that in the early days of immigration south of the Chania there was no clear intention of finality of payment, but that later on what purported to be a final payment was actually made in at least some cases and accepted as such, however reluctantly, by the Dorobo concerned.

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

561 [304] [582] [584] [589]

Dorobo men pass through three stages: *petik*, uncircumcised boys; *murenik*, circumcised men; and *apaiinisk*, elders. Boys are circumcised between the ages of 15 and 18 years, and may marry at any time after circumcision when their circumstances allow. Some men in fact never marry at all, but live alone, getting occasional help from women in the settlement, and depending for sexual satisfaction on surreptitious affairs with wives of age-mates. Women are first *tipik*, girls; then *yoonik*, married women; and finally, when they begin to look old, *engilokisisk*, old women. Girls marry soon after they have been circumcised.

Kinship and Behaviour

602 [171]

The existing Dorobo relationship system, *tiket*, is structurally similar to that of the Nandi, and uses a number of Nandi terms; but it is less regular and includes in the *tiliet* a larger number of persons than does the Nandi. Moreover, the collective term *macokor* (which I did not find in use as a true relationship term in Nandi) is used by the Dorobo as the proper term for a number of people terminologically differentiated by the Nandi.

● 601

Within the *tiliet* the chief terms are: In the third ascending generation, all males are *macokor* and all females *makikat;* in the second ascending generation, all males are *kuko* or *akui* and all females *koko*.

In the first ascending generation, the terms are: *papa* = father, father's brothers, and mother's sister's husband; *oiyo* = mother, mother's sisters, and father's brother's wife; *pukot* = father's sister; *konyit* = father's sister's husband; *mama* = mother's brother and his wife. Terms used by women are *sindet* = father's sister and father's brother's wife; *apulaiyo* = mother's brother; *oiyo* = mother's brother's wife; and *konyit* = mother's sister's husband.

In a man's own generation, his brothers, sisters, and mother's sister's son and daughter are *kesenda;* mother's brother's son and daughter, *mama;* and the son and daughter of his father's brother and father's sister are *macokor*. Women's terms which differ from these are: *apulaiyo* = mother's brother's son and daughter; *oiyo* = mother's sister's son and daughter.

In the first descending generation, *apas* includes son, daughter, brother's son and daughter; *mama*, sister's son and daughter, and mother's brother's son and daughter; *macokor*, father's brother's children's children, and father's sister's children's children. In the second descending generation, both sexes are *akui*, except mother's brother's children's children's children, which are *mama;* and mother's sister's children's children's children, *kesenda*.

Among affines, wife's father is *pamogo;* wife's mother, *poker;* wife's brother, *konyit* and his wife, *poker;* wife's sister *pukot* and her husband, *kipukotiot;* wife's brother's son and wife's sister's son, *apas;* wife's brother's daughter and wife's sister's daughter, *pakuo*. Husband's father is *pakuo* and his mother, *poker;* husband's brother *konyit* and his wife, *sindet;* husband's sister, *kamati* and her husband, *poker;* husband's brother's children, *lakuet;* and husband's sister's children, *apulaiyo*.

602 604

In the *tiliet* it is the *father's brother* who stands out and occupies the special place in family life that the mother's brother does among the Nandi; not a few Dorobo did not know their mother's brother's name. Owing to the nature of Dorobo life, the father's brother is continually in contact with his brother's children, and his relations with his nephews are even closer than those of the Nandi *mama* with his nephews.

4:Huntingford E-5 (1938-1939) 1951 FLÁ Dorobo FLÁ

II. Kinship

Kinship is the formal organization of relationship for social purposes, and depends for its effectiveness on a relationship system, which consists of a mode of naming relatives and is the framework of social organization. The Dorobo relationship terms show much resemblance to those of the Nandi, but there are certain significant differences, though (as among the Nandi) all those who call each other by relationship terms form the *tilist* or relationship system, which is an exogamous behaviour group, for (with one theoretical exception to be mentioned later) nobody may marry a person whom he or she calls by a relationship term. It will be seen that though terms exist for the 3rd ascending generation, there are none for the 3rd descending generation, for the father's father's father has existed, and thus may need a term; but the son's son's son may never exist in a person's lifetime, and so no term is needed.

It would seem that we are dealing with a non-Nilotic relationship system modified by contact with Nandi, as the result of which some of the original terms have been displaced by others of Nandi and also of Masae origin. The relationships comprised within the *tilist*, covering six generations, are as follows:

1. The Third Ascending Generation

(man & woman speaking)

This generation comprises the father's father's father, the father's father's mother, the father's mother's father, the father's mother's mother, the mother's father's father, the mother's father's mother, the mothers mother's father, and the mother's mother's mother. The males in this generation are all called *macokor*, and the females all *makikat*. The word *macokor* is found in Nandi applied to the son's son and daughter, and in Dorobo also to the father's brother's children, father's sister's children, and their children. The etymology of the word is uncertain: we may compare it with the Luo word *cokore*, 'collect', which might give the term the significance of "a collection of relatives". However unsatisfactory such a term may seem, it was the term used by the Dorobo. The females in this generation are all called *makikat*, a term not used elsewhere by the Dorobo, and not found in Nandi at all, though it may be derived from the Nandi *makiikat*, "they are not greeted", because though their names may be known they are seldom alive in a person's lifetime, and therefore he does not greet them.

2. The Second Ascending Generation

(man & woman speaking)

This comprises the father's parents and the mother's parents. Males are *kuko* or *akui*, females *koko*. The latter is used only of this generation, but *akui* is applied by courtesy to father's father's brother and sister and to mother's

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

[601] father's brother and sister, of the same generation, and also to their children. *Ahui* will be found again in the second descending generation. The corresponding Nandi forms are *ingokut*, *ingokot*, *kuko*, *koko*, and *akui*. The last is the same as the Masae (*ni-*)*akui*, father's father. *Koko* means 'old woman', and is related to the Masae (*eng-*)*oko*. Women use *kuko* and *koko* for father's and mother's parents.

3. The First Ascending Generation

(man speaking)

In this generation we have *papa* which covers the father, father's brother, and mother's sister's husband; and *eiyo*, which includes the mother, mother's sister, and father's brother's wife (though mother's sister is sometimes called *pükine*). *Mama* includes mother's brother and mother's brother's wife. The father's sister is *pukut*, a term applied also to the wives of father's brother's son, father's sister's son, brother, and mother's sister's son, as well as to wife's sister, all in the speaker's generation, and implying that the women so called are in the same category as the father's sister, i. e. one of respect. The father's sister's husband is called *konyit*, which is applied also to the husband of the father's brother's daughter, father's sister's daughter, sister, mother's brother's daughter, mother's sister's daughter, and to the wife's brother. It is therefore the male equivalent of *pukut*. The word *papa* is so wide-spread that its use is not significant. *Eiyo* = Nandi *eiyo*, Masae *yeiyo*, a word found with this meaning in most of the Nandi dialects. *Pukut* does not occur in Nandi or Masae, and may be a relic of the original Dorobo terminology. *Konyit* = Nandi *konyit*, 'honour', and may be compared with the Masae phrase *e-sindasi e-anyit*, "respected sister in law" (brother's wife and wife's sister), for *anyit* is the etymological equivalent of *konyit*.

(woman speaking)

Papa and *eiyo* are used for father and mother, and *papa* also = father's brother, and *eiyo* = mother's sister. But father's sister and father's brother's wife are called *sindet*; mother's brother is *apulaiyo* and his wife *eiyo*; while father's sister's husband and mother's sister's husband are *konyit*. *Apulaiyo* is from the Masae *apule* = 'mother's brother' (woman speaking), a word formed from *apa*, (same meaning, man speaking). *Konyit*, it may be noted, is a common term for a male relative by marriage, and is used by men as well as women.

4. Own Generation

(man speaking)

In this generation a man's relatives are grouped in three classes: (1) *Kesenda*, which comprises his brother and sister, and his mother's sister's [605] son and daughter; (2) *Mama*, his mother's brother's son and daughter;

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

and (3) *Macokor*, the sons and daughters of both his father's brother and his father's sister. There is thus a sharp distinction between cousins on the father's and the mother's side, and a divergence from the Nandi usage. That the mother's brother's children count as *mama* may be due to Nandi influence, for, as we shall see, the mother's brother is not the relative of importance to the Dorobo that he is to the Nandi. *Kesenda* is a word meaning 'brother, sister' which occurs in other Nandi dialects, though not in Nandi itself, and may possibly be derived from the verb *kesen* 'carry a child', it being one of the duties of a child, especially of a girl, to carry about its small brother or sister.

(woman speaking)

According to feminine terminology, these relatives are grouped in four classes, with a change of term: (1) *Kesenda*, brother and sister; (2) *Apulaiyo*, mother's brother's children; (3) *Macokor*, the children of both father's brother and father's sister; (4) *Eiyo*, the children of mother's sister.

5. The First Descending Generation

(man speaking)

The children of a man and his brothers are all called *apas*; but the children of his sister and of his mother's brother's children are *mama*, his sister's son having also the alternative term of *weirit ap cepto*, which means 'son of the girl', and is applied in Nandi to father's sister's son who is otherwise called *mama*. The Dorobo grouping which places the sister's children in the mother's brother's category is unusual and there is here a wide divergence from the Nandi rule.

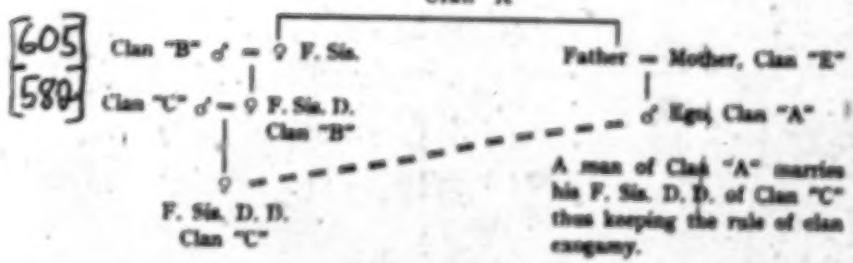
(woman speaking)

A woman calls her children *lakuet*, 'child'; her brother's and sister's children are *sungs*; the children of her mother's brother's children, *akui*; and the children of her mother's sister's children are *eiyo*. The term *sungs* in Nandi means 'sister of a parent', and refers to the father's sister; in Dorobo it is applied to the reciprocal, the brother's son, and is extended to the sister's son. It is also used, as in Nandi, as a term of endearment to small children.

We now return to the children, male and female, of the father's brother's children and of the father's sister's children, all of whom are called *macokor*. According to statements made independently by four different Dorobo elders, a man may marry one of the girls whom he calls *macokor*, that is, his father's sister's daughter's daughter (the daughter of his cross-cousin).

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

•601



This statement was not supported by any of my genealogies; but this does not necessarily mean that the practice was never followed, and my informants insisted that this type of marriage was not only allowed, but actually took place in the past. On the other hand, they said that marriage with any other kind of cousin within the *tilat* was "very bad". In actual fact, however, marriage with the father's sister's daughter's daughter was probably not common, even in the past, and to-day would be quite impossible, partly from disparity of age (though this is not in itself a serious bar), and partly from the shortage of women and lack of wealth. If a man was a *Nyongi*, he might be about forty years old, and his *macokor* would be perhaps ten, uninitiated, and too young to cohabit; she would therefore be suitable only as a second wife, a luxury out of the reach of most Dorobo. An equally serious objection lies in the fact that owing to the small number of clans, a man's *macokor* may often be of his own clan and thus barred from marriage with him.

6. The Second Descending Generation

(man speaking)

The term *akui* covers most of this generation: it includes the children of one's own children (grandchildren), children of brother's and sister's children, children of father's brother's grandchildren, and children of father's sister's grandchildren. The children of mother's brother's grandchildren are *mama*, and of the mother's sister's grandchildren, *kesende*. [603] Thus a man's own grandchildren are classed as grandparents.

(woman speaking)

Grandchildren are *apaa*; grandchildren of brother and sister are *senge*, and of mother's sister, *eiyo*; the rest are *akui*.

AFFINALS:

(man speaking)

Wife is *museriat*; wife's brother, *konyit*, and his wife, *pôker*; wife's sister, *pakat*, and her husband, *kipakatiat*. Wife's parents are *pamao* (m.) and *pôker* (f.). Wife's brother's and sister's children are *apaa* (m.) and *pakao* (f.).

4:Huntingford E-5 (1938-1939) 1951 FLÁ Dorobo FLÁ

(woman speaking)

Husband is *mamamiat*; husband's brother, *kowyit*, and his wife, *sindat*; husband's sister, *kamati*, and her husband, *pikar*. Husband's parents are *pakuo* (m.) and *pikar* (f.). Husband's brother's children are *lakuat*; and husband's sister's children, *apulaiyo*.

Further etymological notes

Papa occurs in Nandi only as a term of address, the term of reference being *kaan*.

Pikine as an alternative for *siyo*, 'mother's sister', is from the Nandi *pikine* — husband's brother's wife.

Apaa, used for a man's own children and for those of his brother and sister, is probably connected etymologically with the Nandi *apa* — mother's sister's husband, and father's brother's son, the latter being strictly *ar-i-apa*.

Mamiat is a dialect form of Nandi *mamwat*, which is the term applied to a man's pre-marital sweetheart.

Reciprocal Terms

m. s. — man speaking; w. s. — woman speaking; * — used by both sexes.

* *Papa* — father:	*Apaa* — child.
* *Eiyo* — mother:	*Lakuat* — child.
* *Kesenda* — sister:	*Kesenda* — brother.
* *Papa* — father's brother:	*Apaa* — brother's child.

Kipakatiat — wife's sis. hus.:	*Kipakatiat* — wife's sis. hus.

Terms of Address

The forms given in the foregoing lists are those of reference, used when speaking of a person. In some cases the form used when speaking to a person is the same as the form of reference; but in others there is a difference:

Reference:		or mama	Address:	
imamat			*mama* (m. s.)	
			apalaiyo. (w. s.)	
ingokat			*akui*	
macakor(at)			*macakoroni*	
urogat or *urogo*			*urogo*	
muweiat			*muweiandoni*	
mawuatiat			*mawuatiandoni*	
sindat			*sindoni*	
lakuat			*lakuoni* or *lakuoyoo*	

Other terms have the same form for both reference and address. In this list it will be noted that *mama* and *urogo*, though strictly forms of address, are used by the Dorobo for forms of reference as well. The forms ending in *-ai* are vocative (i. e. the demonstrative pronoun *ai*, 'this', used as vocative). *Lakuoyoo* means 'my child'.

[193]

Grouping of terms

In the following classification of terms, an asterisk * means terms used by both sexes, and (w) means terms used by women.

Macakor

Third ascending generation: father's father's father*, father's father's mother*, mother's father's father*, mother's mother's father*. Own generation: father's brother's son*, father's brother's daughter*, father's sister's son*, father's sister's daughter*. First descending generation: father's brother's children's children*, father's sister's children's children*.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

601

Abui

Second ascending generation: father's father*, mother's father* father's father's brother*, father's father's sister*, mother's father's brother*, mother's father's sister*. First ascending generation: father's father's brother's children*, father's father's sister's children*, mother's father's brother's children*, mother's father's sister's children*. Second descending generation: father's brother's children's children's children*, father's sister's children's children's children*, brother's children's children, sister's children's children, own children's children, mother's brother's children's children's children (w).

Papa

Father*, father's brother*, mother's sister's husband.

Eiyo

First ascending generation: mother*, father's brother's wife, mother's sister*. Own generation: mother's sister's children (w).

Kwenda

Own generation: brother*, sister*, mother's sister's children. First and second descending generations: mother's sister's children's children, mother's sister's children's children's children.

Apua

First and second descending generations: son, daughter, brother's son, brother's daughter, son's children (w), daughter's children (w), wife's brother's son, wife's sister's son.

Sindat

Father's sister (w), father's brother's wife (w), husband's brother's wife (w).

Mama

First ascending generation: mother's brother, mother's brother's wife. Own generation: mother's brother's son and daughter. First and second descending generations: mother's brother's children's children, mother's brother's children's children's children.

Apukuiyo

Mother's brother's wife (w), mother's brother's children (w), husband's sister's children (w).

Songo

Brother's children (w), sister's children (w), brother's children's children (w), sister's children's children (w).

Lakwat

• 601 Son and daughter (w), husband's brother's children (w).

Affinals: *Kenyit*

Father's sister's husband*, mother's sister's husband (w), father's brother's daughter's husband*, father's sister's daughter's husband*, sister's husband*, mother's sister's daughter's husband*, mother's brother's daughter's husband (w), daughter's husband, wife's brother, husband's brother (w).

Pukat

Father's sister, father's brother's son's wife*, father's sister's son's wife*, brother's wife, mother's brother's son's wife*, mother's sister's son's wife*, wife's sister.

Kipukatat

Wife's sister's husband.

Pukan

Son's wife, husband's father, wife's brother's daughter, wife's sister's daughter.

Pikar

Daughter's husband (w), wife's mother, husband's mother (w), wife's brother's wife, husband's sister's husband (w).

Sandat: son's wife (w).
Pawaan: wife's father.
Kawaat: husband's sister (w).

The use of kinship terms

[608] In practice kinship terms are used as a form of address and as a method of showing respect to seniors, who acknowledge the respect by using the reciprocal term to the juniors. To illustrate the use of these terms, I have prepared a statement of the relatives of a man named Pilo arap Kaisan of Kiptarakon (Soosiyo group), in which it will be noted that the terms fall into six groups, with one isolated term:

1. *Papa-Eiyo*, in the first ascending generation.
2. *Abai*, the second ascending, first ascending, and second descending generations.
3. *Maaskor*, in the third ascending, own, and first descending generations.
4. *Kwanda*, in own, and first and second descending generations.
5. *Apaa*, in the first descending generation.
6. *Mama*, in the first ascending, own, and first and second descending generations.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

601

The indicial term *pakat* denotes the father's sister. But it is used also for certain affinals, and alternates with the term *kenyit*. It should be noted that:

a) the wife of a *mandet* is always *pakat*;
the husband of a *mandet* is always *kenyit*;
the wife of a *kwanda* is always *pakat*;
the husband of a *kwanda* is always *kenyit*;
the wife of a *mama* (own gen.) is always *pakat*;
the husband of a *mama* (own gen.) is always *kenyit*;
but, the wife of *mama*, the mother's brother, is always *mama*.

b) the spouses of *akui*, when the term refers to people other than the father's father, mother's father, father's mother, and mother's mother, are all *akui*.

This is the genealogy of Pilo arap Katam, with the terms used by himself and his sister Kiroti:

Third ascending generation:

			Called by Pilo:		Called by Kiroti:	
1	PPP.	MUNTAYAN m. Tiwosi	MACOMOM	*cmakikut*	MACOMOM	*cmakikut*

Second ascending generation:

2	PP.	KIMNGAMNGAM m. Cosungut	KUKO AKUI	*kuko*	KUKO AKUI	*kuko*
3	PPSis.	LEMANSO m. (unknown).	AKUI	*akui*	AKUI	*akui*
4	PPSis.	Kikiwo m. RIPANYA.	*akui*	AKUI	*akui*	AKUI
5	MP.	MEMEWA m. (unknown)	AKUI	*kuko*	AKUI	*kuko*

First ascending generation:

6	F.	KIPKATAM m. Kosorio	PAPA	*ciyo*	PAPA	*ciyo*
7	FBr.	KIPTOO m. (unknown)	PAPA	*ciyo*	PAPA	*cimdet*
8	FBr.	KACILA m. Nandoiyo.	PAPA	*ciyo*	PAPA	*cimdet*
9	FSis.	Cepuljoi m. TURIRPUKU.	*pakat*	KONYIT	*cimdet*	KONYIT

601
593

Pilo's immediate contacts are with people of the ***papa-eiyo***, ***kesenda***, and ***apaa*** groups, for he lives at Kiptarakon with his aged and infirm father and his married brother Coimim. Pilo always speaks of his father as ***papa***, and treats him with great respect, kindness, and gentleness. Coimim is his younger brother, and though of a junior age-set (*Maina*, while Pilo is *Nyongi*) * is now married and a father, and so is on terms of more or less equality with Pilo. They address each other by name, but usually refer to one another as ***kesenda*** — ***mii kesendannyon ka***, "my brother is at home", rather than ***mii ka Coimim***, in answer to a question as to his whereabouts. His own and Coimim's children Pilo calls by name though he often addresses them as ***apaa*** by way of instruction. His two sisters Kicoti and Ceimbar are both married and live not far away in Nandi. The former is the eldest of the four and was married to a Kimnyike now dead; Ceimbar married

[561]

* The names *Kimnyike*, *Nyongi*, *Maina* are those of age-sets, which form an important element in social behaviour, and will be described in detail later on (p. 30).

4:Huntingford E-S (1938-1939) 1951 FLÓ Dorobo FLÓ

a Nandi, and her husband is spoken of with less respect than Kiruti's, though both men are referred to as *konyit*. Their children are called *mama*.

His father's sister Cepulpul and her husband Turiepuku are both dead, and if he speaks of them it is by the terms *pukat* and *konyit*; but her son Kipkoiec is, as *macakor*, on the same footing as Leii and Kimaiyo, the sons of his father's elder brother Kaola, allowing for the difference of age-set. Pilo is a *Nyongi*, as also is Leii; but Kimaiyo is a *Maina*. On the other hand, Kimaiyo is a policeman, which somewhat outweighs the difference. Cepkemoi and Cerob, the daughters of Pilo's father's younger brother Kiptoo have lessened themselves to a certain extent in old-fashioned Dorobo eyes by marrying Nandi (though Dorobo-Nandi marriage has been practised for a long time), and they live at a distance. The wife of Leii and the husband of Cepkumuren, Pilo's other *macakor*, are both Dorobo, and although they live near the forest, there is a good deal of intercourse between their families. All these people are spoken of as *macakorennyon*, and addressed as *macakoronni*, *macakor*, or by name. Their spouses are spoken of as *konyit*. Though Kimopo Arap Mining, the husband of Cepkumuren, is *konyit* to Pilo, his relatives are outside the *tiliet* as far as Pilo himself is concerned (though not of course for Cepkumuren), and this applies also to the relatives of his sisters' husbands; such people when on terms of friendship and visiting are addressed and referred to by name, or they may be spoken to by the word *leiye*, a general term of address to any person of either sex with whom one is friendly. An old woman like Cesikirikat, Arap Mining's mother (not named in the genealogy), would not be addressed as *leiye*, however, but as *koko* "grandmother" or *cepiosonni*, "old woman", though not related in any way, but out of respect because Pilo is a friend of Arap Mining, and often meets his relatives, including Cesikirikat.

Kaola and Kiptoo, the brother's of Pilo's father, lived for many years at Cepkunyuk, four miles from Kiptarakon, close to and inside the boundary of the Nandi Reserve; but in 1939 they went to live in Sosoiyo near the forest. At that time, both of them were more active than their brother Kipkatam (Pilo's father) who, if he had been a European, would have been described as "bed-ridden"; and for practical purposes Kaola took the place of a father to Pilo and his brothers and sisters. Kipkatam was deaf, nearly blind, almost speechless, and hardly able to move; so when Pilo wanted to consult anyone, he turned to Kaola, or if he was away, to the slightly younger Kiptoo.

It will be seen that a sister's children are not *apaa*, like a brother's, but *mama*. Pilo's sister's children are a typical case. They live at a distance, and so are as remote from him as all the descendants of his mother's brother (*mama*) Nekoi who, with his wife and his son in law Kilanya and his family, lives at Ngatepkong on the far side of the forest and has little to do with Pilo. Moreover, the only link between Pilo and Nekoi, his mother Keuarie, is there no longer, for she died some years ago; so Nekoi and his family are just spoken of as *mama* — when it is necessary to speak of them at all, for though they exist they count very little in Pilo's life.

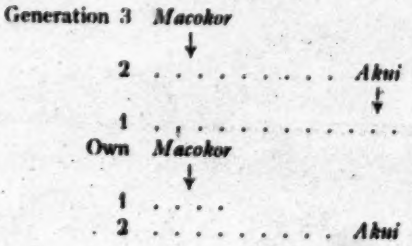
Between Pilo and his brother Coimim there is a good deal of inter-

4:Huntingford E-5 (1938-1939) 1951 FLÓ Dorobo FLÓ

593 [888] course. They live in the same settlement, they are *papa* to each other's children, they both look after old Kipkatam, and they have the joint responsibility of feeding him as well as their own families. They are *kesenda* in name and in fact. But the existence of a remoter *kesenda* group, the children [605] of the mother's sister, shows how the term may mislead if the circumstances are not known and if it is not realized how much depends on proximity. Both their mother's sister's sons Kikoror and Tote live on the other side of the country at Ngatepkong, and Kikoror moreover dwells inside the forest; between them and Pilo intercourse is rare, and relationship might not exist. In practice, of course, Pilo would refer to them as *kesendannyon* and would greet them as *kesenda* or by name; but in the absence of proximity the intercourse would be limited to mere greeting.

602 The *akui* group includes three sets of people: (A) parents of father and mother; (B) father's father's brother and sister and their children; and (C) all of the second descending generation except the great grandchildren of the mother's brother and sister.

603 (A) The senior *akui* at the time when I collected the genealogies which form the basis of this study were all dead. The real *akui* are the father's 601 father and the mother's father (their wives being *koko*), and these two are often referred to as *kuko* as well as *akui*. When Pilo said, "My *akui* was Kimngamngam", or "my *akui* was Mereua", his statement was amplified by saying who they were: *akui ko papa nepo papa, kuko ko papa nepo eiyo*, "*akui* is the father of my father, *kuko* is the father of my mother". (B) But the brother's and sisters of the *kuko* or *koko* (none were recorded on the maternal side) are referred to as *akui* by courtesy, and this courtesy is extended to their children (people of father's generation) but not to lower generations. So Arap Lemando was merely *leiye* or "Arap Lemando" to Pilo, though his father and grandfather were *akui*; and between Pilo and Arap Lemando there was no relationship. (C) The third descending generation, the children of Pilo, his brother's children, his sister's children, and those of his father's brother, and his father's sister, are all *akui* also; but no descendant of the mother's brother or sister is called *akui*. This term, it will be seen, has a symmetrical alternation from the second ascending to the second descending generation, that is, from grandfather to grandson; *macokor* has an asymmetrical alternation from the third ascending generation to own's own, being extended in both cases to the next generation below:



4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

603

The senior *macokor* are seldom alive in a man's lifetime, and all those in the 3rd ascending generation were dead before Pilo was born. The terms therefore are merely of reference, and that this is so is emphasized by the word *makikat*, "one who is not greeted".

601 ●

On the right hand side of the genealogy of Pilo are given the terms used by his elder sister Kicoti, who married a Dorobo of the *Kimnyiko* age named Manyepai, where we find additional groups:

The first ascending generation is now divided into two: (A) the father of Kicoti, his brothers and sister and their spouses, who are *papa* and *sindet*; and (B) her mother, her mother's sister and her children, grandchildren and great grandchildren, and her mother's brother's wife, all of whom are *eiyo*. (A female *eiyo*'s husband is *konyit*, and a male *eiyo*'s wife is *pukot*, except that Seratet, the mother's brother, is *apulaiyo*.) The father's sister has the same term as his brother's wife, *sindet*.

Kicoti calls her brother and sister *kesenda*, just as Pilo calls her *kesenda*; but whereas Pilo calls his own and Coimim's children *apaa*, and the children of both his sisters, *mama*, Kicoti calls her own children *lakuet* and those of her brothers and sister *senge*, and the grandchildren and great grandchildren of her mother's sister *eiyo* (which latter Pilo calls *kesenda*).

The mother's brother group is called by four terms instead of one, and the mother's brother himself and his children are not *mama* but *apulaiyo*; his grandchildren and great grandchildren are *akui*; and Kicoti's sister's children are *senge*, while her own are *lakuet*: all these are called *mama* by Pilo.

The two brothers of Manyepai, for whom Pilo has no term (he would refer to them as *poiyot*, "old man", and if necessary define their position) are called *konyit* by Kicoti, and the wife of Kimôken her husband's brother is *sindet*. Her husband's father and mother are *pakuo* and *pôker*, though outside the *tiliet* for Pilo. Her husband's father's father is outside the *tiliet* for her. As regards the use of *konyit* and *pukot* for spouses, the female terminology is the same as the male for *macokor* and *kesenda*, but

the wife of an *apulaiyo* (m. br.) is always *eiyo*;
the wife of an *apulaiyo* (own generation) is always *pukot*;
the husband of an *apulaiyo* (own. gen) is always *konyit*;
the wife of an *eiyo* is always *pukot*; and
the husband of an *eiyo* (except own mother) is always *konyit*.

Contrast with the Nandi system

601
171

The Dorobo relationship system is much less regular than that of the Nandi, and has a greater mixture of terms. Moreover it includes a greater number of people than the Nandi, which counts the following as outside the *tiliet*:

A. Father's mother's brothers and sisters and their children (Dorobo, *akui*).
B. Mother's parents' brothers and sisters and their children (Dorobo, *akui*).

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

601 191

C. Children and grandchildren of mother's brother's son and daughter (Dorobo, *mama*).

D. Children and grandchildren of mother's sister's son and daughter (Dorobo, *kesenda*).

A Nandi, therefore, may marry any person in groups C and D provided they are not of his clan.

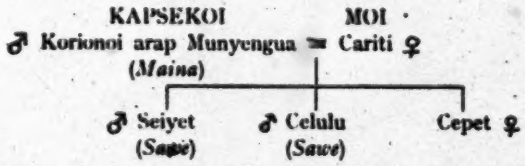
The children of the father's brother and father's sister are *tupet* and *mama* in Nandi, and their children are *lakuet* and *akui*; whereas in Dorobo all are called *macokor*. The marriage with the father's sister's daughter's daughter is not allowed in Nandi, where there is no relaxation of the rule against marriage within the *tilist*. But, on the other hand, the Nandi has a certain number of people who are biologically related to him though not classed as relatives, and therefore potential wives. The Nandi say that there are really no terms for the third ascending generation, as a man never sees them; but if it should be necessary to speak of them, the terms *kuko* (masc.) and *senge* (fem.) are used, whereas the corresponding Dorobo terms are *macokor* and *makikat*.

III. The Family and Behaviour

1. Family life

594 Dorobo life and social structure are based on the elementary family within the clan, the family being a unit consisting of father, mother, and children. The elementary family is sometimes enlarged into the domestic 596 family, which is a group of people based on an elementary family living in one homestead and containing more than one parent, i. e. an elementary family with one or both of the husband's parents. A further development is the extended patrilocal family, where two or more elementary families related by genealogy or adoption live together as a defined unit.

594 A typical elementary family living in the forest in Sosoiyo was the following, consisting of a man, his wife, and their three children[*]:



596 A domestic family living on the edge of the forest at Timopo comprised the following people: a man, his mother, his wife, and his children:

[*] In the genealogical diagrams, words in capitals indicate clans, and words in brackets age-sets.

[P. 184, B]

The social structure of the Dorobo is based on clan-solidarity, the clans being patrilineal, partially patrilocal, and exogamous. The clan-names, as well as the age-set names, and many of the relationship terms, are of Nandi origin; but here the resemblance ends, and it is seen that the social structure is unlike that of the Nandi. The whole life and outlook of the people is, in fact, dissimilar. There is no doubt that living in and in close contact with a forest produces a considerable effect on people, which differentiates them from those who live in open country; and the influence of the forest is felt particularly by the children. Peculiar factors of forest life, which obviously cannot occur in open country, are:

1. The homestead is set in a small clearing, just large enough to hold two or three huts.

2. The continual presence of large trees, inescapable when the children are young.

[P.185, A]

Physical influences, too, must be taken into account. The average rainfall in the North Tindiret forest is over 56 inches per annum, and the highest recorded rainfall in one year is 70 inches. During several months of the year the forest is very damp and sunless; mists are frequent, and there is considerable cold as well as frost.[1] All this will affect character as well as the rate of infant mortality. 132 [155] [165]

II

THE BASIS OF SOCIAL STRUCTURE.

A. Kinship.

Many of the relationship terms are borrowed from Nandi, but the system is not the same, as the following analysis will show. 601 [177]

Functional analysis of terms: ♂ speaking (M.S.)

First Ascending Generation.

(1) F., M.=*BABA, eiyo.*

(2) M.Br., M.Br.W.=*MAMA, mama.*

(3) M.Sis., M.Sis. H.=*eiyo, BABA,* as F. and M.

(4) F. Br., F. Br. W.=*BABA, eiyo.* "The F.Br. is the same as a man's father," say the Dorobo.

(5) F.Sis.=*pukot,* a term applied also to the wives of F.Br.S., F.Sis.S., Br., M.Sis. S., and to W. Sis. It implies that all the women so called come into the same category of respect as the F.Sis.

(6) F. Sis. H.=*kowyit,* i.e. brother-in-law,

[1] So the Dorobo tell me: I never saw any myself, though I have seen frost in other parts of the highlands of Kenya. [114]

[P185,B]

applied also to the husbands of F. Br. D., F.Sis.D., Sis., M.Br. D., M.Sis.D., and to W.Br. It is therefore the male equivalent of *pukot*. [601]

Second Ascending Generation.

(1) F.F., F.M., and M.F., M.M.=*KUKO, koko*, and also *AGWI, agwi*, the latter applied by courtesy to F.F.Br., M.F.Br., F.F.Sis., M.F.Sis., and their children.

Third Ascending Generation.

(1) F.F.F., F.F.M., F.M.F., F.M.M., M.F.F., M.F.M., M.M.F., M.M.M.=*MACHOKOR, makikat.*

Ego's own Generation.

(1) Br., Sis., M.Sis.S., M.Sis.D.=*KESENDA, Kesenda*, linking these two groups in a br.—sis. relationship.

(2) M.Br. S., M.Br. D.=*MAMA, mama*, as M.Br.

(3) F.Br. S., F.Br. D., F.Sis. S., F.Sis.D.=*MACHOKOR, machokor.*

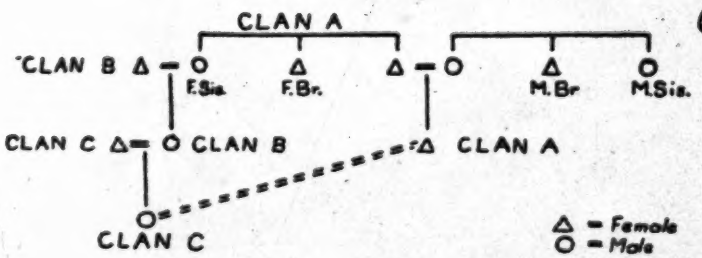
There is here a sharp distinction between cousins on the father's and the mother's side, the former being linked with 3rd ascending and 1st descending generations, the latter with one's brothers and sisters. [605]

First Descending Generation.

(1) Children both ♂ and ♀ of F.Br.S. and D. and of F.Sis. S. and D. are *MACHOKOR*, the same as their parents. According to Dorobo statements, a man is allowed to marry his F. Sis. D.D.—his *machokor*—, but no other woman whom he calls by a relationship term. [582]

[P.185, C]

582
601
614



THEORETICAL MARRIAGE WITH ESis.DD.

This statement is not supported by any of my genealogies, but this does not necessarily mean it has never occurred, and my informants were unanimous in asserting it. A man can therefore in theory marry his classificatory grand-daughter; he would not be likely to do so in fact on account of the shortage of women, and the lack of wealth. [595]

582 602

[Text continues top of P. 186, B-Analysis]

(2) Ego's S. and D., and Br. S. and D.= *APAA, apaa.* 601

(3) Children both ♂ and ♀ of Sis., and of M. Br. S.=*MAMA, mama,* placing them in the M.Br. category, an unusual feature, since the Nandi (and ? Masae) group M.Br. and M.Br. S. together, but have no term for M. Br. S.S., who is outside the *tiliet* or relationship.

(4) M.Br.D.S. and D.=*MAMA, mama,* again different from the Nandi, who regard them as outside the *tiliet.*

(5) Children both ♂ and ♀ of M.Sis. S. and D.= *KESENDA, Kesenda,* placing them in the same category as Br., Sis., and M.Sis.S, and D.

Second Descending Generation.

(1) Son's S. and D., Dau's S. and D.= *AGWI, agwi,* i.e. they call ego *agwi*=grandfather; and all of this generation are *agwi* to ego, i.e. all children of *machokor, apaa,* and *mama,* though not of M.Sis.S.S., who are *kesenda.*

[Text continues middle of P. 186, B--Analysis]

[P.186,B]

for if, e.g. a man was forty years old, and his *machohor* was only ten, he could marry her only as a second wife, a luxury which few Dorobo can attain. And again, owing to the small number of clans, the F.Sis. D.D. is often of the same clan, and so barred from marriage, as in the following case:

582 602 [595]

Functional analysis of terms : ♀ speaking. (W.S.)

601

First Ascending Generation.

(1) F.Br., M.Sis. are ***BABA***, *eiyo*, the same as when a man is speaking.

(2) M.Br.=***APULAIYO***, <Masae *apula*, <*apu*, M.Br. (M.S.); M.Br.W.=*eiyo* as M.S.

(3) M.Sis.Hus.=***KONYIT***, the ordinary term for a male relative by marriage, i.e. "husband," and applied also to the same other catagories as M.S.

(4) F.Sis., F.Br.W.=*Sindet*.

Terms for second and third ascending generations are the same as M.S.

Ego's own Generation.

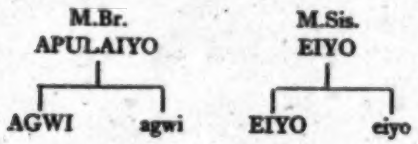
As when M.S., there is a distinction between the paternal and maternal sides. The children of F.Br. and F.Sis. are all grouped as ***MACHOKOR***, *machohor*, while on on the maternal side we have :—

[602]

(1) M.Br.S. and D.=***AGWI***, *agwi*.

(2) M.Sis.S. and D.=***EIYO***, *eiyo* :—

601



W.S.

(3) Br., Sis.=*KESENDA*, *kesenda*.

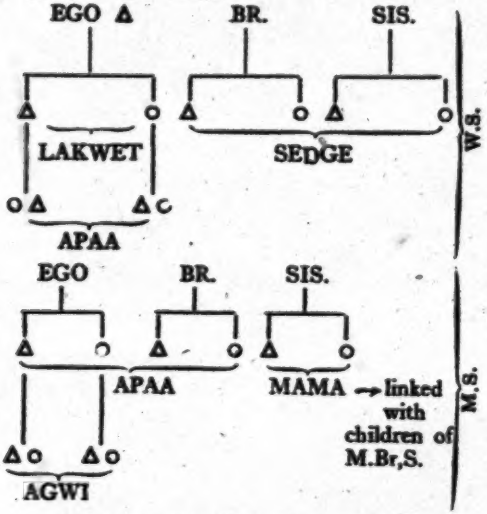
First Descending Generation.

(1) Children of *MACHOKOR* are also *MACHOKOR*.

(2) Ego's children ♂ and ♀=*LAKWET*, *Lakwet*.

(3) Children ♂ and ♀ of Br., Sis.=*SEDGE*, *sedge*.

When W.S., children of this generation are grouped differently:



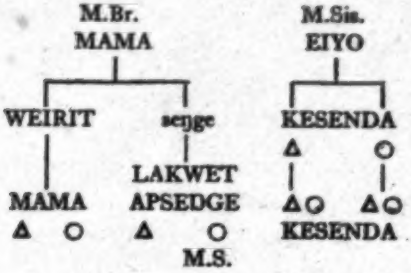
Second Descending Generation.

(1) Children both ♂ and ♀ of S. and D.=*APAA*, *apaa*, transferred from first descending generation M.S.

Linguistic Analysis of Relationship Terms.

BABA=F., F.Br., M.Sis.H. Allied to Masae *papa*, Bari *baba*, and probably to Ndi *apa* (Gala *aba*), all meaning 'father.' [197]

601 ●



MAMA=M.Br., M.Br.W. Ndi *mama*, and possibly akin to Bari *mana-ye*. 601 197

EIYO=M., M.Sis., F.Br.W. Nandi *eiyo*, Masae *yeiyo*, and in most of the Nandi dialects for "mother." An occasional alternative for *eiyo* in Dorobo is *POKINE*, which in Nandi means Hus.Br.W.

AGWI=F.Br., his children and grandchildren. Nandi *agwi*, Masae *ol-akwi*='grandfather.' Cf. Bari *akwe* < *kwe*, 'head.'

KOKO=F.M., M.M. Nandi and Masae *koko*, 'old woman,' i.e. grandmother. And cf. Masae *eng-ŏgho*, old woman.

PUKOT=F.Sis. This might be from a stem occurring in Bari *puk*, 'germinate,' but I think it is more likely to be a remnant of the original Dorobo terminology.

KONYIT=F.Sis.H. etc. Nandi *konyit* means 'honour,' and cf. the Masae term *e-sindani e-anyit*, 'respected sister in law,'=Br.W. and W.Sis.

KUKO=F.F., M.F. Nandi *kuko* is the masc. form of *koko*, and hence='old man,' i.e. grandfather, like Nandi *inguget*, *ingoget*, the reference forms for *kuko*, *koko*.

MACHOKOR=F.F.F. etc. Nandi *machokor* =S.S. and S.D. The etymology may be Luo *chokore*, 'collect,' hence it would signify 'a collection of relatives.'

MAKIKAT=F.F.M. etc. Not a Nandi term, but perhaps of Nandi origin, i.e. *ma-ki-ikat*, "They are not greeted," because though their names are known, none are ever alive in ego's life-time.

KESENDA=Br., Sis., M.Sis.S. and D. Nandi dialect for Br., Sis., the true Nandi being *tupchet*. Possibly < Nandi *kesen*, 'carry a

[P.188,A]

child,' it being one of the duties of a young girl to carry her small brother or sister. 601 197

APAA=children of ego and ego's Br. May be connected etymologically with Nandi *apa* =M.Sis.H., F.Br.S. (*ar'-t'-apa,*) meaning 'father,' and used elliptically in Dorobo to mean '(children of) father.'

APULAIYO=M.Br. <Masae *apula* <*apu*.

SINDET=F.Sis., F.Br.W. <item found in Masae *e-sindani*, 'sister in law.' *Sindet* (W.S.) is thus the equivalent of *puko* (M.S.) and must mean 'one to whom respect is due.'

The Dorobo normally live in family groups, either one or more elementary families or domestic families[1] forming an extended family, or one or more elementary or domestic families of fellow clansmen, e.g.: 59

1. (a) *Fraternal group: three brothers*

D.F.	E.F.	E.F.
(*Hut 1*)	(*Hut 2*)	(*Hut 3*)
E. Br.	2 Br.	Y. Br.
+ F. or M.		

1. (b) *Extended patrilocal family*

E.F.	E.F.
(*Hut 1*)	(*Hut 2*)
F. and M.	E. son, wife, and children

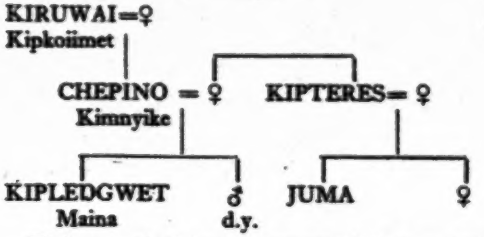
2. *Clan group*

E.F.	E.F.	
(*Hut 1*)	(*Hut 2*)	(*Hut 3*)
Man and wife	Man and wife	♀ Mother of 1

The people under whose influence a child will come are thus: in (1) (a): F., M., one of the 2nd ascending generation, F.Br., F.Br.W., with F.Br. S. and D. as associates. In (1) (b): F., M., F.F., and F.M. In (2): F., M., one of the 2nd ascending generation, with clansmen as associates. The people normally responsible for the bringing up 602 [855]

[1] Definitions of "family":
Elementary family=F., M., and children. (E.F.)
Domestic family=a group of people living together in one house or steading, if based on an elementary family, e.g. one husband, two wives, and the children of each wife. (D.F.)
Extended family=a group of families related by genealogy or adoption living together as a defined unit, e.g. Father, and son and his wives and children form a patrilocal extended family. (Ext. F.)

and education of children may be grouped according to the amount of influence they exert; and as primary authorities are to be included: F., M., F.Br., F.Br. W., F.F., F.M; as secondary authorities, M.Br., M.Br.W., F.Sis., F.Sis. H., M.Sis., M.Sis.H., and *tilionutik* (relations) in the persons of clansmen living in the group. The M.Br. does not occupy the same place with regard to a child that he does in Nandi. He does not live in the same group, whereas the F.Br. frequently does, and so the F.Br. has the greater influence on the child. Many Dorobo, in fact, have had little or nothing to do with their M.Br., and some do not even know their names. In the following Kelpui genealogy,



Kipleggwet had hardly ever seen Kipteres, and could not even remember his name, till another person told him. Juma similarly did not know the name of his M.Br.

The relationship system of the Dorobo thus differs from the Nandi, especially in the following:

(1) Children of F.Br. and F.Sis. are classed as *MACHOKOR.*
(2) Children of M.Sis. are classed with Br. and Sis. as *KESENDA.*
(3) Children of ego and his Br. are classed as *APAA.*
(4) Children of M.Br. and ego's Sis. are classed as *MAMA.*
(5) Children in the 2nd descending generation are *AGWI.*
(6) The F.Br. takes the place of M.Br.

B. Age-sets and behaviour patterns.

The Dorobo have seven age-sets, *ipinda*, pl. *ipinuagik*, with three age-grades in each sex. These sets are borrowed from the Nandi, and have the same 15-year intervals, and the same three sub-divisions.

[P 195]

539 533 An overheard text is: "If I were a bird that is sitting beside the river and a zebra came to drink, I would, in the little bird's place, kiss (or bite) it, because I love it very much. But I am big and therefore can not."

512 Around ten o'clock at the latest the merriment reaches its end, and the camp is finally wrapped in silence.

825 The statement of the Wandorobo, according to which it is still supposed to have never happened that human beings have been killed by predatory animals within the camp seems remarkable. They [189] therefore do not fear them at all and believe themselves safe from them because of their magic medicines, some of which, according to popular belief, keep the wild animals far away, while others have the effect of the cap of invisibility.

III.

• 601 Kinship designations and terms of address.

The kinship designations are the following:

Father: aba or baba.
Mother: jëjo or ga.
My wife: mai totuan.
My brother: bidjog uan.
My sister: bidjot uan.
Half brother: weku baba.
Half sister: wetu baba.
Brother of the father: bidjog e baba.
Sister of the father: bidjot baba.
Brother of the mother: bidjog ga.
Sister of the mother: bidjot ga.
Son of the father's brother: weku bidjog baba.
Son of the father's sister: weku bidjot baba.
Daughter of the father's brother: wetu bidjog baba.
Daughter of the father's sister: wetu bidjot baba.
Son of the mother's brother: weku agogesch.
Son of the mother's sister: weku bidjot ga.

/238 cont./

• 601 Son of my brother: msumbetog bidjog uan.
msumbetog bidjogesch.
Daughter of my brother: wetu bidjogesch.
Son of my sister: weku bidjot uan.
Daughter of my sister: wetu bidjesch.
Grandfather: agoija.
/239/ Grandmother: a mama.
Father-in-law: roiagesch.
Mother-in-law: ratotuan.
The terms of address for relatives are:
Father: aba or baba.
Mother: jējo or ea.
Wife: mai.
Stepmother: ea.
Son: msumbetog (pl. msumbe).
Daughter: illeto (pl. illug).
Grandfather: akuja.
Grandmother: akuja, koko, a mama.
Father-in-law: ba-geteñ.
Brother: bidjogesch, ba-suben.
Half brother: bidjoguan, ba-suben.
Sister: bidjesch.
Half sister: bidjot uan.
Uncle: agogesch.
Aunt: ea.
Mother-in-law: ba-ger.
Brother-in-law: ba-suben.
Sister-in-law: balelo.

593 The head of the family is the family father, who has the same
171 rights as among the Masai.

For the Masai terms of address eraijo, engĭjo, abula and araba,
601 the Asá have the words ego-ea, eto-ea, agogesch, and arāmó
171 (see p. 56).

/240 cont./

583 [439] are bought from the Masai for ivory, and finally half of the meat of a slain female head of game approximately the size of a zebra. The mother of the bride and each of her brothers receive from the bridegroom a beehive apiece. Instead of the beehives the parents-in-law in some regions, especially where the Wandorobo live in close contact with the Masai, receive iron wire. After receiving the gifts, the [601] bridegroom and father-in-law reciprocally call each other ba-geteñ, bridegroom and mother-in-law ba-ger, bridegroom and the brothers of the bride ba-suben, according to ancient Masai custom.

583 587 For beauties no higher price is paid. For a childless widow the usual price is paid, but only after the birth of the first child and after her father has returned to the heirs of her deceased husband the price received for her before her first marriage. For a widow who gave birth to girls only, no bride price is paid; instead, however, 583 the heir of her deceased husband keeps her daughters. Likewise nothing is paid for a woman driven out by her husband. If the bridegroom dies before the marriage, his brother takes the bride. [584] If the bride dies before the marriage or if the betrothed persons dissolve the betrothal, the portion of the bride price already paid is returned. A bridegroom who is too poor to be able to pay the full price serves the father-in-law for a few months as hunter for the remainder owed.

584 If the father of the girl has stubbornly opposed the courtship, he is finally forced to consent by means of a divine judgment. The lover stealthily creeps into the hut of the old man and ties a [784] rope of grass around the wooden honey pot. The father is said /241/ to give his consent regularly then, since otherwise the punishment [583] of God would kill him. In place of this custom, it also happens [171] that the lover secretly takes the girl away, or the latter -- as among the Masai -- flees to him without her parents' knowledge.

837 Wife exchange occurs, but legal marriage does not arise from it. The woman does not remain with the other man for longer than a half to a whole year. If she feels pregnant before this time, she returns to her husband.

582 171 Among the Asá the same marriage obstacles hold as among the Masai, but the great distances between the individual tiny camps

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

561 Dorobo men pass through three stages: ***getik***, uncircumcised boys; ***murenik***, circumcised men; and ***apaiinisiek***, elders. Boys are circumcised between the ages of 15 and 18 years, and may marry at any time after circumcision when their circumstances allow. Some men in fact never marry at all, but live alone, getting occasional help from women in the settlement, and depending for sexual satisfaction on surreptitious affairs with wives of age-mates. Women are first ***tipik***, girls; then ***yosonik***, married women; and finally, when they begin to look old, ***ngitokisiek***, old women. Girls marry soon after they have been circumcised.

[304] [582] [880] [589]

Kinship and Behaviour

602 The existing Dorobo relationship system, ***tiliet***, is structurally similar to that of the Nandi, and uses a number of Nandi terms; but it is less regular and includes in the *tiliet* a larger number of persons than does the Nandi. Moreover, the collective term ***macokor*** (which I did not find in use as a true relationship term in Nandi) is used by the Dorobo as the proper term for a number of people terminologically differentiated by the Nandi.

[171]

601 Within the *tiliet* the chief terms are: In the third ascending generation, all males are ***macokor*** and all females ***makikat;*** in the second ascending generation, all males are ***kuko*** or ***akui*** and all females ***koko***.

In the first ascending generation, the terms are: ***papa*** = father, father's brothers, and mother's sister's husband; ***eiyo*** = mother, mother's sisters, and father's brother's wife; ***pukot*** = father's sister; ***konyit*** = father's sister's husband; ***mama*** = mother's brother and his wife. Terms used by women are ***sindet*** = father's sister and father's brother's wife; ***apulaiyo*** = mother's brother; ***eiyo*** = mother's brother's wife; and ***konyit*** = mother's sister's husband.

In a man's own generation, his brothers, sisters, and mother's sister's son and daughter are ***kesenda;*** mother's brother's son and daughter, ***mama;*** and the son and daughter of his father's brother and father's sister are ***macokor***. Women's terms which differ from these are: ***apulaiyo*** = mother's brother's son and daughter; ***eiyo*** = mother's sister's son and daughter.

In the first descending generation, ***apaa*** includes son, daughter, brother's son and daughter; ***mama***, sister's son and daughter, and mother's brother's son and daughter; ***macokor***, father's brother's children's children, and father's sister's children's children. In the second descending generation, both sexes are ***akui***, except mother's brother's children's children's children, which are ***mama;*** and mother's sister's children's children's children, ***kesenda***.

Among affines, wife's father is ***pamoyo;*** wife's mother, ***poker;*** wife's brother, ***konyit*** and his wife, ***poker;*** wife's sister ***pukot*** and her husband, ***kipukotiet;*** wife's brother's son and wife's sister's son, ***apaa;*** wife's brother's daughter and wife's sister's daughter, ***pakuo***. Husband's father is ***pakuo*** and his mother, ***poker;*** husband's brother ***konyit*** and his wife, ***sindet;*** husband's sister, ***kamati*** and her husband, ***poker;*** husband's brother's children, ***lakuet;*** and husband's sister's children, ***apulaiyo***.

602 In the *tiliet* it is the *father's brother* who stands out and occupies the special
604 place in family life that the mother's brother does among the Nandi; not a few Dorobo did not know their mother's brother's name. Owing to the nature of Dorobo life, the father's brother is continually in contact with his brother's children, and his relations with his nephews are even closer than those of the Nandi ***mama*** with his nephews.

l; Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

A striking difference between the Dorobo and Nandi systems is that whereas Nandi may not marry any person in the *tiliot*, the Dorobo were insistent that a man might marry his father's sister's daughter's daughter, the girl whom he calls *macokor*, a person definitely in the *tiliot*. This type of marriage does not seem to occur now; but did in the past. Marriage with a wife's sister is considered objectionable.

Behaviour patterns may be summed up in a statement made by a Dorobo that " a man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we are all on terms of friendliness and ' clean fun.' " Generally speaking, seniority is a matter of age, except with respect to the father's brother. Between a man and members of his own generation considerable latitude is allowed; but elders must always be shown respect. Where the claims of relatives are concerned, the amount of contact is important, for even a close relative who lives a long way off and is seldom seen cannot expect and will not receive so much respect as one who lives nearby and is well known. On a husband's part, there should be complete avoidance of his wife's mother, though this may be relaxed by degrees as he gets older; conversation with the wife's father should be limited to greetings.

Pre-marital Sex-life

Owing to the small number of Dorobo and the consequent shortage of women for wives, men have little in the way of pre-marital sex-life; and if a man does manage to acquire a lover, he often marries her.

Bridewealth

This varies according to circumstances, and Dorobo statements about it are conflicting. In 1927 it was said to consist of large quantities of honey-wine and of monkey-skin caps; but in 1939 the standard was one cow (with calf if still suckling), one ox, and four goats. The number of goats varied in the recorded cases from two to six, and in one case the cattle amounted to four oxen. A man also gives his father-in-law presents of honey-wine and a fur cap or two; thus marriage is more of a drain on a man's resources than formerly.

Betrothal

A man chooses his wife himself, and arranges the preliminaries with the girl's father during two visits at which he gives him presents of honey. After the second visit the father calls the clan council together and publicly gives his consent to the marriage.

Marriage

The marriage ceremonies are conducted by an elder known for the time as *patum*, who brings the bride to her future husband's home, where the guests are already assembled feasting. The girl enters the hut in which the ceremony is to take place, and in the presence of witnesses the *patum* gives her to the man, saying, *Keipuncis cicoto*, " you now belong to this man." He then binds some *sekutiet* grass on the man's right wrist, and an old woman binds some of the same on the girl's right wrist. They are now married. The *patum* then sets up an erection of *sekutiet* grass called *tumdo* which is smeared over with cow-dung; this the wife has to knock down and tread upon. After this, the pair are left alone, and the marriage is consummated. Next day the *tumdo* is trodden into the floor and plastered over with cow-dung, for it must not be seen. The pair are then shaved, he by the *patum*, she by the old woman, and the hair is buried in cow-dung under an erection of sticks called *koroniot*, which is set up in great secrecy by the *patum*. It is essential

Sandet: son's wife (w).
Pamono: wife's father.
Kamati: husband's sister (w).

The use of kinship terms

● [600] In practice kinship terms are used as a form of address and as a method of showing respect to seniors, who acknowledge the respect by using the reciprocal term to the juniors. To illustrate the use of these terms, I have prepared a statement of the relatives of a man named Pilo arap Katam of Kiptarakon (Sosoiyo group), in which it will be noted that the terms fall into six groups, with one isolated term:

1. *Papa-Eiyo*, in the first ascending generation.
2. *Akui*, the second ascending, first ascending, and second descending generations.
3. *Macokor*, in the third ascending, own, and first descending generations.
4. *Kesenda*, in own, and first and second descending generations.
5. *Apaa*, in the first descending generation.
6. *Mama*, in the first ascending, own, and first and second descending generations.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

a Nandi, and her husband is spoken of with less respect than Kicoti's, though both men are referred to as *konyit*. Their children are called *mama*.

His father's sister Cepulpul and her husband Turiepuku are both dead, and if he speaks of them it is by the terms *pukot* and *konyit*; but her son son Kipkoiec is, as *macokor*, on the same footing as Leii and Kimaiyo, the sons of his father's elder brother Kaola, allowing for the difference of age-set. Pilo is a *Nyongi*, as also is Leii; but Kimaiyo is a *Maina*. On the other hand, Kimaiyo is a policeman, which somewhat outweighs the difference. Cepkemoi and Cerob, the daughters of Pilo's father's younger brother Kiptoo have lessened themselves to a certain extent in old-fashioned Dorobo eyes by marrying Nandi (though Dorobo-Nandi marriage has been practised for a long time), and they live at a distance. The wife of Leii and the husband of Cepkumuren, Pilo's other *macokor*, are both Dorobo, and although they live near the forest, there is a good deal of intercourse between their families. All these people are spoken of as *macokorennyon*, and addressed as *macokoronni*, *macokor*, or by name. Their spouses are spoken of as *konyit*. Though Kimopo Arap Mining, the husband of Cepkumuren, is *konyit* to Pilo, his relatives are outside the *tiliet* as far as Pilo himself is concerned (though not of course for Cepkumuren), and this applies also to the relatives of his sisters' husbands; such people when on terms of friendship and visiting are addressed and referred to by name, or they may be spoken to by the word *leiye*, a general term of address to any person of either sex with whom one is friendly. An old woman like Cesikirikat, Arap Mining's mother (not named in the genealogy), would not be addressed as *leiye*, however, but as *koko* "grandmother" or *cepiosonni*, "old woman", though not related in any way, but out of respect because Pilo is a friend of Arap Mining, and often meets his relatives, including Cesikirikat.

Kaola and Kiptoo, the brother's of Pilo's father, lived for many years at Cepkunyuk, four miles from Kiptarakon, close to and inside the boundary of the Nandi Reserve; but in 1939 they went to live in Sosoiyo near the forest. At that time, both of them were more active than their brother Kipkatam (Pilo's father) who, if he had been a European, would have been described as "bed-ridden"; and for practical purposes Kaola took the place of a father to Pilo and his brothers and sisters. Kipkatam was deaf, nearly blind, almost speechless, and hardly able to move; so when Pilo wanted to consult anyone, he turned to Kaola, or if he was away, to the slightly younger Kiptoo.

It will be seen that a sister's children are not *apaa*, like a brother's, but *mama*. Pilo's sister's children are a typical case. They live at a distance, and so are as remote from him as all the descendants of his mother's brother (*mama*) Nekoi who, with his wife and his son in law Kilanya and his family, lives at Ngatepkong on the far side of the forest and has little to do with Pilo. Moreover, the only link between Pilo and Nekoi, his mother Keuarie, is there no longer, for she died some years ago; so Nekoi and his family are just spoken of as *mama* — when it is necessary to speak of them at all, for though they exist they count very little in Pilo's life.

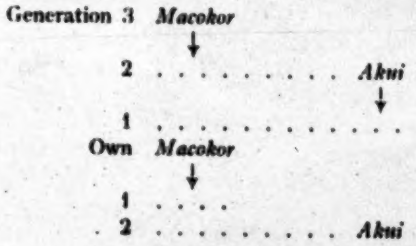
Between Pilo and his brother Coimim there is a good deal of inter-

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

593 [888] course. They live in the same settlement, they are *papa* to each other's children, they both look after old Kipkatam, and they have the joint responsibility of feeding him as well as their own families. They are *kesenda* in name and in fact. But the existence of a remoter *kesenda* group, the children [605] of the mother's sister, shows how the term may mislead if the circumstances are not known and if it is not realized how much depends on proximity. Both their mother's sister's sons Kikoror and Tote live on the other side of the country at Ngatepkong, and Kikoror moreover dwells inside the forest; between them and Pilo intercourse is rare, and relationship might not exist. In practice, of course, Pilo would refer to them as *kesendannyon* and would greet them as *kesenda* or by name; but in the absence of proximity the intercourse would be limited to mere greeting.

602 The *akui* group includes three sets of people: (A) parents of father and mother; (B) father's father's brother and sister and their children; and (C) all of the second descending generation except the great grandchildren of the mother's brother and sister.

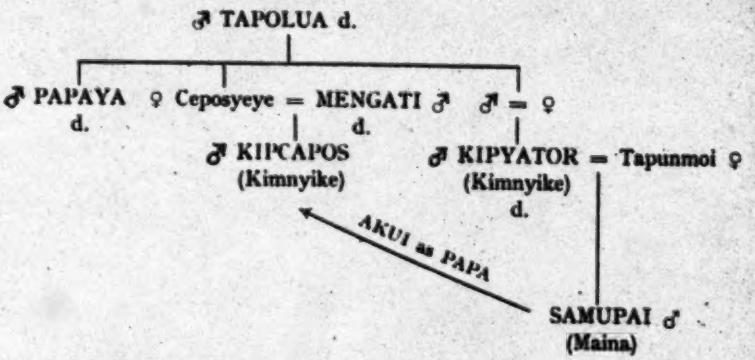
603 601 (A) The senior *akui* at the time when I collected the genealogies which form the basis of this study were all dead. The real *akui* are the father's father and the mother's father (their wives being *koko*), and these two are often referred to as *kuko* as well as *akui*. When Pilo said, "My *akui* was Kimngamngam", or "my *akui* was Mereua", his statement was amplified by saying who they were: *akui ko papa nepo papa, kuko ko papa nepo eiyo*, "*akui* is the father of my father, *kuko* is the father of my mother". (B) But the brother's and sisters of the *kuko* or *koko* (none were recorded on the maternal side) are referred to as *akui* by courtesy, and this courtesy is extended to their children (people of father's generation) but not to lower generations. So Arap Lemando was merely *leiye* or "Arap Lemando" to Pilo, though his father and grandfather were *akui*; and between Pilo and Arap Lemando there was no relationship. (C) The third descending generation, the children of Pilo, his brother's children, his sister's children, and those of his father's brother, and his father's sister, are all *akui* also; but no descendant of the mother's brother or sister is called *akui*. This term, it will be seen, has a symmetrical alternation from the second ascending to the second descending generation, that is, from grandfather to grandson; *macokor* has an asymmetrical alternation from the third ascending generation to own's own, being extended in both cases to the next generation below:



4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

he respected and feared both his father's brother and his mother's brother. When the time came for him to be circumcised, he went first to his *papa* to ask permission, and then to his *mama*; both consented, and both oiled him [12]. If his *papa* got angry with him, he gave him a goat, a new honey-barrel, or some beer; and he treated his *mama* in the same way. Such cases are perhaps not normal, and the respect shown to the *mama* is due to individual circumstances, for Arap Mining was taught by his mother to like his *mama*, and unlike most Dorobo he saw a good deal of the man.

When a man has no father's brother to whom he can turn, other people can act as substitutes, as in the case of a man named Samupai arap Yator, whose father was dead, and had no brothers or sisters:



In this case, Kipcapos, the son of Samupai's father's father's sister was alive, and of the same age-set as his father Kipyator. Though terminologically merely *akui*, Samupai regarded Kipcapos as a father's brother, visited the old man whenever he went near where he lived, and treated him exactly as if he was really *papa*. In another case, a father's father's brother's son, also *akui*, took the place of a non-existent father's brother.

The people who are of primary importance in the life of a child are therefore his parents, his father's parents (especially the mother), and his father's brother. The father's sister while still young and unmarried may live with her parents and thus for a time come in contact with the child. She will thus be able to help the mother for so long as she remains unmarried. But once she has got a husband she is likely to live elsewhere and may pass right out of the child's life, since there may be no man in the settlement who is not either related to her, or of the same clan. In the settlement at Kipukua where Arap Mining lived, there were five other men, Cesundil a married man with two children, and his unmarried brothers Malakuen, Kipsang, and Kipungei, together with Arap Mining's unmarried brother Kimutai

[12] A boy must get permission to be circumcised from his father's brother, who oils his head and face in token of consent.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

normally go elsewhere for the night, leaving the hut to the men. In the matter of hospitality, relationship by blood, marriage, or clan is a deciding factor in the length of time for which a man may expect to be put up by his host. Thus, no matter what the age-set situation may be, a man who is neither a relative nor a clansman cannot claim more than two nights' hospitality on account of necessity, and will not be given honey-wine; while a relative or clansman may be fed for a week or even longer, and the host will give him honey-wine if he has any.

3. Behaviour

A brief summary of the modes of behaviour towards important relatives was given by a Dorobo in the following words: *Makicupe papa ne kosica a kopire lakuet*; *makicupe koheny papa*; *makimuoci korket ok eiyo ualek ce somis, amu ya, ngut ualek ap kumisiet*; *kiurerencinkei tukul*. ("A man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we all play together, i. e. we are on terms of friendliness and 'clean fun'.") Generally speaking, seniority is a matter of age, except with respect to the father's brother and men of senior age-sets.

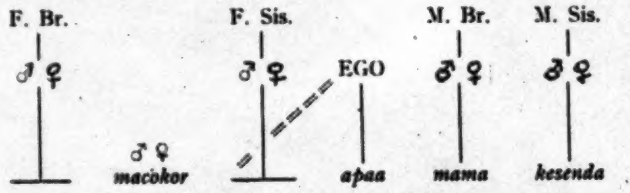
It is unlikely that any Dorobo ever sees his father's father's father, and the father's father is seen only by small children. The father's father is regarded much as one's own father. But the father's mother helps in the care of the children, and so becomes an object not only of familiarity but of affection as well to the children. To all of the father's generation a man should show respect and obedience. He must not insult them, nor use unsuitable language in their presence. Corporal punishment may be inflicted on a rude or disobedient child with the hand or with a stick, by father, mother, and father's brother. Verbal correction is also a common method of dealing with naughty children, and though a man would not as a rule say to a naughty child who had made him angry anything as drastic as *Amin celolei* (may you die of dysentery), in case the spirit-world took him at his word, he might go as far as *Iam piat* (eat dirt), an expression which if used by a child to a senior would certainly earn a beating.

Most Dorobo are fond of their parents, and treat them in old age with much kindness and consideration. Wherever I found aged parents living with their sons it was the same; and the more helpless the parent, the greater the trouble taken to make them comfortable. The old father of Pilo, to whom I have already referred, was such a one. Bent double, hardly able to move without help, he spent his time lying outside in the sun when it was warm, and indoors beside the fire when it was cold. He had to be helped in and out, and fed and looked after like a child; but it was all done cheerfully by Coimim and his wife, in whose hut the old man lived, and if they could not attend to him, Pilo and his wife did.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

Between a man and the members of his own generation considerable latitude is allowed. As the Dorobo put it, *Kicupakei, kiurerencinkei, kiilencinkei, 'Kumin kon, ngut kum kamet', amu ki lakok.* ("We use bad language to one another, we play together, we say to each other, 'May your father lie with you, or may you lie with your mother', because we are children", i. e. we are all of the same age.) These rude phrases, however, must never be used to elders, and to do so is very shameful; but spoken to members of one's own age-set or generation they are quite harmless and have no sinister implications. Between the sexes of the same generation there may be a perfectly innocuous intimacy, between brother and sister, between *macokor, mama,* and *kesenda,* which allows any kind of joking and language but stops short of actual sexual intercourse; and in spite of this license, such evidence as there was indicated that incest was not common. Between members of the same generation, especially in youth and early middle age, there is also a strong bond in the shape of mutual help and support among those who live near each other, extending to all departments of home life. The effect of propinquity must not be overlooked, and the claims of even a close relative who lives a long way off and is seldom seen may be reduced to insignificance.

The general attitude of a man's own children to the children of his *macokor,* his *mama,* and his *kesenda,* is the same, in that they are all like his own children, who may be played with or reproved when necessary, but without the use of any bad language or abuse. To those children to whom he is 'father's brother' there is of course the special attitude that I have already described. But between members of this generation there is a marked terminological difference:



so that by classification all the children on the father's side are *macokor,* while those on the mother's side are both *mama* and *kesenda*; and a man's own children are *apaa,* while those of his sister are *mama.* When the children are small these differences are merely nominal and not apparent; but as they grow older a distinction tends to arise between those on the father's side and those on the mother's side, especially between *macokor* and *mama*; and this is emphasized by the possibility that a man might marry his *macokor* (father's sister's daughter's daughter), even if he seldom or never does so in fact.

Between a man and the second descending generation there is a relationship of respect, for terminologically his grandchildren are equated with his grandfather. In practice, however, this generation counts as far as he

This statement is not supported by any of my genealogies, but this does not necessarily mean it has never occurred, and my informants were unanimous in asserting it. A man can therefore in theory marry his classificatory grand-daughter; he would not be likely to do so in fact on account of the shortage of women, and the lack of wealth. [595]

582
602

[Text continues TOP of P. 186, B - Analysis]

(2) Ego's S. and D., and Br. S. and D.= *APAA, apaa.* 601

(3) Children both ♂ and ♀ of Sis., and of M. Br. S.=*MAMA, mama*, placing them in the M.Br. category, an unusual feature, since the Nandi (and ? Masae) group M.Br. and M.Br. S. together, but have no term for M. Br. S.S., who is outside the *tiliet* or relationship.

(4) M.Br.D.S. and D.=*MAMA, mama*, again different from the Nandi, who regard them as outside the *tiliet*.

(5) Children both ♂ and ♀ of M.Sis. S. and D.= *KESENDA, Kesenda*, placing them in the same category as Br., Sis., and M.Sis.S, and D.

Second Descending Generation.

(1) Son's S. and D., Dau's S. and D.= *AGWI, agwi*, i.e. they call ego *agwi*=grandfather; and all of this generation are *agwi* to ego, i.e. all children of *machokor*, *apaa*, and *mama*, though not of M.Sis.S.S., who are *kesenda*.

[Text continues middle of P. 186, B - Analysis]

[P.186,B]

for if, e.g. a man was forty years old, and his *machokor* was only ten, he could marry her only as a second wife, a luxury which few Dorobo can attain. And again, owing to the small number of clans, the F.Sis. D.D. is often of the same clan, and so barred from marriage, as in the following case: 582 602 [595]

Functional analysis of terms : ♀ speaking. (W.S.) 601

First Ascending Generation.

(1) F.Br., M.Sis. are ***BABA, eiyo***, the same as when a man is speaking.

(2) M.Br.=***APULAIYO***, <Masae *apula*, <*apu*, M.Br. (M.S.); M.Br.W.=*eiyo* as M.S.

(3) M.Sis.Hus.=***KONYIT***, the ordinary term for a male relative by marriage, i.e. "husband," and applied also to the same other catagories as M.S.

(4) F.Sis., F.Br.W.=***Sindet***.

Terms for second and third ascending generations are the same as M.S.

Ego's own Generation.

As when M.S., there is a distinction between the paternal and maternal sides. The children of F.Br. and F.Sis. are all grouped as ***MACHOKOR, machokor***, while on on the maternal side we have :— [602]

(1) M.Br.S. and D.=***AGWI, agwi***.

(2) M.Sis.S. and D.=***EIYO, eiyo*** :—

child,' it being one of the duties of a young girl to carry her small brother or sister. 601 197

APAA=children of ego and ego's Br. May be connected etymologically with Nandi *apa* =M.Sis.H., F.Br.S. (*ar'-t'-apa*,) meaning 'father,' and used elliptically in Dorobo to mean '(children of) father.'

APULAIYO=M.Br. <Masae *apula* <*apu*.

SINDET=F.Sis., F.Br.W. <stem found in Masae *e-sindani*, 'sister in law.' *Sindet* (W.S.) is thus the equivalent of *pukot* (M.S.) and must mean 'one to whom respect is due.'

The Dorobo normally live in family groups, either one or more elementary families or domestic families[1] forming an extended family, or one or more elementary or domestic families of fellow clansmen, e.g.: 59

1. (a) *Fraternal group: three brothers*

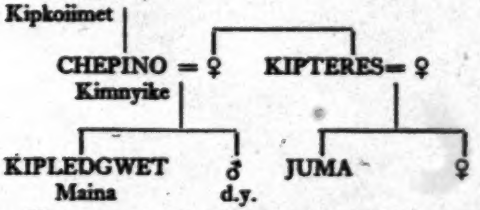
The people under whose influence a child will come are thus: in (1) (a): F., M., one of the 2nd ascending generation, F.Br., F.Br.W., with F.Br. S. and D. as associates. In (1) (b): F., M., F.F., and F.M. In (2): F., M., one of the 2nd ascending generation, with clansmen as associates. The people normally responsible for the bringing up 602 [855]

[1] Definitions of "family":
Elementary family=F., M., and children. (E.F.)
Domestic family=a group of people living together in one house or steading, if based on an elementary family, e.g. one husband, two wives, and the children of each wife. (D.F.)
Extended family=a group of families related by genealogy or adoption living together as a defined unit, e.g. Father, and son and his wives and children form a patrilocal extended family. (Ext. F.)

and education of children may be grouped according to the amount of influence they exert; and as primary authorities are to be included: F., M., FaBr., F.Br. W., F.F., F.M; as secondary authorities, M.Br., M.Br.W., F.Sis., F.Sis. H., M.Sis., M.Sis.H., and *tilionutik* (relations) in the persons of clansmen living in the group. The M.Br. does not occupy the same place with regard to a child that he does in Nandi. He does not live in the same group, whereas the F.Br. frequently does, and so the F.Br. has the greater influence on the child. Many Dorobo, in fact, have had little or nothing to do with their M.Br., and some do not even know their names. In the following Kelpui genealogy,



Kipleŋgwet had hardly ever seen Kipteres, and could not even remember his name, till another person told him. Juma similarly did not know the name of his M.Br.

The relationship system of the Dorobo thus differs from the Nandi, especially in the following:

(1) Children of F.Br. and F.Sis. are classed as *MACHOKOR.*

(2) Children of M.Sis. are classed with Br. and Sis. as *KESENDA.*

(3) Children of ego and his Br. are classed as *APAA.*

(4) Children of M.Br. and ego's Sis. are classed as *MAMA.*

(5) Children in the 2nd descending generation are *AGWI.*

(6) The F.Br. takes the place of M.Br.

B. Age-sets and behaviour patterns.

The Dorobo have seven age-sets, *ipinda*, pl. *ipinuagik*, with three age-grades in each sex. These sets are borrowed from the Nandi, and have the same 15-year intervals, and the same three sub-divisions.

[P.189, A]

The age-grades, through which a person passes in turn are: 561

♂	♀
yetik: uncircumcised boys.	*Tipik:* girls.
Murenik: circumcised men.	*Yoostik:* married women.
Apaiisiek: elders.	*Eygitoginiek:* old women.

Boys are *yetik* till circumcised, when they become *murenik* for the 15-year period of their age-set and then *apaiisiek* when the change over occurs.[1] The sub-divisions, *mostinuek*, of the Dorobo age-sets—each set has the same three sub-divisions—are called:

Senior: *Choyinisk.*
Middle: *Taparik* or *Kipalkopek.*
Junior: *Rawakanik* or *Kiptaiisik.*

A man belongs normally to the age next but one below that of his father, i.e.:

Age-set:	Eldest son usually belongs to:	Younger sons may belong to:
Kipkoiimet	*Kimnyike*	*Nyoggi*
Kaplelach	*Nyoggi*	*Maina*
Kimnyike	*Maina*	*Juma*
Nyoggi	*Juma*	*Sawe*
Maina	*Sawe*	*Kipkoiimet*
Juma	*Kipkoiimet*	*Kaplelach*
Sawe	*Kaplelach*	*Kimnyike*

It may happen, as in Nandi, that a man will be classed with an age next but two below that of his father (as in the last column above), because he was born so long after his father's marriage that he would be too young to be circumcised with the age he would normally belong to. [191]

With these terminological features, the resemblance of the Dorobo age-sets to the Nandi ends. They have no military functions at all, and their sole significance is behaviouristic. As an element in social structure the age-sets cut across the formal kinship patterns, and behaviour is not wholly reflected in the kinship system; when the two elements clash, the age-set pattern prevails. In a short summary it is not possible to go into details, but the following genealogy will illustrate it sufficiently: [701] [182] [602]

[1] See J.R.A.I. lvii. 426, for further details of the Nandi age-set.

14.Cunningford 2-4 (1938-1939):1943
FLS Dundee FLS

[P.190,A]

Although by relationship all these brothers are theoretically equals, as being brothers, yet by reason of their age-grouping different age-sets are found in all three families, with the result that Kimisi and Kipkutik are socially inferior to their brothers Kiptanui, Kenimo, and Kipet, Kipsir; while Leina, Kipilat, and Kipkoimo are all inferior to Lemiga. So long as they were small this did not matter, but when they reached puberty, the inferiority of their status became noticeable in such things as exclusion from all sexual matters, and is reflected in the general idea that " So and so is only a child, and he must not expect to do the grown-up things that we are allowed to do." The same will apply to the next generation.

The general principles of Dorobo behaviour may be summarised thus (from the standpoint of " ego "):

To the 3rd and 2nd ascending generations: care and respect.

To the 1st ascending generation: respect, obedience (and care when old). Easy and familiar intercourse, but no loose talk or bad language.

To his own generation: considerable latitude is allowed between members of the same generation: obscene talk and jests, discussion of sexual matters and so forth are tolerated, though of course such talk must not become acts. The idea of mutual help and support, which is accorded by all to their parents and grandparents (when these are still alive) is more emphasised in the interrelations of those of the same generation.

To the 1st descending generation: all members of this are treated much as ego treats his own children (and this applies more or less to the 2nd descending generation). In this category are also included those members of one's own generation, e.g. younger brother, who belong to a junior age-set.

To affinals: wife's mother must be avoided, both indoors and out, and must not be spoken to; if met on a road, a man must get off the road out of her sight. The wife's father need not be avoided, and

[P. 142, A]

Both the social and the economic ranges of the Dondo are very narrow. The family is a self-supporting unit, and a group of families forms a social unit; but the group is isolated, and the groups cohere through their strong clan solidarity and strict exogamy. There is no "tribe" as e.g. the Nandi, but a collection of family or clan groups forming a hoor or district, and a collection of such groups within a given area having common organization, customs, and dialect, and the innate idea that "we are the Dondo of such-and-such a place." Thus the Kapsingkandi Dondo (with whom this paper deals) distinguish themselves from the Dondo living on Tindiret hill, though that hill is only some seven miles from Sawiyo. (See map of the Dondo country.) Before the Government dispersed them the Dondo possessed, more or less undisturbed, the whole of the forest. Now they have no land at all. But they maintain their solidarity in spite of disruption, by means of their initiation, strong clan-system, and the fact that outsiders, e.g. the Nandi, are half afraid of them (so long as they do not go into Nandi), as being reincarnations and magicians of no mean ability, a people who are, in fact, somewhat uncanny. Their external relations may be described under three heads as (1) acquisitional: exchange of goods and services with the Nandi, and, till about 30 years ago, with the Venie Giniu Masai; (2) restrictive: the Government raids them for taxes, and takes away their land, which leads to (3) an attitude of deep suspicion towards all Europeans, though they are driven by economic pressure to work for them.

Productive activities are concerned with the following:

A. *Food*: meat (by hunting and trapping), honey, wild plants, elevsine and maize (grown or obtained), milk, maize meal, ash and beer.

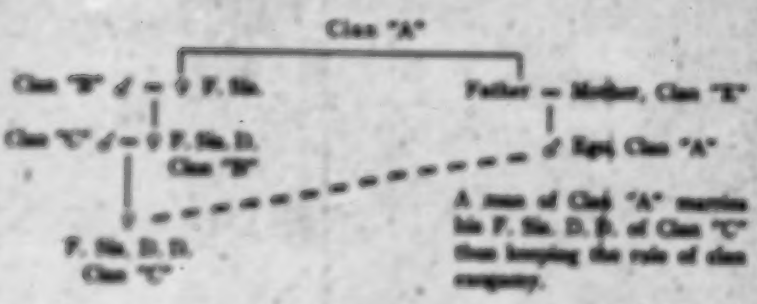
B. *Non-edible*: bowers, weapons, implements, utensils, clothing and ornaments (except of iron), firewood, traps, honey-barrels, coloured earth (which is dug in the eastern part of the forest and sold to the Nandi for cash.)

C. *Raw Materials*: wood, plants, and skins.

The exchange of their own products for things they do not make is governed by natural resources,

601

[605] [589]



This statement was not supported by any of my genealogies; but this does not necessarily mean that the practice was never followed, and my informants insisted that this type of marriage was not only allowed, but actually took place in the past. On the other hand, they said that marriage with any other kind of cousin within the clan was "very bad". In actual fact, however, marriage with the father's sister's daughter's daughter was probably not common, even in the past, and to-day would be quite impossible, partly from disparity of age (though this is not in itself a serious bar), and partly from the shortage of women and lack of wealth. If a man was a *Piroyot*, he might be allowed [illegible] but would [illegible] be suitable only as a second wife, a luxury out of the reach of most Dorobo. An equally serious objection lies in the fact that owing to the small number of clans, a man's mother may often be of his own clan and thus barred from marriage with him.

8. The Second Descending Generation

(Man speaking)

The term *ekwi* covers most of this generation: it includes the children of one's own children (grandchildren), children of brother's and sister's children, children of father's brother's grandchildren, and children of father's sister's grandchildren. The children of mother's brother's grandchildren are *mama*, and of the mother's sister's grandchildren, *kwenda*. Thus a man's own grandchildren are classed as grandparents.

[601]

(Woman speaking)

Grandchildren are *ekwi*; grandchildren of brother and sister are *ongo*, and of mother's sister, *aiye*; the rest are *ekwi*.

AFFINALS:

(Man speaking)

Wife is *mamnia*; wife's brother, *kwayit*, and his wife, *pakwe*; wife's sister, *pakwi*, and her husband, *kipakwiat*. Wife's parents are *pamwan* (m.) and *pakwe* (f.). Wife's brother's and sister's children are *ayian* (m.) and *pakwe* (f.).

4:Huntingford E-5 (1938-1939) 1951 FLÁ Dorobo FLÁ

593 [808] course. They live in the same settlement, they are *papa* to each other's children, they both look after old Kipkatam, and they have the joint responsibility of feeding him as well as their own families. They are *kesunda* in name and in fact. But the existence of a remoter *kesunda* group, the children [605] of the mother's sister, shows how the term may mislead if the circumstances are not known and if it is not realized how much depends on proximity. Both their mother's sister's sons Kikuror and Tote live on the other side of the country at Ngaterpkong, and Kikuror moreover dwells inside the forest; between them and Pilo intercourse is rare, and relationship might not exist. In practice, of course, Pilo would refer to them as *kesundaeyyon* and would greet them as *kesunda* or by name; but in the absence of proximity the intercourse would be limited to mere greeting.

609 The *akui* group includes three sets of people: (A) parents of father and mother; (B) father's father's brother and sister and their children; and (C) all of the second descending generation except the great grandchildren of the mother's brother and sister.

●603 601 (A) The senior *akui* at the time when I collected the genealogies which form the basis of this study were all dead. The real *akui* are the father's father and the mother's father (their wives being *koko*), and these two are often referred to as *koko* as well as *akui*. When Pilo said, "My *akui* was Kimugamugan", or "my *akui* was Nereun", his statement was amplified by saying "the father of my father, *koko* is the father of my mother". (B) But the brother's and sisters of the *koko* or *koko* (some were recorded on the maternal side) are referred to as *akui* by courtesy, and this courtesy is extended to their children (people of father's generation) but not to lower generations. So Arap Lemando was merely *loiye* or "Arap Lemando" to Pilo, though his father and grandfather were *akui*; and between Pilo and Arap Lemando there was no relationship. (C) The third descending generation, the children of Pilo, his brother's children, his sister's children, and those of his father's brother, and his father's sister, are all *akui* also; but no descendant of the mother's brother or sister is called *akui*. This term, it will be seen, has a symmetrical alternation from the second ascending to the second descending generation, that is, from grandfather to grandson; *murukor* has an asymmetrical alternation from the third ascending generation to ego's own, being extended in both cases to the next generation below:

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

603

The senior *macokor* are seldom alive in a man's lifetime, and all those in the 3rd ascending generation were dead before Pilo was born. The terms therefore are merely of reference, and that this is so is emphasized by the word *makikat*, "one who is not greeted".

601

On the right hand side of the genealogy of Pilo are given the terms used by his elder sister Kicoti, who married a Dorobo of the *Kimnyiki* age named Manyepai, where we find additional groups:

The first ascending generation is now divided into two: (A) the father of Kicoti, his brothers and sister and their spouses, who are *papa* and *sindet*; and (B) her mother, her mother's sister and her children, grandchildren and great grandchildren, and her mother's brother's wife, all of whom are *eiyo*. (A female *eiyo*'s husband is *konyit*, and a male *eiyo*'s wife is *pukot*, except that Seratet, the mother's brother, is *apulaiyo*.) The father's sister has the same term as his brother's wife, *sindet*.

Kicoti calls her brother and sister *kesenda*, just as Pilo calls her *kesenda*; but whereas Pilo calls his own and Coimim's children *apaa*, and the children of both his sisters, *mama*, Kicoti calls her own children *lakuat* and those of her brothers and sister *senge*, and the grandchildren and great grandchildren of her mother's sister *eiyo* (which latter Pilo calls *kesenda*).

The mother's brother group is called by four terms instead of one, and the mother's brother himself and his children are not *mama* but *apulaiyo*; his grandchildren and great grandchildren are *akui*; and Kicoti's sister's children are *senge*, while her own are *lakuat*: all these are called

The two brothers of Manyepai, for whom Pilo has no term (he would refer to them as *poiyat*, "old man", and if necessary define their position) are called *konyit* by Kicoti, and the wife of Kimóken her husband's brother is *sindet*. Her husband's father and mother are *pakuo* and *póker*, though outside the *tilist* for Pilo. Her husband's father's father is outside the *tiliet* for her. As regards the use of *konyit* and *pukut* for spouses, the female terminology is the same as the male for *macokor* and *kesenda*, but

the wife of an *apulaiyo* (m. br.) is always *eiyo*;
the wife of an *apulaiyo* (own generation) is always *pukot*;
the husband of an *apulaiyo* (own. gen) is always *konyit*;
the wife of an *eiyo* is always *pukot*; and
the husband of an *eiyo* (except own mother) is always *konyit*.

Contrast with the Nandi system

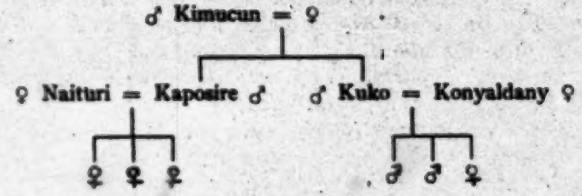
601
191

The Dorobo relationship system is much less regular than that of the Nandi, and has a greater mixture of terms. Moreover it includes a greater number of people than the Nandi, which counts the following as outside the *tilist*:

A. Father's mother's brothers and sisters and their children (Dorobo, *akui*).
B. Mother's parents' brothers and sisters and their children (Dorobo, *akui*).

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

ficatory mother, *eiyo*, has a similar position, and if the father's mother is not alive, or living far away, she takes the grandmother's place in helping her husband's brother's wife; and being younger than the grandmother, can give more active assistance. This was the case with two brothers both married, whose mother was dead:



To Kaposire's children, Konyaldany took the place of the grandmother; and Naituri did the same for Kuko's children,. The father's brother is the equivalent, as an authority in the lives of children, of the mother's brother among the Nandi and elsewhere, and is as near as possible a second father. Patrilocal residence as well as other factors no doubt account for this; and the effect is that the father's brother is someone to be reckoned with, a man with whom a boy should keep on good terms, and one of whom permission must be obtained before a boy is circumcised. Kimutai arap Ruto is Arap Mining's brother. He lived in the same settlement at Kipukua, and saw his brother's children every day. When he greeted them, he said, *Sopai, leiyo*, and they answered, *Epa, papa*. (Here *leiyo* is used loosely as a term of familiarity.) The father's brother gives the children food and other things; he teaches them much of what it is necessary for them to know, and when they ask him questions, like what is this grass called? what are you going to do with that piece of wood? what made those marks on the ground? and so forth, he answers them in such a way that question and answer become part of their education. He shows them his bow, arrows, and quiver, his knives, his honey bags. He takes them into the forest and tells them how people look after their bees, how they make honey-barrels, and how they take honey. He teaches them to use firesticks, and explains the magical observances towards bees and honey.

The mother's brother, *mama*, the father's sister, *puko*, and their spouses (f. *mamay* m. *konyit*) are in a different category from the father's brother. Not only do they live in different settlements, but the mother's brother has no special position of authority. And while all Dorobo to whom I talked knew their father's brother, many did not know their mother's brother, either by name or by sight. Others knew his name, but had never seen him; and in one or two cases when I was taking down genealogies men had to ask their friends what their mother's brothers' names were. It is thus quite clear that the mother's brother is of little account, and that the father's brother is a much more important person.

Yet on occasion the mother's brother is accorded a respect that is not his customary due. Arap Mining was a great follower of tradition, but

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

normally go elsewhere for the night, leaving the hut to the men. In the matter of hospitality, relationship by blood, marriage, or clan is a deciding factor in the length of time for which a man may expect to be put up by his host. Thus, no matter what the age-set situation may be, a man who is neither a relative nor a clansman cannot claim more than two nights' hospitality on account of necessity, and will not be given honey-wine; while a relative or clansman may be fed for a week or even longer, and the host will give him honey-wine if he has any.

3. Behaviour

A brief summary of the modes of behaviour towards important relatives was given by a Dorobo in the following words: *Makicupe papa ne kosica a kopire lakuet*; *makicupe kokeny papa*; *makimuoci korket ok eiyo nalek ce somis, amu ya, ngut nalek ap kumisiet*; *kiurerencinkei tukul*. ("A man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we all play together, i. e. we are on terms of friendliness and 'clean fun'.") Generally speaking, seniority is a matter of age, except with respect to the father's brother and men of senior age-sets.

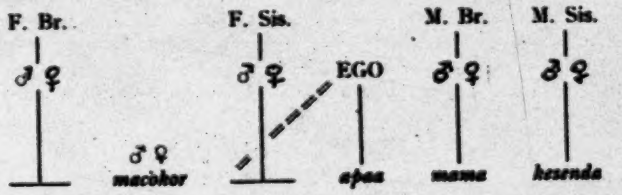
It is unlikely that any Dorobo ever sees his father's father's father, and the father's father is seen only by small children. The father's father is regarded much as one's own father. But the father's mother helps in the care of the children, and so becomes an object not only of familiarity but of affection as well to the children. To all of the father's generation a man should show respect and obedience. He must not insult them, nor use unsuitable language in their presence. Corporal punishment may be inflicted on a rude or disobedient child with the hand or with a stick, by father, mother, and father's brother. Verbal correction is also a common method of dealing with naughty children, and though a man would not as a rule say to a naughty child who had made him angry anything as drastic as *Amin celolei* (may you die of dysentery), in case the spirit-world took him at his word, he might go as far as *Iam piat* (eat dirt), an expression which if used by a child to a senior would certainly earn a beating.

Most Dorobo are fond of their parents, and treat them in old age with much kindness and consideration. Wherever I found aged parents living with their sons it was the same; and the more helpless the parent, the greater the trouble taken to make them comfortable. The old father of Pilo, to whom I have already referred, was such a one. Bent double, hardly able to move without help, he spent his time lying outside in the sun when it was warm, and indoors beside the fire when it was cold. He had to be helped in and out, and fed and looked after like a child; but it was all done cheerfully by Coimim and his wife, in whose hut the old man lived, and if they could not attend to him, Pilo and his wife did.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

Between a man and the members of his own generation considerable latitude is allowed. As the Dorobo put it, *Kicupshi, kiwerencinkei, kiilencinkei, 'Kumin kon, ngul kum kamat', amu ki lakak.* ("We use bad language to one another, we play together, we say to each other, 'May your father lie with you, or may you lie with your mother', because we are children", i. e. we are all of the same age.) These rude phrases, however, must never be used to elders, and to do so is very shameful; but spoken to members of one's own age-set or generation they are quite harmless and have no sinister implications. Between the sexes of the same generation there may be a perfectly innocuous intimacy, between brother and sister, between *macokor*, *mama*, and *kesenda*, which allows any kind of joking and language but stops short of actual sexual intercourse; and in spite of this license, such evidence as there was indicated that incest was not common. Between members of the same generation, especially in youth and early middle age, there is also a strong bond in the shape of mutual help and support among those who live near each other, extending to all departments of home life. The effect of propinquity must not be overlooked, and the claims of even a close relative who lives a long way off and is seldom seen may be reduced to insignificance.

The general attitude of a man's own children to the children of his *macokor*, his *mama*, and his *kesenda*, is the same, in that they are all like his own children, who may be played with or reproved when necessary, but without the use of any bad language or abuse. To those children to whom he is 'father's brother' there is of course the special attitude that I have already described. But between members of this generation there is a marked terminological difference:

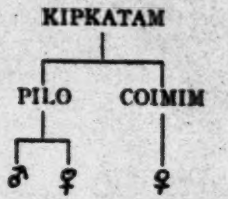


so that by classification all the children on the father's side are *macokor*, while those on the mother's side are both *mama* and *kesenda*; and a man's own children are *apaa*, while those of his sister are *mama*. When the children are small these differences are merely nominal and not apparent; but as they grow older a distinction tends to arise between those on the father's side and those on the mother's side, especially between *macokor* and *mama*; and this is emphasized by the possibility that a man might marry his *macokor* (father's sister's daughter's daughter), even if he seldom or never does so in fact.

Between a man and the second descending generation there is a relationship of respect, for terminologically his grandchildren are equated with his grandfather. In practice, however, this generation counts as far as he

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

603 is concerned, as little as its reciprocal owing to his age, for when his grandchildren are growing up he will be as old as his own grandfather when he himself was a child.



[587] Kipkatam in this diagram is too old, decrepit, and blind even to notice his grandchildren, and he cannot therefore keep an eye on them when their mother goes to the *shamba*. In fact, all the men of this generation whom I saw among the Dorobo were too old to do anything for their grandchildren, though in certain cases grandmothers are able to give a good deal of help to their sons' wives, since women are usually younger than their husbands, [589] even if the disparity in age is but small.

606 Between a man and his relations by marriage, behaviour tends to be much more formal and intercourse to be more restricted, than between blood-kindred. A man is not supposed to converse with his wife's father, in whose presence he must watch carefully his speech and actions, though he may greet him when they meet; if they should happen to be together, the son in law should sit silent out of respect. Before marriage, however, a man may visit the parents of his intended bride to make the necessary arrangements with her father. With his wife's mother a man should have nothing to do at all; he should not only refrain from speaking to her, but should go out of his way to avoid her, both if he meets her out of doors and if he finds her in a hut. This rule of complete avoidance is usually relaxed as he grows older, and the time comes when he may even sit and talk to her, as Arap Mining did to the mother of his second wife Cepkumuren. Relations between a woman and the mother or father of her husband, however, are of necessity different. She may have to live with them, or at least in close proximity to them, whereas her husband may seldom come into contact [591] with her parents; and therefore she cannot be expected to avoid her husband's parents. Her attitude to his father is one of respect due to a senior, with such converse as is inevitable when two people have to live together, and with a certain amount of familiarity arising from the fact that the old man may be in need of physical help from her. Her relations with his mother are greatly affected by her children and the consequent need for co-operation between the two women in seeking their welfare.

607 Between a man and his wife's brother and his wife's sister and her husband, there may be what the Dorobo call *ureriet*, "play", which means that they may greet each other, make fun of one another, and behave in fact in a normal friendly manner; but there must be no loose talk, dirty jests, or sexual allusions. Between him and his wife's brother's wife, on

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

the other hand, there should be no *ureriet*, just greeting and a minimum of conversation, as between strangers. The children of his wife's brother and sister are treated as his own. A woman regards her husband's brother and sister and their spouses much as he regards her brother and sister.

When the father's mother does not live with her son, she may perhaps be in the next settlement. She will then visit her grandchildren, and they will go to see her. This interchange of visits teaches children a good deal about the treatment of important people like grandmother. Interchange of visits with the mother's mother also takes place, especially when the man is getting older. Thus, Cesikirikat the mother of Arap Mining used to visit her daughter Cesunguny who was married to a *Nyongi* called Ngueses and had three sons. She would stay a few days with her daughter (during which time Ngueses would live in another hut) and then go home. Presently Cesunguny would bring her children to see Cesikirikat, and while the children were all still young (before they had reached puberty) they slept together in Cesikirikat's hut. After reaching puberty they slept in the *sikiroinet* with Arap Ruto. Girls visiting their father's mother sleep in her hut whatever their age.

Children are generally fond of their father's mother, partly because she makes it her business to be nice to them, "for they are the children of her child, and people do not hate their grandchildren". But if they do not visit her as often as she would like and bring her presents of food, she will be annoyed and shows her anger by saying, *Sere opeku lakocu ce mooipua omituakik* ("Peace, die you children who have not brought me food"), a curse which is not dangerous because it is neutralized by the word 'peace', and because she takes care to say it in the hearing of someone who will report it to the children, when some such conversation as this will take place:

Friend:	*Kaami kapkoko amut, konereket, amu maoipcin omituakik araaek ce cau, kocupok, kole, "Sere, opekun lakocu".*	I was at Grandmother's place yesterday, and she is angry because you have not brought her food for many months, and she cursed you and said, "Peace, die, you children".
Children:	*Woi, awendi ono, eiyo! Kokocupei koko, kole, "Sere, opekun".*	Alas! where shall I go, mother? Grandmother has cursed us and said, "Peace, die!"
Mother:	*Moomuen, lakocu, mawecok koko, kocamok, a mutai kipendi olinnyin si kiipcin melekto.*	Do not be afraid, children, grandmother does not hate you, she loves you; but to-morrow we will go to her place to take her a present.
Friend:	*Weiis, miye noto, si kocam koko.*	Yes, that's the best thing to do, so as to please grandmother.
Children:	*Weiis, kepe korun, . . . Kiipcin ns, si kocam?*	Yes, let's go to-morrow, . . . What shall we take her, so that she shall be pleased?
Mother:	*Kipendi korun, si kiipcin nyanyait ok lokomek.*	We'll go in the morning, and take her some meat and some honey and water.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

603 754 598 Next day the mother and the offending children hasten to grandmother's with food. The old woman accepts the food and spits on the children, saying at the same time, *Sere kaaunŭok ako ra opaipaiitun* ("Peace, I spit on you and to-day you will flourish"), thus both forgiving them and removing any possibility that her curse may have an ill effect. The mother's mother may do the same sort of thing, if she lives near enough for the children to visit her.

603 606 Arap Mining's wife's mother and father lived at Kipkorom, and his children used to visit them there, always taking presents with them. When Arap Mining visited the old people, as he did sometimes in the company of his children, he met them on ordinary terms, entered their hut, and sat down inside, *si keam lokoi* ("to talk of our affairs"), and his mother in law gave him food to eat. By this time, the strictness of avoidance had been much relaxed, for he was a staid and respectable man of forty or so. But though his children may sleep in this hut, he may not do so on any account, and if he stays too long to be able to return home before dark, he must sleep in a neighbour's hut. His father in law Kaola used to live at Cepkunyuk in Nandi, a good two hours' walk from Kipukua ; but in July 1939 he moved to Kipkorom, as his son Leii was working on Kapchorua Farm close by. A small hut was built for Kaola and his wife in a maize *shamba* belonging to some Nandi, and the old Dorobo were allowed to live there in return for guarding it. Leii, a *Maina*, is Arap Mining's wife's brother, and therefore 604 *mama* to his children ; but though his sister's children do not go to see him, he sometimes goes to Kipukua to see them. This was one of the few instances of a mother's brother being at all intimate with his sister's children ; and Cepkumuren taught her children to like Leii, who would greet them by saying *Sopai, lakocu* ("greetings, children"), and then spitting on them and saying *Sere, lakocu* ("Peace, children") to which they would answer *Epa, mama* ("Blessing, uncle"). But in spite of this friendly intercourse, Leii never played the part in their lives that Arap Mining's brother Kimutai did ; and his share in their training was very small.

IV. The Clan

614 The clan, *orot*, plural *ortinnoh*, is an exogamous patrilineal group with a name and a totem, *tlond ap orot*, or simply *tlondo*, "the animal (of the clan)". Of the eleven clans listed, the existence of eight is attested by genealogies and the census ; the remaining three are reputed to exist or to have existed. All but one of these clans have but one totem each ; the exception has three, the principal of which it shares with another clan, an unusual feature in that it is the group not the totem that is important, the clan being a social group rather than a group of people mystically related through the clan animal. All the clan names but one are taken from Nandi clan names ; the exception seems to be of Dorobo origin. Some of these [197] names are taken from the principal name of a Nandi clan, others from subsidiary names, for the Nandi clan has (1), a principal name by which it is generally known, and (2) a subsidiary name or nickname which is

1;Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

561 Dorobo men pass through three stages: *potik*, uncircumcised boys; *murenik*, circumcised men; and *apaiisiek*, elders. Boys are circumcised between the ages of [304] 15 and 18 years, and may marry at any time after circumcision when their circum- [582] stances allow. Some men in fact never marry at all, but live alone, getting occasional [884] help from women in the settlement, and depending for sexual satisfaction on surrep- [589] titious affairs with wives of age-mates. Women are first *tipik*, girls; then *yosotik*, married women; and finally, when they begin to look old, *engitokisiek*, old women. Girls marry soon after they have been circumcised.

Kinship and Behaviour

602 The existing Dorobo relationship system, *tiliet*, is structurally similar to that of [171] the Nandi, and uses a number of Nandi terms; but it is less regular and includes in the *tiliet* a larger number of persons than does the Nandi. Moreover, the collective term *macokor* (which I did not find in use as a true relationship term in Nandi) is used by the Dorobo as the proper term for a number of people terminologically differentiated by the Nandi.

601 Within the *tiliet* the chief terms are: In the third ascending generation, all males are *macokor* and all females *makikat;* in the second ascending generation, all males are *kuko* or *akui* and all females *koko*.

In the first ascending generation, the terms are: *papa* = father, father's brothers, and mother's sister's husband; *eiyo* = mother, mother's sisters, and father's brother's wife; *pukot* = father's sister; *konyit* = father's sister's husband; *mama* = mother's brother and his wife. Terms used by women are *sindet* = father's sister and father's brother's wife; *apulaiyo* = mother's brother; *eiyo* = mother's brother's wife; and *konyit* = mother's sister's husband.

In a man's own generation, his brothers, sisters, and mother's sister's son and daughter are *kesenda;* mother's brother's son and daughter, *mama;* and the son and daughter of his father's brother and father's sister are *macokor*. Women's terms which differ from these are: *apulaiyo* = mother's brother's son and daughter; *eiyo* = mother's sister's son and daughter.

In the first descending generation, *apaa* includes son, daughter, brother's son and daughter; *mama*, sister's son and daughter, and mother's brother's son and daughter; *macokor*, father's brother's children's children, and father's sister's children's children. In the second descending generation, both sexes are *akui*, except mother's brother's children's children's children, which are *mama;* and mother's sister's children's children's children, *kesenda*.

Among affines, wife's father is *pamogo;* wife's mother, *poker;* wife's brother, *konyit* and his wife, *poker;* wife's sister *pukot* and her husband, *kipukotiot;* wife's brother's son and wife's sister's son, *apaa;* wife's brother's daughter and wife's sister's daughter, *pakuo*. Husband's father is *pakuo* and his mother, *poker;* husband's brother *konyit* and his wife, *sindet;* husband's sister, *kamati* and her husband, *poker;* husband's brother's children, *lakuet;* and husband's sister's children, *apulaiyo*.

602 In the *tiliet* it is the *father's brother* who stands out and occupies the special ●604 place in family life that the mother's brother does among the Nandi; not a few Dorobo did not know their mother's brother's name. Owing to the nature of Dorobo life, the father's brother is continually in contact with his brother's children, and his relations with his nephews are even closer than those of the Nandi *mama* with his nephews.

l: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

A striking difference between the Dorobo and Nandi systems is that whereas Nandi may not marry any person in the *tiliet*, the Dorobo were insistent that a man might marry his father's sister's daughter's daughter, the girl whom he calls *macokor*, a person definitely in the *tiliet*. This type of marriage does not seem to occur now; but did in the past. Marriage with a wife's sister is considered objectionable.

Behaviour patterns may be summed up in a statement made by a Dorobo that " a man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we are all on terms of friendliness and ' clean fun.' " Generally speaking, seniority is a matter of age, except with respect to the father's brother. Between a man and members of his own generation considerable latitude is allowed; but elders must always be shown respect. Where the claims of relatives are concerned, the amount of contact is important, for even a close relative who lives a long way off and is seldom seen cannot expect and will not receive so much respect as one who lives nearby and is well known. On a husband's part, there should be complete avoidance of his wife's mother, though this may be relaxed by degrees as he gets older; conversation with the wife's father should be limited to greetings.

Pre-marital Sex-life

Owing to the small number of Dorobo and the consequent shortage of women for wives, men have little in the way of pre-marital sex-life; and if a man does manage to acquire a lover, he often marries her.

Bridewealth

This varies according to circumstances, and Dorobo statements about it are conflicting. In 1927 it was said to consist of large quantities of honey-wine and of monkey-skin caps; but in 1930 the standard was one cow (with calf if still suckling), one ox, and four goats. The number of goats varied in the recorded cases from two to six, and in one case the cattle amounted to four oxen. A man also gives his father-in-law presents of honey-wine and a fur cap or two; thus marriage is more of a drain on a man's resources than formerly.

Betrothal

A man chooses his wife himself, and arranges the preliminaries with the girl's father during two visits at which he gives him presents of honey. After the second visit the father calls the clan council together and publicly gives his consent to the marriage.

Marriage

The marriage ceremonies are conducted by an elder known for the time as *patum*, who brings the bride to her future husband's home, where the guests are already assembled feasting. The girl enters the hut in which the ceremony is to take place, and in the presence of witnesses the *patum* gives her to the man, saying, *Koipuncin cicoto*, " you now belong to this man." He then binds some *sekutiet* grass on the man's right wrist, and an old woman binds some of the same on the girl's right wrist. They are now married. The *patum* then sets up an erection of *sekutiet* grass called *tumdo* which is smeared over with cow-dung; this the wife has to knock down and tread upon. After this, the pair are left alone, and the marriage is consummated. Next day the *tumdo* is trodden into the floor and plastered over with cow-dung, for it must not be seen. The pair are then shaved, he by the *patum*, she by the old woman, and the hair is buried in cow-dung under an erection of sticks called *koroiot*, which is set up in great secrecy by the *patum*. It is essential

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

a Nandi, and her husband is spoken of with less respect than Kicoti's, though both men are referred to as *konyit*. Their children are called *mama*.

His father's sister Cepulpul and her husband Turiepuku are both dead, and if he speaks of them it is by the terms *pukot* and *konyit*; but her son son Kipkoiec is, as *macokor*, on the same footing as Leii and Kimaiyo, the sons of his father's elder brother Kaola, allowing for the difference of age-set. Pilo is a *Nyongi*, as also is Leii; but Kimaiyo is a *Maina*. On the other hand, Kimaiyo is a policeman, which somewhat outweighs the difference. Cepkemoi and Cerob, the daughters of Pilo's father's younger brother Kiptoo have lessened themselves to a certain extent in old-fashioned Dorobo eyes by marrying Nandi (though Dorobo-Nandi marriage has been practised for a long time), and they live at a distance. The wife of Leii and the husband of Cepkumuren, Pilo's other *macokor*, are both Dorobo, and although they live near the forest, there is a good deal of intercourse between their families. All these people are spoken of as *macokorennyon*, and addressed as *macokoronni*, *macokor*, or by name. Their spouses are spoken of as *konyit*. Though Kimopo Arap Mining, the husband of Cepkumuren, is *konyit* to Pilo, his relatives are outside the *tiliet* as far as Pilo himself is concerned (though not of course for Cepkumuren), and this applies also to the relatives of his sisters' husbands; such people when on terms of friendship and visiting are addressed and referred to by name, or they may be spoken to by the word *leiye*, a general term of address to any person of either sex with whom one is friendly. An old woman like Cesikirikat, Arap Mining's mother (not named in the genealogy), would not be addressed as *leiye*, however, but as *koko* "grandmother" or *cepiosonni*, "old woman", though not related in any way, but out of respect because Pilo is a friend of Arap Mining, and often meets his relatives, including Cesikirikat.

Kaola and Kiptoo, the brother's of Pilo's father, lived for many years at Cepkunyuk, four miles from Kiptarakon, close to and inside the boundary of the Nandi Reserve; but in 1939 they went to live in Sosoiyo near the forest. At that time, both of them were more active than their brother Kipkatam (Pilo's father) who, if he had been a European, would have been described as "bed-ridden"; and for practical purposes Kaola took the place of a father to Pilo and his brothers and sisters. Kipkatam was deaf, nearly blind, almost speechless, and hardly able to move; so when Pilo wanted to consult anyone, he turned to Kaola, or if he was away, to the slightly younger Kiptoo.

It will be seen that a sister's children are not *apaa*, like a brother's, but *mama*. Pilo's sister's children are a typical case. They live at a distance, and so are as remote from him as all the descendants of his mother's brother (*mama*) Nekoi who, with his wife and his son in law Kilanya and his family, lives at Ngatepkong on the far side of the forest and has little to do with Pilo. Moreover, the only link between Pilo and Nekoi, his mother Keuarie, is there no longer, for she died some years ago; so Nekoi and his family are just spoken of as *mama* — when it is necessary to speak of them at all, for though they exist they count very little in Pilo's life.

Between Pilo and his brother Coimim there is a good deal of inter-

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

who stands in the relation of father's brother to the younger members of the group, as in the diagram of Pilo's family above, in which both sets of children have a father's brother living close at hand. In a clan group there might be no father's brother actually in the settlement, but often he would not be far off, for the tendency is to settle in defined groups, and not isolated to the same extent as among the Nandi, where a family may live alone without forming part of a settlement though still a member of the parish. This point is important, for the father's brother plays the same part in a child's life that the mother's brother does among the Nandi.

The family, consisting of father, mother, and children, lives in close contact with one or more families, and sometimes includes the husband's father or mother (I came across no case where both were alive together). These families give the Dorobo child his first experience of human beings. Kinship usages are determined to a certain extent by environment and way of life, for under forest conditions and a hunting economy the father is of necessity away from home a good deal, and young children are much in the society of their mothers and *the other women of the settlement. This* of course is true of other types of society; but in a pastoral society, such as the Nandi, for instance, the father is not, under compulsion of seeking the day to day food supply, obliged to go away from the homestead if he feels disinclined; and there is no doubt that a Dorobo child of tender years saw much less of his father than a Nandi child. When food must be got as it is needed, and when it is scanty or difficult to store, the father, on whom falls the duty of getting it, must be away much more than the man whose cows are close at hand, or whose cultivation produces a crop which he can store.

Till a child is weaned, which may be at the age of twelve months or thereabouts, it is in closer contact with its mother than anybody else, and the father leaves it more or less alone. When the mother has to go out to do her share of food-getting, the child is left at home in charge of its elder sister if it has one, or with its father's mother; failing these, some woman or girl of the settlement will look after it. A Dorobo mother cannot take her baby with her when searching for vegetable food in the forest, for it cannot conveniently be carried on the back in such surroundings; nor can she, like the agriculturalist, lay it down under a tree while she works, because it would not be safe to do so in the forest. This habit persists to-day, and even when a woman goes to work in her *shamba* [10] the baby is left behind in somebody's care. But a woman's food-questing is done much more quickly than a man's hunting, and she is soon back at home; the *shamba*, too, is not so far away that she cannot get back to the child quickly if need be.

The attitude of a man to his wife is profoundly affected by physical and environmental conditions. The shortage of women and the difficulties of getting a wife (especially when cattle are becoming the medium of bride-

[10] The Swahili word *shamba* = cultivated land, field, farm, is current throughout Kenya. Since it is a shorter and simpler word than the English equivalent, I shall use it in the sense of a plot of cultivated land.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

888 helps his wife to bring up his children, continuing her claim on him in affection which outlasts childhood into old age.

596 My chief friend and informant among the Dorobo, Kimopo arap Mining, lived, during the period of my field-work, at Kipukua, with his mother Cesikirikat, and his family consisted of the following:

Cesikirikat ♀

♂ Arap Mining = Cepkumuren ♀

♂ Kiprotic ♂ Kiptuma ♂ Tiongoi Situni ♀ girl not yet named, born 3 Dec 1938.

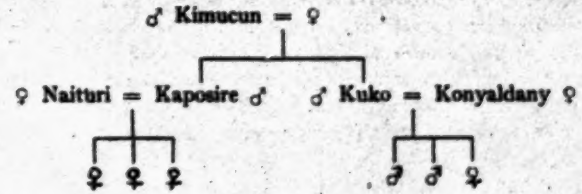
[342] [361] In July 1938 he was living in a flat-topped hut in the middle of his section of the settlement; but by December of the same year he had moved to a new hut with a pointed roof outside the *shamba*. His mother's hut was about 300 yards away at the other end of the *shamba*. His three boys (all *Ilume* age-set, he himself being a *Nyongi*) ranged from about four years old upwards, and Situni, the elder girl, was about seven. At this time he [513] [231] slept in the back part of the hut, the *incor*, where his goats are kept at night, and his wife slept with the children in the front part, the *koima*. This was because she was suckling a baby. Strictly, Arap Mining should have gone to sleep in another hut, but since this was not possible for several reasons, the wall dividing the *incor* from the *koima* was allowed to make the *incor* count as a separate hut (the original type of Dorobo hut has no partition at all).

855 One day I arrived rather early and found that Cepkumuren had gone across the valley to get a new water-pot, leaving Arap Mining in charge of the children. Situni looked after the baby, but still he found his responsibilities rather a heavy burden, and was glad when his wife returned a little before noon. Cepkumuren fed the baby, sent the children indoors to rest, and went down to the river to wash. At this hour, when there is no particular work to be done, the older people sleep. On some days Cesikirikat comes to Arap Mining's *shamba* to help with the cultivation: Cepkumuren [241] normally works there too, but not every day while the baby is so young. When she does go, Arap Mining goes with her, and the baby is left with Situni. But the *shamba* is not so far away that Cepkumuren cannot hear the children if anything goes wrong.

855 604 The Dorobo elementary family might thus seem to be independent and self-contained. But it is not so really, and other relatives have a share in the upbringing of the children, not in spite of the parents' authority, but in support of it, and the relative who must be considered next to the parents from the Dorobo point of view is the father's brother, *papa*, who often lives in the same settlement, or if not, only a short distance away. This person, especially when he is an elder brother, has a position of authority over his brother's children at least equal to that of their father. His wife, a classi-

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

ficatory mother, *siyo*, has a similar position, and if the father's mother is not alive, or living far away, she takes the grandmother's place in helping her husband's brother's wife; and being younger than the grandmother, can give more active assistance. This was the case with two brothers both married, whose mother was dead:



To Kaposire's children, Konyaldany took the place of the grandmother; and Naituri did the same for Kuko's children,. The father's brother is the equivalent, as an authority in the lives of children, of the mother's brother among the Nandi and elsewhere, and is as near as possible a second father. Patrilocal residence as well as other factors no doubt account for this; and the effect is that the father's brother is someone to be reckoned with, a man with whom a boy should keep on good terms, and one of whom permission must be obtained before a boy is circumcised. Kimutai arap Ruto is Arap Mining's brother. He lived in the same settlement at Kipukua, and saw his brother's children every day. When he greeted them, he said, *Sopai, leiye*, and they answered, *Epa, papa*. (He [illegible]*w* is used loosely as a term of familiarity.) The father's brother gives the children food and other things; he teaches them much of what it is necessary for them to know, and when they ask him questions, like what is this grass called? what are you going to do with that piece of wood? what made those marks on the ground? and so forth, he answers them in such a way that question and answer become part of their education. He shows them his bow, arrows, and quiver, his knives, his honey bags. He takes them into the forest and tells them how people look after their bees, how they make honey-barrels, and how they take honey. He teaches them to use firesticks, and explains the magical observances towards bees and honey.

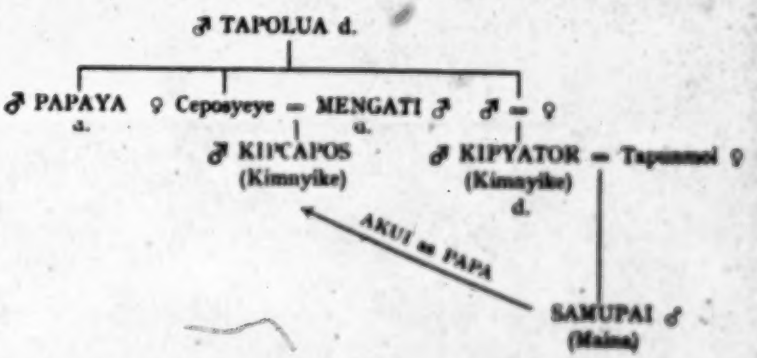
The mother's brother, *mama*, the father's sister, *puko*, and their spouses (f. *mama*, m. *konyit*) are in a different category from the father's brother. Not only do they live in different settlements, but the mother's brother has no special position of authority. And while all Dorobo to whom I talked knew their father's brother, many did not know their mother's brother, either by name or by sight. Others knew his name, but had never seen him; and in one or two cases when I was taking down genealogies men had to ask their friends what their mother's brothers' names were. It is thus quite clear that the mother's brother is of little account, and that the father's brother is a much more important person.

Yet on occasion the mother's brother is accorded a respect that is not his customary due. Arap Mining was a great follower of tradition, but

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

he respected and feared both his father's brother and his mother's brother. When the time came for him to be circumcised, he went first to his *papa* to ask permission, and then to his *mama*; both consented, and both oiled him [12]. If his *papa* got angry with him, he gave him a goat, a new honey-barrel, or some beer; and he treated his *mama* in the same way. Such cases are perhaps not normal, and the respect shown to the *mama* is due to individual circumstances, for Arap Mining was taught by his mother to like his *mama*, and unlike most Dorobo he saw a good deal of the man.

When a man has no father's brother to whom he can turn, other people can act as substitutes, as in the case of a man named Samupai arap Yator, whose father was dead, and had no brothers or sisters:



In this case, Kipcapos, the son of Samupai's father's father's sister was alive, and of the same age-set as his father Kipyator. Though terminologically merely *akui*, Samupai regarded Kipcapos as a father's brother, visited the old man whenever he went near where he lived, and treated him exactly as if he was really *papa*. In another case, a father's father's brother's son, also *akui*, took the place of a non-existent father's brother.

The people who are of primary importance in the life of a child are therefore his parents, his father's parents (especially the mother), and his father's brother. The father's sister while still young and unmarried may live with her parents and thus for a time come in contact with the child. She will thus be able to help the mother for so long as she remains unmarried. But once she has got a husband she is likely to live elsewhere and may pass right out of the child's life, since there may be no man in the settlement who is not either related to her, or of the same clan. In the settlement at Kipukia where Arap Mining lived, there were five other men, Cemandi a married man with two children, and his unmarried brothers Malakwen, Kipsang, and Kipungoi, together with Arap Mining's unmarried brother Kimutai

[12] A boy must get permission to be circumcised from his father's brother, who oils his head and face in token of consent.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

Between a man and the members of his own generation considerable latitude is allowed. As the Dorobo put it, *Kicapkei, kiarenenkei, kilowcinkei, 'Kumin kon, agut kum kamat', anu ki lakak.* ("We use bad language to one another, we play together, we say to each other, 'May your father lie with you, or may you lie with your mother', because we are children", i.e. we are all of the same age.) These rude phrases, however, must never be used to elders, and to do so is very shameful; but spoken to members of one's own age-set or generation they are quite harmless and have no sinister implications. Between the sexes of the same generation there may be a perfectly innocuous intimacy, between brother and sister, between *marakor, mama,* and *kwanda,* which allows any kind of joking and language but stops short of actual sexual intercourse; and in spite of this license, such evidence as there was indicated that incest was not common. Between members of the same generation, especially in youth and early middle age, there is also a strong bond in the shape of mutual help and support among those who live near each other, extending to all departments of home life. The effect of propinquity must not be overlooked, and the claims of even a close relative who lives a long way off and in whom soon may be reduced to insignificance.

The general attitude of a man's own children to the children of his *marakor,* his *mama,* and his *kwanda,* is the same, in that they are all like his own children, who may be played with or reproved when necessary, but without the use of any bad language or abuse. To these children to whom he is 'father's brother' there is of course the special attitude that I have already described. But between members of this generation there is a marked terminological difference:

so that by classification all the children on the father's side are *marakor,* while those on the mother's side are both *mama* and *kwanda*; and a man's own children are *apan,* while those of his sister are *mama.* When the children are small these differences are merely nominal and not apparent; but as they grow older a distinction tends to arise between those on the father's side and those on the mother's side, especially between *marakor* and *mama*; and this is emphasized by the possibility that a man might marry his *marakor* (father's sister's daughter's daughter), even if he seldom or never does so in fact.

Between a man and the second descending generation there is a relationship of respect, for terminologically his grandchildren are equated with his grandfather. In practice, however, this generation counts as far as he

4(Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

603 754 596

Next day the mother and the offending children hasten to grandmother's with food. The old woman accepts the food and spits on the children, saying at the same time, *Sov kwaanik ake ne ejwijwiikoo* ("Peace, I spit on you and to-day you will flourish"), thus both forgiving them and removing any possibility that her curse may have an ill effect. The mother's mother may do the same sort of thing, if she lives near enough for the children to visit her.

603 606

Arap Mining's wife's mother and father lived at Kipkenren, and his children used to visit them there, always taking presents with them. When Arap Mining visited the old people, as he did sometimes in the company of his children, he met them on ordinary terms, entered their hut, and sat down inside, *ei kowo kakei* ("to talk of our affairs"), and his mother in law gave him food to eat. By this time, the strictness of avoidance had been much relaxed, for he was a staid and respectable man of forty or so. But though his children may sleep in this hut, he may not do so on any account, and if he stays too long in the hut or [illegible]

● 604

away to a neighbour's hut. The father of her Kaale used to live at Cepkunyuk in Nandi, a good two hours' walk from Kipsaben; but in July 1938 he moved to Kipkenren, so his son Loti was working on Kapchemsa Farm close by. A small hut was built for Kaale and his wife in a maize shamba belonging to some Nandi, and the old Dorobo were allowed to live there in return for guarding it. Loti, a Maina, is Arap Mining's wife's brother, and therefore owes to his children; but though his sister's children do not go to see him, he sometimes goes to Kipsaben to see them. This was one of the few instances of a mother's brother being on all intimate with his sister's children; and Cepkemuntu taught her children to like Loti, who would greet them by saying *Nyhei, kakwa* ("greetings, children"), and then spitting on them and saying *Sov, kakwa* ("Peace, children") to which they would answer *Eye, owwa* ("Morning, uncle"). But in spite of this friendly intercourse, Loti never played the part in their lives that Arap Mining's brother Kimaiyo did; and his share in their training was very small.

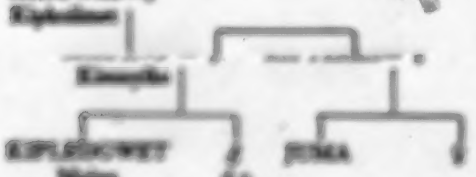
IV. The Clan

614

The clan, *oot*, plural *ootwek*, is an exogamous patrilineal group with a name and a totem, *kimet ap oot*, or simply *kimet*, "the animal [of the clan]". Of the eleven clans listed, the existence of eight is attested by genealogies and the census; the remaining three are reported to exist or to have existed. All but one of these clans have but one totem each; the exception has three, the principal of which it shares with another clan, so unusual feature in that it is the group not the totem that is important, the clan being a social group rather than a group of people symbolically related through the clan animal. All the clan names but one are taken from Nandi clan names; the exception seems to be of Dorobo origin. Some of these names are taken from the principal name of a Nandi clan, others from subsidiary names, for the Nandi clan has (i), a principal name by which it is generally known, and (ii) a subsidiary name or nickname which is

[illegible]

and education of children may be grouped according to the amount of influence they exert and as primary authorities are to be included: F., M., F.Br., F.Br. W., F.F., F.M.; as secondary authorities, M.Br., M.Br.W., F.Si., F.Br. H., M.Si., M.Si.H., and eldermith (relations) in the persons of elsewhere living in the group. The M.Br. does not occupy the same place with regard to a child that he does in Nandi. He does not live in the same group, whereas the F.Br. frequently does, and so the F.Br. has the greater influence on the child. Many Dorobo, in fact, have had little or nothing to do with their M.Br., and some do not even know their names. In the following Kalpsi genealogy,



Kipkoguyet had hardly ever seen Kipsaros, and could not even remember his name, till another person told him. Jame similarly did not know the name of his M.Br.

The relationship system of the Dorobo thus differs from the Nandi, especially in the following:

(1) Children of F.Br. and F.Si. are classed as *MAKWEEK*.

(2) Children of M.Si. are classed with Br. and Si. as *KEEEYEK*.

(3) Children of age and his Br. are classed as *AP.A.K*.

(4) Children of M.Br. and age's Si. are classed as *MAMA*.

(5) Children in the 2nd descending generation are *AGWE*.

(6) The F.Br. takes the place of M.Br.

B. Age-sets and behaviour patterns.

The Dorobo have seven age-sets, *Ipkinde, pl. Ipinogik*, with three age-grades in each set. These sets are borrowed from the Nandi, and have the same 15-year intervals, and the same three sub-divisions.

father's brother and sister, of the same generation, and also to their children. *Attai* will be found again in the second descending generation. The corresponding Tamil forms are *appaṉ*, *ammāḷ*, *aṇṇaṉ*, *aṇṇi*, and *attai*. The last is the same as the Skaane (*a*)*attai*, father's father. *Kiḻavi* means 'old woman', and is related to the Skaane (*reg*)*ieke*. Women use *kuṭṭa* and *kuṭṭi* for father's and mother's parents.

5. The First Ascending Generation

(man speaking)

In this generation we have *puṟa* which covers the father, father's brother, and mother's sister's husband; and *aiyi*, which includes the mother, mother's sister, and father's brother's wife (though mother's sister is sometimes called *puṟavi*). *Mama* includes mother's brother and mother's brother's wife. The father's sister is *pudai*, a term applied also to the wives of father's brother's son, father's sister's son, brother, and mother's sister's son, as well as to wife's sister, all in the speaker's generation, and implying that the women so called are in the same category as the father's sister, i.e. one of respect. The father's sister's husband is called *kuṟṟi*, which is applied also to the husband of the father's brother's daughter, father's sister's daughter, sister, mother's brother's daughter, mother's sister's daughter, and to the wife's brother. It is therefore the male equivalent of *pudai*. The word *puṟa* is so wide-spread that its use is not significant. *Aiyi* — Tamil *aiyi*, Skaane *aeiye*, a word found with this meaning in most of the Tamil dialects. *Pudai* does not occur in Tamil or Skaane, and may be a relic of the original Dravidian terminology. *Kuṟṟi* — Tamil *kuṟṟi*, 'inverse', and may be connected with the Skaane phrase *a vindaeni a mayk*, "respected sister-in-law" (brother's wife and wife's sister), for *mayk* is the etymological equivalent of *kuṟṟi*.

(woman speaking)

Puṟa and *aiyi* are used for father and mother, and *puṟa* also = father's brother, and *aiyi* = mother's sister. But father's sister and father's brother's wife are called *aiyāḷ*; mother's brother is *aṇṇaiyaṉ* and his wife *aiyi*; while father's sister's husband and mother's sister's husband are *kuṟṟi*. *Aṇṇaiyaṉ* is from the Skaane *aṇṇa* = 'mother's brother' (woman speaking), a word formed from *aṇṇi*, (same meaning, man speaking). *Kuṟṟi*, it may be noted, is a common term for a male relative by marriage, and is used by men as well as women.

6. The Generation

(man speaking)

In this generation a man's relatives are grouped in three classes: (1) *Kuvaṉḍa*, which comprises his brother and sister, and his mother's sister's son and daughter; (2) *Mama*, his mother's brother's son and daughter;

Achimalaygland R-5 (1936-1939) 1951 FLA Dorobo FLA

and (3) *Mwanke*, the sons and daughters of both his father's brother and his father's sister. There is thus a sharp distinction between cousins on the father's and the mother's side, and a divergence from the Nandi usage. That the mother's brother's children count as women may be due to Nandi influence, for, as we shall see, the mother's brother is not the relative of importance to the Dorobo that he is to the Nandi. *Kimondo* is a word meaning 'brother, sister' which occurs in other Nandi dialects, though not in Nandi itself, and may possibly be derived from the verb *kwon* 'carry a child', in being one of the duties of a child, especially of a girl, to carry about its small brother or sister.

(woman speaking)

According to feminine terminology, these relatives are grouped in four classes, with a change of term: (1) *Kimondo*, brother and sister; (2) *Ayakoiyo*, mother's brother's children; (3) *Mwanke*, the children of both father's brother and father's sister; (4) *Siyo*, the children of mother's sister.

8. The First Descending Generation

(man speaking)

The children of a man and his brothers are all called *ajaa*; but the children of his sister and of his mother's brother's children are *mamo*, his sister's son having also the alternative term of *mwisi ap ogiik*, which means 'son of the girl', and is applied in Nandi to father's sister's son who is otherwise called *mamo*. The Dorobo grouping which places the sister's children in the mother's brother's category is unusual and there is here a wide divergence from the Nandi rule.

(woman speaking)

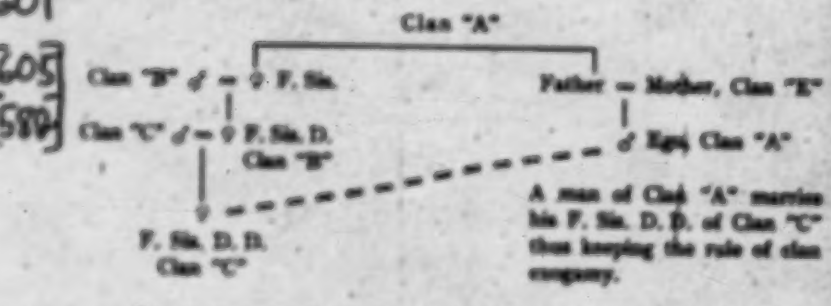
A woman calls her children *kokwet*, 'child'; her brother's and sister's children are *ongo*; the children of her mother's brother's children, *ebei*; and the children of her mother's sister's children are *siyo*. The term *ongo* in Nandi means 'sister of a parent', and refers to the father's sister; in Dorobo it is applied to the reciprocal, the brother's son, and is extended to the sister's son. It is also used, as in Nandi, as a term of endearment to small children.

We now return to the children, male and female, of the father's brother's children and of the father's sister's children, all of whom are called *mwanke*. According to statements made independently by four different Dorobo men, a man may marry one of the girls whom he calls *mwanke*, that is, his father's sister's daughter's daughter (the daughter of his cross-cousin).

4(Huntingford E-5 (1938-1939) 1951 FLÁ Dorobo FLÁ

601

[205] [588]



This statement was not supported by any of my genealogies; but this does not necessarily mean that the practice was never followed, and my informants insisted that this type of marriage was not only allowed, but actually took place in the past. On the other hand, they said that marriage with any other kind of cousin within the *tilat* was "very bad". In actual fact, however, marriage with the father's sister's daughter's daughter was probably not common, even in the past, and to-day would be quite impossible, partly from disparity of age (though this is not in itself a serious bar), and partly from the shortage of women and lack of wealth. If a man was a *Siyangi*, he might be about forty years old, and his *mandet* would be perhaps ten, uninitiated, and too young to cohabit; she would therefore be suitable only as a second wife, a luxury out of the reach of most Dorobo. An equally serious objection lies in the fact that owing to the small number of clans, a man's *mandet* may often be of his own clan and thus barred from marriage with him.

6. The Second Descending Generation

(*man speaking*)

The term *akui* covers most of this generation: it includes the children of one's own children (grandchildren), children of brother's and sister's children, children of father's brother's grandchildren, and children of father's sister's grandchildren. The children of mother's brother's grandchildren are *nanua*, and of the mother's sister's grandchildren, *kwanda*. Thus a man's own grandchildren are classed as grandparents.

[603]

(*woman speaking*)

Grandchildren are *ajwa*; grandchildren of brother and sister are *wuga*, and of mother's sister, *aiya*; the rest are *akui*.

AFFINALS:

(*man speaking*)

Wife is *mamwiat*; wife's brother, *kwayi*, and his wife, *pakwa*; wife's sister, *pakwa*, and her husband, *kipakwiat*. Wife's parents are *famwaa* (m.) and *pakwa* (f.). Wife's brother's and sister's children are *ajwa* (m.) and *pakwa* (f.).

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

a Nandi, and her husband is spoken of with less respect than Kicoti's, though both men are referred to as *kenyit*. Their children are called *mama*.

His father's sister Cepulpul and her husband Turiepuku are both dead, and if he speaks of them it is by the terms *pakat* and *kenyit*; but her son son Kipkoiec is, as *marakor*, on the same footing as Leii and Kimaiyo, the sons of his father's elder brother Kaela, allowing for the difference of age-set. Pilo is a *Nyongi*, as also is Leii; but Kimaiyo is a *Maisa*. On the other hand, Kimaiyo is a policeman, which somewhat outweighs the difference. Cepkemoi and Ceeub, the daughters of Pilo's father's younger brother Kiptoo have lowered themselves to a certain extent in old-fashioned Dorobo eyes by marrying Nandi (though Dorobo-Nandi marriage has been practised for a long time), and they live at a distance. The wife of Leii and the husband of Cepkumuren, Pilo's other *marakor*, are both Dorobo, and although they live near the forest, there is a good deal of intercourse between their families. All these people are spoken of as *marakoreneyon*, and addressed as *marakoreneni*, *marakor*, or by name. Their spouses are spoken of as *kenyit*. Though Kimaiyo Arap Mining, the husband of Cepkumuren, is *kenyit* to Pilo, his relatives are outside the *tilet* as far as Pilo himself is concerned (though not of course for Cepkumuren), and this applies also to the relatives of his sisters' husbands; such people when on terms of friendship and visiting are addressed and referred to by name, or they may be spoken to by the word *leiye*, a general term of address to any person of either sex with whom one is friendly. An old woman like Ceukirikai, Arap Mining's mother (not named in the genealogy), would not be addressed as *leiye*, however, but as *koko* "grandmother" or *cepiononi*, "old woman", though not related in any way, but out of respect because Pilo is a friend of Arap Mining, and often meets his relatives, including Ceukirikai.

Kaela and Kiptoo, the brother's of Pilo's father, lived for many years at Cepkunyuk, four miles from Kiptarakom, close to and inside the boundary of the Nandi Reserve; but in 1929 they went to live in Soaniyo near the forest. At that time, both of them were more active than their brother Kipkatam (Pilo's father) who, if he had been a European, would have been described as "bed-ridden"; and for practical purposes Kaela took the place of a father to Pilo and his brothers and sisters. Kipkatam was deaf, nearly blind, almost speechless, and hardly able to move; so when Pilo wanted to consult anyone, he turned to Kaela, or if he was away, to the slightly younger Kiptoo.

It will be seen that a sister's children are not *apaa*, like a brother's, but *mama*. Pilo's sister's children are a typical case. They live at a distance, and so are as remote from him as all the descendants of his mother's brother (*mama*) Nekoi who, with his wife and his son in law Kilaeya and his family, lives at Ngetyekeng on the far side of the forest and has little to do with Pilo. Moreover, the only link between Pilo and Nekoi, his mother Kemarie, is there no longer, for she died some years ago; so Nekoi and his family are just spoken of as *mama* — when it is necessary to speak of them at all, for though they exist they count very little in Pilo's life.

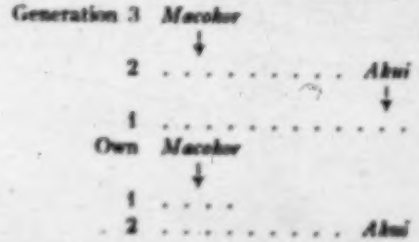
Between Pilo and his brother Cuimin there is a good deal of inter-

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

593 [888] course. They live in the same settlement, they are *papa* to each other's children, they both look after old Kipkatam, and they have the joint responsibility of feeding him as well as their own families. They are *kesenda* in name and in fact. But the existence of a remoter *kesenda* group, the children of the mother's sister, shows how the term may mislead if the circumstances are not known and if it is not realized how much depends on proximity. [605] Both their mother's sister's sons Kikoror and Tote live on the other side of the country at Ngatepkong, and Kikoror moreover dwells inside the forest; between them and Pilo intercourse is rare, and relationship might not exist. In practice, of course, Pilo would refer to them as *kesendannyon* and would greet them as *kesenda* or by name; but in the absence of proximity the intercourse would be limited to mere greeting.

602 The *akui* group includes three sets of people: (A) parents of father and mother; (B) father's father's brother and sister and their children; and (C) all of the second descending generation except the great grandchildren of the mother's brother and sister.

603 601 (A) The senior *akui* at the time when I collected the genealogies which form the basis of this study were all dead. The real *akui* are the father's father and the mother's father (their wives being *koko*), and these two are often referred to as *kuko* as well as *akui*. When Pilo said, "My *akui* was Kimngamngam", or "my *akui* was Mereua", his statement was amplified by saying who they were: *akui ko papa nepo papa, kuko ko papa nepo eiyo*, "*akui* is the father of my father, *kuko* is the father of my mother". (B) But the brother's and sisters of the *kuko* or *koko* (none were recorded on the maternal side) are referred to as *akui* by courtesy, and this courtesy is extended to their children (people of father's generation) but not to lower generations. So Arap Lemando was merely *leiye* or "Arap Lemando" to Pilo, though his father and grandfather were *akui*; and between Pilo and Arap Lemando there was no relationship. (C) The third descending generation, the children of Pilo, his brother's children, his sister's children, and those of his father's brother, and his father's sister, are all *akui* also; but no descendant of the mother's brother or sister is called *akui*. This term, it will be seen, has a symmetrical alternation from the second ascending to the second descending generation, that is, from grandfather to grandson; *macokor* has an asymmetrical alternation from the third ascending generation to own's own, being extended in both cases to the next generation below:



4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

Between a man and the members of his own generation considerable latitude is allowed. As the Dorobo put it, *Kicupakei, kiurerencinkei, kiilencinkei, 'Kumin kon, ngut kum kamat', amu ki lakok.* ("We use bad language to one another, we play together, we say to each other, 'May your father lie with you, or may you lie with your mother', because we are children", i. e. we are all of the same age.) These rude phrases, however, must never be used to elders, and to do so is very shameful; but spoken to members of one's own age-set or generation they are quite harmless and have no sinister implications. Between the sexes of the same generation there may be a perfectly innocuous intimacy, between brother and sister, between *macokor, mama*, and *kesenda*, which allows any kind of joking and language but stops short of actual sexual intercourse; and in spite of this license, such evidence as there was indicated that incest was not common. Between members of the same generation, especially in youth and early middle age, there is also a strong bond in the shape of mutual help and support among those who live near each other, extending to all departments of home life. The effect of propinquity must not be overlooked, and the claims of even a close relative who lives a long way off and is seldom seen may be reduced to insignificance.

The general attitude of a man's own children to the children of his *macokor*, his *mama*, and his *kesenda*, is the same, in that they are all like his own children, who may be played with or reproved when necessary, but without the use of any bad language or abuse. To those children to whom he is 'father's brother' there is of course the special attitude that I have already described. But between members of this generation there is a marked terminological difference:

so that by classification all the children on the father's side are *macokor*, while those on the mother's side are both *mama* and *kesenda*; and a man's own children are *apaa*, while those of his sister are *mama*. When the children are small these differences are merely nominal and not apparent; but as they grow older a distinction tends to arise between those on the father's side and those on the mother's side, especially between *macokor* and *mama*; and this is emphasized by the possibility that a man might marry his *macokor* (father's sister's daughter's daughter), even if he seldom or never does so in fact.

Between a man and the second descending generation there is a relationship of respect, for terminologically his grandchildren are equated with his grandfather. In practice, however, this generation counts as far as he

[P185,B]

applied also to the husbands of F. Br. D., F.Sis.D., Sis., M.Br. D., M.Sis.D., and to W.Br. It is therefore the male equivalent of *pukot*. 601

Second Ascending Generation.

(1) F.F., F.M., and M.F., M.M.=*KUKO, koko*, and also *AGWI, agwi*, the latter applied by courtesy to F.F.Br., M.F.Br., F.F.Sis., M.F.Sis., and their children.

Third Ascending Generation.

(1) F.F.F., F.F.M., F.M.F., F.M.M., M.F.F., M.F.M., M.M.F., M.M.M.=*MACHOKOR, makikat*.

Ego's own Generation.

(1) Br., Sis., M.Sis.S., M.Sis.D.=*KESENDA, Kesenda*, linking these two groups in a br.—sis. relationship.

(2) M.Br. S., M.Br. D.=*MAMA, mama*, as M.Br.

(3) F.Br. S., F.Br. D., F.Sis. S., F.Sis.D.=*MACHOKOR, machokor*.

There is here a sharp distinction between cousins on the father's and the mother's side, the former being linked with 3rd ascending and 1st descending generations, the latter with one's brothers and sisters. [605]

First Descending Generation.

(1) Children both ♂ and ♀ of F.Br.S. and D. and of F.Sis. S. and D. are *MACHOKOR*, the same as their parents. According to Dorobo statements, a man is allowed to marry his F. Sis. D.D.—his *machokor*—, but no other woman whom he calls by a relationship term. [582]

1: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

A striking difference between the Dorobo and Nandi systems is that whereas Nandi may not marry any person in the *tiliot*, the Dorobo were insistent that a man might marry his father's sister's daughter's daughter, the girl whom he calls *macohor*, a person definitely in the *tiliot*. This type of marriage does not seem to occur now; but did in the past. Marriage with a wife's sister is considered objectionable.

Behaviour patterns may be summed up in a statement made by a Dorobo that "a man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we are all on terms of friendliness and 'clean fun.'" Generally speaking, seniority is a matter of age, except with respect to the father's brother. Between a man and members of his own generation considerable latitude is allowed; but elders must always be shown respect. Where the claims of relatives are concerned, the amount of contact is important, for even a close relative who lives a long way off and is seldom seen cannot expect and will not receive so much respect as one who lives nearby and is well known. On a husband's part, there should be complete avoidance of his wife's mother, though this may be relaxed by degrees as he gets older; conversation with the wife's father should be limited to greetings.

Pre-marital Sex-life

Owing to the small number of Dorobo and the consequent shortage of women for wives, men have little in the way of pre-marital sex-life; and if a man does manage to acquire a lover, he often marries her.

Bridewealth

This varies according to circumstances, and Dorobo statements about it are conflicting. In 1927 it was said to consist of large quantities of honey-wine and of monkey-skin caps; but in 1930 the standard was one cow (with calf if still suckling), one ox, and four goats. The number of goats varied in the recorded cases from two to six, and in one case the cattle amounted to four oxen. A man also gives his father-in-law presents of honey-wine and a fur cap or two; thus marriage is more of a drain on a man's resources than formerly.

Betrothal

A man chooses his wife himself, and arranges the preliminaries with the girl's father during two visits at which he gives him presents of honey. After the second visit the father calls the clan council together and publicly gives his consent to the marriage.

Marriage

The marriage ceremonies are conducted by an older known for the time as *patum*, who brings the bride to her future husband's home, where the guests are already assembled feasting. The girl enters the hut in which the ceremony is to take place, and in the presence of witnesses the *patum* gives her to the man, saying, *Koipuecie cicoto*, "you now belong to this man." He then binds some *sokutiot* grass on the man's right wrist, and an old woman binds some of the same on the girl's right wrist. They are now married. The *patum* then sets up an erection of *sokutiot* grass called *tumdo* which is smeared over with cow-dung; this the wife has to knock down and tread upon. After this, the pair are left alone, and the marriage is consummated. Next day the *tumdo* is trodden into the floor and plastered over with cow-dung, for it must not be seen. The pair are then shaved, he by the *patum*, she by the old woman, and the hair is buried in cow-dung under an erection of sticks called *kwosiot*, which is set up in great secrecy by the *patum*. It is essential

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

603 is concerned, as little as its reciprocal owing to his age, for when his grandchildren are growing up he will be as old as his own grandfather when he himself was a child.

. . . . . 1st descending generation

. . . . . 2nd descending generation

[587] Kipkatam in this diagram is too old, decrepit, and blind even to notice his grandchildren, and he cannot therefore keep an eye on them when their mother goes to the *shamba*. In fact, all the men of this generation whom I saw among the Dorobo were too old to do anything for their grandchildren, though in certain cases grandmothers are able to give a good deal of help to their sons' wives, since women are usually younger than their husbands, [588] even if the disparity in age is but small.

Between a man and his relations by marriage, behaviour tends to ● 606 be much more formal and intercourse to be more restricted, than between blood-kindred. A man is not supposed to converse with his wife's father, in whose presence he must watch carefully his speech and actions, though he may greet him when they meet; if they should happen to be together, the son in law should sit silent out of respect. Before marriage, however, a man may visit the parents of his intended bride to make the necessary arrangements with her father. With his wife's mother a man should have nothing to do at all; he should not only refrain from speaking to her, but should go out of his way to avoid her, both if he meets her out of doors and if he finds her in a hut. This rule of complete avoidance is usually relaxed as he grows older, and the time comes when he may even sit and talk to her, as Arap Mining did to the mother of his second wife Cepkumuren. Relations between a woman and the mother or father of her husband, however, are of necessity different. She may have to live with them, or at least in close proximity to them, whereas her husband may seldom come into contact [591] with her parents; and therefore she cannot be expected to avoid her husband's parents. Her attitude to his father is one of respect due to a senior, with such converse as is inevitable when two people have to live together, and with a certain amount of familiarity arising from the fact that the old man may be in need of physical help from her. Her relations with his mother are greatly affected by her children and the consequent need for co-operation between the two women in seeking their welfare.

607 Between a man and his wife's brother and his wife's sister and her husband, there may be what the Dorobo call *areriet*, "play", which means that they may greet each other, make fun of one another, and behave in fact in a normal friendly manner; but there must be no loose talk, dirty jests, or sexual allusions. Between him and his wife's brother's wife, on

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

603 754 598 Next day the mother and the offending children hasten to grandmother's with food. The old woman accepts the food and spits on the children, saying at the same time, *Sere kaaiwtok ako ra opaipaiitun* ("Peace, I spit on you and to-day you will flourish"), thus both forgiving them and removing any possibility that her curse may have an ill effect. The mother's mother may do the same sort of thing, if she lives near enough for the children to visit her.

603 606 Arap Mining's wife's mother and father lived at Kipkorom, and his children used to visit them there, always taking presents with them. When Arap Mining visited the old people, as he did sometimes in the company of his children, he met them on ordinary terms, entered their hut, and sat down inside, *si kaam lokoi* ("to talk of our affairs"), and his mother in law gave him food to eat. By this time, the strictness of avoidance had been much relaxed, for he was a staid and respectable man of forty or so. But though his children may sleep in this hut, he may not do so on any account, and if he stays too long to be able to return home before dark, he must sleep in a neighbour's hut. His father in law Kaola used to live at Cepkunyuk in Nandi, a good two hours' walk from Kipukua; but in July 1939 he moved to Kipkorom, as his son Leii was working on Kapchorua Farm close by. A small hut was built for Kaola and his wife in a maize *shamba* belonging to some Nandi, and the old Dorobo were allowed to live there in return for guarding it. Leii, a *Maina*, is Arap Mining's wife's brother, and therefore 604 *mama* to his children; but though his sister's children do not go to see him, he sometimes goes to Kipukua to see them. This was one of the few instances of a mother's brother being at all intimate with his sister's children; and Cepkumuren taught her children to like Leii, who would greet them by saying *Sopai, lakocu* ("greetings, children"), and then spitting on them and saying *Sere, lakocu* ("Peace, children") to which they would answer *Epa, mama* ("Blessing, uncle"). But in spite of this friendly intercourse, Leii never played the part in their lives that Arap Mining's brother Kimutai did; and his share in their training was very small.

IV. The Clan

614 The clan, *ord*, plural *ortinuuk*, is an exogamous patrilineal group with a name and a totem, *tiond ap ord*, or simply *tiondo*, "the animal (of the clan)". Of the eleven clans listed, the existence of eight is attested by genealogies and the census; the remaining three are reputed to exist or to have existed. All but one of these clans have but one totem each; the exception has three, the principal of which it shares with another clan, an unusual feature in that it is the group not the totem that is important, the clan being a social group rather than a group of people mystically related through the clan animal. All the clan names but one are taken from Nandi clan names; the exception seems to be of Dorobo origin. Some of these [199] names are taken from the principal name of a Nandi clan, others from subsidiary names, for the Nandi clan has (1), a principal name by which it is generally known, and (2) a subsidiary name or nickname which is

may be greeted, though not talked to otherwise. Other relations of the wife are treated as the 1st ascending generation, and their children as one's own. But as men get older, the complete avoidance of their wife's mother tends to relax, though never at any time is there ordinary intercourse between them. 606

C. The Clan and Marriage Regulations. 614

Marriage regulations are based on the clan system, and the general rule is that a man may not marry within his clan. The clan, *oret*, is the basis of social organization, and the social aspect of the clan is emphasized by the habit of living in clan settlements, by the clan councils where matters like land boundaries, marriages, and minor offences between clansmen are discussed, and by the stress laid on the group-aspect of the clan rather than on its animal-aspect (i.e. "totem"). The Nandi, for example, talk of *tiond' ap oreniyō*, 'the animal of my clan' or *tiondanyō* 'my animal'; whereas the Dorobo say *orayon*, 'my clan'. There are no prohibitions concerning the clan-animal (*tiondo*), which in fact has no ritual social value, though as a source of food it has an actual social value. [361] [627]

Two clans, Moi and Kapsegoi, have the same *tiondo* (the crested crane), and marriage between these two is allowed, because the *oret* is different, although the *tiondo* is the same. It may be noted, too, that in the case of the Moi, a Moi may marry a Moi woman, provided she belongs to 'another house,' *kut ake*, that is, lives in another district, and is not a blood relation. Clansmen are regarded as *tilioswik*, 'relations' and are addressed as *orayon*, 'my clan[sman],' or as *a' l' apan*, a term not otherwise found in Dorobo, but equivalent to F. Br. S. in Nandi. [171]

The clan animals are:

Kapsegoi ..... } *koyonyot* (crested crane).
Moi ..... }
Kipiegen ..... *kimukichat* (baboon).
Kipamwi ..... *pemuriyo* (duiker).
Kapil ..... *tuwait* (bush-pig).
Toiyoi ..... *rukita* (the rain).
Kororpor ..... *kimuketyot* (hyaena).

[587] Kipkatam in this diagram is too old, decrepit, and blind even to notice his grandchildren, and he cannot therefore keep an eye on them when their mother goes to the *shamba*. In fact, all the men of this generation whom I saw among the Dorobo were too old to do anything for their grandchildren, though in certain cases grandmothers are able to give a good deal of help to their sons' wives, since women are usually younger than their husbands, [589] even if the disparity in age is but small.

606 Between a man and his relations by marriage, behaviour tends to be much more formal and intercourse to be more restricted, than between blood-kindred. A man is not supposed to converse with his wife's father, in whose presence he must watch carefully his speech and actions, though he may greet him when they meet; if they should happen to be together, the son in law should sit silent out of respect. Before marriage, however, a man may visit the parents of his intended bride to make the necessary arrangements with her father. With his wife's mother a man should have nothing to do at all; he should not only refrain from speaking to her, but should go out of his way to avoid her, both if he meets her out of doors and if he finds her in a hut. This rule of complete avoidance is usually relaxed as he grows older, and the time comes when he may even sit and talk to her, as Arap Mining did to the mother of his second wife Cepkamuren. Relations between a woman and the mother or father of her husband, however, are of necessity different. She may have to live with them, or at least in close proximity to them, whereas her husband may seldom come into contact [591] with her parents; and therefore she cannot be expected to avoid her husband's parents. Her attitude to his father is one of respect due to a senior, with such converse as is inevitable when two people have to live together, and with a certain amount of familiarity arising from the fact that the old man may be in need of physical help from her. Her relations with his mother are greatly affected by her children and the consequent need for co-operation between the two women in seeking their welfare.

● 607 Between a man and his wife's brother and his wife's sister and her husband, there may be what the Dorobo call *mwiat*, "play", which means that they may greet each other, make fun of one another, and behave in fact in a normal friendly manner; but there must be no lewd talk, dirty jests, or sexual allusions. Between him and his wife's brother's wife, on

4:Huntingford E-5 (1938-1939) 195 FL6 Dorobo FL6

the other hand, there should be no *wuriá*, just greeting and a minimum of conversation, as between strangers. The children of his wife's brother and sister are treated as his own. A woman regards her husband's brother and sister and their spouses much as he regards her brother and sister.

When the father's mother does not live with her son, she may perhaps be in the next settlement. She will then visit her grandchildren, and they will go to see her. This interchange of visits teaches children a good deal about the treatment of important people like grandmother. Interchange of visits with the mother's mother also takes place, especially when the man is getting older. Thus, Ceuikirikat the mother of Arap Mining used to visit her daughter Ceuuguny who was married to a *Nyangi* called Ngueses and had three sons. She would stay a few days with her daughter (during which time Ngueses would live in another hut) and then go home. Presently Ceuuguny would bring her children to see Ceuikirikat, and while the children were all still young (before they had reached puberty) they slept together in Ceuikirikat's hut. After reaching puberty they slept in the *sikiriotet* with Arap Ratos. Girls visiting their father's mother sleep in her hut whatever their age.

Children are generally fond of their father's mother, partly because she makes it her business to be nice to them, "for they are the children of her child, and people do not hate their grandchildren". But if they do not visit her as often as she would like and bring her presents of food, she will be annoyed and shows her anger by saying, *Iere ɨpako lakwa ee mooɨpua emɨmakɨ* ("Peace, die you children who have not brought me food"), a curse which is not dangerous because it is neutralized by the word 'peace', and because she takes care to say it in the hearing of someone who will report it to the children, when some such conversation as this will take place:

Friend:	*Kaami kapɨnko amut, ko-ceuket, ame mamɨpeta emɨmakɨk aweuk ee ame, kwanɨpɨk, kɨnɨ,* "Iere, ɨpɨkwa lakwa".	I was at Grandmother's place yesterday, and she is angry because you have not brought her food for many months, and he cursed you and said, "Peace, die, you children".
Children:	*Wei, eweuki ame, aiyo! Ko-kwanɨpɨ kɨnɨ, kɨnɨ,* "Iere, ɨpɨkwa".	Alas! where shall I go, mother? Grandmother has cursed us and said, "Peace, die!"
Mother:	*Mamuun, lakwa, mamɨ-cɨk kɨnɨ, kwamɨk, a mɨ-ta kɨpɨrɨɨk ɨlɨmɨpɨn ɨl kɨ-ɨpɨn makɨlɨn.*	Do not be afraid, children, grandmother does not hate you, she loves you; but tomorrow we will go to her place to take her a present.
Friend:	*Wɨrɨn, mɨjo natɨ, ɨl ko-ceuu kɨnɨ.*	Yes, that's the best thing to do, so as to please grandmother.
Children:	*Wɨrɨn, kɨpɨ kwan, . . . Kɨɨpɨn ee, ɨl kwam?*	Yes, let's go tomorrow, . . . What shall we take her, what she shall be pleased?
Mother:	*Kɨpɨnɨ kwan, ɨl kɨɨpɨn eyeuyɨt ɨk kɨlɨmɨk.*	We'll go in the morning, and take her [illegible] some honey and water.

5:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

Private delicts include trespass, that is, hunting on another's land in the forest; theft, of honey-barrels in particular and of other things in general; murder; adultery; and assault. These are offences for which compensation is payable, or for which a man may kill the offender, e.g. for theft, though if he does so he must pay compensation for murder. Offences which concern fellow clansmen are dealt with by the clan council. Others came within the province of the *kwot* council, which was not a daily affair, nor held at stated times, but only when there was a definite reason. When a person had some business which needed the calling of a council, he told the *kiruokindet*, who passed word round the *kwot* that people should assemble on a certain day. If, for example, a man had been robbed of a honey-barrel, and knew who had stolen it, he would put the matter before the council, partly to decide on the amount of compensation, for the amount might vary according to the thief's circumstances, and partly to have public opinion behind him when he enforced his claim for payment. I believe that on the whole theft among the Dorobo themselves was not very common; and certain kinds of theft are regarded by them as so mean that a man must be very depraved indeed who will commit them. Besides, in a small horde whose members feel that outside their own circle every man's hand is against them, and to whom a stranger is a potential enemy until proved a friend, the need for unity and absence of friction is overwhelming if they are to survive. I certainly heard of no cases of theft during the period of my investigations.

We may now pass on to describe some of the traditional measures taken against offenders.

Incest. Incest means intercourse between a man and a woman of his *chiat* (that is, one whom he calls by a relationship term), and a clanswoman. We have already described the punishment for this (see above, p. 127 f.), which in the first case is carried out with the approval of the *kwot* council, and in the second, under the authority of the clan council.

Killing a Dorobo. When a man killed a Dorobo belonging to another clan, the council of the dead man's clan met to discuss the amount of compensation that was to be paid (*ipat*), and then sent word to the council of the murderer's clan. This meant that the offence had been committed, and that action must be taken. The council of the murderer's *kwot* then assembled so that arrangements for payment could be made and become known to everybody. The murderer also had to be purified, in the same way as when the victim was a clansman. The *kwot* council then met again to discuss the amount of the compensation. This, it seems, was usually reckoned at nine head of cattle (male or female), though it is doubtful if the full number was ever collected[1], and if the murderer was a poor man with

[1] The reason nine is probably due to imitation of the Nandi procedure, where nine is the amount payable as compensation for homicide.

693 the relatives it would be very much less. The murderer had to provide as many of the murder-doubled spear as he could, either from his own herd if he had one, or by getting them from the Nandi in exchange for furs, which meant, of course, that the cattle would be either cows or worn-out old ones, and that he would not be able to provide many himself. It therefore fell to his relatives and clansmen to make up the number, which needed a clan council to apportion the balance among them, and also resulted in a good deal of feeling against the murderer for a time. Until the amount had been agreed upon by both clan and local councils, the murderer was liable (in theory at least) to be killed by his victim's relatives, as he had to be low till the negotiations were completed, though again it is doubtful if they would actually have gone so far as killing him, for then they themselves would merely have had to return the cattle as compensation for their own act. In dividing cattle between the murdered man's relatives, the order of priority was brother, wife, father, mother, father's brother, father's brother's son, father's sister's son.

693 Killing a witch. Though in 1938 I could hear of no Dendo who were reputed to be witches (*mwoti*), such people certainly existed in the past. Apart from killing people by spells, their principal activities were to have been centred on hunting — putting spells on game traps and on men who were going to hunt. If a witch was shown by a diviner to be guilty of a person's death, he or she might be killed, and no compensation was payable (*mojinet*).

693 Killing an enemy. This means killing any person who is not a Dendo and is believed or known to have performed any actionally act against the Dendo. The Dendo have no sort of war organization, and their enemies were generally shot at from the cover of undergrowth. Though not a crime, killing an enemy uses the law makes the killer ritually unclean and therefore dangerous to others because he has shed human blood. The action is thus brought into the same category as homicide of a Dendo, and though there is naturally no compensation, purification is required. The face of a man who has killed an enemy is painted (*kwaan ndet*) with stripes of white earth (*mwonet*) on the forehead, down each cheek, and down both sides of the nose. The paint is allowed to remain till it flakes off, and the man does not have to stay in his hut, but goes about as usual. Though if he had killed a Nandi he would take care to go to some other part of the forest till he thought it safe to return. If actual fact, Nandi were seldom killed, but one who strayed into the forest might get shot by accident: the body would be taken to a lonely place for the hyaenas to eat, and at any sign of Nandi activity the Dendo would vanish into the depth of the forest where the Nandi would have little chance of finding them even if they had the inclination to search.

685 Theft. Stealing honey is the most kind of theft, and is almost comparable with (unprovoked) cattle-theft among the Nandi. A man who steals honey from someone else's hive(s) is considered very low indeed, and if found

[redacted]

[redacted]

[redacted]

Both the social and the economic origins of the Dorobo are very narrow. The family is a self-supporting unit, and a group of families forms a social unit; but the group is isolated, and those groups whose thought does occupy their minds are exclusive and strict exogamy. There is no "tribe" as a unit among the Dorobo, but a collection of family or clan groups forming a local or district, and a collection of such groups within a given area having a common organization, customs, and dialect, and the latter also that "we are the Dorobo of such-and-such a place." Thus the Kapchepkendi Dorobo (with whom this paper deals) distinguish themselves from the Dorobo living on Thadiow hill, though that hill is only some seven miles from Sawiyo. (See map of the Dorobo country.) Before the Government dispersed them the Dorobo possessed, more or less undisputed, the whole of the forest. Now they have no land at all. But they maintain their solidarity in spite of disruption, by means of their isolation, strong clan-system, and the fact that outsiders, e.g. the Masai, are half afraid of them (so long as they do not go into Masai), as being ventriloquists and magicians of no mean ability, a people who are, in fact, somewhat uncanny. Their external relations may be described under three heads as (1) acquisitional: exchange of goods and services with the Masai, and, till about 30 years ago, with the Nandi (Giloy Mission); (2) restitutive: the Government calls them for taxes, and takes away their land, which leads to (3) an attitude of distinct suspicion towards all Europeans, though they are driven by economic pressure to work for them.

Productive activities are concerned with the following:

A. *Food*: meat (by hunting and trapping), honey, wild plants, tubers and roots (grown or cleared), milk, native meal, salt and beer.

B. *Use-skills*: houses, weapons, implements, utensils, clothing and ornaments (image of iron), firewood, traps, honey-barrels, cultivated earth (which is dug in the eastern part of the forest and sold to the Masai for cash.)

C. *Raw Materials*: wood, plants, and skins.

The exchange of their own products for things they do not make is governed by natural resources,

D
K
174 themselves, ready to pay the usual dues demanded of a foreign visitor, in course of time increased tremendously in numbers and gradually assumed an agricultural type of alimentary culture and in doing so put the Dorobo country to a different use which changed its face entirely. The very name Kikuyu must have been associated in Dorobo minds with the elimination of everything in life they thought worth while. So they would not readily share their country with a people who, they knew, intended to destroy its forest. The reaction of the occupants to what they thought the immigrants intention would govern the situation, and so the mode of acquisition, in each case. In the north a few Kikuyu banians had come to and paid the usual fee or made the usual presents. There would have and there have been some clearing for a homestead, but later the increasing population (eventually too many to be overawed) would have started cultivation; the Dorobo would have begun to realize that their means
D of livelihood were gone or going fast; some no doubt would have been
[609] absorbed [p. 107] and some would have Kikuyu-ized their way of life, but most would have searched for somewhere else where they could live their lives unhampered by the hated forest-farmers. In the south the immigrants made no pretence of seeking a share in hunting grounds; their openly declared intention was to make those grounds unsuitable for hunting; any other declaration would have been of no avail, the Kiambu Dorobo knowing where they came from and what had happened there, and doubtless knowing also that hunting was by then not merely rarely practiced by the Kikuyu as a way of life, but almost, like its products, subject to taboo, at least regarded as an occupation followed only by the lower sort. Before they willingly relinquished what they held they would demand security or greater value than their brothers to the north had found,
D they would require in fact a guaranteed subsistence, not mere longe-
[648] Hitherto Dorobo sections whose borders marched with those of stronger peoples had always sought some form of symbiosis, a theoretical equality of status although their different mode of life and their dependence on the goodwill of a numerically stronger people involved in practice something approaching some degree of serfdom. But now their case was different. It was no longer [illegible] of protecting a dangerous neighbour by occasional gifts of honey or hides or undertaking certain menial tasks to keep him in a peaceful

THE MINERS OF KING (KINGITA)

History

The group described by Lambert as living at Kyaka on top of the escarpment, on the edge of the Great Rukwa, is quite unlike all others in that region or indeed in Kingitania (IRS).[1] It was seen by Thompson in 1883 on the plain between it and Mwanda,[2] place of Kalulema,[3] which, he says, is "another village and considered the selling best bought from the Kikuyu in the West and the Kyaka." The people in part of the Kikuyu Kyaka, who occupied the land before the Kikuyu came. The process by which the Kyaka lost complaining has been lost to IRS since Kyaka ground through a comment up by the Kenya Land Commission as one "guilty of silence and persevering and guilty of religious and atmospheric, guilty of impatience, and tragedy of force and inhumanity."[4]

Organization

There are no chiefs, council being in the hands of a council of elders, with a leading elder called Kondelelani, or young Kyaka. Marriage is prohibited, and sexual permissive. Polygamy is prohibited. Boys are circumcised, and girls are subjected to clitoridectomy. There appears to be some sort of age-set system, but Lambert's statement is not very clear on this point.

There are said to be also chiefs, with Kyaka-Kalinga names beginning with the prefix Mpi. Lambert does not locate territorially, but simply records "groups of." These chiefs are sometimes elected to by Mwami also exists, as does for Kikuyu also appear. The word for chief is mi-Mwami, derived from the Mwami of which "Mwa" and are, as Lambert suggests, from Arabian, which means not "glass," but "one God."

Religion

A so-called supreme being called Kyaka[5] is recognized, and the elements describing ancestral spirits or "entire members" of a Mwagi implies the existence of an ancestor cult.

/50 com'd/

Succession is patrilineal and marriage patrilocal. Polygyny is practiced. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Davies succeed in grouping the [illegible] of the Kikuyu and the [illegible] of the Maasai. The word they use for the handing-over ceremony is [illegible]. Alternating ages or generations are distinguished as [illegible] (the right hand) and [illegible] (the left hand). Where the Kikuyu system is referred to 'Mwangi' in the former and 'Mbiru' the latter, but the expressions were probably and originally of the Maasai right-hand and left-hand circumcision groups.

There are no indigenous chiefs, the judiciary and legislature being a council of elders. Each an elder is called [illegible] (pl. [illegible]). A [illegible] has much the same function as a Kikuyu [illegible]. There is an [illegible] but formerly the Davies owed allegiance to the [illegible] of the Maasai.

They recognize one supreme being, called [illegible] (compare the Sub [illegible]). There appears to be no cult of so-called [illegible] Worship. The sacred trees, used for prayers to Ngai, are, for example, the [illegible] (a solitary clump), [illegible] mutiny, and, in connection with circumcision ceremonies, the [illegible] and the [illegible].

[illegible] little or nothing is known of the relationship of the Davies of Northern Kikuyu with other Davies divisions. The "Davies Commission" called them the Kikuyu Development group, and remarked that they were first found in the [illegible] but left them and went to the Maasai Reserve, whence they were expelled. [illegible] the Commission the [illegible] group was living on Maasai pasture in the

Succession is patrilineal and marriage patrilocal. Polygyny is practised. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Dorobo imitated or joined in the ituika of the Kikuyu and the eunoto of the Masai. The word they use for the handing-over ceremony is cuuotwet. Alternating ages or generations are distinguished as oret ap-tai (the right hand) and oret ap-katap (the left hand). When the Kikuyu system is referred to Mwangi is the former and Moina the latter, but the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups.

There are no indigenous chiefs, the judiciary and legislature being a council of elders. Such an elder is called kiruogindet (pl. kiruogik). A kiruogindet has much the same function as a Kikuyu muthamaki. There is no laibon but formerly the Dorobo owed allegiance to the laibon of the Masai.

They recognize one Supreme Being, called Tururit (compare the Sun Tororut). There appears to be no cult of so-called Sun Worship. The sacred trees, used for prayers to Tururit, are, for rain the bamboo (a solitary clump), for honey the mubeo, and, in connection with circumcision ceremonies, the murhai and the mutamaiyu.

78. Little or nothing is known of the relationship of the Dorobo of Southern Kikuyu with other Dorobo sections. The "Dorobo Commission" called them the Kikuyu forest group, and remarked that they were first found in the Aberdares but left there and went to the Masai Reserve, whence they were ejected. At the time the Commission met this group was living on forest squatters in the

/15 cont./
the El aziki also have their own idiom, which will be briefly discussed at a later place.

Corresponding to the uniformity in language, the number words are the same among the Masai and Wakuafi, whereas the Aaí and El aziki have their own words for only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all three branches in their religious view, and the manner of circumcision customary among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tenga, closely related to the Masai people. In birth and death, too, all three have the same customs, while in the rest of their customs one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their descent.

The people as a whole are divided into three large tribes, the Il aiser, the El molelyan, and the El oonkgona, each of which is made up of a number of lineages, and every Aaí, as well as every Ol kuafi and Ol mamasi, is a representative of one of these lineages.

If we now concern ourselves further with the ethnography of the Masai in particular, which is at the same time that of the Wakuafi, we are thereby including the ethnographic traits of the entire people the knowing of individual differences that have developed among the Wandorobbo in the course of time and under the influence of changed conditions will be reserved for the third part.

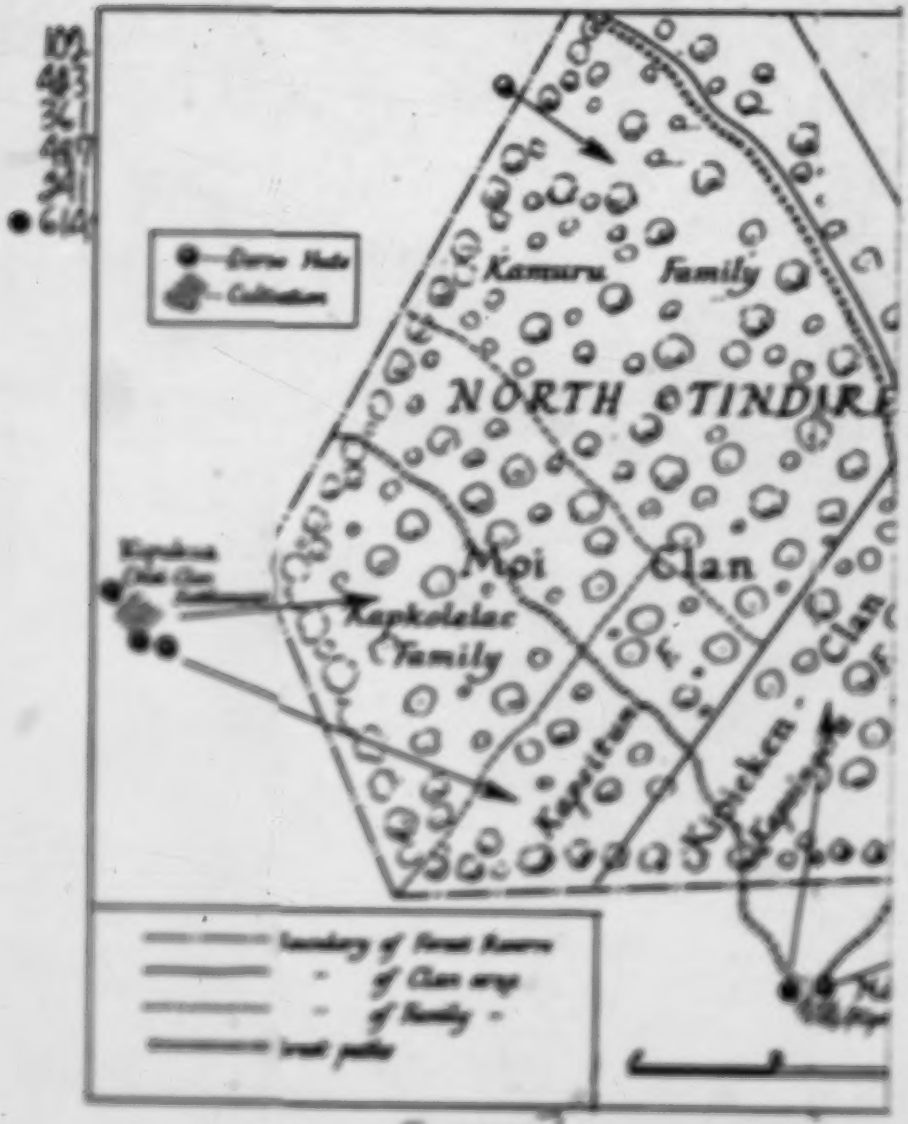
000 Plan and arrangement of the camp. -- The huts. -- Household equipment. -- Daily life, food, work. -- Earthen pots. -- Basketry. -- Leather dressing. -- Market trade. -- Honey extraction. -- Manufacture of bows and arrows. -- Spears. -- Dances and song.

361 The Asá roam the steppes as hunters, in that they wander with
[358] the game, whose meat gives them food and out of whose skins they
[359] make their clothing. This circumstance brings along with it the fact that they can not live together in large bands, but rather, divided into small bands, are forced to stay here today and in a
[362] distant place a few weeks later. Accordingly, their camps (also) only consist of hastily built small huts (manda) that are made out of branches and grass. The camps as a rule are hidden in dense
[367] bush and have no special enclosure. The paths and game runs leading to them are carefully barricaded with thorn branches and thus made inaccessible. Only the practiced eye of the Asá will find the wonderfully concealed entrance to the camp.

621 Only two or three families, rarely a few more, usually live in one camp. Next to their huts are found those in which the unmarried
[391] circumcised sons (kokonyi) live with the young girls. As among
[392] the Masai, each young man has his favorite girl. She calls her
[393] enkai nai, she calls him enkai nai, words to which one again finds the Masai word enkai. Their huts are designated as inanyi

THE SOUTHERN NILO-HAMITES



[p. 56]

[p-57]

patronymic from their father's prestige name. Younger sons generally take their patronymic from the father's subclan, or else from some circumstance in their own lives.

Circumcision

Boys are circumcised at the same intervals as the Nandi, and the Dorobo keep watch for the opening of the Nandi circumcision. Occasionally boys are circumcised in Nandi with other Nandi boys, but more often in the forest, as in the circumcision of 1936-37. Sometimes a Dorobo acts as sponsor for the Nandi. The whole procedure of circumcision (save) is identical with that of the Nandi. Girls undergo the operation of clitoridectomy whenever there are enough ready to be done, and not at any stated intervals.

Age-sets

The Dorobo have borrowed the whole age-set system from the Nandi, and it works exactly as among the Nandi, with the same set-names and 15-year intervals synchronized with those of the Nandi. The reader may therefore be referred to the account of the Nandi system, p. 31. A slight difference in the sub-divisions called *mut* may be noted: the Dorobo have only three, called *Cegiwandi*, the senior; *Tuguldi* or *Kipkilionyek*, the middle; and *Kwondandi* or *Kipsiandi*, the junior. A more significant difference is that the sets have no military or political force, for the Dorobo are not fighters, and the practical effect of the system is to introduce further behaviour patterns, as well as to modify the traditional rules of hospitality; for while an Dorobo would refuse to shelter one of his own lands, the degree of hospitality varies according to the age-set situation.

Political Institutions

Land Division

The Dorobo live mainly in clan settlements divided between a number of districts or *pororiek* (*koroweik*, sing. *koret*). Till about 1900 these settlements were in small clearings inside the forest; after 1901 they were spread round the outer edge of the forest.

The Clan

The clan, *ovet*, is an exogamous patrilineal group with a name and a totem, *kowi ap ovet*, the animal of the clan. The existence of eight clans is attested by genealogies and the census, three others are reported to exist or to have existed, though none occurred in my records; they were, however, mentioned to me in 1937 as well as in 1938-9. Each of these clans has one totem, except that which has four, one of which it shares with another clan; it is not the totem which is important, but the group itself, the clan being a social group, not a group of people mystically related through their totem. The emphasis is therefore on the clan name and not on the animal, though marriage, nevertheless, is forbidden within the clan. An exception to this rule is found in the case of five, where intermarriage is allowed between people of different totems, an exception borne the possibly to the influence of the Nandi, among whom like marriages are common between people of different totems. (See p. 97.) There seem to be no restrictions either on marriage between clans (as among the Nandi), or on killing or eating the clan animal, which suggests that originally the Dorobo clans were sub-totemic, and that their present totemism is a feature borrowed from the Nandi along with the clan names, which enough to one of the reputed clans are all Nandi.

* The Nandi occasionally use *ogwet* for this sub- (i.e. Nandi *mutik* meaning "the totems"

Table of Clans

Clan name	Corresponding Proto-Lituanic word, and also Old Prussian	Source	Possible notes
Kiparkas*	Kiparkas Kip	Proto-clan	ancient name
Kiv*	Kiv	Proto-clan	ancient clan name, meaning unclear
Kipakas*	Kipakas	Proto-clan	Kipa-
Kipanas*	Kipanas	Proto-clan	Kipa-
Kupal*	Kupalkas	Proto-clan	kupa pig
Kupa*	Kupa	Proto-clan	kupa
Kunigas*	Kunigs	Proto-clan	kunig
Kuis*	Kuis	Proto-clan	kuis

The clans named clans are: Kiparkai,* corresponding to the Proto-Lituanic name *kiparkas,* corresponding to the Proto-Lituanic name *kip-* and Kiparkas, meaning a Lituanic word, Proto-Lituanic.

(All clan names marked * are of Proto-Lituanic origin.)

The clan is the basis of political organization, and people tend to live in clan settlements under the control of a clan council. This council consists of all the full men of the clan. People meet at the house of a chairman who, upon notice being given to him, prepares honey-wine or beer, for the business of the council is done in an informal way with a jar of honey-wine or a keg of beer passing around. Each in an informal way with a jar of honey-wine or a keg of beer passing around, which is a case in a. Business is done first and the drinking follows. The council deals with clan matters, including disputes between members, boundaries of hunting areas, [illegible] of a chieftainship, feuds, and the preliminary arrangements when a clan man has killed a member of another clan. Disputes are settled by discussion, and the result is pronounced by the council leader, Kiparkas, who is not necessarily the oldest member of the clan, but someone fairly senior who acquires his position in [illegible] which the clans may or does the Proto-Lituanic [illegible] (p. 68).

The Kiparkai

Superimposed on the clan areas is a system of districts (*kunigai*, sing. *kunig*) governed by Proto-Lituanic officials. Each district includes several clan settlements, and has a council which is formed of the elders and accredited men of all the clan settlements within it; the council site marks a tree (there are no special council trees) in an open space from which the land has been cleared. The function of the Proto-Lituanic council is to decide [illegible] clans. It has a leader, also known as Kiparkas, whose position and duties resemble those of the leader of the clan council, and he organizes the affairs in the same way. There are six clans of the Kiparkai.

The Kiparkai is divided into nine Proto-Lituanic clans (Proto-Lituanic *kipakas*, Proto-Lituanic *kipanas*, Proto-Lituanic *kupal*, Proto-Lituanic *kupa*, Proto-Lituanic *kunigas*, Proto-Lituanic *kuis*, and Proto-Lituanic *kiv*). Of these, only three of them were occupied: Kiparkai, Kipakas, and Kupal. [illegible]

Legal Sanctions

Legal system which governs sanctions on Proto-Lituanic [illegible] and [illegible] in the council. Secondary sanctions deal with magical theft, [illegible]

[illegible] and wealth. In the first category, incest is punished under the authority of the clan council; the man is beaten, the girl burnt. Sorcery [illegible] the woman who is beaten. Witches might be killed under authority of the tribal council. In cases of persistent disobedience to the council, the elders could agree two or three men to force the offender, by sword and physical persuasion, to submit his case. Of offences in the second category, [illegible] have already been mentioned (p. 76). Theft, when not dealt with summarily, can be brought to the tribal council, which may order payment of compensation. A more powerful deterrent is [illegible] "If I see a thief, every time grass we see," said [illegible] a thief, [illegible] grass between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-wite. If a man [illegible] committed by something like, he must bind [illegible] to recompense. Homicide of a member of another clan, though not involving primary revenge, was a serious offence, because it meant that the murderer had to get cattle in order to pay compensation. The murdered man was also head of cattle, though when the murderer was a very poor man [illegible] the murder might be enforced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could from his own herd if he had one, or by exchange from his friends, or by any other means, including theft. The deficiency had to be made up by his fellow-clansmen.

Summary

The Dirndo lands consists of a loosely integrated group of districts held together chiefly by the feeling that they are all Dirndo, the ascendancy by the clan law which [illegible] and by the district boundaries. The clan is therefore one of the chief institutions in the life of the Dirndo.

MAIN CULTURAL FEATURES

Clans

Housing

(a) Forest type.—The Amongali, as we saw in 1927, was a [illegible] of circular [illegible] huts in long [illegible] structures, covered by the grounds with [illegible] and [illegible] of trees (eight, 6 ft.; height, 11 ft.; width, 7 ft. [illegible] type; the [illegible] has a circular wall about 3 ft. high [illegible] with mud, and an [illegible] flat thatched roof supported by a centre post; the hut is a hut of ordinary Pondi type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of from [illegible] huts, were situated in [illegible] just big enough to hold the huts, and were [illegible] by [illegible] [illegible] which [illegible] to a [illegible] regulation that each is [illegible] to [illegible] [illegible] a guide. Settlements outside the forest are arranged in small groups usually close to the [illegible] land.

Dress and Ornament

Clothing is made largely from the [illegible] of wild animals, and the hides are mainly [illegible] from those of the Pondi, as are most of the ornaments, which include, among other things, [illegible] and [illegible], necklaces, and [illegible] worked in an irregular [illegible]. The necklaces are [illegible] and arranged [illegible] getting [illegible] to the [illegible], and [illegible] [illegible] to [illegible] in the [illegible] of the ear. Those [illegible] all [illegible] the [illegible] [illegible] [illegible]. [illegible] is [illegible] to [illegible] in a [illegible] of about 2 [illegible] [illegible] is a [illegible] [illegible] with a [illegible] cap, and [illegible] [illegible] [illegible] [illegible] [illegible] and [illegible]. Occasionally a [illegible] [illegible] [illegible] [illegible] [illegible].

THE HISTORY OF KINGS (EXERCISE)

History

The group identified by Lambert relating to Kinsbo as top of the escarpment, on the edge of the Great Rivers of salt north of Lamora, is first shown on Kinsbo in Lambert, 1851. It was seen by Thomas in 1861 at the place known to the Lambert as Wanmak ("place of hunters") which, he says, a Kinsbo village was established for selling land bought from the Kinsbo in the West and the Kinsbo." The group is part of the Kinsbo Kinsbo who occupied the land before the Kinsbo came. The process by which the Kinsbo had completely lost their land by 1861 when Lambert passed through is unknown, but the Kinsbo Land Commission in one [illegible] purchase of villages and surrounding land by of religious and missionaries, purchase of properties, and forgery of titles and ownership."[1]

Organization

There are no chiefs, council being in the hands of a council of elders, with a leading elder called Kinsbo-Kinsbo or simply the Kinsbo-Kinsbo. Marriage is prohibited, and divorce prohibited. Polygamy is practiced. There are circumcised, and girls are subjected to clitoridectomy. Tribal spoons as the centre unit of age-set system, and Lambert's statement is not very clear on this point.

There are said to be nine clans, one Kinsbo-Kinsbo clan beginning with the [illegible] clan, which does not apply territorially, but simply means "group of". These clans are sometimes referred to by Kinsbo clan names, but Kinsbo clan names. The word for clan is Kinsbo, derived from the Kinsbo [illegible] "clan," and not, as Lambert suggests, one of [illegible], which means not "[illegible]" but "one goat."

Religion

A so-called supreme being called Lamoi is recognized, and the deceased [illegible] spirits as "entire nations" of a Kinsbo implies the existence of an ancestor cult.

[illegible]

of the following types of Dembo.[1] I give the names in the singular and plural forms.[2]

Sing.	*Plur.*
1. Ch-Dolofgni	D-Dolofgo
2. Ch-Kinyolofgni	D-Kinyolofgni
3. Ch-Mbiri	D-Mbiro[3]
4. Ch-Mvfuki	D-Mvfuki
5. Ch-Kimvbomi	D-Kimvbomo
6. Ch-Avumuli	D-Avumuli
7. Ch-Kivkovchi	D-Kivkovchi
8. Ch-Kimogoro	D-Kimogoro

These names, all provided by the Mossi article, would seem to be the only ones known to the members of the types they represent. It is possible that there may have been other names in existence originally, and that many years in close contact with the Mossi have had the effect of reducing some of these names to the Mossi idiom. On this it is not possible to give an opinion, owing to the complete lack of information on the subject.

The names of the types of Dembo having been ascertained, I endeavoured to establish contact with some individuals of each type. In this I have been moderately successful. An added incentive to my efforts was the fact that the *Mbiro* Dembo, who live in considerable numbers in the vicinity of Yalomni, were discovered to have a language of their own. This language is almost wholly unintelligible to the Mossi. On being questioned, the *Mbiro* admitted their ability to converse in a tongue unknown to the Mossi, but stated that there were other Dembo[4] whose language they (the *Mbiro*) did not know.[5]

[1] I do not call them clans. I object to calling the segments, having totally unconnected or remote ancestors, by the name of clan. On the further ground, it would not seem, from the existing evidence, that they can all be indirectly traced to Bantoid and Sudanese origin.

[2] The singular would represent an individual of the type and the plural the type as a whole.

[3] According to Delhy, *D-Mbiro* is the name given to a class of the Gagu people by the Yarse Mossi. I have not heard the name used in this connection by the Mossi of the Yungayanda District. [4] *D-Lemogoro*.

[5] It might be of interest, in this connection, to recall the fact that the

[illegible] G. W. S. Shannonians.—Modern Russian: Some Account of

Class.

● 614 The Duellist have eight chess pawns, g2 continued, B.g, which correspond to eight of the Dutch class:—

Class.	Name.	Meaning.	Corresponding Dutch Name.
1. Bel	Bulgarian (Fr.)	Crystal stone	Bel.
2. Kahgan	Kazakh (Kaz.)	Baron	Kahgan.
3. Kazikan	Tatars (Fr.)	Dark city	Kazikan.
4. Kalmuk	Russian (Bel.)	Elk	Kalmuk.
5. Kaz	Kazakh	Kaz	Kaz.
6. Kalun	Kalmuk	Kazik	Kalun.
7. Kazikan	Tatar (Fr.)	Kazikan	Kazikan.
8. Kalmuk	Arabic (Fr.)	Elk and	Kalmuk.

The first class is the most numerous.

Consecutive Ages.

524 There are seven consecutive ages (brisés, pl. brisegh), which have the same names as in Dutch; the intervals between the ages are about 14 years, and they succeed one another in a recurring cycle of about 98 years, as in Dutch, except that the Dutch intervals are 12 years (formerly 13) years. The present order of the ages, and their names, are as follows[1]:—

1. Bors (very old men)								Chronicled about 1877
2. Kilgishtuni								1891
3. Kilgishtuh								1905
4. Kilmaylin								1919
5. Kilmagli (mothers)								1933
6. Kalun (boys)								Chronicled after 1947
7. Kalun (small children)								1961

The old men speak of an eighth age, Kilgaraliy or Kilgaraliy, which has fallen out of use.

Each age is divided into three divisions (see pl. mentioned (B.) a line), which are called[2]:—

1. Bazan—Kilmaglishi (B.) Radishtish, or Radigan-ugh).
2. Ali-ishi—Kilmaglishi (B.) Kilgishtuh.[3]
3. Kazan—Kilmaglishi (B.) Kilgishtuh.[3]

[1] By Kazik Kilmagli a.v. "Ireland's queen" for the Duellist Kaz. A valid form of an even Kaz for both Kaz gives.

[2] By the Kazikan dialect of Kazik Kaz names are called also "Kilgishtuhgish" and "Kilgishtuhgish."

[3] See B.C. Ali. A. W. S. Shannonians a.v.B.C.I. Kilg.g. Ali-ishi.

In 1928 and 1929 I made a census of the three Gumuz districts which were still inhabited, which showed that out of a total of 280 surviving members of the Eighteenth family, 67 % were living in the forest or on forest clear in it. The remaining 33 %, were settled in groups in certain areas of Gumuz where they had been for many years, having gone there by private arrangement with the Gumuz, and in Uanie Uoha, with a few in the Dumassa and Kuya Reserves. Most of these 33 %, maintained fairly constant contact with the forest people, and all were recognised as members of one or other of the three Gumuz districts. Under these conditions it is surprising that they have retained so much of their traditional organisation, but the disruption of even the remainder for some of the difficulties experienced in studying them, and for some of the gaps in the record. Accordingly it was not too late in 1929 to gain a record which, however imperfect, does substantially increase our knowledge of the Gumuz.

The dispersal of the Gumuz made it necessary to classify the groups according to their distribution, and this resulted in a grouping of the bands in four "forest categories".

1). Inside the forest, at an altitude of 6000 ft. and over.
2). Forefoot on the edge of the forest, usually over 7000 ft. and within a mile of the trees.
3). Forefoot or Upper Gumuz, within 10 miles of the forest, with several conditions generally similar to 2, but a little lower.
4). Kuya, Dumassa and Lekkuya, where conditions in places are similar to 3.

The analysis of the census and forest categories will be found in the Appendix p. 6.

Here in this paper we are first only with those parts of the social organisation that concern the family and clan, a short summary of other aspects of Gumuz life may be helpful. The social and political life of the Gumuz is based on the clan, which has its own council to deal with internal affairs, and even in this people live in clan groups. This is common to the Forest, where the clans are dispersed and play but a small part in communal political life. The forest is divided into nine districts or spatial divisions, also forested, of which only three are now inhabited. These districts, from north to south, are: 1 Lagaba[1], 2 Bulgai, 3 Gwaa, 4 Kabanma, 5 Gwanya, 6 Gwadeu, 7 Bidugu, 8 Fadi, 9 Angolo. In 1928-29 only Bulgai, Kabanma, and Gwanya were inhabited, the latter had been small previously to the district as a whole (irrespective of clan). The Gumuz never acquired the coastal belt of the Forest, district councils were held only where there was something important to talk about, and the clan council was held a short distance and was closed after that the district council.

There is no chief of the Gumuz, nor an overall chief in Gumuz to whom has an district council, the holding was dissatisfied — the executive

[1] B is English church, and is used with the clan throughout

[illegible] getting his position through the tacit recognition of the people. The Ganda therefore consists of a loosely integrated group of districts held together partly because they "are all Ganda", but much more by the clan-solidarity which extends across the district boundaries. The clan is thus a far more important institution than it is among the Kavirondo.

The Ganda are a hunting people who have been forced to take up agriculture, and at the same time are in process of acquiring a small amount of live stock. A great deal of their culture and most of their language have been borrowed from the Kavirondo, but their habits and mental characteristics are their own, including a "hunting outlook" which contrasts with the "cattle outlook" of the pastoralists, and a feeling of sympathy with wild animals that does not exist among either pastoralists or agriculturalists. There is importance in hunting even here, and history is regarded mainly as pastoral people regard cattle.

Although the Ganda are commonly thought of as a people who practise or still observe taboo a game, this notion is true only to a limited extent. Parties used to go for shoot in the old days working game outside their own territory in the sparsely inhabited areas of the highlands; but their own lands map and still is divided into strictly observed economic areas where no family holdings to which people have, as crops, keep their bees, and other vegetable food. These areas may look small on the map, but anyone who thinks that half an inch on a map representing perhaps one mile on the ground covers a very short distance, will find when he gets to the Ganda that one inch on the ground is a very formidable item altering all sorts of possibilities for the hunter, and infinite distance for the stranger to see himself.

[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

The parts played by the grandfather or grandmother, and by the father's brother and his wife are directed largely towards instruction in behaviour and stability, though a young paternal uncle may often help in teaching boys the elements of woodcraft and hunting. And although the father and mother teach their children to distinguish between right and wrong, and how to behave to their relatives, the grandparents in particular have a good deal to do with this aspect of education.

The part played by elsewhere as educators is in general limited, for it depends upon the type of settlement and the number of them with whom the child is able to have contact. Where the settlement is a purely family affair there will be no elsewhere immediately at hand, and it is only in clan settlements that their influence can be at all effective. At Kolpai there was in 1938 a settlement consisting of two elementary families and four unmarried elsewhere; and at Kibaraina a widow with two small children could turn to five adult elsewhere for help in bringing up her children, as well as to three other widows and a young girl. In such circumstances children will have more to do with elsewhere than with relatives. This is very different from the Nandi, who do not live in clan settlements and among whom elsewhere are much less important than relatives in these matters.

5. The Age-Set system

In all forms of training, a proper standard of behaviour is insisted upon, because without due attention to this, no cohesion of clan or family is possible, and hence there can be no hostile solidarity. Theoretical this of kinship cannot last if the behaviour of members towards each other is not carefully promoted and strictly regulated, and so behaviour is the keystone of social life. It must be considered not only from the point of view of a man's dealings with his relatives, but with respect to the different generations with which he comes in contact, and the effect of the age-set system on these relationships must therefore be taken into account. Age-sets and kinship rules may actually be in conflict, and so it is necessary before going any further into the subject of behaviour to see how the age-set system works among the Dorobo.

Age-sets, *ipinda, plur. ipinwaki*, are an Wanderobo institution adopted by the Nandi and Dorobo, and borrowed from the Nandi by the Dorobo. The principle of the system is that the males of the tribe or horde are divided into a number of groups or sets of individuals whose ages all fall within certain limits, and the sets are not progressive like the age-grades or stages through which the individual passes from birth to death. Thus a Dorobo man passes through the successive stages of boy, circumcised man, and old man; and a woman through those of girl and woman. But age-sets are more than this: for a man is born into a set, and in that set he remains all his life irrespective of his age in years; women, moreover, do not have age-sets, but on marriage refer to themselves as belonging to their husbands' age-sets.

603 754 598 Next day the mother and the offending children hasten to grandmother's with food. The old woman accepts the food and spits on the children, saying at the same time, *Sore kamasiek ake ne ageyiandwee* ("Peace, I spit on you and to-day you will flourish"), thus both forgiving them and removing any possibility that her curse may have an ill effect. The mother's mother may do the same sort of thing, if she lives near enough for the children to visit her.

603 606 Arap Maiting's wife's mother and father lived at Kipkoreon, and his children used to visit them there, always taking presents with them. When Arap Maiting visited the old people, as he did sometimes in the company of his children, he met them on ordinary terms, entered their hut, and sat down inside, *ei kotee kakai* ("to talk of our affairs"), and his mother in law gave him food to eat. By this time, the strictness of avoidance had been much relaxed, for he was a staid and respectable man of forty or so. But though his children may sleep in this hut, he may not do so on any account, and if he stays too long to be able to return home before dark, he must sleep in a neighbour's hut. His father in law Kaela used to live at Cepkenyuk in Nandi, a good two hours' walk from Kipsikon; but in July 1933 he moved to Kipkoreon, as his son Loli was working on Kapchorua Farm close by. A small hut was built for Kaela and his wife in a maize shamba belonging to some Nandi, and the old Dorobo were allowed to live there in return for guarding it. Loli, a *Moiton*, is Arap Maiting's wife's brother, and therefore 604 owes to his children; but though his sister's children do not go to see him, he sometimes goes to Kipsikon to see them. This was one of the few instances of a mother's brother being at all intimate with his sister's children; and Cepkemoiro taught her children to like Loli, who would greet them by saying *Nabei, kakwa* ("greetings, children"), and then spitting on them and saying *Sore, kakwa* ("Peace, children") to which they would answer *Eju, mama* ("Blessing, uncle"). But in spite of this friendly intercourse, Loli never played the part in their lives that Arap Maiting's brother Kimoisi did; and his share in their training was very small.

IV. The Clan

● 614 The clan, *ent*, plural *entinik*, is an exogamous patrilineal group with a name and a totem, *Ainet ap ent*, or simply *Ainet*, "the animal (of the clan)". Of the eleven clans listed, the existence of eight is attested by genealogies and the census; the remaining three are reported to exist or to have existed. All but one of these clans have but one totem each; the exception has three, the principal of which it shares with another clan, an unusual feature in that it is the group not the totem that is important, the clan being a social group rather than a group of people nominally related through the clan animal. All the clan names but one are taken from Nandi clan names; the exception seems to be of Dorobo origin. Some of these [199] names are taken from the principal name of a Nandi clan, others from subsidiary names, for the Nandi clan has (1), a principal name by which it is generally known, and (2) a subsidiary name or nickname which is

grandfather, though not always very clearly, of the animal or one of its products. Each clan corresponds to a Huron clan, with the exception that one, the Eagle-Hawk, corresponds to both Huron Eagle-Hawk and Bird, and that the Huron have also a clan called Rat corresponding to Huron Bird. This apparent confusion indicates that the Hurons have borrowed the Huron clan nomenclature and called it by their own clan names without much care, for it is plain that they did not borrow the clan system, which is too deeply rooted a part of their organization. The two appearances of the Eagle-Hawk clan extinct has a bearing on marriage which will be noted later on.

The clan names and animals are:

A. Inherited by grandfather and women

[illegible]	[illegible]	Name	[illegible]
1. Kayenhes	Kayenhes Bird	subsidiary name of Huron clan Kayenhes	Kanenyah*
2. Bird	Bird	Huron corresponding clan	1. Kanenyah 2. Rat* 3. Kayenhes
3. Kayenhes	Kayenhes	Huron clan	Kanenyah
4. Kayenne	Kayenne	Huron clan	Kanenyah
5. Kayll	Kayenhes	subsidiary name of Huron clan	Deer
6. Tsiyut	Tsiyut	Huron clan	Otter
7. Kwayer	Tsiyut	subsidiary name of Huron clan	Otter

B. Inherited by genealogy from Tsiyut

8. Tsiyut	Tsiyut	Huron clan	Otter

The following are reported to exist or to have existed, though it seems certain on numbers of clans, either in person or in genealogies, the names were ascertained by Mrs. Emerson, in 1847:

9. Kayenge, corresponding to the Huron Kwenrohe, of which Kayenge is a subsidiary name; bones, sagamorship
10. Kayenhes, corresponding to Huron Kayenhes; bones, snake

* Kanenyah, applied Huron * Rat are corresponds to the Huron Ata-ochiatah

though to Kautil such a marriage is forbidden. This statement is based on the evidence of genealogists, which does not exist that (1) a man may marry into the clan of his mother or his mother's mother, (2) a man who marries one whole may take both from the same clan, and (3) two brothers may marry sisters of the same clan.

9. Marriage

1. Generalities

Consanguinity is a prohibition to marriage, but does the whole process of alliance associated with that of the Kautil, it is not necessary to describe in part the regular ways to alliance in Kautil's descriptions for the Kautil.[1] It is probable that the practice was borrowed from the Kautil along with the agnatic system with which it is closely associated. The fact that the Kautil prescribes not a formula to perform the operation of Kautil ways and that the Kautil is the past normality for a might suggest that the Kautils practised it before they came in contact with the Kautil of Kautil. But is also of the close resemblance of the Kautils to the Kautil population and the use of Kautil forms there points to its working particularly significant to the employment of Kautils as specialists, and does the operation of discretionary which is performed on the girls is symbolically of Kautils might, an way to question to assuming that the Kautils have borrowed the whole business from the Kautil.[2]

Kautils have not often encountered a Kautil along with Kautil how to an someone who may be either Kautil or Kautils. Kautil Kautil may known Kautil of Kautil Kautil Kautil and another Kautils asked Kautil Kautil Kautil part right Kautil. An operation Kautil a Kautils. The periods of encounters correspond with those of the Kautil, for the Kautils have not worked out a method of interbreeding of Kautil sons, has expressed themselves with marriage the Kautil of the Kautil. Where Kautil and Kautil have been preventing the circumstance Kautil Kautil Kautil

forms and other intangible elements, because of their suitability, blend into the existing culture patterns and even then reluctantly adopted. The Nandi, are living two-experts, even the two divine forms; are living functions, they divine fate; the Dorobo living both functionary and function now supply the Nandi with what they want, and in return get from the Nandi things which they cannot produce. The satisfaction of these desires has undoubtedly helped to the assimilation of Nandi culture to the Dorobo, and it has also preserved the continuity of friendly relations between the two peoples.

When I first met the Dorobo in 1927 they were virtually as they had been in pre-European days: a purely hunting people with a basically non-Nandi organization heavily overlaid and modified by Nandi influence, yet distinct in outlook and way of life — so distinct in fact from having taken to agriculture and cattle simultaneously, they have not acquired the cattle complex of the pastoralists and retain the outlook of the hunter.

5. The Clan and its Place in Public Life

The life of the Nandi is controlled by two institutions: the clan and the council, and the later council. The clan council may be described as a primary institution working within the framework of the later organization. The Dorobo are not a "tribe" like the Nandi, and the clan-system does not strengthen tribal solidarity, but it does strengthen and maintain family unity by bringing together disputes from the whole area to deal with clan affairs. The clan council deals with matters which concern members of the clan; the later council is more political and has domestic, organizing the disputes as a whole irrespective of clan.

Of importance and binding are the feasts of social life, the clan is the basis of family relations and government; and it is in regard to the importance granted to the clan that Dorobo social organization differs fundamentally from that of the Nandi. To the latter, the clan is in practice little more than a means of regulating marriage, and a traditional form of tribal division (though it has actually a deeper) has only limited significance. Not so the Dorobo the regulation of public life on a clan basis depends upon the clan, and its social importance is emphasized by the habit of living in clan settlements by the clan councils, and by the cross-link on the group-aspect rather than on the cross-aspect of the clan. Moreover, clan-solidarity ensures the most friendships, and in the event forms that brings the Dorobo together under conditions which would make guarantees any institutions less strong.

The social aspect of the clan has been described in a previous paper[1], and this aspect need not therefore be touched upon here. Pupils tend to live in clan settlements, and therefore the institution of a clan council is both natural and easily maintained. The clan council consists of all the old men of the clan, that is, the men of the age-set senior to the age of the council who correspond to the fighting men of the Nandi. Though in practice it has become customary for anyone who has been circumcised to attend the council

[1] Huntingford, G. W. B., op. cit.

and speak at it. People meet at the house of a chieftain who, upon announcing given to him, prepares as much honey-wine as he can for the proposed event of the gathering, and what he provides may be supplemented by wine brought by other members. The business of the council is done with the aid of a pot of honey-wine in an informal way as if it were a social gathering, which to a sense it is, for the clan council through its informality has become a social bond between members. Business is done then, and the drinking soon follows. The subjects which may be discussed include:

1. Disputes between members of the clan.
2. Planning disputes.
3. Disputes about boundaries of hunting areas.
4. The preliminary business when a chieftain has killed a member of another clan.
5. Homicide within the clan.
6. Sexual intercourse between a man and a girl of the clan. Disputes under heads 1-7 are settled by discussion, the justice of the council executing by the opinions, the views of the members. The leader, theoretically is not necessarily the oldest member of the clan, but such a man might be his words to get property, has someone fairly senior to age, with the headman being, who is blind and respected, becomes a source of clan law in the case of the leader of the local council looked upon as a responsible person who can be safely listened to and whose judgement is sound.

Most serious matters, the three under heads 1-3, are dealt with the clan and by discussion, but there is as well a certain traditional procedure to follow. When a chieftain has killed a member of another clan, the council of the dead man's clan meets to discuss the compensation payable and a chosen a messenger who will be sent to the council of the murderer's clan to start proceedings, which after a preliminary discussion, are heard before the dead council, since two different views are involved, and the matter is not purely the affair of one clan. When a man kills a member of his own clan, the whole matter is settled within the clan. Once the murderer has to have some honey-wine and kill a goat from which his kin is collected. There are two of both the families concerned most of the house of the murderer and which he has to be provided, after which two of the old men of the murderer sit over with the goat's fat. The animal from which the fat is obtained must be a goat, and if the murderer has none of his own, he must get one by purchase or theft. As a murderer can in some circumstances, and even illegal, for it to be a man's goat he kills living against it caught, and the examination as are of both sexes, regardless only the sacrificing of the fats. Also fats from the performance except by the shedding of human blood. There is no payment of compensation for the murder of a stranger, but the murderer must if he can get his victim's skin and use it to help towards his maintenance. The fact is a fourth cousin and one probably considers to know more than the fourths but there is usually more to a small one.

Sexual intercourse between a man and a girl of the clan is not an offence provided the girl does not have a baby. Though the [illegible]

[illegible] to marry her, and should the affair become known (as well things usually do), the man would be [illegible]. If necessary by force, any attempt of the man to do so. Although such intercourse is not technically an offence, it is nevertheless regarded with great disapproval, and may result in the man's temporary exclusion, for as an elder told me, *Ingonyama ii ok vuk ga ndaa, ukhulile ke ke tha, uma sesuna sperrsuk ngak sesuna sweetlik.* "If a man lies with a girl of his tribe (by which he means clan), it is a very great sin, for not only do the old men disapprove, but the spirits also disapprove". If, however, the act should result in a baby, then it becomes known, and a very serious offence, involving as it does intercourse with a relative by the tribe, and customary punishment is inflicted on both offenders, for the union of incest offends the ancestral, the spirits of the dead, and if the guilty pair are permitted there is a danger that the spirits in their wrath may have [illegible] and not only have bad [illegible] people as well. So in such cases when it is known that a girl has had a baby, the man is beaten by the men and women of his own clan, his hut is burned, his [illegible] are destroyed, and he must provide a goat to be eaten by the male and female relatives of the girl. She herself is also beaten by women of her clan. This punishment is inflicted after the discovery of the clan council, and is therefore not just a spontaneous expression of group-resentment, but the deliberate action of public authority.

Much of what has just been written applies to the past, that is to the time before the Government proceeded to establish the Courts in Natal in 1937, and my census in 1936 revealed that there were comparatively few old men left, many fully in fact, than there were in 1937. The clan genealogies therefore do not show as many old men as would have appeared normally, and most of the existing members of society are older members of the Nyongi age-set, whose [illegible] age in 1936 was fifty. Some idea of the composition of a clan settlement in that year is given by the following particulars from my census:

(1) Ntombela and Ngidimana, 2 elder aged: 28 like clan

- 1 Englishe
- 1 married Nyongi, with out children
- 1 married Mdala, with out children
- 1 unmarried Ngidi
- 1 Jonta
- 1 old woman with [illegible]

(2) Ngcobo - Nxi and Ngqokolo clans

- 1 Ntombela
- 1 married Nyongi, wives and children
- 1 unmarried Nyongi
- 1 unmarried Mdala

(3) Ndlovana and Ngcongolwana elder aged: 28 Ngidima

- 1 married Nyongi, with clients
- 1 unmarried Mdala
- 1 Jonta
- 1 widows and 3 girls living with them
- 1 married Nyongi, with out children
- 1 married Mdala, with out children
- 1 unmarried Nyongi

These all contain one relatively small settlement, but there were seven people living round and inside the fence in 1957, and a number of them had been evicted owing to the effect of the 1957 storm. The manner in which the settlements are distributed may be seen from the map.

3. The Name

The methods by which primitive people perceive themselves and separate [illegible] one another are usually so unstated to ourselves, even if they are not themselves fully obvious to the casual visitor. The observations of concrete facts and events are doubtless even the commonplace organisations that are so difficult to understand, and an obstacle to their history, where there may often be an [illegible] difficulty, and an inertia sustaining that groups of old men. Some of the more important peoples of Europe like the Slavs, Greek, and Hungarians had [illegible] of this type, and the Nordic also were similarly organised. But in the case of the Nordic the difficulties in the way of investigations were greatly [illegible] increased as a result of the wars of 1917, an action which it was hoped would [illegible] place the Nordic in more favourable conditions and increase their chances [illegible] and unity of national consciousness, but of ultimate survival, and in 1938 I was told that as there existed but three such wars before 1917, I was likely [illegible] [illegible] to observe only seven of Nordic life, and the concept of such [illegible] [illegible] [illegible]

the relatives it would be very much so. The murderer had to provide as many of the murder-fretted spirit as he could, either from his own kind if he had one, or by getting them from the Druid in exchange for furs, which means, of course, that the family would be either more or less-or-not still-ready, and that he would not be able to provide many himself. It therefore fell to the relatives and dependents to make up the number, which worked a dire reward to apportion the fellows among them, and also resulted in a good deal of feeling against the murderer for a time. Until the present had been agreed upon by both clan and local assembly, the murderer was liable (in theory at least) to be killed by the victim's relatives, as he had to do (as the negotiations were completed, though again it is doubtful if they would actually have gone so far as killing him, for then they themselves would shortly have had to endure the world as compensation for their own gut. In dividing worth between the murdered man's relatives, the order of priority was brother, wife, father, mother, father's brother, father's brother's son, father's sister's son.

Killing a witch. Though in 1930 I could have given friends who were married to the witches (Jewish), such people certainly subject to the gen- ration from killing people by spells, their principal activities were to have been involved on hunting — putting spells on game traps and on men who were going to hunt. If a witch was shown by a division to the guilty of a person's death, he or she might be killed, and no compensation was payable (payment).

Killing an enemy. This means killing any person who is not a friends and is believed or known to have performed any unfriendly act against the friends. The friends have an sort of war organization, and their enemies kill generally start at once the cause of undergrounds. Though not a crime, killing an enemy were the law makes the killer morally unclean and therefore dangerous to others because he has short human blood. This action is then brought into the same category as homicide of a friends, and though there is generally no compensation, purification is required. The man of a man who has killed an enemy is ordered (because killed) with stripes of white earth painted on the forehead, down each cheek, and down both sides of the neck. He gives a shout to scare off a fiction elf, and the men then are free to stay in the fort, but goes about as usual. Though if he had killed a Druid or Druid who was to go to some other part of the forest till he thought it safe to return. So small fact, Druid were seldom killed, but any who stayed into the forest might get shot by accident. The body would be taken to a Druid, given for the funerals to eat, and at any age of Druid generally the friends would cause the death of the forest where the Druid dwelt (and many dozens of feeling there even if they had the confidence to search).

Theft. Stealing honey is the same kind of theft, and is placed com- pletely with being killed upon theft among the Druid. A man who steals honey from someone else's dwelling is considered very low indeed, and if found

[illegible] different, for they also are intelligent. Every animal of the forest is also [illegible] we are aware, others we do not ; but on this there all. We are of the forest, and they also are of the forest.)

With animals for the Dembo have personality, and the belief that is expressed in the folk-tales of pastoral and agricultural Africans in which animals speak and behave like humans, but a real belief of personality that human beings like the Dembo are supposed to.

Bees, though are domestic insects, are analogous to cattle among the Fulani, and their product has great social value and forms among Fulani value. Besides giving honey with its many uses, bees provide an occupation which is less strenuous than herding and one likely to continued by older men who are still reasonably active but are active enough to stand all the rigours of a hunter's life.

Edible plants have social value, but does some existing conditions have to do exactly of them, there is an inked understanding between them and men.

The also has a social value and found among the Fulani, for the Dembo are not a tribe in the same sense that the Fulani are, and although the expression of which, "we are Dembo", means a good deal, it has not the same significance that the similar expression of Fulani, "we are Fulani", give when said by a Fulani. The real work of the Dembo is the also, the significance and solidarity of which we have already tried to explain, and the effect of all that the also means to the Dembo is that it has an immense prestige, being the element that means both solidarity.

[illegible] Dembo are perhaps more striking to a Dembo than the one, and it is noticeable that they should be prescribed in one figure. "the way a man" This is probably an original Dembo belief for in the Fulani life has the form of a belief. This prescriptions expresses and fulfills the Dembo world of personal contact with a dangerous elements, and explains the policies of the Dembo whose the Fulani Dembo and bridging the "side-gulf" [1]. The policy of and to avoid the enemies and enfolds, and in spite of occasional prayers a day. No subscription of the Dembo is ever has days. For while the way to expected as the power which controls the weather, and seems to be the moving spirit behind everything, with the spirits of the dead as intermediaries between man and heaven. It is plain, however, that the well-being of the tribe is maintained by keeping on the right side of these powers, and that the practitioners of public duties is necessary to prevent disaster to the tribe. Public duties that is are more even within the field of religion, the most conspicuous which the breaking of the moral relationship between man and

THE SOCIAL ORGANISATION OF THE HORDERS

By C. W. S. [illegible]

Experiments, even bold guides of a wider kind [illegible] and controversial. In 1907, in accordance with the decisions of the Kongo Land Tenure Commission of 1905, they were forcibly driven out of the forest and settled in the Vlaak Reserve. This attempt to settle these nomadic Bush-spirits forest was a failure, and they are now so scattered by [illegible] group of nomadic living a precarious existence on the forest which extends up to the edge of the forest. Unless they work on a farm, their only existence here is illegal, and although they are permitted to live in Vlaak, the majority do not care to, and are bitterly resentful of being kept out of their own forest. I had fortunately made [illegible] their acquaintance in 1907, and when I returned to make fuller investigations in 1910, I had little difficulty in overcoming the fear and distrust engendered by the government's actions, and I found that in spite of everything they were still living as far as possible in accordance with their traditional organisation.

As regards their numbers, the census I took in I showed a total of 301 people. This is probably not the full total, but I do not think it is very much short of the real total. The census and genealogies also revealed that they were divided into seven clans, the names [illegible] enumerated [illegible]

[P 134, 4]

[P.184, B]

The social structure of the Dorobo is based on clan-solidarity, the clans being patrilineal, partially patrilineal, and exogamous. The clan-names, as well as the age-set names, and many of the relationship terms, are of Nandi origin; but here the resemblance ends, and it is seen that the social structure is unlike that of the Nandi. The whole life and outlook of the people is, in fact, dissimilar. There is no doubt that living in and in close contact with a forest produces a considerable effect on people, which differentiates them from those who live in open country; and the influence of the forest is felt particularly by the children. Peculiar factors of forest life, which obviously cannot occur in open country, are:

1. The homestead is set in a small clearing just large enough to hold two or three huts.

2. The continual presence of large trees, inescapable when the children are young.

cide, adultery, and assault. In the first category, incest is punished under the authority of the clan council: the man is beaten, his hut burnt, his honey-barrels destroyed; the woman also is beaten. Witches might be killed under authority of the *kowet* council. In cases of persistent disobedience to the council, the elders could call upon two or three men to force the offender, by moral and physical persuasion, to mend his ways. Of offences in the second category, trespass has already been mentioned (p. 56). Theft, when not dealt with summarily, can be brought to the *kowet* council, which can order payment of compensation. A man accused of stealing food may say, "If I am a thief, may this grass eat me," and place a blade of grass between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-cattle. If a man incapacitates another by assaulting him, he must feed him till he recovers. Homicide of a Dorobo of another clan, though not involving primary sanctions, was a serious offence because it meant that the murderer had to get cattle in order to pay compensation. The usual number was nine head of cattle, though when the murderer was a very poor man living alone the number might be reduced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could, from his own herd if he had one, or by exchange from the Nandi, or by any other means, including theft. The deficiency had to be made up by his fellow-clansmen.

Summary

The Dorobo horde consists of a loosely integrated group of districts held together partly by the feeling that they are all Dorobo, but much more by the clan ties which cut across the district boundaries. The clan is therefore one of the chief institutions in the life of the Dorobo.

MAIN CULTURAL FEATURES

Crafts

Housing

(a) Forest type: the *kocoogei*, in use as late as 1937, was a framework of sticks bent over to form an oblong, dome-shaped structure, covered on the outside with banana leaves and leaves of trees; height, 6 ft.; length, 11 ft.; width, 7 ft. (b) New types: the *kowet* has a circular wall about 5 ft. high plastered with mud, and an almost flat thatched roof supported by a centre post; the *kot* is a hut of ordinary Nandi type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of three or four *kocoogei* huts, were situated in clearings just big enough to hold the huts, and were approached by concealed paths which branched in a bewildering manner that made it impossible to find them without a guide. Settlements outside the forest are arranged in small groups usually close to the cultivated land.

Dress and Ornaments

Clothing is made largely from the skins of wild animals, and the forms are mainly copied from those of the Nandi, as are most of the ornaments, which include, among other things, iron wire armlets and leglets, necklaces, and married women's ear-rings (*lauk*). The ear-lobes are pierced and elongated (sometimes getting torn in the forest), and a small hole is bored in the top of the ear. Some but not all remove the two lower middle incisors. Hair is allowed to grow to a length of about 2 ins., when it is sometimes covered with a bladder cap, and sometimes dressed with red earth and fat. Occasionally a man has his hair done in pigtails like the Nandi.

Tools and Weapons

Axes and knives are obtained from Nandi smiths, the Dorobo making the wooden handles. Needles are made from old nails and bits of wire which the Dorobo

"In spite of the fact that only such a small number of Wanderobo are left to represent this tribe, it would be erroneous to consider that the tribe was never more numerous, and in fact, there were probably several hundreds of families representing more than a thousand people in the not very distant past. The reason for the decrease in their numbers is due, not to extinction, but to absorption, for when the Kikuyu bought their land many Wanderobo families gave up their hunting life and married into Kikuyu families as well as giving their daughters in marriage to the Kikuyu, until in the course of a generation or two they were completely absorbed ...

"... it was the custom of the Wanderobo of the Kikuyu area to live in fairly large villages where their numbers gave them and their families reasonable security from attack, and where they could organise their social life in such a way as to have courts of justice and other amenities of this type".

77. Dorobo Organization

With regard to organization, a Dorobo witness told the Land Commission in a sworn statement: "Like the Kikuyu we had our mbaris", but this does not in itself mean very much; an mbari is only an extended family and the extension may be so slight that all we can infer from the remark, if we believe it, is that the family was the unit of the social order. But the same witness, later on in the same statement, said: "Our name 'Mbari ya Choiro' is the name applied to us all, as Kikuyu is the name for all the Kikuyu tribe. Within the Mbari ya Choiro there are other mbari", and this certainly suggests a recognition of the mbari as part of a clan, though the possibility of mere imitation cannot be ruled out.

The following brief account of their tribal organization was given me at a meeting of the Dorobo now living at Kerita on the edge of the Forest Reserve, and subsequently checked with the assistance of two elders, Ruchuba obo Lesuswa, who lives on a European farm close to the Forest Reserve (in the Naivasha area), and Gwamba ng'ab Sabaiya, who lives at Kerrita.

[P. 192, A]

Both the social and the economic ranges of the Dorobo are very narrow. The family is a self-supporting unit, and a group of families forms a social unit; but the group is isolated, and the groups cohere through their strong clan solidarity and strict exogamy. There is no "tribe" as e.g. the Nandi, but a collection of family or clan groups forming a *koret* or district, and a collection of such groups within a given area having a common organization, customs, and dialect, and the innate idea that "we are the Dorobo of such-and-such a place." Thus the Kapchepkendi Dorobo (with whom this paper deals) distinguish themselves from the Dorobo living on Tindiret hill, though that hill is only some seven miles from Sosoiyo. (See map of the Dorobo country.) Before the Government dispersed them the Dorobo possessed, more or less undisturbed, the whole of the forest. Now they have no land at all. But they maintain their solidarity in spite of diaruption, by means of their isolation, strong clan-system, and the fact that outsiders, e.g. the Nandi, are half afraid of them (so long as they do not go into Nandi), as being rainmakers and magicians of no mean ability, a people who are, in fact, somewhat uncanny. Their external relations may be described under three heads as (1) acquisitional: exchange of goods and services with the Nandi, and, till about 80 years ago, with the Vasin Gishu Maasae; (2) restrictive: the Government raids them for taxes, and takes away their land, which leads to (3) an attitude of deep suspicion towards all Europeans, though they are driven by economic pressure to work for them.

Productive activities are concerned with the following:

A. *Food*: meat (by hunting and trapping), honey, wild plants, eleusine and maize (grown or obtained), milk, maize meal, salt and beer.

B. *Non-edible*: houses, weapons, implements, utensils, clothing and ornaments (except of iron), firewood, traps, honey-barrels, coloured earth (which is dug in the eastern part of the forest and sold to the Nandi for cash.)

C. *Raw Materials*: wood, plants, and skins.

The exchange of their own products for things they do not make is governed by natural resources,

194 Fort Hall Kikuyu told the 1929 Committee that there were no Dorobo there when their forefathers first arrived, but we have every reason to believe that to have been a political lie. There are certainly Dorobo or part-Dorobo in the District now, and we may take it as reasonably certain that there were Dorobo in all three districts of Kikuyu proper when the Kikuyu first entered them. We can also believe that the first Kikuyu immigrants into Fort Hall and Nyeri were still to a very large extent in the hunting stage of culture; there is a definite tradition to that effect and there appears to be no political reason why the Kikuyu should invent it. There were therefore different degrees of difference between the occupants and the immigrants in the two cases (North of the Chania and South of the Chania) in accordance with the nutritional aspects of their cultures. In Metume the occupants would be impinged upon by people very like themselves who wanted a share in the seemingly illimitable forest hunting-grounds; in Karura the occupants would be impinged upon by a people very unlike themselves whose mode of life would mean eventually a serious diminution in the type of land where they could practice theirs. It cannot be supposed that the Kiambu Dorobo were ignorant of this. They must have known that happened in Fort Hall, and probably among them were some of those (or some of their descendants) who had been ejected from the northern districts whether forcibly or by chicanery or simply by increasing economic pressure; there was almost certainly a southward crossing of the Chania by Dorobo families before the first Kikuyu crossing started (1). The Dorobo must have

D
[619 64]

1. The Keriita Dorobo told me that they had no intercourse with the Dorobo north of the Chania, the "Dorobo of Karuri" or "Nguchuri" or "Tongiik" as they call them. They explained, however, that they meant they have no intercourse now, the northern Dorobo being, to them, so Kikuyu-ised as to be Kikuyu. Formerly Dorobo from the north had crossed the Chania and settled south of it.

had, if not a first-hand knowledge, at least a tribal memory of expulsion from their northern happy hunting-grounds by hordes of aliens who, starting as small bands of friendly strangers, hunters like

/13 cont./

MD 142 eyes are almond-shaped, straight or somewhat slanted. The nose is extended, narrow, and, at the root, flat or very moderately deep-set compared to the forehead. The alae are narrow and very flat, the nostrils roundish to longitudinally oval, less often transversely oval. The bridge of the nose is straight, sometimes slightly convex. The lips are full, without appearing actually protruding. Protruding, thick lips are something so rare and striking that they earn their owner the name Lebeleb -- thick lip (or actually: uproar, loud noise). The ears are small, except for the hyperplasia of the upper edge of the ear and ear lobes caused by the wearing of heavy ornaments. The hair is evenly distributed over the scalp, which is most clearly shown on recently shaved heads. The hair often appears "tufty," but this is artifically produced. Only at a length of from one to three centimeters does it curl slightly and /14/ almost never becomes completely curly. The arms and especially the legs are very long, the wrists thin, hands and feet, especially among female individuals, small, narrow, and delicate, the fingers are slender and often strikingly long and narrow, the fingernails long, narrow, and slightly arched.

MD • 619 174 Even if the racial membership of the three branches were to be traced anthropologically, one can determine an even closer connection ethnographically, which must lead to the conviction that all three belong to the same people. The difference in their principal occupations, to be sure, seems at /Ill. 3 appears here/ first glance to indicate a sharp division. As has already been pointed out above, however, one can easily explain these differences by the consistent behavior of a people of similar customs and habits under unlike external circumstances. The predilection for stock raising, based on the eagerness for a meat diet, and the nomadic life necessarily growing out of it were common. While the Wandorobo had to endure it when their livestock fell victim to epidemics and raids of the strong Wakuafi, the latter, under pressure from the still mightier Masai, had to flee from the open plains to fixed residences in the mountains. The Wakuafi protected

Ill. 3. Young Masai. 2 and 4 pure-blooded, 3 mixed with Negro blood, 1 doubtful.

The Wakuafi protected what remained of their livestock by giving up their roving life, whereas the Wandorobo, by sacrificing their herds, were able to continue their fancied nomadic life as hunters; and neither of them needed to forgo the meat diet.

M
174
619
197

/15/ Even though, in general, one should be very careful in ethnology about drawing conclusions from linguistic bases, it seems permissible here, on behalf of the three branches' belonging to one people, to point to their language as well.

As a matter of fact, we find the same language among the Masai and Wakuafi, with the limitation that for the latter, with the great number of Masai dialects, sometimes this one, sometimes that one is their own, according to the location of their area, whereas the very widely ranging Masai probably understand almost all the dialects. In addition, for the Wakuafi, in places, according to the degree of their mixture with Negro tribes, a language of the latter's is more or less familiar. Of the Wandoróbo, the El gasurek speak only the language of the Masai, whereas the Asá and

D
197

D 197 /15 cont./ the El asiti also have their own idiom, which will be briefly discussed at a later place.

M 197 802 184 D 197 802 Corresponding to the uniformity in language, the number words are the same among the Masai and Wakuafi, whereas the Asá and El asiti have their own words for only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all three branches in their religious view, and the manner of circumcision customary among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tatoga, closely related to the Masai people. In birth and death, too, all three have the same customs, while in the rest of their customs one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their descent.

D M 771 304 619 [171] D M 174 612 [844] [876] The people as a whole are divided into three large tribes, the L aiser, the El mulelyan, and the El mengana, each of which is made up of a number of lineages, and every Asá, as well as every Ol kuafi and Ol massani, is a representative of one of these lineages.

D M 614 613 If we now concern ourselves further with the ethnography of the Masai in particular, which is at the same time that of the Wakuafi, we are thereby including the ethnographic traits of the entire peoples

D M 128 the stressing of individual differences that have developed among the Wandorobo in the course of time and under the influence of changed conditions will be reserved for the third part.

li Huntingford E-4, 9 (1938-1939) 1953 FL6 Dorobo FL6

patronymic from their father's porridge name. Younger sons generally take their patronymic from the father's nickname, or else from some circumstance in their own lives.

Circumcision

Boys are circumcised at the same intervals as the Nandi, and the Dorobo keep watch for the opening of the Nandi circumcision. Occasionally boys are circumcised in Nandi with other Nandi boys, but more often in the forest, as in the circumcision of 1936–30. Sometimes a Dorobo acts as operator for the Nandi. The whole procedure of circumcision (*tum*) is identical with that of the Nandi. Girls undergo the operation of clitoridectomy whenever there are enough ready to be done, and not at any stated intervals.

Age-sets

The Dorobo have borrowed the whole age-set system from the Nandi, and it works exactly as among the Nandi, with the same set-names and 15-year intervals synchronized with those of the Nandi. The reader may therefore be referred to the account of the Nandi system, p. 31. A slight difference in the sub-divisions called *mat* may be noted: the Dorobo have only three, called *Cepinich*, the senior; *Taparik*[1] or *Kipalkoayek*, the middle; and *Ruwakanik* or *Kiptoïnik*, the junior. A more significant difference is that the sets have no military or political force, for the Dorobo are not fighters, and the practical effect of the system is to introduce further behaviour patterns, as well as to modify the traditional rules of hospitality; for while no Dorobo would refuse to shelter one of his own horde, the degree of hospitality varies according to the age-set situation.

Political Structure

Land Divisions

The Dorobo live mainly in dan settlements divided between a number of districts or parishes (*koroinek*, sing. *koret*). Till about 1930 these settlements were in small clearings inside the forest; after 1937 they were spread round the outer edge of the forest.

The Clan

The clan, *oret*, is an exogamous patrilineal group with a name and a totem, *tiond ap oret*, the animal of the clan. The existence of eight clans is attested by genealogies and the census; three others are reputed to exist or to have existed, though none occurred in my records; they were, however, mentioned to me in 1927 as well as in 1936–9. Each of these clans has one totem, except Moi which has three, one of which it shares with another clan; it is not the totem which is important, but the group itself, the clan being a social group, not a group of people mystically related through their totem. The emphasis is therefore on the clan name and not on the animal, though marriage, nevertheless, is forbidden within the clan. An exception to this rule is found in the case of Moi, where intermarriage is allowed between people of different totems, an anomalous feature due possibly to the influence of the Nandi, among whom Moi marriages are common between people of different totems. (See p. 27.) There seem to be no restrictions either on marriage between clans (as among the Nandi), or on killing or eating the clan animal, which suggests that originally the Dorobo clans were non-totemic, and that their present totemism is a feature borrowed from the Nandi along with the clan names, which except for one of the reputed clans are all Nandi.

[1] The Nandi occasionally use *taparik* for this *mat*; it is a Nandi word meaning "the turves."

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

TABLE OF CLANS

Clan name	Corresponding Nandi name, used also by Dorobo	Source	Dorobo totem
Kapeshoi *	Kipkokoe Moi	Nandi clan	crested crane
Moi *	Moi	Nandi clan	crested crane buffalo small red bird
Kipieken *	Kipieken	Nandi clan	baboon
Kipamui *	Kipamui	Nandi clan	duiker
Kapii *	Kipsirkoi	Nandi clan	bush pig
Toiyoi *	Toiyoi	Nandi clan	rain
Korapor *	Tungo	Nandi clan	hyena
Talai *	Talai	Nandi clan	lion

The three reputed clans are: Kipongoi,* corresponding to the Nandi Kamwaike, totem partridge; Kipasiso,* corresponding to the Nandi Kipasiso, totem the sun; and Koŋoŋ, apparently a Dorobo name, totem snake.

(All names marked * are of *Nandi* origin.)

The clan is the basis of political organization, and people tend to live in clan settlements under the control of a clan council. This council consists of all the old men of the clan. People meet at the house of a clansman who, upon notice being given to him, prepares honey-wine or beer, for the business of the council is done in an informal way with a jar of honey-wine as if it were a social gathering, which in a sense it is. Business is done first and the drinking follows. The council deals with clan matters, including disputes between clansmen, boundaries of hunting areas, homicide of a clansfellow, incest, and the preliminary arrangements when a clansman has killed a member of another clan. Disputes are settled by discussion, and the result is announced by the council leader, *kirusokindet*, who is not necessarily the oldest member of the clan, but someone fairly senior who acquires his position in much the same way as does the Nandi *poiyot ap kokuet* (p. 32).

The Koret

Superimposed on the clan areas is a system of districts (*korosuek*, sing. *koret*) possibly due to Nandi influence. Each district includes several clan settlements, and has a council which is formed of the elders and circumcised men of all the clan settlements within it; the council sits under a tree (there are no special council trees) in an open space from which the bush has been cleared. The function of the *koret* council is to handle inter-clan affairs. It has a leader, also known as *kirusokindet*, whose position and duties resemble those of the leader of the clan council, and he acquires his office in the same way. There was no chief of the horde.

The forest is divided into nine *korosuek*, named (from north to south), Cepurur, Kelpui, Sirua, Kipkorom, Sosoiyo, Meteitei, Mokopic, Puret, and Sapalo. In 1939 only three of these were occupied: Kelpui, Kipkorom, and Sosoiyo (which had by then been amalgamated with Meteitei).

Legal Sanctions

Crimes against which primary sanctions are directed include incest, witchcraft, and disobedience to the council. Secondary sanctions deal with trespass, theft, homi-

THE DOROBO OF KIDOŊ (KERIITA)

History

The group described by Lambert as living at Keriita on top of the escarpment, on the edge of the Forest Reserve 10 miles north of Limuru, is that classed as Kidoŋ in *Anthropos* 1951.[1] It was seen by Thomson in 1883 at the place known to the Swahili as Mianzini (" place of bamboos ") where, he says, a Dorobo village was established for selling food bought from the Kikuyu to the Masai and the traders.[2] This group is part of the Kikuyu Dorobo who occupied the land before the Kikuyu came. The process by which the Dorobo had completely lost their land by 1887 when Teleki passed through is summed up by the Kenya Land Commission as one " partly of alliance and partnership and partly of adoption and absorption, partly of payment, and largely of force and chicanery."[3]

Organization

There are no chiefs, control being in the hands of a council of elders, with a leading elder called *kiruokindet*, as among the Kipkurerek. Marriage is patrilocal, and descent patrilineal. Polygyny is permitted. Boys are circumcised, and girls are subjected to clitoridectomy. There appears to be some sort of age-set system, but Lambert's statement is not very clear on this point.

There are said to be nine clans, with Nandi-looking names beginning with the prefix *kap-* (which does not imply territoriality, but simply means " group of "). These clans are sometimes referred to by Masai clan names, or even by Kikuyu clan names. The word for clan is *ol-gilatait*, derived from the Masai *oil-gilata*, " clan," and not, as Lambert suggests, from *ol-gelata*, which means not " plain," but " side path."

Religion

A so-called supreme being called *Tururit*[4] is recognized; and the statement describing ancestral spirits as " active members " of a lineage implies the existence of an ancestor cult.

are borrowed from the Nandi. But all the available evidence indicates that they are not of Nandi stock, and that in fact they are not related to any of the present inhabitants of the East African highlands.

A Dorobo group cannot strictly be called a tribe, for among other things no group seems to call itself by a distinctive name: they are merely *Okiek* to themselves and to the Nandi. The term 'group' is not a satisfactory substitute for 'tribe', and the least ambiguous word available seems to be 'horde', by which we shall accordingly designate each of these scattered groups of hunters. The Dorobo horde has not developed the tribal spirit which is so marked in neighbouring tribes, though there is a certain amount of horde spirit — enough to keep each horde to its own territory and to mind its own business. But to strangers, the Dorobo emphasizes that he is a Dorobo rather than, say, a Masae or a Nandi. This absence of distinctive horde-names means that we must devise names to designate particular hordes. Such names may readily be found among the place-names of the areas concerned; and so long as we remember that they are merely convenient labels no harm will be done, and the task of distinction between hordes will be made easier. For the horde which we are now about to describe the name Kipkurerek seems the most appropriate, for it is the name of the chief river in their forest, and has, moreover, already been given currency by HOBLEY, who used it in 1905.

The Dorobo call themselves *Okiek*, singular *Okiet*, by which name the Nandi also call them. The Masae speak of them as *Il-Torobo*, singular *Ol-Toroboni*, from which is derived (through Bantuized forms) the name *Wandorobo* or *Andorobo* by which they are often known. So far as I have been able to ascertain, there are fifteen Dorobo hordes in Kenya and Tanganyika, which may be classed in four major groups, three in Kenya and one in Tanganyika:

Group	Horde	Now or formerly [1] in contact with	Territory
I. Western [2]:	1. Kipkurerek	Nandi	Kenya
	2. Tindiret	Nandi	Kenya
	3. Lo-l-diani	Nandi	Kenya
	4. Ravine	Nandi, Tuken, Keyo	Kenya
	5. Western Mau	Nandi, Kipsikis, Masae	Kenya
	6. Eastern Mau	Nandi, Kipsikis, Masae	Kenya
II. Central [3]:	7. Dundule	Masae	Kenya
	8. Saleta	Masae	Kenya
	9. Kidong	Masae, Kikuyu	Kenya
	10. Digiri	Masae, Kikuyu	Kenya
III. Eastern [3]:	11. Kisima	Masae	Kenya
	12. Mt. Kenya	Masae, Kikuyu	Kenya
IV. Southern:	13. Mosiro	Masae	Tanganyika
	14. Aramanik.	Masae	Tanganyika

[1] I. e. before the arrival of Europeans about 1890.
[2] Remnants of these still remain in places in the western area.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

In 1938 and 1939 I made a census of the three Dorobo districts which were still inhabited, which showed that out of a total of 226 surviving members of the Kipkurerek horde, 67 % were living in the forest or on farms close to it. The remaining 33 % were settled in groups in certain areas of Nandi (where they had been for many years, having gone there by private arrangement with the Nandi), and in Uasin Gishu, with a few in the Kamasya and Keyo Reserves. Most of these 33 % maintained fairly constant contact with the forest people, and all were recognized as members of one or other of the three Dorobo districts. Under these conditions it is surprizing that they have retained so much of their traditional organization; but the disruption of their life accounts for some of the difficulties experienced in studying them, and for some of the gaps in the record. Nevertheless it was not too late in 1938 to gain a record which, however imperfect, does substantially increase our knowledge of the Dorobo.

The dispersal of the Dorobo made it necessary to classify the people according to their domiciles, and this resulted in a grouping of the horde in four "domicile categories":

A. Inside the forest, at an altitude of 8000 ft. and over.
B. Farmland on the edge of the forest, mostly over 7500 ft. and within a mile of the trees.
C. Farmland or Nandi Reserve within 10 miles of the forest, with natural conditions generally similar to B, but a little lower.
D. Keyo, Kamasya, and Laikipya, where conditions in places are similar to B.

An analysis of the census and domicile categories will be found in the Appendix p. 8.

Since in this paper we can deal only with those parts of the social organization that concern the family and clan, a short summary of other aspects of Dorobo life may be helpful. The social and political life of the Dorobo is based on the clan, which has its own council to deal with internal affairs, and even to-day people live in clan groups. This is contrast to the Nandi, where the clans are dispersed and play but a small part in outward political life. The forest is divided into nine districts or parishes (*koret* plur. *korosuek*) of which only three are now inhabited. These districts, from north to south, are: 1. Cepurur[1]; 2. Kelpui; 3. Sirua; 4. Kipkorom; 5. Sosoiyo; 6. Meteitei; 7. Mokopic; 8. Puret; 9. Sangalo. In 1938-40 only Kelpui, Kipkorom, and Sosoiyo were inhabited; the latter had been amalgamated with Meteitei. Each district had a council, which dealt with matters appertaining to the district as a whole irrespective of clans. The Dorobo never acquired the council habit of the Nandi; district councils were held only when there was something important to talk about; and the clan council was both a more frequent and less formal affair than the district council.

There is no chief of the horde, nor an elected chief or leader in either clan or district council, the leading man (*kiruokindet* — the councillor)

[1] *C* — *ch* in English 'church', and is used with this value throughout.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

gaining his position through the tacit recognition of the people. The horde therefore consists of a loosely integrated group of districts held together partly because they "are all Dorobo", but much more by the clan-solidarity which extends across the district boundaries. The clan is thus a far more important institution than it is among the Nandi.

The Dorobo are a hunting people who have been forced to take up agriculture, and at the same time are in process of acquiring a small amount of live stock. A great deal of their culture and most of their language have been borrowed from the Nandi; but their habits and mental characteristics are their own, including a "hunting outlook" which contrasts with the "cattle outlook" of the pastoralist, and a feeling of sympathy with wild animals that does not exist among either pastoralists or agriculturalists. Next in importance to hunting come bees, and honey is regarded much as pastoral people regard milk.

Although the Dorobo are commonly thought of as a people who wander at will wherever there is game, this notion is true only to a limited extent. Parties used to go far afield in the old days seeking game outside their own territory in the sparsely inhabited areas of the highlands; but their own forest was and still is divided into strictly observed economic areas where are family holdings in which people hunt, set traps, keep their bees, and collect vegetable food. These areas may look small on the map; but anyone who thinks that half an inch on a map (representing perhaps one mile on the ground) seems a very short distance, will find when he gets to the forest that one mile on the ground is a very formidable tract offering all sorts of possibilities for the hunter, and infinite chances for the stranger to lose himself.

Other forms of grouping are the fraternal group, where several brothers live together, either in separate huts with their wives and children, or if unmarried sharing one or two huts; and the clan group, in which several elementary or domestic families of the same clan live together.

In the old days, by which I mean the time when the Dorobo still lived unmolested by Europeans in the forest, these family and clan groups lived a good deal inside the forest, in small clearings or in glades on the edge. Inside the forest, the clearings were just big enough to contain the number of huts needed by the settlement. The old type of Dorobo hut soon became ruinous and full of fleas (as they put it), and in consequence after a few months a clearing would be abandoned and a new site chosen. These forest settlements were hard for a stranger to find. The path which he was following from the main track would branch a few yards from where it took off, with no indication as to which branch to follow, and whichever he chose, he would find that it branched again after a little way: it was in fact almost impossible to find one's way to one of these settlements without a guide. Most of the Dorobo to-day, however, live on the edge of the forest. Their settlements are consequently easier to find; they are usually close to some cultivation, and are occupied for longer periods.

Family groupings, whether in the forest or outside it, when they are larger than the elementary or domestic family, very often contain someone

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

who stands in the relation of father's brother to the younger members of the group, as in the diagram of Pilo's family above, in which both sets of children have a father's brother living close at hand. In a clan group there might be no father's brother actually in the settlement, but often he would not be far off, for the tendency is to settle in defined groups, and not isolated to the same extent as among the Nandi, where a family may live alone without forming part of a settlement though still a member of the parish. This point is important, for the father's brother plays the same part in a child's life that the mother's brother does among the Nandi.

The family, consisting of father, mother, and children, lives in close contact with one or more families, and sometimes includes the husband's father or mother (I came across no case where both were alive together). These families give the Dorobo child his first experience of human beings. Kinship usages are determined to a certain extent by environment and way of life, for under forest conditions and a hunting economy the father is of necessity away from home a good deal, and young children are much in the society of their mothers and the other women of the settlement. This of course is true of other types of society; but in a pastoral society, such as the Nandi, for instance, the father is not, under compulsion of seeking the day to day food supply, obliged to go away from the homestead if he feels disinclined; and there is no doubt that a Dorobo child of tender years sees much less of his father than a Nandi child. When food must be got as it is needed, and when it is scanty or difficult to store, the father, on whom falls the duty of getting it, must be away much more than the man whose cows are close at hand, or whose cultivation produces a crop which he can store.

Till a child is weaned, which may be at the age of twelve months or thereabouts, it is in closer contact with its mother than anybody else, and the father leaves it more or less alone. When the mother has to go out to do her share of food-getting, the child is left at home in charge of its elder sister if it has one, or with its father's mother; failing these, some woman or girl of the settlement will look after it. A Dorobo mother cannot take her baby with her when searching for vegetable food in the forest, for it cannot conveniently be carried on the back in such surroundings; nor can she, like the agriculturalist, lay it down under a tree while she works, because it would not be safe to do so in the forest. This habit persists to-day, and even when a woman goes to work in her shamba [*] the baby is left behind in somebody's care. But a woman's food-questing is done much more quickly than a man's hunting, and she is soon back at home; the shamba, too, is not so far away that she cannot get back to the child quickly if need be.

The attitude of a man to his wife is profoundly affected by physical and environmental conditions. The shortage of women and the difficulties of getting a wife (especially when cattle are becoming the medium of bride-

[*] The swahili word shamba — cultivated land, field, farm, is current throughout Kenya. Since it is a shorter and simpler word than the English equivalent, I shall use it in the sense of a plot of cultivated land.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

Between a man and the members of his own generation considerable latitude is allowed. As the Dorobo put it, *Kirupshei, Ainewomishei, Aitiowishei, 'Kemein Am, ngui kom kimat', amwa ki lakok.* ("We use bad language to one another, we play together, we say to each other, 'May your father lie with you, or may you lie with your mother', because we are children", i.e. we are all of the same age.) These rude phrases, however, must never be used to elders, and to do so is very shameful; but spoken to members of one's own age-set or generation they are quite harmless and have no sinister implications. Between the sexes of the same generation there may be a perfectly innocuous intimacy, between brother and sister, between *marokor, mamwa,* and *kwanda,* which allows any kind of joking and language but stops short of actual sexual intercourse; and in spite of this license, such evidence as there was indicated that incest was not common. Between members of the same generation, especially in youth and early middle age, there is also a strong bond in the shape of mutual help and support among those who live near each other, extending to all departments of home life. The effect of propinquity must not be overlooked, and the claims of even a close relative who lives a long way off and is seldom seen may be reduced to insignificance.

The general attitude of a man's own children to the children of his *marokor*, his *mamwa*, and his *kwanda*, is the same, in that they are all like his own children, who may be played with or reproved when necessary, but without the use of any bad language or abuse. To those children to whom he is 'father's brother' there is of course the special attitude that I have already described. But between members of this generation there is a marked terminological difference:

so that by classification all the children on the father's side are *marokor*, while those on the mother's side are both *mamwa* and *kwanda*; and a man's own children are *apaa*, while those of his sister are *mamwa*. When the children are small these differences are merely nominal and not apparent; but as they grow older a distinction tends to arise between those on the father's side and those on the mother's side, especially between *marokor* and *mamwa*; and this is emphasized by the possibility that a man might marry his *marokor* (father's sister's daughter's daughter), even if he seldom or never does so in fact.

Between a man and the second descending generation there is a relationship of respect, for terminologically his grandchildren are equated with his grandfather. In practice, however, this generation counts as far as he

(2) Nekui arap Mereua, his wife and son.
(3) Kilanya arap Korongua, his wife and 3 children.

[*] Note that (1) is Kipiekut, (2) Kapil, and (3) Kapurkui.

/67 cont'd/

[illegible] only [illegible] a small number of Wanderobo 162
are left to represent this tribe, it would be erroneous to consider
that the tribe was never more numerous, and in fact, there were
probably several hundreds of families representing more than a
thousand people in the not very distant past. The reason for the 648
decrease in their numbers is due, not to extinction, but to 177
absorption, for when the Kikuyu bought their land many
Wanderobo families gave up their hunting life and married into
Kikuyu families as well as giving their daughters in marriage to
the Kikuyu, until in the course of a generation or two they
were completely absorbed ...

"... it was the custom of the Wanderobo of the Kikuyu area to 621
live in fairly large villages where their numbers gave them and
their families reasonable security from attack, and where they
could organise their social life in such a way as to have courts [692]
of justice and other amenities of this type".

77. Dorobo Organization

With regard to organization, a Dorobo witness told the 596
Land Commission in a sworn statement: "Like the Kikuyu we had
our mbaris", but this does not in itself mean very much; an mbari
is only an extended family and the extension may be so slight that
all we can infer from the remark, if we believe it, is that the family
was the unit of the social order. But the same witness, later on in
the same statement, said: "Our name 'Mbari ya Choiro' is the name
applied to us all, as Kikuyu is the name for all the Kikuyu tribe. [619]
Within the Mbari ya Choiro there are other mbari", and this certain-
ly suggests a recognition of the mbari as part of a clan, though the
possibility of mere imitation cannot be ruled out.

The following brief account of their tribal organization was 124
given me at a meeting of the Dorobo now living at Kerita on the [114]
edge of the Forest Reserve, and subsequently checked with the
assistance of two elders, Ruchuba obo Lesuswa, who lives on a [115]
European farm close to the Forest Reserve (in the Naivasha area), and
Gwamba ng'ab Sabaiya, who lives at Kerrita.

Both the social and the economic ranges of the Dorobo are very narrow. The family is a self-supporting unit, and a group of families forms a social unit: but the group is isolated, and the groups cohere through their strong clan solidarity and strict exogamy. There is no "tribe" as e.g. the Nandi, but a collection of family or clan groups forming a *koret* or district, and a collection of such groups within a given area having a common organization, customs, and dialect, and the innate idea that "we are the Dorobo of such-and-such a place." Thus the Kapchepkendi Dorobo (with whom this paper deals) distinguish themselves from the Dorobo living on Tindiret hill, though that hill is only some seven miles from Sosoiyo. (See map of the Dorobo country.) Before the Government dispersed them, the Dorobo possessed, more or less undisturbed, the whole of the forest. Now they have no land at all. But they maintain their solidarity in spite of disruption, by means of their isolation, strong clan-system, and the fact that outsiders, e.g. the Nandi, are half afraid of them (so long as they do not go into Nandi), as being rainmakers and magicians of no mean ability, a people who are, in fact, somewhat uncanny. Their external relations may be described under three heads as (1) acquisitional: exchange of goods and services with the Nandi, and, till about 80 years ago, with the Vasin Gishu Masae; (2) restrictive: the Government raids them for taxes, and takes away their land, which leads to (3) an attitude of deep suspicion towards all Europeans, though they are driven by economic pressure to work for them.

Productive activities are concerned with the following:

A. *Food*: meat (by hunting and trapping), honey, wild plants, eleusine and maize (grown or obtained), milk, maize meal, salt and beer.

B. *Non-edible*: houses, weapons, implements, utensils, clothing and ornaments (except of iron), firewood, traps, honey-barrels, coloured earth (which is dug in the eastern part of the forest and sold to the Nandi for cash.)

C. *Raw Materials*: wood, plants, and skins.

The exchange of their own products for things they do not make is governed by natural resources,

/230 cont./ It is to be
613 noted, however, that there seems to be no El kiboron among the Asá,
171 as is shown by both the consistent assertions of the people and the observations of the author, who did not find any members of that lineage among them anywhere. The respect and esteem that the El kiboron enjoy among all the Masai people sufficiently explains the fact that, with the displacement of the Wandorobo at the time, they were adopted into the community of the oppressors.

/231/ II.

000 Plan and arrangement of the camp. -- The huts. -- Household equipment. -- Daily life, food, work. -- Earthen pots. -- Baskets. -- Leather dressing. -- Market trade. -- Honey extraction. -- Manufacture of bows and arrows. -- Spears. -- Dance and song.

361 The Asá roam the steppes as hunters, in that they wander with
[224] the game, whose meat gives them food and out of whose skins they
[239] make their clothing. This circumstance brings along with it the fact that they can not live together in large kraals, but rather, divided into small bands, are forced to stay here today and in a
[342] distant place a few weeks later. Accordingly, their camps (aijo) only consist of hastily built small huts (morōg) that are made out of branches and grass. The camps as a rule are hidden in dense
[487] bush and have no special enclosure. The paths and game runs leading to them are carefully barricaded with thorn branches and thus made inaccessible. Only the practiced eye of the Asá will find the wonderfully concealed entrance to the camp.

• 621 Only two or three families, rarely a few more, usually live in
[591] one camp. Next to their huts are found those in which the unmarried circumcised men (dobonog) live with the young girls. As among
[192] the Masai, each young man has his favorite girl. He calls her
[191] sanjet uan, she calls him sanjeg uan, words in which one again finds the Masai word sandja. Their huts are designated as morog

/231 cont./

621 [192] [071] to dobonog, i.e., huts of the unmarried men, in contrast to the aija to daĩma, the camp of the married. Therefore here, too, we find, even in the name, a separation into kraal of the married and kraal of the warriors, similar to the one mentioned for the Masai.

171 353 415 237 283 352 412 The arrangement of the interior of the hut, like the form itself, resembles that of the Masai; its furnishings, however, are even sparser. A honey pot (madjé, madjeog), a gourd bottle (mget) for drinking water and honey beer, a leather bag (lebenu, lebenua) for collecting honey, a larger one (ndaro, ndareraũg) for water, a few earthen pots, larger ones (idug, idia) and smaller ones (ruguba, ruguba) for cooking, a couple of wooden bowls (tagi), a rope cut out of an animal skin (scharu, scháruga) to tie up the slain meat, a cord twisted out of the bark fibers of the baobab (Adansonia digitata) for the drawing up and letting down of the beehives hung in trees (meriñgo), along with a few dehaired skins (fulót) that serve as beds, as well as ax (haũo, hauereg) and knife (pandyug), constitute the 492 412 principal household equipment. In a few huts one also finds the en dereta /pack-holders/ of the Masai, here called lalaho (leleweg), 413 as well as a hammer (giribét) for forging and a chisel for designing 177 the arrow points (mad, mara), and finally that sharpened small piece of sheet iron serving as razor-knife (herá, hererá). The entire family, 592 namely, husband, wife or wives, and the uncircumcised children, live in one /232/ hut. Men and boys, however, are usually out.

512 [224] [264] [825] The day begins even before daybreak for the hunting men. They set out with a snack consisting of a little piece of boiled or roasted meat, so that the first light of day already finds them in the hunting grounds. The game now behaves best; as they say, it then feeds more eagerly and carelessly than a few hours later, when the sun already becomes annoying to it. At daybreak women and children leave the huts; firewood and water are carried up in order to cook the meat fetched from a larder located in a nearby tree. The meat [251] is kept there and not in the camp, so that it hangs in the air and 512 thus remains fresh longer. After that the morning meal is eaten. 264 Actually the Wandorobo do not have definite mealtimes: as long as there is something edible they simply eat as long as they can.

3:Huntingford E-5 (1921-1928)1929 FL6 Dorobo FL6

together. The rim is made of a single stick bent in an oval and the ends bound together; across it are fastened pieces of tree-rope.[1] Grindstones (*littlo*, N.) have already been mentioned.

The Dorôbo have no knowledge of metallurgy, and they have no musical instruments, pottery, or, apparently, objects of ivory. Metal-work and pottery they buy from the Nandi.[2]

Trade and Commerce.

Trade is by barter. The Dorôbo give the Nandi baskets, dressed skins, and bows in exchange for ironwork, tobacco, pottery, beads, and other necessaries which they cannot produce themselves. There are no special market-places, but goods are taken to any place where there are Nandi, and there exchanged.

Land.

(i) *Tenure.*—The forest is divided by the elders into sections, and each family has its own section of forest. The boundaries between family holdings may be paths or rivers.

(ii) *Geographical Divisions.*—The Dorôbo divide their country into divisions called *koret*, pl. *korosuek* (N.). The chief divisions appear to be called Kipkorom, Sirua, Kimurienge, Sosoiyo (bamboo, N. *tekat*), and Mokopich. The majority of the present place-names are Nandi.

The points of the compass are called as follows:—North and South: Murot (N.). East: Ye-torur (N. *ulin-durur* = up). West: Ye-'rek-to (= where(-the-sun)-descends-thither).

III.—Government.

The Kâmelilo-Kâpchepkendi Dorôbo have now no chief. The last to hold office was Parñgetuny[3] arap Ñgamñgam, who was chief at the time of the Nandi Punitive Expedition, 1905. He is still alive, though he no longer holds office. The chief was elected, and the office was not hereditary. The chief (*kiruogindet* (N.)=councillor) was chosen for "ñgelyepta kitio" ("tongue only" = sense, ability and position). The only form of Government that exists now is a council of elders (*kiruoget ap poiisiek*, N.), who meet and decide on matters which are brought to them. They seem to have little power of enforcing obedience to their decisions, though they claim

[1] This is described and illustrated, although it is a Nandi use, since H.N. does not mention it.

[2] On the use of horns, *see* V, "Miscellaneous." These can hardly be considered as instruments of music.

[3] N. = lion-killer.

4:Huntingford E-5 (1938-1939) 1951 FLÓ Dorobo FLÓ

In 1938 and 1939 I made a census of the three Dorobo districts which were still inhabited, which showed that out of a total of 226 surviving members of the Kipkurerek horde, 67 % were living in the forest or on farms close to it. The remaining 33 % were settled in groups in certain areas of Nandi (where they had been for many years, having gone there by private arrangement with the Nandi), and in Uasin Gishu, with a few in the Kamasya and Keyo Reserves. Most of these 33 % maintained fairly constant contact with the forest people, and all were recognized as members of one or other of the three Dorobo districts. Under these conditions it is surprizing that they have retained so much of their traditional organization; but the disruption of their life accounts for some of the difficulties experienced in studying them, and for some of the gaps in the record. Nevertheless it was not too late in 1938 to gain a record which, however imperfect, does substantially increase our knowledge of the Dorobo.

The dispersal of the Dorobo made it necessary to classify the people according to their domiciles, and this resulted in a grouping of the horde in four "domicile categories":

A. Inside the forest, at an altitude of 8000 ft. and over.
B. Farmland on the edge of the forest, mostly over 7500 ft. and within a mile of the trees.
C. Farmland or Nandi Reserve within 10 miles of the forest, with natural conditions generally similar to B, but a little lower.
D. Keyo, Kamasya, and Laikipya, where conditions in places are similar to B.

An analysis of the census and domicile categories will be found in the Appendix p. 8.

Since in this paper we can deal only with those parts of the social organization that concern the family and clan, a short summary of other aspects of Dorobo life may be helpful. The social and political life of the Dorobo is based on the clan, which has its own council to deal with internal affairs, and even to-day people live in clan groups. This is contrast to the Nandi, where the clans are dispersed and play but a small part in outward political life. The forest is divided into nine districts or parishes (*koret* plur. *korosuek*) of which only three are now inhabited. These districts, from north to south, are: 1. Cepurur[1]; 2. Kelpui; 3. Sirua; 4. Kipkorom; 5. Sosoiyo; 6. Meteitei; 7. Mokopic; 8. Puret; 9. Sangalo. In 1938-40 only Kelpui, Kipkorom, and Sosoiyo were inhabited; the latter had been amalgamated with Meteitei. Each district had a council, which dealt with matters appertaining to the district as a whole irrespective of clans. The Dorobo never acquired the council habit of the Nandi; district councils were held only when there was something important to talk about; and the clan council was both a more frequent and less formal affair than the district council.

There is no chief of the horde, nor an elected chief or leader in either clan or district council, the leading man (*kirnokindet* — the councillor)

[1] *C* — *ch* in English 'church', and is used with this value throughout.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

gaining his position through the tacit recognition of the people. The horde therefore consists of a loosely integrated group of districts held together partly because they "are all Dorobo", but much more by the clan-solidarity which extends across the district boundaries. The clan is thus a far more important institution than it is among the Nandi.

The Dorobo are a hunting people who have been forced to take up agriculture, and at the same time are in process of acquiring a small amount of live stock. A great deal of their culture and most of their language have been borrowed from the Nandi; but their habits and mental characteristics are their own, including a "hunting outlook" which contrasts with the "cattle outlook" of the pastoralist, and a feeling of sympathy with wild animals that does not exist among either pastoralists or agriculturalists. Next in importance to hunting come bees, and honey is regarded much as pastoral people regard milk.

Although the Dorobo are commonly thought of as a people who wander at will wherever there is game, this notion is true only to a limited extent. Parties used to go far afield in the old days seeking game outside their own territory in the sparsely inhabited areas of the highlands; but their own forest was and still is divided into stricly observed economic areas where are family holdings in which people hunt, set traps, keep their bees, and collect vegetable food. These areas may look small on the map; but anyone who thinks that half an inch on a map (representing perhaps one mile on the ground) seems a very short distance, will find when he gets to the forest that one mile on the ground is a very formidable tract offering all sorts of possibilities for the hunter, and infinite chances for the stranger to lose himself.

Appendix

Analysis of the Census

District	Single men	Married men	Women	Male children	Female children	Totals
Kipkorom	8	6	15	10	10	49
Sosoiyo	22	19	26	16	19	102
Kelpui	25	19	17	9	5	75
	55	44	58	35	34	226

596

MOI
Ceposyeye ♀

KIPIEKEN — MOI
♂ Kipcapos arap Mengati (*Kimnyike*) = Cemiemit ♀
♂ Kipsoimo (*Juma*)

An extended patrilocal family which lived at Kiptarakon in the Nandi Reserve was that of Pilo, whose relationship contacts have been described above:

Hut 1
KAPSEKOI
♂ Kipkatam arap Ngamngam (*Kaplelac*)

Hut 2

KIPKENDA — KIPIEKEN
♂ Coimim (*Maina*) = Cepkoiec ♀ — ♂ Pilo (*Nyongi*) = Cematia ♀
Cemesundei ♀ — ♂ Kipkurkat ♂ Kimaiyo (*Juma*)

Other forms of grouping are the fraternal group, where several brothers live together, either in separate huts with their wives and children, or if unmarried sharing one or two huts; and the clan group, in which several elementary or domestic families of the same clan live together.

361

In the old days, by which I mean the time when the Dorobo still lived unmolested by Europeans in the forest, these family and clan groups lived a good deal inside the forest, in small clearings or in glades on the edge. Inside the forest, the clearings were just big enough to contain the number of huts needed by the settlement. The old type of Dorobo hut soon became ruinous and full of fleas (as they put it), and in consequence after a few months a clearing would be abandoned and a new site chosen. These forest settlements were hard for a stranger to find. The path which he was following from the main track would branch a few yards from where it took off, with no indication as to which branch to follow, and whichever he chose, he would find that it branched again after a little way: it was in fact almost impossible to find one's way to one of these settlements without a guide. Most of the Dorobo to-day, however, live on the edge of the forest. Their settlements are consequently easier to find; they are usually close to some cultivation, and are occupied for longer periods.

[342]

487

361
178

Family groupings, whether in the forest or outside it, when they are larger than the elementary or domestic family, very often contain someone

67
682

4:Huntingford E-5 (1938-1939).1951 FL6 Dorobo FL6

who stands in the relation of father's brother to the younger members of the group, as in the diagram of Pilo's family above, in which both sets of children have a father's brother living close at hand. In a clan group there might be no father's brother actually in the settlement, but often he would not be far off, for the tendency is to settle in defined groups, and not isolated to the same extent as among the Nandi, where a family may live alone without forming part of a settlement though still a member of the parish. This point is important, for the father's brother plays the same part in a child's life that the mother's brother does among the Nandi.

The family, consisting of father, mother, and children, lives in close contact with one or more families, and sometimes includes the husband's father or mother (I came across no case where both were alive together). These families give the Dorobo child his first experience of human beings. Kinship usages are determined to a certain extent by environment and way of life, for under forest conditions and a hunting economy the father is of necessity away from home a good deal, and young children are much in the society of their mothers and the other women of the settlement. This of course is true of other types of society; but in a pastoral society, such as the Nandi, for instance, the father is not, under compulsion of seeking the day to day food supply, obliged to go away from the homestead if he feels disinclined; and there is no doubt that a Dorobo child of tender years saw much less of his father than a Nandi child. When food must be got as it is needed, and when it is scanty or difficult to store, the father, on whom falls the duty of getting it, must be away much more than the man whose cows are close at hand, or whose cultivation produces a crop which he can store.

Till a child is weaned, which may be at the age of twelve months or thereabouts, it is in closer contact with its mother than anybody else, and the father leaves it more or less alone. When the mother has to go out to do her share of food-getting, the child is left at home in charge of its elder sister if it has one, or with its father's mother; failing these, some woman or girl of the settlement will look after it. A Dorobo mother cannot take her baby with her when searching for vegetable food in the forest, for it cannot conveniently be carried on the back in such surroundings; nor can she, like the agriculturalist, lay it down under a tree while she works, because it would not be safe to do so in the forest. This habit persists to-day, and even when a woman goes to work in her *shamba* [10] the baby is left behind in somebody's care. But a woman's food-questing is done much more quickly than a man's hunting, and she is soon back at home; the *shamba*, too, is not so far away that she cannot get back to the child quickly if need be.

The attitude of a man to his wife is profoundly affected by physical and environmental conditions. The shortage of women and the difficulties of getting a wife (especially when cattle are becoming the medium of bride-

[10] The Swahili word *shamba* = cultivated land, field, farm, is current throughout Kenya. Since it is a shorter and simpler word than the English equivalent, I shall use it in the sense of a plot of cultivated land.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

and speak at it. People meet at the house of a clansman who, upon notice being given to him, prepares as much honey-wine as he can for the entertainment of the gathering, and what he provides may be supplemented by wine brought by other members. The business of the council is done with the aid of a jar of honey-wine in an informal way as if it were a social gathering, which in a sense it is, for the clan council through its informality has become a social bond between clansmen. Business is done first, and the drinking soon follows. The subjects which may be discussed include:

1. Disputes between members of the clan.
2. Hunting disputes.
3. Disputes about boundaries of hunting areas.
4. The preliminary business when a clansman has killed a member of another clan.
5. Homicide within the clan.
6. Sexual intercourse between a man and a girl of the clan. Disputes under heads 1-3 are settled by discussion, the leader of the council swaying, by his opinion, the views of the members. The leader, *kirwokindet*, is not necessarily the oldest member of the clan, for such a man might be too senile to act properly; but someone fairly senior in age, with his faculties intact, who is liked and respected, becomes in course of time (as in the case of the leader of the *koret* council) looked upon as a responsible person who can be safely listened to and whose judgement is sound.

More serious matters, like those under heads 4-6, are dealt with like the rest by discussion, but there is as well a certain traditional procedure to follow. When a clansman has killed a member of another clan, the council of the dead man's clan meets to discuss the compensation payable, and to choose a messenger who will be sent to the council of the murderer's clan to start proceedings, which after a preliminary discussion, are heard before the *koret* council, since two different clans are involved, and the matter is not purely the affair of one clan. When a man kills a member of his own clan, the whole matter is settled within the clan. First, the murderer has to brew some honey-wine and kill a goat from which the fat is collected. Then old men of both the families concerned meet at the house of the murderer and drink the wine he has provided, after which two of the old men oil the murderer all over with the goat's fat. The animal from which this fat is obtained must be a goat, and if the murderer has none of his own, he must get one by purchase or theft. He is therefore put to some trouble and even danger, for if he has to steal a goat he risks being speared if caught, and this constitutes an act of faith which, together with the anointing of his body, frees him from the uncleanness caused by the shedding of human blood. There is no payment of compensation for the murder of a clansman, but the murderer must if he can give his victim's wife one cow to help towards her maintenance. This last is a Nandi custom and was probably introduced in recent times after the Dorobo had begun to acquire cattle in a small way.

Sexual intercourse between a man and a girl of his clan is not an offence provided the girl does not have a baby, though the lover is not allowed

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

634 [161 [178] To-day, only three of these districts are inhabited, Kelpui, Kipkorom and Sosoiyo (with which Meteitei has been amalgamated). The inhabitants of the empty *korosuek* have joined the three inhabited districts, gone right away, or died.

These *korosuek* correspond with the Nandi *korotinuek* (sing. *koret*) as the administrative units, the difference being that the Dorobo districts are larger than those of the Nandi, and that they consist mostly of forest, or forest with a strip of open land in front of it, whereas the Nandi districts are mostly parkland with patches of forest in places. Each Dorobo *koret* 634 had its council, *kiruoket*, with a leader or spokesman, *kiruokindet* or *apaiyet*, 623 "the old man". The *kiruokindet* was not a chief at all, as we understand 622 the word. He held his position, not by descent, nor by election, but, as the Dorobo expressed it, by *ueliepta kitio*, "by the power of his tongue only", or more precisely, by virtue of his age, character, personality, and ability. Nor did the *kiruokindet* act for the whole horde. Each council was independent so far as its decisions went; but the interacting ties of clanship, the sense of "being Dorobo" fostered by isolation and suspicion of the outside [186] world, and the absolute need for Dorobo to stick together, united them more than one might expect, and certainly more than the nebulous authority of a horde-chief could have done.

In 1939 no *koret* council met, as far as I know, and there was nobody then holding the office of *kiruokindet* in any of the three districts. I learned, however, that the last *kiruokindet* of Kipkorom was one Cemuren arap Cepsuku, a Kimnyike, who died some years before my visit, and might perhaps have been 55 years old when he was in office; that the last *kiruokindet* of Sosoiyo had been Kipkatam arap Ngamngam, who was still alive in 1939, aged about 80, and was said to have been *kiruokindet* at the time of the last Nandi War in 1905, which would make him about 45 when he took office, which he resigned before 1925; and that the last *kiruokindet* of Meteitei was Ncascas arap Meirica, a Kipkoiimet who died "many years ago", and must have been over sixty at the time of the Nandi War. The phrase "in office" must not be taken too literally: there was nothing official about a Dorobo *kiruokindet*, and he was really no more than a primus inter pares who from his character and personality was looked upon as a fit person to listen to.

634 623 [182] 197 These facts would seem to indicate that not only had no council been held since before 1937, but that the system itself was already beginning to fall into disuse independently of the move of 1937, its place being taken more and more by the clan council. I think there is no doubt that the *koret* council was a feature acquired from the Nandi, and that while the Nandi lived close to the Dorobo it functioned smoothly. But the Nandi were cleared away from the forest in 1906, and for a time there was a break in their residential contact with the Dorobo. After a time, they began to come back, in smaller numbers than before, and only as squatters on the farms into which the area had meanwhile been divided; but as a result of this short break the Dorobo had lost some of their familiarity with them, and their characteristic shyness had taken its place. I noticed that when Dorobo

7: Wayland N-5 (ca. 1926) 1931 FL6 Dorobo FL6

Social Organization.—The Tribe.—The Wanderobo are very few in number, and are divided among three sections, each of which has its own habitat as follows (according to the Chief, who was my informant on this point):— 631 618

Section.	Habitat.	Approximate Numbers.
Kokosera	Kokosoga	40
Ulugum	Naumugum	60
Luterem	Loturim	40

Each section lives in a single village of its own, similar in structure to that already described. The sections are not totemic, but they are exogamous, and descent is in the male line. The tribe has but one chief, who lives at Kokosoga (north of Kameon). Chieftainship is hereditary, and no woman is ever permitted to wield the powers of a chief. The Ulugum and the Luterem are each presided over by a headman (paterfamilias). 643 622

Birth.—When a child is born the mother is assisted by female relations. There are no official deliveries, as among the Labwor. The Wanderobo allege that there are no special ceremonies connected with birth. Should a child come feet foremost into the world he will be lucky throughout life. It is stated that the afterbirth is thrown away with the rubbish. After weaning, a child occupies his father's hut, if a boy, and her mother's if a girl. 844 858

Betrothal and Marriage.—The rules for betrothal seem to be very similar to those usual among the Labwor, except that the prospective husband goes to the girl's people direct, without representation in the first instance. The consent of the girl and of the parents on both sides is necessary, and the number of gifts is not specified as it is among the Labwor. 584

Marriage is celebrated by a feast in which the people of the two sections to which the contracting parties belong take part. There is no dance peculiar to the marriage feast. After marriage a man lives for two days and nights in the hut of his betrothed, after which she returns with him to his own village, there to occupy a new hut already built for the newly married couple by the male partner, after he has consulted the wizard with regard to the luckiest time for erecting it. 585 591 342

Burial.—All the dead are buried without special ceremony.[1] There is no special burial ground, but graves are dug "out in the bush," well away from the village. 764

Age Classes.—These appear to be quite unknown. 561

Crime and Punishment.—The chief offence is adultery. This, however, is a private affair, and is dealt with privately, for it is not a sin against the community. A woman who is guilty in respect of this is cast out by her husband, who seeks the offending man with a view to slaying him. Murder is, however, a tribal affair, for which the punishment is death. The Labwor practice in this respect is not followed. 684 682

[1] This statement was subsequently contradicted, in so far as it was stated that the wizard attends at all burials.

/68 cont'd/ 611

Succession is patrilineal and marriage patrilocal. Polygyny is practised. 591 595 The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by 613 the persons responsible (so to speak) for keeping them alive by acts 769 of memory and communion, the continuum being of the perpetually [775] successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys, and a pre-marital 881 rite of clitoridectomy for girls. Age-grading is based on male 561 initiation. There are no generation-ages except in so far as the [177] Dorobo imitated or joined in the ituika of the Kikuyu and the eunoto of the Masai. The word they use for the handing-over ceremony is eunotwet. Alternating ages or generations are distinguished as onet ap-tai (the right hand) and onet ap-katap (the left hand). When the Kikuyu system is referred to Mwangi is the former and Maina the latter, but the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups.

There are no indigenous chiefs, the judiciary and legislature 622 being a council of elders. Such an elder is called kiruogindet (pl. 623 kiruogik). A kiruogindet has much the same function as a Kikuyu [171] muthamaki. There is no laibon but formerly the Dorobo owed 648 allegiance to the laibon of the Masai.

They recognize one Supreme Being, called Tururit (compare 776 the Suk Tororut). There appears to be no cult of so-called Sun 771 Worship. The sacred trees, used for prayers to Tururit, are, for rain 778 the bamboo (a solitary clump), for honey the mukeu, and, in connection with circumcision ceremonies, the muthai and the [881] mutamaiyu.

78. Little or nothing is known of the relationship of the Dorobo 101 of Southern Kikuyu with other Dorobo sections. The "Dorobo [628] Committee" called them the Kikuyu Escarpment group, and remarked that they were first found in the Aberdares but left there and [166] went to the Masai Reserve, whence they were ejected. At the time the Committee sat this group was living as forest squatters in the

10: Hobley G-5 (ca. 1900) 1905 FL6 Dorobo FL6

depths of the forests on that mountain. The incident was referred to in a description of the journey in the *Proceedings of the Royal Geographical Society*, August 1892 and August 1894. During thirteen long years nothing was heard of these people, nor does any other traveller seem to have referred to them; it was therefore with some interest that a representative of these people was discovered in a Dorobo colony found on the north-east side of the Aberdare range in the vicinity of Pîs swamp, and it was then elucidated that the bearded people are the Digiri clan of the Oggiek tribe, and that they acknowledge as their ruler a chieftainess named Ongibore who lives near Nyeri Sta. She is married to one Sibirai, who is also said to be one of the bearded people. Needless to remark, the possession of beards and their acknowledgment of a female ruler are features of great rarity in Central Africa. Although the information is still very scanty, it has been considered advisable to communicate it in the hopes that it may prove an incentive to further research. I append short comparative vocabularies of these dialects of the Oggiek language, and at the same time give in separate columns the Nandi and Masai equivalents for purpose of comparison. It will at once be seen that some words are the same in Oggiek language as Nandi, and other words are the same as Masai. At first sight it might appear that the Oggiek had borrowed these words from Nandi and Masai, but it is rather remarkable to find the Digiri clan of Oggiek, whose great haunt is the Kenia forest, using many Nandi words when practically the only languages spoken in that region are Masai and Kikuyu.

They all speak Masai because there are a number of poor Masai living among them—people who lost all their cattle in the plague of 1891 and after that took to a hunting life. It therefore seems to me highly probable that the so-called Nandi words used by the Digiri people may be true Oggiek words gradually borrowed by the Nandi and now incorporated with the Nandi language; in the same way a few Oggiek roots may have become incorporated with Masai. The subject is one of great interest, and it is to be regretted that our opportunities of studying these people are so infrequent.

The following is a list of the Oggiek clans:—

Clan.	Chief.	Clan.	Chief.
Oggiek of Kamillo or Tinderit	Kipsangtan.	Oggiek on the Mau range, west of Nakuru	Kipkurerek.
Oggiek, east of Lumbwa country	Pilukum.	Do. do.	Kamiek.
Oggiek in Eldama Ravine	Kakimengiria.	Oggiek, south-west Kenia and also Pîs swamp	Digiri.
Oggiek, north of Kenia	Siniwok.	Oggiek of Kisima, north of EasoNyiro	Lalariek.
Oggiek of Loldiani	Kaivatet.	Oggiek, south of Ndabibi plain, south-west of Naivasha	Saleta.
Oggiek on the Mau range, west of Nakuru	Chibcharwanek.		

The head Laibon of the Oggiek is said to be one Lamondo, who lives with the Masai at Ngong lel Mariko, a hill in the region of the Lower Kedong.

The Digiri have a chieftainess named Ongibore who is said to live near Nyeri or Kakeya in North Kikuyu. I would mention that I am indebted to Mr. A. C. Hollis for the Masai equivalents in the vocabulary.

I:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

TABLE OF CLANS

Clan name	Corresponding Nandi name, used also by Dorobo	Source	Dorobo totem
Kapeokui *	Kipkokos Moi	Nandi clan	crested crane
Moi *	Moi	Nandi clan	crested crane buffalo small red bird
Kipieken *	Kipieken	Nandi clan	baboon
Kipamui *	Kipamui	Nandi clan	duiker
Kapii *	Kipsirkoi	Nandi clan	bush pig
Toiyoi *	Toiyoi	Nandi clan	rain
Korapor *	Tungo	Nandi clan	hyena
Talai *	Talai	Nandi clan	lion

The three reputed clans are: Kipongoi,* corresponding to the Nandi Kamwaika, totem partridge; Kipasiso,* corresponding to the Nandi Kipasiso, totem the sun; and Kopoc, apparently a Dorobo name, totem snake.

(All names marked * are of *Nandi* origin.)

The clan is the basis of political organization, and people tend to live in clan settlements under the control of a clan council. This council consists of all the old men of the clan. People meet at the house of a clansman who, upon notice being given to him, prepares honey-wine or beer, for the business of the council is done in an informal way with a jar of honey-wine as if it were a social gathering, which in a sense it is. Business is done first and the drinking follows. The council deals with clan matters, including disputes between clansmen, boundaries of hunting areas, homicide of a clansfellow, incest, and the preliminary arrangements when a clansman has killed a member of another clan. Disputes are settled by discussion, and the result is announced by the council leader, *kiruokindet*, who is not necessarily the oldest member of the clan, but someone fairly senior who acquires his position in much the same way as does the Nandi *poiyot ap kokuet* (p. 32).

The Koret

Superimposed on the clan areas is a system of districts (*korosuek*, sing. *koret*) possibly due to Nandi influence. Each district includes several clan settlements, and has a council which is formed of the elders and circumcised men of all the clan settlements within it; the council sits under a tree (there are no special council trees) in an open space from which the bush has been cleared. The function of the *koret* council is to handle inter-clan affairs. It has a leader, also known as *kiruokindet*, whose position and duties resemble those of the leader of the clan council, and he acquires his office in the same way. There was no chief of the horde.

The forest is divided into nine *korosuek*, named (from north to south), Cepurur, Kelpui, Sirua, Kipkorom, Sosoiyo, Meteitei, Mokopic, Puret, and Sapalo. In 1939 only three of these were occupied: Kelpui, Kipkorom, and Sosoiyo (which had by then been amalgamated with Meteitei).

Legal Sanctions

Crimes against which primary sanctions are directed include incest, witchcraft, and disobedience to the council. Secondary sanctions deal with trespass, theft, homi-

THE DOROBO OF KIDOŊ (KERITA)

History

101 The group described by Lambert as living at Kerita on top of the escarpment, on the edge of the Forest Reserve 10 miles north of Limuru, is that classed as Kidoŋ in *Anthropos* 1951.[1] It was seen by Thomson in 1883 at the place known to the Swahili as Mazaini (" place of bamboos ") where, he says, a Dorobo village was established for selling food bought from the Kikuyu to the Masai and the traders.[2] This group is part of the Kikuyu Dorobo who occupied the land before the Kikuyu came. The process by which the Dorobo had completely lost their land by 1897 when Teleki passed through is summed up by the Kenya Land Commission as one " partly of alliance and partnership and partly of adoption and absorption, partly of payment, and largely of force and chicanery."[3]

Organization

There are no chiefs, control being in the hands of a council of elders, with a leading elder called *kiruokindet*, as among the Kipkurerek. Marriage is patrilocal, and descent patrilineal. Polygyny is permitted. Boys are circumcised, and girls are subjected to clitoridectomy. There appears to be some sort of age-set system, but Lambert's statement is not very clear on this point.

There are said to be nine clans, with Nandi-looking names beginning with the prefix *kap-* (which does not imply territoriality, but simply means " group of "). These clans are sometimes referred to by Masai clan names, or even by Kikuyu clan names. The word for clan is *ol-gisiait*, derived from the Masai *ol-gisa*, " clan," and not, as Lambert suggests, from *ol-gelata*, which means not " plain," but " side path."

Religion

A so-called supreme being called *Turuviti*[4] is recognized; and the statement describing ancestral spirits as " active members " of a lineage implies the existence of an ancestor cult.

together. The rim is made of a single stick bent in an oval and the ends bound together; across it are fastened pieces of tree-rope.[1] Guitars (*kitilo*, N.) have already been mentioned.

The Dorobo have no knowledge of metallurgy, and they have no musical instruments, pottery, or, apparently, objects of ivory. Metal-work and pottery they buy from the Nandi.[2]

Trade and Commerce.

Trade is by barter. The Dorobo give the Nandi baskets, dressed skins, and honey in exchange for livestock, tobacco, pottery, beads, and other commodities which they cannot produce themselves. There are no special market-places, but goods are taken to any place where there are Nandi, and there exchanged.

Land.

(i) *Tenure.*—The forest is divided by the elders into sections, and each family has its own section of forest. The boundaries between family holdings may be paths or rivers.

(ii) *Geographical Divisions.*—The Dorobo divide their country into divisions called *kwet*, pl. *kwenuk* (N.). The chief divisions appear to be called Kiptenon, Ilwa, Kimoriogo, Soniyo (hamlet, N. *sokut*), and Mokopich. The majority of the present place-names are Nandi.

The points of the compass are called as follows:—North and South: Mawet (N.). East: Ye-tarur (N. *ole-tarur* = sp). West: Ye'nik-ta (= where[the sun] descends-thither).

III.—Government.

The Kimalilo-Kipchepkendi Dorobo have now no chief. The last to hold office was Parkyetuy[3] arap Ngaindigan, who was chief at the time of the Nandi Punitive Expedition, 1906. He is still alive, though he no longer holds office. The chief was elected, and the office was not hereditary. The chief (*kiruogindet* (N.)—councillor) was chosen for "*kipiyopta kitio*" ("tongue only" = sense, ability and position). The only form of Government that exists now is a council of elders (*kiruogut ap poiniek*, N.), who meet and decide on matters which are brought to them. They seem to have little power of enforcing obedience to their decisions, though they claim

[1] This is described and illustrated, although it is a Nandi one, since H.H. does not mention it.

[2] On the use of horns, see V., "Miscellaneous." These were hardly to be considered as instruments of music.

[3] N. = lion-killer.

3:Huntingford E-5 (1921-1928)1929 FLA Dorobo FLA

that emotional disturbance is punished by expulsion from the tribe. They described their office in the following terms :—

Ke'nuch ligúsh ai kuúch che mûyuch ak che
We take-counsel the-matters that we-may-get which-are good and which-are

[139] nuch, ai ke-kas pûk tukul. Ingumin chûl'
bad that they-may-understand (-okay) the-people all. If-he-refuses the-man

ake tukul, ke-nen, ai kwa emet ake.
other way, we-expel (-him) that he-may-go the-country other.

["We take counsel that we may find what is good, and leave what is bad, that all men may obey. If any refuse, he is driven out of our country."]

IV.—Religious Beliefs, Magic, and Medicine.

Religion.

[171] The religious beliefs of the Dorobo are even vaguer than those of the Nandi.
[176] They believe in a god *Asista* (N.), who is the sun and moonshine, and who has a sister *Aruwa** (N.), the moon.† No offerings are made to either, but the men pray to both before going on a hunt. The prayers seem to have one form :—

[182] *Asis,** ipûy'-uch emûk,
[139] God, fill-us-with the-food,

or,

*Aruwa,** ipûy'-uch emûk,
Moon, fill-us-with the-food.

[183] They believe also in ghosts and spirits (*mûndet*, pl. *mik*, N.) which are good and
[180] bad. Prayers are addressed to the good *mik* (*mik che mûyuch*) to obtain food and
[184] health; *e.g.* :—

Mik, ipûy'-uch emûk,
The-spirits, fill-us-with the-food.

[184] Mik, ipûy'-uch mget,
The-spirits, fill-us-with the-health.

[182] Libations of honey and water (*kapsoûk*)* and of honey-wine (*kipkelûk*, N.) are offered to the good *mik*, in order to obtain food and health. These libations are made from gourds (*lumûk*), and while they are poured out, the formula,

[184] Ipûy'-uch emûk ai kîpûye mget,
Fill-us-with the-food that we-be-filled-with health,

is pronounced.

[171] * I have not come across this particular relationship before in the Nile-Hamitic group; though other tribes of this group hold that the sun and moon are related, or are husband and wife (the latter Masai and Nandi). (See Seidel, *The Ark*, for the ideas of the Sak, Kajemsel, Turkana, etc.)

† The Nandi offer milk.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

In 1938 and 1939 I made a census of the three Dorobo districts which were still inhabited, which showed that out of a total of 226 surviving members of the Kipkurerek horde, 67 % were living in the forest or on farms close to it. The remaining 33 % were settled in groups in certain areas of Nandi (where they had been for many years, having gone there by private arrangement with the Nandi), and in Uasin Gishu, with a few in the Kamasya and Keyo Reserves. Most of these 33 % maintained fairly constant contact with the forest people, and all were recognized as members of one or other of the three Dorobo districts. Under these conditions it is surprising that they have retained so much of their traditional organization; but the disruption of their life accounts for some of the difficulties experienced in studying them, and for some of the gaps in the record. Nevertheless it was not too late in 1938 to gain a record which, however imperfect, does substantially increase our knowledge of the Dorobo.

The dispersal of the Dorobo made it necessary to classify the people according to their domiciles, and this resulted in a grouping of the horde in four "domicile categories":

A. Inside the forest, at an altitude of 8000 ft. and over.
B. Farmland on the edge of the forest, mostly over 7500 ft. and within a mile of the trees.
C. Farmland or Nandi Reserve within 10 miles of the forest, with natural conditions generally similar to B, but a little lower.
D. Keyo, Kamasya, and Laikipya, where conditions in places are similar to B.

An analysis of the census and domicile categories will be found in the Appendix p. 8.

Since in this paper we can deal only with those parts of the social organization that concern the family and clan, a short summary of other aspects of Dorobo life may be helpful. The social and political life of the Dorobo is based on the clan, which has its own council to deal with internal affairs, and even to-day people live in clan groups. This is contrast to the Nandi, where the clans are dispersed and play but a small part in outward political life. The forest is divided into nine districts or parishes (*kwet* plur. *kwosuek*) of which only three are now inhabited. These districts, from north to south, are: 1. Cepurur[1]; 2. Kelpui; 3. Sirua; 4. Kipkorom; 5. Sosoiyo; 6. Meteitei; 7. Mokogic; 8. Puret; 9. Sangalo. In 1938-40 only Kelpui, Kipkorom, and Sosoiyo were inhabited; the latter had been amalgamated with Meteitei. Each district had a council, which dealt with matters appertaining to the district as a whole irrespective of clans. The Dorobo never acquired the council habit of the Nandi; district councils were held only when there was something important to talk about; and the clan council was both a more frequent and less formal affair than the district council.

There is no chief of the horde, nor an elected chief or leader in either clan or district council, the leading man (*kiruokindet* — the councillor)

[1] C ch in English 'church', and is used with this value throughout.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

terms and other intangible elements, because of their suitability, fitted into the existing culture pattern and were thus voluntarily adopted. The Nandi, not being bee-experts, none the less desire honey; not being hunters, they desire furs; the Dorobo being both bee-keepers and hunters can supply the Nandi with what they want, and in return get from the Nandi things which they cannot produce. The satisfaction of these desires has undoubtedly helped in the transmission of Nandi culture to the Dorobo, and it has also preserved the continuity of friendly relations between the two peoples.

When I first met the Dorobo in 1927 they were virtually as they had been in pre-European days: a purely hunting people with a basically non-Nandi organization heavily overlaid and modified by Nandi influence, yet distinct in outlook and way of life — so distinct in fact that having taken to agriculture and cattle simultaneously, they have not acquired the cattle complex of the pastoralist and retain the outlook of the hunter.

2. The Clan and its Place in Public Life

The life of the horde is controlled by two institutions: the clan and its council, and the *koret* council. The clan council may be described as a primary institution working within the framework of the *koret* organization. The Dorobo are not a "tribe" like the Nandi, and the clan-system does not strengthen tribal solidarity, but it does strengthen and maintain horde-unity by bringing together clansmen from the whole area to deal with clan affairs. The clan council deals with matters which concern members of the clan; the *koret* council is more political and less domestic, regulating the district as a whole irrespective of clan.

If behaviour and kinship are the basis of social life, the clan is the basis of horde-cohesion and government; and it is in regard to the importance attached to the clan that Dorobo social organization differs fundamentally from that of the Nandi. To the latter, the clan is in practice little more than a means of regulating marriage, and a traditional form of tribal division (though it has actually a deeper but less easily defined significance); but to the Dorobo the regulation of public life as a whole depends upon the clan, and its social importance is emphasized by the habit of living in clan settlements, by the clan councils, and by the stress laid on the group-aspect rather than on the totem-aspect of the clan. Moreover, clan-solidarity crosses the *koret* boundaries, and is the main factor that keeps the horde together under conditions which would render powerless any institution less strong.

The social aspect of the clan has been described in a previous paper [4], and this aspect need not therefore be touched upon here. People tend to live in clan settlements, and therefore the institution of a clan council is both natural and easily maintained. The clan council consists of all the old men of the clan, that is, the men of the age-sets senior to the age of the *muranik* who correspond to the fighting men of the Nandi; though in practice it has become customary for anyone who has been circumcised to attend the council

[4] Anthropos 46. 1951. pp. 38-41.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

and speak at it. People meet at the house of a clansman who, upon notice being given to him, prepares as much honey-wine as he can for the entertainment of the gathering, and what he provides may be supplemented by wine brought by other members. The business of the council is done with the aid of a jar of honey-wine in an informal way as if it were a social gathering, which in a sense it is, for the clan council through its informality has become a social bond between clansmen. Business is done first, and the drinking soon follows. The subjects which may be discussed include:

1. Disputes between members of the clan.
2. Hunting disputes.
3. Disputes about boundaries of hunting areas.
4. The preliminary business when a clansman has killed a member of another clan.
5. Homicide within the clan.
6. Sexual intercourse between a man and a girl of the clan. Disputes under heads 1-3 are settled by discussion, the leader of the council swaying, by his opinion, the views of the members. The leader, *kiruokindet*, is not necessarily the oldest member of the clan, for such a man might be too senile to act properly; but someone fairly senior in age, with his faculties intact, who is liked and respected, becomes in course of time (as in the case of the leader of the *koret* council) looked upon as a responsible person who can be safely listened to and whose judgement is sound.

More serious matters, like those under heads 4-6, are dealt with like the rest by discussion, but there is as well a certain traditional procedure to follow. When a clansman has killed a member of another clan, the council of the dead man's clan meets to discuss the compensation payable, and to choose a messenger who will be sent to the council of the murderer's clan to start proceedings, which after a preliminary discussion, are heard before the *koret* council, since two different clans are involved, and the matter is not purely the affair of one clan. When a man kills a member of his own clan, the whole matter is settled within the clan. First, the murderer has to brew some honey-wine and kill a goat from which the fat is collected. Then old men of both the families concerned meet at the house of the murderer and drink the wine he has provided, after which two of the old men oil the murderer all over with the goat's fat. The animal from which this fat is obtained must be a goat, and if the murderer has none of his own, he must get one by purchase or theft. He is therefore put to some trouble and even danger, for if he has to steal a goat he risks being speared if caught, and this constitutes an act of faith which, together with the anointing of his body, frees him from the uncleanness caused by the shedding of human blood. There is no payment of compensation for the murder of a clansman, but the murderer must if he can give his victim's wife one cow to help towards her maintenance. This last is a Nandi custom and was probably introduced in recent times after the Dorobo had begun to acquire cattle in a small way.

Sexual intercourse between a man and a girl of his clan is not an offence provided the girl does not have a baby, though the lover is not allowed

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

to marry her, and should the affair become known (as such things usually do), the clan council can prevent, if necessary by force, any attempt of the man to do so. Although such intercourse is not technically an offence, it is nevertheless regarded with great disapproval, and may result in the man's temporary ostracism, for as an elder told me, *ingoruiyo cĭ ok cept ap tiliet, caluokto ne oo kut, amu mecome apaiisiek ngut mecome cesowilōk*, "if a man lies with a girl of his *tiliet* (by which he meant clan), it is a very great sin, for not only do the old men disapprove, but the spirits also disapprove". If, however, the act should result in a baby, then it becomes incest, and a very serious offence, treated as if it were intercourse with a relative in the *tiliet*, and summary punishment is inflicted on both offenders, for the crime of incest offends the *cesowilōk*, the spirits of the dead, and if the guilty are not punished there is a danger that the spirits in their wrath may hurt indiscriminately not only them but innocent people as well. So in such cases, when it is known that a girl has had a baby, the man is beaten by the men and women of his own clan, his hut is burned, his honey-barrels are destroyed, and he must provide a goat to be eaten by the male and female relatives of the girl. She herself is also beaten by women of her clan. This punishment is inflicted after due discussion at the clan council, and is therefore not just a spontaneous expression of group-resentment, but the deliberate action of public authority.

Much of what has just been written applies to the past, that is, to the time before the Government attempted to establish the Dorobo in Nandi in 1937; and my census in 1939 revealed that there were comparatively few old men left, many less, in fact, than there were in 1927. The clan groupings therefore do not show so many old men as would have appeared normally, and most of the existing seniors of to-day are elder members of the Nyongi age-set, whose maximum age in 1939 was fifty. Some idea of the composition of a clan settlement in that year is given by the following particulars from my census:

At Kipukua and Kipkorom, 2 miles apart; all Moi clan.	1 Kaplelac. 1 married Nyongi, wife and children. 1 married Maina, wife and children. 5 unmarried Maina. 1 Juma. 3 old women and 1 girl.
At Kepen; Moi and Kapsekoi clans.	1 Kimnyike. 2 married Nyongi, wives and children. 3 unmarried Nyongi. 6 unmarried Maina.
At Ndoroton and Ngatepkong, 3 miles apart; all Kipieken.	1 married Nyongi, wife absent. 4 unmarried Maina. 2 Juma. 3 widows and 2 girls living with them. 1 married Nyongi, wife and children. 1 married Maina, wife and children. 1 unmarried Nyongi.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

These of course are relatively small settlements; but there were more people living round and inside the forest in 1927, and a number of them has been scattered owing to the effect of the 1937 move. The manner in which clan settlements are distributed may be seen from the map.

3. The Koret

The methods by which primitive people govern themselves and maintain law and order can usually be studied in operation, even if they are not immediately obvious to the casual visitor. The observation of concrete facts and events can elucidate even the uncentralized organizations that are so difficult to understand, and so common in East Africa, where there may often be no chiefs, and no visible authority but groups of old men. Some of the more important peoples of Kenya, like the Masae, Nandi, and Akamba had systems of this type, and the Dorobo also were similarly organized. But in the case of the Dorobo the difficulties in the way of investigation were greatly increased as a result of the move of 1937, an action which it was hoped would place the Dorobo in more favourable conditions and increase their chances not only of cultural advancement, but of ultimate survival; and in 1939 I was told that no *koret* council had been held since before 1937. I was therefore unable to observe this aspect of Dorobo life, and the account of their district organization that follows is based on their own statements. Information was obtained from a number of senior Dorobo, and it was possible to check their statements to a certain extent, so that taken in conjunction with the information I collected in 1927 the somewhat slight and unavoidably incomplete picture is, I think, correct as far as it goes.

The Dorobo are divided into three age-grades: *apaiisiek*, elders; *murenik*, circumcised men; and *uetik*, boys. The *apaiisiek* and *murenik* are those who take part in public affairs; *uetik* have no voice in them. Women, too, though they have the grades of *engitokisiek*, old women; *yosotik*, married women; and *tipik*, girls; have no official share in public affairs, however much influence they may have at home over their husbands and relatives. Neither they nor boys may attend council meetings, unless they happen to be major participants in some affair, as for instance, when a widow accuses someone of an offence against her.

The Dorobo divide their forest country into a number of districts called *koret*, pl. *korosuek*. The names of nine districts are recorded, and these are, from north to south:

1. Cepurur, on the northern edge of the forest.
2. Kelpui: the NW corner of the forest.
3. Sirua: south of Kelpui.
4. Kipkorom: from Sirua to the SW corner of the forest.
5. Sosoiyo: east of Kipkorom.
6. Meteitei: between the forest and the Meteitei river.
7. Mokopic: east of Kipkorom.
8. Puret: east of Sirua.
9. Sangalo: east of Sirua.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

To-day, only three of these districts are inhabited, Kelpui, Kipkorom and Sosoiyo (with which Meteitei has been amalgamated). The inhabitants of the empty *korosuek* have joined the three inhabited districts, gone right away, or died.

These *korosuek* correspond with the Nandi *korotinuek* (sing. *koret*) as the administrative units, the difference being that the Dorobo districts are larger than those of the Nandi, and that they consist mostly of forest, or forest with a strip of open land in front of it, whereas the Nandi districts are mostly parkland with patches of forest in places. Each Dorobo *koret* had its council, *kiruokat*, with a leader or spokesman, *kiruokindet* or *apaiyet*, "the old man". The *kiruokindet* was not a chief at all, as we understand the word. He held his position, not by descent, nor by election, but, as the Dorobo expressed it, by *ueliepta kitio*, "by the power of his tongue only", or more precisely, by virtue of his age, character, personality, and ability. Nor did the *kiruokindet* act for the whole horde. Each council was independent so far as its decisions went; but the interacting ties of clanship, the sense of "being Dorobo" fostered by isolation and suspicion of the outside world, and the absolute need for Dorobo to stick together, united them more than one might expect, and certainly more than the nebulous authority of a horde-chief could have done.

In 1939 no *koret* council met, as far as I know, and there was nobody then holding the office of *kiruokindet* in any of the three districts. I learned, however, that the last *kiruokindet* of Kipkorom was one Cemuren arap Cepsuku, a Kimnyike, who died some years before my visit, and might perhaps have been 55 years old when he was in office; that the last *kiruokindet* of Sosoiyo had been Kipkatam arap Ngamngam, who was still alive in 1939, aged about 80, and was said to have been *kiruokindet* at the time of the last Nandi War in 1905, which would make him about 45 when he took office, which he resigned before 1925; and that the last *kiruokindet* of Meteitei was Ncascas arap Meirica, a Kipkoiimet who died "many years ago", and must have been over sixty at the time of the Nandi War. The phrase "in office" must not be taken too literally: there was nothing official about a Dorobo *kiruokindet*, and he was really no more than a primus inter pares who from his character and personality was looked upon as a fit person to listen to.

These facts would seem to indicate that not only had no council been held since before 1937, but that the system itself was already beginning to fall into disuse independently of the move of 1937, its place being taken more and more by the clan council. I think there is no doubt that the *koret* council was a feature acquired from the Nandi, and that while the Nandi lived close to the Dorobo it functioned smoothly. But the Nandi were cleared away from the forest in 1906, and for a time there was a break in their residential contact with the Dorobo. After a time, they began to come back, in smaller numbers than before, and only as squatters on the farms into which the area had meanwhile been divided; but as a result of this short break the Dorobo had lost some of their familiarity with them, and their characteristic shyness had taken its place. I noticed that when Dorobo

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

I noticed that when Dorobo were having a meeting of any sort, however informal, at which they wanted to speak of anything important, they were careful to exclude Nandi from it; and if a Nandi insisted on intruding, they would talk only of trivial matters till he had gone. One day when I was talking to some Dorobo about their land, they insisted on my sending out of earshot a Nandi who was with me — they even took me out of his sight and spoke in low voices, for the subject was too serious to be heard and perhaps ridiculed by a Nandi. It is thus not difficult to understand how an acquired feature like the *koret* can fall into disuse; and this is what I believe has happened among the Dorobo. Pressure of various kinds was by 1927 forcing the Dorobo to be more wary than ever, and the clan system could give them all the administrative organization they needed. Hence the *koret* council could lapse, and with it the office of *kiruokindet*, though the *koret* names remained, as they had become useful terms of reference.

Nevertheless, the *koret* council is closely associated with the punishment of crime, and it is therefore necessary to understand something of the way in which it did its work in the past.

All the elders and circumcised men of a district formed the council. They met at the foot of a tree where the undergrowth was cleared away to make an open space. Any tree would do, for unlike the Nandi they had no special trees which mark the *korosuek*. The functions of the *koret* council were described briefly by a Dorobo in the following words: *Kernoc nalek si kesic ce miyac ak ce yac, si kokas pik tukul. Ingoesio cit ake tukul, keoon si kua emet ake*, "We take counsel that we may find what is good and leave what is bad so that all men may understand. If any man refuses, he is driven out of our country". Questions of theft and homicide were discussed by the council; it considered what steps to take when food was scarce; and disputes of all sorts between people of different clans were heard and settled. The decision of the council was announced by the *kiruokindet*, who after sensing the opinion of the meeting, would stand up and say what ought to be done. It was then left to the people concerned to carry out the suggestion, for such it was, in effect, rather than an order.

The way in which the law is enforced is liable to be something of a puzzle to the casual observer. The mainspring of Dorobo political organization is public opinion, and behind public opinion is the fear of the dead. People know that it is wrong, that is, contrary to custom, to do a certain thing; they know also that if they do it, their friends will do someting unpleasant to them, and, what is really most important of all, they know that *mecome cesowiloi*, "the spirits of the dead disapprove". Hence in order to understand how Dorobo law works, one must know something about their religious beliefs. To the European these reasons no doubt seem feeble; but they are effective in that the Dorobo have been able to survive till to-day as a unit sufficiently law-abiding to hold its own and carry on its existence in face of human and non-human enemies, and to maintain its place as a living organization.

Among people like the Nandi, the council habit has become an almost daily business, has in fact almost come to be the equivalent of a club, though without the conviviality of a club; but this is not possible for people who

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

673 live under such conditions as the Dorobo. The dense forest, crossed by a [987] path only at one corner, the scattered groups of huts each in the old days [36] shut off from the next by a wall of trees, and the precarious hand to mouth existence of a hunting economy, all operate against the spending of much time in meeting others away from home merely to talk. And so the council was a more serious affair and held only when necessary; moreover its seriousness was emphasized, in the case of the clan council, by the provision of honey-wine so that it became a social as well as an administrative institution. Though Dorobo had their quarrels and disputes, they were not cattle men, and so were saved from one of the commonest causes of litigation in Africa, disputes over stock ownership and inheritance, which can occupy so much of the time of a pastoral tribe. The possessions of a Dorobo — his bow, his knife, his honey-barrels — do not reproduce themselves, and his bees and dogs, important as they are, have not the same significance as cattle when questions of inheritance are raised.

673 691

4. Crime and its Results

681 When a man had heard the decision of the council go against him, and knew that he should do this or that, did he always do it? As often as not, I believe, he obeyed because he felt the force of public opinion. Africans are very sensitive to what their own people think of them, and as a last resort the elders could call on the young men, the *murenik*, to enforce their decisions. If a man, knowing that he had to pay an ox as compensation, persisted in his failure to produce the animal, two or three *murenik* could be sent by the council to persuade him by moral or if necessary physical force to obey. But in a small community like that of the Dorobo a man just could not afford to have everybody's disapproval or resentment directed against him; and the strength of public opinion as an incentive to obey orders is very real. It is a strong element in horde cohesion. Moreover, behind it is the fear of the spirits, to which we shall return later on.

674 673 Crimes and offences for which some form of action is taken fall into two categories, public delicts, or crimes against the horde as a whole, and private delicts, or offences against individuals. The former are the more serious, since their commission may affect not only the offender, but also 674 others with whom he is connected. Such crimes include incest, intercourse with a clanswoman, killing a clansfellow, witchcraft, killing an enemy (but see below), and disobedience to the council. These crimes are "public" because their commission is regarded as likely to affect others besides the criminal. Incest and intercourse with a clanswoman (equivalent to incest) are displeasing to the *cesowiloi*, the spirits, and unless appropriate action is taken, the people may suffer. Murder of a clansman, though in one sense a private delict, is really to be classed among public delicts because it strikes at the foundations of horde unity, the clan. And though killing an enemy is not in itself a crime, it nevertheless brings the killer into the same state of danger to himself and others as killing a Dorobo, and thus necessitates ceremonial cleansing.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

Private delicts include trespass, that is, hunting on another's land in the forest; theft, of honey-barrels in particular and of other things in general; murder; adultery; and assault. These are offences for which compensation is payable, or for which a man may kill the offender, e. g. for theft, though if he does so he must pay compensation for murder. Offences which concern fellow clansmen are dealt with by the clan council. Others came within the province of the *koret* council, which was not a daily affair, nor held at stated times, but only when there was a definite reason. When a person had some business which needed the calling of a council, he told the *kiruokindet*, who passed word round the *koret* that people should assemble on a certain day. If, for example, a man had been robbed of a honey-barrel, and knew who had stolen it, he would put the matter before the council, partly to decide on the amount of compensation, for the amount might vary according to the thief's circumstances, and partly to have public opinion behind him when he enforced his claim for payment. I believe that on the whole theft among the Dorobo themselves was not very common; and certain kinds of theft are regarded by them as so mean that a man must be very depraved indeed who will commit them. Besides, in a small horde whose members feel that outside their own circle every man's hand is against them, and to whom a stranger is a potential enemy until proved a friend, the need for unity and absence of friction is overwhelming if they are to survive. I certainly heard of no cases of theft during the period of my investigations.

We may now pass on to describe some of the traditional measures taken against offenders.

Incest. Incest means intercourse between a man and a woman of his *tiliet* (that is, one whom he calls by a relationship term), and a clanswoman. We have already described the punishment for this (see above, p. 127 f.), which in the first case is carried out with the approval of the *koret* council, and in the second, under the authority of the clan council.

Killing a Dorobo. When a man killed a Dorobo belonging to another clan, the council of the dead man's clan met to discuss the amount of compensation that was to be paid (*pas*), and then sent word to the council of the murderer's clan. This meant that the offence had been recognized, and that action must be taken. The council of the murderer's *koret* then assembled so that arrangements for payment could be made and become known to everybody. The murderer also had to be purified, in the same way as when the victim was a clansman. The *koret* council then met again to discuss the amount of the compensation. This, it seems, was usually reckoned at nine head of cattle (male or female), though it is doubtful if the full number was ever enforced [1], and if the murderer was a poor man with

[1] The number nine is probably due to imitation of the Nandi procedure, where nine is the amount payable as compensation for homicide.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

682 623 692 few relatives it would be very much less. The murderer had to provide as many of the number decided upon as he could, either from his own herd if he had one, or by getting them from the Nandi in exchange for furs, which meant, of course, that the cattle would be either oxen or worn-out old cows, and that he would not be able to provide many himself. It therefore fell to his relatives and clansmen to make up the number, which needed a clan council to apportion the balance among them, and also resulted in a good deal of feeling against the murderer for a time. Until the amount had been [614] agreed upon by both clan and *koret* councils, the murderer was liable (in theory at least) to be killed by his victim's relatives, so he had to lie low till the negotiations were completed, though again it is doubtful if they would actually have gone as far as killing him, for then they themselves would merely have had to return the cattle as compensation for their own act. In dividing cattle between the murdered man's relatives, the order of priority was brother, wife, father, mother, father's brother, father's brother's son, father's sister's son.

683 754 **Killing a witch.** Though in 1939 I could hear of no Dorobo who were reputed to be witches (*ponik*), such people certainly existed in the past. Apart from killing people by spells, their principal activities seem to have been centred on hunting — putting spells on game traps and on men who were going to hunt. If a witch was shown by a diviner to be guilty of a person's death, he or she might be killed, and no compensation was payable (*mepase*).

609 682 **Killing an enemy.** This means killing any person who is not a Dorobo and is believed or known to have performed any unfriendly act against the [701] Dorobo. The Dorobo have no sort of war organization, and their enemies were generally shot at from the cover of under-growth. Though not a crime, [721] killing an enemy none the less makes the killer ritually unclean and therefore dangerous to others because he has shed human blood. This action is thus [783] brought into the same category as homicide of a Dorobo, and though there is naturally no compensation, purification is required. The face of a man [302] who has killed an enemy is painted (*kemase toket*) with stripes of white earth (*enoriot*) on the forehead, down each cheek, and down both sides of the nose. The paint is allowed to remain till it flakes off, and the man does not have to stay in his hut, but goes about as usual; though if he had killed a Nandi he would take care to go to some other part of the forest till he thought it safe to return. In actual fact, Nandi were seldom killed, but one who strayed into the forest might get shot by accident: the body would be taken to a lonely place for the hyaenas to eat, and at any sign of Nandi activity the Dorobo would vanish into the depth of the forest where the Nandi would have little chance of finding them even if they had the inclination to search.

685 **Theft.** Stealing honey is the worst kind of theft, and is almost comparable with intra-tribal cattle-theft among the Nandi. A man who steals honey from someone else's barrels is considered very low indeed, and if found

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

out might be shot by the owner, who, if he killed the thief, would have to pay compensation for homicide. 685

If a man steals a honey-barrel from a man's recognized area in the forest, the case can be brought before the *koret* council, and the usual compensation is the payment of a goat, which the thief has to get from the Nandi if he has none of his own, though if the thief's circumstances were good, he might have to pay more. The Dorobo say that stealing honey-barrels is apt to be dangerous, because if a barrel is full of bees, the thief might be injured by their stings if they got his scent and did not recognize it.

I was told that theft of an animal caught in someone else's trap never occurred, partly because of the deep-seated public hatred of such an act, and partly because of the belief that after eating meat stolen from a trap the thief's belly would swell to a great size and he would die.

A person accused of stealing food may, to attest his innocence, take a blade of grass between his teeth and say: *Ingo a corin, kuama susuonno*, "If I am a thief, may this blade of grass eat me". [695]

A man who is found stealing ordinary property is beaten by the owner if he can catch him, but if in doing so the thief is killed, the owner must pay the compensation for homicide. In cases of serious theft, like stealing a man's bow and arrows, the case could be referred to the *koret* council, and the thief might have to pay adequate compensation. A man accused of theft might protest that he was innocent by throwing his knife at a tree and saying: *Ingo a corin, kuama rotuanno*, "If I am a thief, may this knife eat me". [692] [693] [695]

Trespass. To the Dorobo, trespass means hunting on somebody else's land. Normally this is no more than either following an animal across the boundary into another man's land, or else in the heat of the chase picking up the trail of another animal on someone else's land. If the hunter gives the owner of the land some of the meat, this accidental trespass is not considered as an offence. But if a man were deliberately to set out to hunt or trap on another man's land without permission or promise of meat, then the owner might, if he thought fit, kill him, though he would have to pay compensation for homicide. Trespass can occur only in the horde's own forest area. In the old days, when people roamed over the plains below, they could hunt where they pleased, and all they had to do was to keep out of the way of the Masae or Nandi herdsmen.

Adultery. A man who lies with another man's wife is said to *cor*, that is, steal her. He thereby commits an offence against her husband, who may kill him if he catches him in the act, and then, of course, must pay compensation; the wife may get a beating. A woman is not divorced for one act of adultery. 684

Assault. If a man injures another and incapacitates him, he must feed him till he recovers; and should the man eventually die as a result of the injury, the offender will have to pay compensation for homicide. 683

/68 cont'd/ 611

Succession is patrilineal and marriage patrilocal. Polygyny is practised. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again. 591 595 613 769 [775]

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Dorobo imitated or joined in the ituika of the Kikuyu and the eunoto of the Masai. The word they use for the handing-over ceremony is eunotwet. Alternating ages or generations are distinguished as onet ap-tai (the right hand) and onet ap-katap (the left hand). When the Kikuyu system is referred to Mwangi is the former and Maina the latter, but the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups. 881 561 [777]

There are no indigenous chiefs, the judiciary and legislature being a council of elders. Such an elder is called kiruogindet (pl. kiruogik). A kiruogindet has much the same function as a Kikuyu muthamaki. There is no laibon but formerly the Dorobo owed allegiance to the laibon of the Masai. 622 623 [171] 648

They recognize one Supreme Being, called Tururit (compare the Suk Tororut). There appears to be no cult of so-called Sun Worship. The sacred trees, used for prayers to Tururit, are, for rain the bamboo (a solitary clump), for honey the mukeu, and, in connection with circumcision ceremonies, the muthai and the mutamaiyu. 776 771 778 [881]

78. Little or nothing is known of the relationship of the Dorobo of Southern Kikuyu with other Dorobo sections. The "Dorobo Committee" called them the Kikuyu Escarpment group, and remarked that they were first found in the Aberdares but left there and went to the Masai Reserve, whence they were ejected. At the time the Committee sat this group was living as forest squatters in the 101 [628] [166]

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

the other world, and atonement is effected by ritual methods. The primary sanctions against such acts are upheld by the force of public opinion which is based on the fear of loss of well-being through offending the spirits, behind whom are the ultimate powers of nature expressed in the concept of *Asis*.

But these ultimate powers cannot be reached by man, who can neither see nor understand them, and people like the Dorobo (and indeed many African peoples) must therefore have some kind of intermediary. First come the *cesowiloi*, the spirits of the dead, to whom each man addresses his own prayers, and with whom there is a private relationship based on the fact that the spirits were once human beings themselves. Then protection is looked for through the use of tangible material objects in the form of amulets, such as the *lepuywet* against the evil eye, *rerendet* against rheumatism, and perhaps the double spiral ear-rings occasionally worn, although the significance of the last among the Dorobo is not known. These are material intermediaries in that they act between man and the unseen as protectors.

Formalized religion. The notion of a spiritual being which dwells in the Kiet or 'universe' is crystallized in the word *Asis(la)*, borrowed from the Nandi with perhaps some of the Nandi notions of its nature. He is identified with the sun, and prayers are made to him for success, and sometimes to his mother (or sister, for the accounts vary) *Arawa* the moon as well. This is the extent of the formal part *Asis* plays in Dorobo religious life, but he none the less performs the necessary function of being a recognized object to which men can turn, especially in thought, for restoration of confidence, which is no doubt one of the primary functions of the formalized concept of a major spiritual being, who provides people with an entity that they may look to for help and protection.

The belief in the existence of spirits is much more concrete, and more practical, for one section of the spirits were once men themselves and are therefore much nearer to men than *Asis* and well fitted to stand between men and the unseen world as mediators. The evil spirits are merely harmful or irritating according as the whim takes them, but they seem to play a relatively unimportant part in the religious life of the Dorobo, however much trouble and discomfort they may cause. They are just things that must be endured. A statement made by a Dorobo that the *musambuanik*, the evil spirits, are the same as the *oiik* or good spirits, is to be explained by the belief that even the good spirits can be malevolent at times, for malevolence is more noticed than benevolence, and it is necessary to maintain proper ritual relations with them to prevent malevolence. But unlike the evil spirits the *oiik* have a definite home somewhere under the earth, whence they return to visit and take care of the living, in whom they take an interest, and the part taken by the *oiik* in Dorobo life may in fact be summarized thus: (a) they can provide or withhold food; (b) they can cause illness if angered; (c) they can desert a man and so spoil his luck and neutralize his skill; (d) they are at the back of the legal sanctions as intermediaries between man and the ultimate spiritual power that controls the universe.

he found hunting on his area, though he would be liable to pay blood-cattle for homicide.

As for trapping, it is said that nobody steals meat from traps because their bellies would swell to a great size if they ate stolen meat. Public opinion, too, is strongly against such a mean crime, and is of itself a powerful deterrent. Nowadays trapping is the chief source of meat, and the common practice is for a man to set three or four traps at a time in different places, and to visit them every two days or so to see if anything has been caught.

Monkeys and buck[1] are killed for their meat and skins; pig provide meat and gut for bow-strings.

2. Agriculture.[2]

The Dorobo are in process of changing from a hunting to an agricultural existence, from the uncertain hunting economy to the more certain one of agriculture; and the same economic pressure which has forced them to till the soil is now encouraging a desire for cattle, which are being slowly and laboriously acquired. This leads in turn to a more self-supporting state, with less dependence on the Nandi for grain crops; and agricultural techniques, both in tillage and stock, are being learnt from the Nandi and from Europeans.

Both sexes work in the cultivated plots (*imbaret*), and are helped by children, who weed the crops, herd the stock, and milk the cows. The crops grown at present are eleusine (*eleusine coracana*, called *wimbi* in Swahili) and maize; millet and tobacco are still bought from the Nandi, from whom the Dorobo also get eleusine and maize seed when necessary. Unlike the distribution of the forest into hunting areas, people cultivate the ground close to their own homes, and a group

[1] The buck killed are:
Kipsekei, blue duiker (cehpalophus aequatorialis).
Mindet, red duiker (c. igna-issaci.)
Keremaiit, bush buck (tragelaphus scriptus.)
Irukutet, reed-buck
Kenyelet, oribi
Kipsomeret, water-buck (cobus ellipsiprymnus).

[2] I prefer the term 'agriculture' to 'horticulture,' for the latter implies mere cultivation, with no livestock, and in East Africa agriculture is almost always practised in conjunction with stock-rearing, even if only on a small scale.

l: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

cide, adultery, and assault. In the first category, incest is punished under the authority of the clan council: the man is beaten, his hut burnt, his honey-barrels destroyed; the woman also is beaten. Witches might be killed under authority of the *koret* council. In cases of persistent disobedience to the council, the elders could call upon two or three men to force the offender, by moral and physical persuasion, to mend his ways. Of offences in the second category, trespass has already been mentioned (p. 58). Theft, when not dealt with summarily, can be brought to the *koret* council, which can order payment of compensation. A man accused of stealing food may say, "If I am a thief, may this grass eat me," and place a blade of grass between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-cattle. If a man incapacitates another by assaulting him, he must feed him till he recovers. Homicide of a Dorobo of another clan, though not involving primary sanctions, was a serious offence because it meant that the murderer had to get cattle in order to pay compensation. The usual number was nine head of cattle, though when the murderer was a very poor man living alone the number might be reduced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could, from his own herd if he had one, or by exchange from the Nandi, or by any other means, including theft. The deficiency had to be made up by his fellow-clansmen.

Summary

The Dorobo horde consists of a loosely integrated group of districts held together partly by the feeling that they are all Dorobo, but much more by the clan ties which cut across the district boundaries. The clan is therefore one of the chief institutions in the life of the Dorobo.

MAIN CULTURAL FEATURES

Crafts

Housing

(*a*) Forest type: the *koconget*, in use as late as 1927, was a framework of sticks bent over to form an oblong, dome-shaped structure, covered on the outside with banana leaves and leaves of trees; height, 6 ft.; length, 11 ft.; width, 7 ft. (*b*) New types: the *keriet* has a circular wall about 5 ft. high plastered with mud, and an almost flat thatched roof supported by a centre post; the *kot* is a hut of ordinary Nandi type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of three or four *koconget* huts, were situated in clearings just big enough to hold the huts, and were approached by concealed paths which branched in a bewildering manner that made it impossible to find them without a guide. Settlements outside the forest are arranged in small groups usually close to the cultivated land.

Dress and Ornaments

Clothing is made largely from the skins of wild animals, and the forms are mainly copied from those of the Nandi, as are most of the ornaments, which include, among other things, iron wire armlets and leglets, necklaces, and married women's ear-rings (*tasok*). The ear-lobes are pierced and elongated (sometimes getting torn in the forest), and a small hole is bored in the top of the ear. Some but not all remove the two lower middle incisors. Hair is allowed to grow to a length of about 2 ins., when it is sometimes covered with a bladder cap, and sometimes dressed with red earth and fat. Occasionally a man has his hair done in pigtails like the Nandi.

Tools and Weapons

Axes and knives are obtained from Nandi smiths, the Dorobo making the wooden handles. Needles are made from old nails and bits of wire which the Dorobo

may be greeted, though not talked to otherwise. Other relations of the wife are treated as the 1st ascending generation, and their children as one's own. But as men get older, the complete avoidance of their wife's mother tends to relax, though never at any time is there ordinary intercourse between them. 606

C. The Clan and Marriage Regulations. 614

Marriage regulations are based on the clan system, and the general rule is that a man may not marry within his clan. The clan, *oret*, is the basis of social organization, and the social aspect of the clan is emphasized by the habit of living [361] in clan settlements, by the clan councils where [627] matters like land boundaries, marriages, and minor offences between clansmen are discussed, and by the stress laid on the group-aspect of the clan rather than on its animal-aspect (i.e. "totem"). The Nandi, for example, talk of *tiond' ap orenyō*, 'the animal of my clan' or. *tiondannyō* 'my animal'; whereas the Dorobo say *ornyon*, 'my clan'. There are no prohibitions concerning the clan-animal (*tiondo*), which in fact has no ritual social value, though as a source of food it has an actual social value.

Two clans, Moi and Kapsegoi, have the same *tiondo* (the crested crane), and marriage between these two is allowed, because the *oret* is different, although the *tiondo* is the same. It may be noted, too, that in the case of the Moi, a Moi may marry a Moi woman, provided she belongs to 'another house,' *kot ake*, that is, lives in another district, and is not a blood relation. Clansmen are regarded as *tilionutik*, 'relations' and are addressed as *ornyon*, 'my clan[sman],' or as *ar' t' apaa*, a term not otherwise found in Dorobo, [171] but equivalent to F. Br. S. in Nandi.

The clan animals are:

Kapsegoi..... } Moi ..... }	*koyonyot* (crested crane).
Kipiegen.....	*konokchot* (baboon).
Kipamwi.....	*yemwiyo* (duiker).
Kapil.....	*toralt* (bush-pig).
Toiyoi.....	*robta* (the rain).
Korapor	*kimaketyet* (hyaena).

/68 cont'd/

Succession is patrilineal and marriage patrilocal. Polygyny is practised. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Dorobo imitated or joined in the inuika of the Kikuyu and the eunoto of the Masai. The word they use for the handing-over ceremony is eunotwet. Alternating ages or generations are distinguished as onet ap-tai (the right hand) and onet ap-katap (the left hand). When the Kikuyu system is referred to Mwangi is the former and Maina the latter, but the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups.

There are no indigenous chiefs, the judiciary and legislature being a council of elders. Such an elder is called kiruogindet (pl. kiruogik). A kiruogindet has much the same function as a Kikuyu muthamaki. There is no laibon but formerly the Dorobo owed allegiance to the laibon of the Masai.

They recognize one Supreme Being, called Turuit (compare the Suk Tororut). There appears to be no cult of so-called Sun Worship. The sacred trees, used for prayers to Turuit, are, for rain the bamboo (a solitary clump), for luney the mukeu, and, in connection with circumcision ceremonies, the muthai and the mutamaiyu.

78. Little or nothing is known of the relationship of the Dorobo of Southern Kikuyu with other Dorobo sections. The "Dorobo Committee" called them the Kikuyu Escarpment group, and remarked that they were first found in the Aberdares but left there and went to the Masai Reserve, whence they were ejected. At the time the Committee sat this group was living as forest squatters in the

/261 cont./

GOO D 431 0 572 is present at all. The heir of the warrantor is also liable. The giver is offended by a refusal to accept a gift. A counter-gift of approximately the same value follows gift-giving. The giver spits upon the gift when he hands it over. The Wandorobo never conclude into blood friendships among themselves, but only -- and, to be sure, very rarely -- with members of other tribes. The ceremony observed for this resembles the one described above among the Masai. If a stranger has bought ivory from him and paid only part of the price, the ol donkoni often likes to conclude blood friendship with him because he thinks that then the debtor must die if he does not repay the debt as quickly as possible (1).

D [191] [425]

D [191]

1. This view is in general vogue; it was not originally peculiar to the Asá, but adopted.

D 682 638 [191] [672]

As among the Masai, the legal view makes no distinction between murder and manslaughter, but indeed between the latter and negligent homicide. A murderer caught in the very act is subject to blood revenge, for the execution of which every man belonging to the family of the one murdered and in some districts also any of his friends and campmates are justified. If the avengers do not succeed in capturing the murderer on the day of the murder, /263/ the latter is safe from blood revenge, for people see in the unsuccessful search for him a command of God to let him live. To atone for his deed, however, he must pay the principal heir of the deceased one large and two small ivory tusks. Negligent homicide is punished by the payment of a medium-sized ivory tusk. If the perpetrator and the one who was killed belong to the same lineage, the punishment is considerably less than if they are from different lineages of the same tribe. On the other hand, if the two belong to different tribes, the ones entitled to blood revenge often hand over the execution of it to the Masai, who kill the perpetrator, even if they do not capture him until after several months. Up to the completed payment the perpetrator is regarded as punt-ensig, corresponding to the ol olchani of the Masai. If an Asá kills a Masai blacksmith, the deed remains unpunished because the blacksmiths are too weak for revenge and the Masai would

TABLE OF CLANS

Clan name	Corresponding Nandi name, used also by Dorobo	Source	Dorobo totem
Kepenkut*	Kipkokus Moi	Nandi clan	crested crane
Moi*	Moi	Nandi clan	crested crane buffalo small red bird
Kipiekun*	Kipiekun	Nandi clan	baboon
Kipamui*	Kipamui	Nandi clan	duiker
Kapil*	Kipsirkui	Nandi clan	bush pig
Tuiyui*	Tuiyui	Nandi clan	rain
Kuruput*	Tungo	Nandi clan	hyena
Tuini*	Tuini	Nandi clan	lion

The three reputed clans are: Kiponga,* corresponding to the Nandi Kamwaika, totem partridge; Kipaiso,* corresponding to the Nandi Kipaiso, totem the sun; and [illegible]

(All names marked * are of *Nandi* origin.)

The clan is the basis of political organization, and people tend to live in clan settlements under the control of a clan council. This council consists of all the old men of the clan. People meet at the house of a clansman who, upon notice being given to him, prepares honey-wine or beer, for the business of the council is done in an informal way with a jar of honey-wine as if it were a social gathering, which in a sense it is. Business is done first and the drinking follows. The council deals with clan matters, including disputes between clansmen, boundaries of hunting areas, homicide of a clansfellow, incest, and the preliminary arrangements when a clansman has killed a member of another clan. Disputes are settled by discussion, and the result is ascertained by the council leader, *kiruchindet*, who is not necessarily the eldest member of the clan, but someone fairly senior who acquires his position in much the same way as does the Nandi *poiyot ap kotwet* (p. 32).

The Kowet

Superimposed on the clan areas is a system of districts (*kowemek*, sing. *kowet*) possibly due to Nandi influence. Each district includes several clan settlements, and has a council which is formed of the elders and circumcised men of all the clan settlements within it; the council sits under a tree (there are no special council trees) in an open space from which the bush has been cleared. The function of the *kowet* council is to handle inter-clan affairs. It has a leader, also known as *kiruchindet*, whose position and duties resemble those of the leader of the clan council, and he acquires his office in the same way. There was no chief of the horde.

The forest is divided into nine *kowemek*, named (from north to south), Ceparur, Kelpui, Sirua, Kipkorum, Sowiyo, Metetiet, Mokogin, Puret, and Segalo. In 1938 only three of these were occupied: Kelpui, Kipkorum, and Sowiyo (which had by then been amalgamated with Metetiet).

Legal Sanctions

Crimes against which primary sanctions are directed include incest, witchcraft, and disobedience to the council. Secondary sanctions deal with trespass, theft, homi-

1: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

cide, adultery, and assault. In the first category, incest is punished under the authority of the clan council: the man is beaten, his hut burnt, his honey-barrels destroyed; the woman also is beaten. Witches might be killed under authority of the *koret* council. In cases of persistent disobedience to the council, the elders could call upon two or three men to force the offender, by moral and physical persuasion, to mend his ways. Of offences in the second category, trespass has already been mentioned (p. 58). Theft, when not dealt with summarily, can be brought to the *koret* council, which can order payment of compensation. A man accused of stealing food may say, "If I am a thief, may this grass eat me," and place a blade of grass between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-cattle. If a man incapacitates another by assaulting him, he must feed him till he recovers. Homicide of a Dorobo of another clan, though not involving primary sanctions, was a serious offence because it meant that the murderer had to get cattle in order to pay compensation. The usual number was nine head of cattle, though when the murderer was a very poor man living alone the number might be reduced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could, from his own herd if he had one, or by exchange from the Nandi, or by any other means, including theft. The deficiency had to be made up by his fellow-clansmen.

Summary

The Dorobo horde consists of a loosely integrated group of districts held together partly by the feeling that they are all Dorobo, but much more by the clan ties which cut across the district boundaries. The clan is therefore one of the chief institutions in the life of the Dorobo.

MAIN CULTURAL FEATURES

Crafts

Housing

(*a*) Forest type: the *koconget*, in use as late as 1927, was a framework of sticks bent over to form an oblong, dome-shaped structure, covered on the outside with banana leaves and leaves of trees; height, 6 ft.; length, 11 ft.; width, 7 ft. (*b*) New types: the *koret* has a circular wall about 5 ft. high plastered with mud, and an almost flat thatched roof supported by a centre post; the *kot* is a hut of ordinary Nandi type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of three or four *koconget* huts, were situated in clearings just big enough to hold the huts, and were approached by concealed paths which branched in a bewildering manner that made it impossible to find them without a guide. Settlements outside the forest are arranged in small groups usually close to the cultivated land.

Dress and Ornaments

Clothing is made largely from the skins of wild animals, and the forms are mainly copied from those of the Nandi, as are most of the ornaments, which include, among other things, iron wire armlets and leglets, necklaces, and married women's ear-rings (*tauk*). The ear-lobes are pierced and elongated (sometimes getting torn in the forest), and a small hole is bored in the top of the ear. Some but not all remove the two lower middle incisors. Hair is allowed to grow to a length of about 2 ins., when it is sometimes covered with a bladder cap, and sometimes dressed with red earth and fat. Occasionally a man has his hair done in pigtails like the Nandi.

Tools and Weapons

Axes and knives are obtained from Nandi smiths, the Dorobo making the wooden handles. Needles are made from old nails and bits of wire which the Dorobo

7: Wayland N-5 (ca. 1926) 1931 FL6 Dorobo FL6

Social Organization.—The Tribe.—The Wanderobo are very few in number, and are divided among three sections, each of which has its own habitat as follows (according to the Chief, who was my informant on this point):—

Section.	Habitat.	Approximate Numbers.
Kokosera	Kokosoga	40
Uhugum	Naumugum	60
Luterem	Loturim	40

Each section lives in a single village of its own, similar in structure to that already described. The sections are not totemic, but they are exogamous, and descent is in the male line. The tribe has but one chief, who lives at Kokosoga (north of Kameon). Chieftainship is hereditary, and no woman is ever permitted to wield the powers of a chief. The Uhugum and the Luterem are each presided over by a headman (paterfamilias).

Birth.—When a child is born the mother is assisted by female relations. There are no official deliveries, as among the Labwor. The Wanderobo allege that there are no special ceremonies connected with birth. Should a child come feet foremost into the world he will be lucky throughout life. It is stated that the afterbirth is thrown away with the rubbish. After weaning, a child occupies his father's hut, if a boy, and her mother's if a girl.

Betrothal and Marriage.—The rules for betrothal seem to be very similar to those usual among the Labwor, except that the prospective husband goes to the girl's people direct, without representation in the first instance. The consent of the girl and of the parents on both sides is necessary, and the number of gifts is not specified as it is among the Labwor.

Marriage is celebrated by a feast in which the people of the two sections to which the contracting parties belong take part. There is no dance peculiar to the marriage feast. After marriage a man lives for two days and nights in the hut of his betrothed, after which she returns with him to his own village, there to occupy a new hut already built for the newly married couple by the male partner, after he has consulted the wizard with regard to the luckiest time for erecting it.

Burial.—All the dead are buried without special ceremony.[1] There is no special burial ground, but graves are dug "out in the bush," well away from the village.

Age Classes.—These appear to be quite unknown.

Crime and Punishment.—The chief offence is adultery. This, however, is a private affair, and is dealt with privately, for it is not a sin against the community. A woman who is guilty in respect of this is cast out by her husband, who seeks the offending man with a view to slaying him. Murder is, however, a tribal affair, for which the punishment is death. The Labwor practice in this respect is not followed.

[1] This statement was subsequently contradicted, in so far as it was stated that the wizard attends at all burials.

/247 cont./

278 415 252 [411] When the cooking of the poison is finished, the pot is cleaned with sand and water and used again for the preparation of food. The arrow point is thoroughly cleaned, heated red-hot, and poisoned anew.

224 [634] [631] The region in question for hunting has been divided by the El dorobo into definite districts, each of which may be hunted in only the community of its inhabitants. A district, in turn, consists of a number of precincts, whose grassy plains are burned off in a sequence following from their location, the weather conditions, etc. The wild animals then gather to graze on the grass soon freshly sprouting after the burning. This management explains why the hunter is only rarely /248/ forced to return home without booty and why he is able to feed his family continuously and regularly from the yields of his hunting.

The game in general in East Africa is game frequenting the same spot; but the meaning of this statement must be modified in accordance with the relatively enormously large areas here. Just as in Germany a hunter expects a herd of deer at a particular time on a particular knoll, the ol doroboni can quite certainly count on finding the game expected by him at the appropriate time in a region whose diameter amounts to approximately 3-5 kilometers. Considerable disturbances [136] are caused, of course, by the appearance of large predatory animals, especially lions almost always hunting in herds and the hyena dogs always hunting together in larger numbers.

In practicing hunting the men split up in such a way that the younger ones do the stalking on the open steppe, whereas the older ones lie in wait at the watering places of the game. Stalking requires incomparably greater endurance and skill than at home.. The ol doroboni must more accurately watch the wind, since his own strong odor makes it extremely easy for the animal to pick up the scent. He must take the greatest pains to conceal himself from the sight of the animal, since he is unfamiliar with any kind of adaptation to the region and the surroundings, so that his black body stands out clearly, even at great distances, on the usually light yellow steppe. The difficulty of the rush is further increased by the primitive nature of his weapons, which permit him to make an accurate shot only at 20 to 30 meters. In what concerns the patience, perseverence, and dexterity that the Wandorobo show in this, a European hunter can

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

In 1938 and 1939 I made a census of the three Dorobo districts which were still inhabited, which showed that out of a total of 226 surviving members of the Kipkurerek horde, 67 % were living in the forest or on farms close to it. The remaining 33 % were settled in groups in certain areas of Nandi (where they had been for many years, having gone there by private arrangement with the Nandi), and in Uasin Gishu, with a few in the Kamasya and Keyo Reserves. Most of these 33 % maintained fairly constant contact with the forest people, and all were recognized as members of one or other of the three Dorobo districts. Under these conditions it is surprizing that they have retained so much of their traditional organization; but the disruption of their life accounts for some of the difficulties experienced in studying them, and for some of the gaps in the record. Nevertheless it was not too late in 1938 to gain a record which, however imperfect, does substantially increase our knowledge of the Dorobo.

The dispersal of the Dorobo made it necessary to classify the people according to their domiciles, and this resulted in a grouping of the horde in four "domicile categories":

A. Inside the forest, at an altitude of 8000 ft. and over.
B. Farmland on the edge of the forest, mostly over 7500 ft. and within a mile of the trees.
C. Farmland or Nandi Reserve within 10 miles of the forest, with natural conditions generally similar to B, but a little lower.
D. Keyo, Kamasya, and Laikipya, where conditions in places are similar to B.

An analysis of the census and domicile categories will be found in the Appendix p. 8.

Since in this paper we can deal only with those parts of the social organization that concern the family and clan, a short summary of other aspects of Dorobo life may be helpful. The social and political life of the Dorobo is based on the clan, which has its own council to deal with internal affairs, and even to-day people live in clan groups. This is contrast to the Nandi, where the clans are dispersed and play but a small part in outward political life. The forest is divided into nine districts or parishes (*koret*, plur. *korosuek*) of which only three are now inhabited. These districts, from north to south, are: 1. Cepurur[1]; 2. Kelpui; 3. Sirua; 4. Kipkorom; 5. Sosoiyo; 6. Meteitei; 7. Mokopic; 8. Puret; 9. Sangalo. In 1938-40 only Kelpui, Kipkorom, and Sosoiyo were inhabited; the latter had been amalgamated with Meteitei. Each district had a council, which dealt with matters appertaining to the district as a whole irrespective of clans. The Dorobo never acquired the council habit of the Nandi; district councils were held only when there was something important to talk about; and the clan council was both a more frequent and less formal affair than the district council.

There is no chief of the horde, nor an elected chief or leader in either clan or district council, the leading man (*kirwokindet* — the councillor)

[1] *C — ch* in English 'church', and is used with this value throughout.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

gaining his position through the tacit recognition of the people. The horde therefore consists of a loosely integrated group of districts held together partly because they "are all Dorobo", but much more by the clan-solidarity which extends across the district boundaries. The clan is thus a far more important institution than it is among the Nandi.

The Dorobo are a hunting people who have been forced to take up agriculture, and at the same time are in process of acquiring a small amount of live stock. A great deal of their culture and most of their language have been borrowed from the Nandi; but their habits and mental characteristics are their own, including a "hunting outlook" which contrasts with the "cattle outlook" of the pastoralist, and a feeling of sympathy with wild animals that does not exist among either pastoralists or agriculturalists. Next in importance to hunting come bees, and honey is regarded much as pastoral people regard milk.

Although the Dorobo are commonly thought of as a people who wander at will wherever there is game, this notion is true only to a limited extent. Parties used to go far afield in the old days seeking game outside their own territory in the sparsely inhabited areas of the highlands; but their own forest was and still is divided into strictly observed economic areas where are family holdings in which people hunt, set traps, keep their bees, and collect vegetable food. These areas may look small on the map; but anyone who thinks that half an inch on a map (representing perhaps one mile on the ground) seems a very short distance, will find when he gets to the forest that one mile on the ground is a very formidable tract offering all sorts of possibilities for the hunter, and infinite chances for the stranger to lose himself.

These of course are relatively small settlements; but there were more people living round and inside the forest in 1927, and a number of them has been scattered owing to the effect of the 1937 move. The manner in which clan settlements are distributed may be seen from the map.

3. The Koret

The methods by which primitive people govern themselves and maintain law and order can usually be studied in operation, even if they are not immediately obvious to the casual visitor. The observation of concrete facts and events can elucidate even the uncentralized organizations that are so difficult to understand, and so common in East Africa, where there may often be no chiefs, and no visible authority but groups of old men. Some of the more important peoples of Kenya, like the Masae, Nandi, and Akamba had systems of this type, and the Dorobo also were similarly organized. But in the case of the Dorobo the difficulties in the way of investigation were greatly increased as a result of the move of 1937, an action which it was hoped would place the Dorobo in more favourable conditions and increase their chances not only of cultural advancement, but of ultimate survival; and in 1939 I was told that no *koret* council had been held since before 1937. I was therefore unable to observe this aspect of Dorobo life, and the account of their district organization that follows is based on their own statements. Information was obtained from a number of senior Dorobo, and it was possible to check their statements to a certain extent, so that taken in conjunction with the information I collected in 1927 the somewhat slight and unavoidably incomplete picture is, I think, correct as far as it goes.

The Dorobo are divided into three age-grades: *apaiisiek*, elders; *murenik*, circumcised men; and *netik*, boys. The *apaiisiek* and *murenik* are those who take part in public affairs; *netik* have no voice in them. Women, too, though they have the grades of *engitokisiek*, old women; *yosotik*, married women; and *tipik*, girls; have no official share in public affairs; however much influence they may have at home over their husbands and relatives. Neither they nor boys may attend council meetings, unless they happen to be major participants in some affair, as for instance, when a widow accuses someone of an offence against her.

The Dorobo divide their forest country into a number of districts called *koret*, pl. *korosuek*. The names of nine districts are recorded, and these are, from north to south:

1. Cepurur, on the northern edge of the forest.
2. Kelpui: the NW corner of the forest.
3. Sirua: south of Kelpui.
4. Kipkorom: from Sirua to the SW corner of the forest.
5. Sosoiyo: east of Kipkorom.
6. Meteitei: between the forest and the Meteitei river.
7. Mokopic: east of Kipkorom.
8. Puret: east of Sirua.
9. Sangalo: east of Sirua.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

634 [161] [178] To-day, only three of these districts are inhabited, Kelpui, Kipkorom and Sosoiyo (with which Meteitei has been amalgamated). The inhabitants of the empty *korosuek* have joined the three inhabited districts, gone right away, or died.

These *korosuek* correspond with the Nandi *korotinuek* (sing. *koret*) as the administrative units, the difference being that the Dorobo districts are larger than those of the Nandi, and that they consist mostly of forest, or forest with a strip of open land in front of it, whereas the Nandi districts are mostly parkland with patches of forest in places. Each Dorobo *koret* had its council, *kiruoket*, with a leader or spokesman, *kiruokindet* or *apaiyet*, "the old man". The *kiruokindet* was not a chief at all, as we understand the word. He held his position, not by descent, nor by election, but, as the Dorobo expressed it, by *ueliepta kitio*, "by the power of his tongue only", or more precisely, by virtue of his age, character, personality, and ability. Nor did the *kiruokindet* act for the whole horde. Each council was independent so far as its decisions went; but the interacting ties of clanship, the sense of "being Dorobo" fostered by isolation and suspicion of the outside world, and the absolute need for Dorobo to stick together, united them more than one might expect, and certainly more than the nebulous authority of a horde-chief could have done.

634 673 622 [186]

In 1939 no *koret* council met, as far as I know, and there was nobody then holding the office of *kiruokindet* in any of the three districts. I learned, however, that the last *kiruokindet* of Kipkorom was one Cemuren arap Cepsuku, a Kimnyike, who died some years before my visit, and might perhaps have been 55 years old when he was in office; that the last *kiruokindet* of Sosoiyo had been Kipkatam arap Ngamngam, who was still alive in 1939, aged about 80, and was said to have been *kiruokindet* at the time of the last Nandi War in 1905, which would make him about 45 when he took office, which he resigned before 1925; and that the last *kiruokindet* of Meteitei was Ncascas arap Meirica, a Kipkoiimet who died "many years ago", and must have been over sixty at the time of the Nandi War. The phrase "in office" must not be taken too literally: there was nothing official about a Dorobo *kiruokindet*, and he was really no more than a primus inter pares who from his character and personality was looked upon as a fit person to listen to.

634 633 [182] 177

These facts would seem to indicate that not only had no council been held since before 1937, but that the system itself was already beginning to fall into disuse independently of the move of 1937, its place being taken more and more by the clan council. I think there is no doubt that the *koret* council was a feature acquired from the Nandi, and that while the Nandi lived close to the Dorobo it functioned smoothly. But the Nandi were cleared away from the forest in 1906, and for a time there was a break in their residential contact with the Dorobo. After a time, they began to come back, in smaller numbers than before, and only as squatters on the farms into which the area had meanwhile been divided; but as a result of this short break the Dorobo had lost some of their familiarity with them, and their characteristic shyness had taken its place. I noticed that when Dorobo

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

were having a meeting of any sort, however informal, at which they wanted to speak of anything important, they were careful to exclude Nandi from it; and if a Nandi insisted on intruding, they would talk only of trivial matters till he had gone. One day when I was talking to some Dorobo about their land, they insisted on my sending out of earshot a Nandi who was with me — they even took me out of his sight and spoke in low voices, for the subject was too serious to be heard and perhaps ridiculed by a Nandi. It is thus not difficult to understand how an acquired feature like the *koret* can fall into disuse; and this is what I believe has happened among the Dorobo. Pressure of various kinds was by 1927 forcing the Dorobo to be more wary than ever, and the clan system could give them all the administrative organization they needed. Hence the *koret* council could lapse, and with it the office of *kirnokindet*, though the *koret* names remained, as they had become useful terms of reference.

Nevertheless, the *koret* council is closely associated with the punishment of crime, and it is therefore necessary to understand something of the way in which it did its work in the past.

All the elders and circumcised men of a district formed the council. They met at the foot of a tree where the undergrowth was cleared away to make an open space. Any tree would do, for unlike the Nandi they had no special trees which mark the *korosuek*. The functions of the *koret* council were described briefly by a Dorobo in the following words: *Keruoc walek si kesic ce miyac ak ce yac, si kokas pik tukul. Ingoesio clt ake tukul, keoon si kua emet ake*, "We take counsel that we may find what is good and leave what is bad so that all men may understand. If any man refuses, he is driven out of our country". Questions of theft and homicide were discussed by the council; it considered what steps to take when food was scarce; and disputes of all sorts between people of different clans were heard and settled. The decision of the council was announced by the *kirnokindet*, who after sensing the opinion of the meeting, would stand up and say what ought to be done. It was then left to the people concerned to carry out the suggestion, for such it was, in effect, rather than an order.

The way in which the law is enforced is liable to be something of a puzzle to the casual observer. The mainspring of Dorobo political organization is public opinion, and behind public opinion is the fear of the dead. People know that it is wrong, that is, contrary to custom, to do a certain thing; they know also that if they do it, their friends will do someting unpleasant to them, and, what is really most important of all, they know that *mecome cesowiloi*, "the spirits of the dead disapprove". Hence in order to understand how Dorobo law works, one must know something about their religious beliefs. To the European these reasons no doubt seem feeble; but they are effective in that the Dorobo have been able to survive till to-day as a unit sufficiently law-abiding to hold its own and carry on its existence in face of human and non-human enemies, and to maintain its place as a living organization.

Among people like the Nandi, the council habit has become an almost daily business, has in fact almost come to be the equivalent of a club, though without the conviviality of a club; but this is not possible for people who

AGRICULTURE

The Dorobo began to cultivate in a small way about 30 years ago (or even a little earlier) and at first they grew only eleusine. Though their inclinations were to become cattle-owners, conditions were unfavourable to the development of cattle-breeding as a primary activity and they have been forced to make agriculture a serious business; for the methods, implements, and even the seed used in this, they have been indebted to the Nandi.

Land

Those who live in A and B domicile categories (with whom alone we are concerned here) cultivate small plots in the open land which surrounds the forest. They have no rights of tenure, except the temporary ones acquired, according to Kenya law, if they live there as squatters under the Resident Native Labourers Ordinance. Their plots, *imbaret*, pl. *imbarenik*, range in size from one acre divided into four individual holdings, to half an acre divided into four holdings; in other cases, plots of a quarter to one-fifth of an acre worked by one person. All plots are fenced, and sometimes a living-hut is built inside the fenced area; occasionally it was found that elderly Dorobo were allowed by Nandi squatters to have a little piece of their cultivated land to work.

European farmers in the district, with whom the Dorobo land question was discussed, seemed not unwilling to let the Dorobo live unmolested on their land provided they gave no trouble; but the government authorities thought otherwise, and the position of a Dorobo who did not choose to become a squatter in order to live on what he considered his own land was thus precarious.

Cultivation Methods and Crops

Two main crops are grown, eleusine, *paiek*, and maize, *ipandek*. Millet had not been grown by 1940, though they bought it from the Nandi. Sweet potatoes, *ropoonik*, are sometimes grown in very limited quantities. Implements are the heart-shaped hoe and the panga or cutlass, both obtained from the Nandi. They have also small axes, *adolut*, and knives, *rotuet* or *cambolust*.

The growing of crops is regulated by the dry and wet seasons, *muainonik*, from October to March, and *inotet*, from April to September. The land is prepared between January and April, and planted in April or May according to the rain. Cultivation follows the Nandi method, with paring and burning of new land. The seed of eleusine and maize is bought from the Nandi, usually from squatters living nearby. Maize and eleusine are planted together in the same plot, though potatoes are generally grown separately. Eleusine is reaped in the Nandi manner by cutting off the heads; maize is picked by hand. Granaries of Nandi type are sometimes made, but are seldom needed, as the yields are so small that the loft of a hut can generally hold all that is not eaten on the field (as is often the case with maize). Cereals are roughly ground on slabs of granite in the Nandi manner.

Food

Food in the old days consisted mainly of meat supplemented by honey, wild vegetables, and grain bought by exchange from the Nandi. The food supply is now based on their own agricultural produce, supplemented by milk when they have any, and by certain other foods when they can be got. Meat is still obtained by trapping, though seldom by hunting; it includes the flesh of antelopes, monkeys, pigs, and leopards. Honey is got, as already described, from honey-barrels. Wild food, collected in the forest, includes fruit of the *momoniat* (*rubus rigidus*), *lemeiyuet* (*ximenia americana*), and *sasuriet* (*musa ensete*, wild banana), the sap of the *sasuriet*, and leaves of nettle, *siuot*.

Intoxicating drink is of two kinds: the Dorobo honey-wine, *kiphelinik* or *kumik ap lo*, made from honey, and fermented with the long seed-pods of the "sausage

DK 174

Fort Hall Kikuyu told the 1929 Committee that there were no Dorobo there when their forefathers first arrived, but we have every reason to believe that to have been a political lie. There are certainly Dorobo or part-Dorobo in the District now, and we may take it as reasonably certain that there were Dorobo in all three districts of Kikuyu proper when the Kikuyu first entered them. We can also believe that the first Kikuyu immigrants into Fort Hall and Nyeri were still to a very large extent in the hunting stage of culture; there is a definite tradition to that effect and there appears to be no political reason why the Kikuyu should invent it. There were therefore different degrees of difference between the occupants and the immigrants in the two cases (North of the Chania and South of the Chania) in accordance with the nutritional aspects of their cultures. In Metume the occupants would be impinged upon by people very like themselves who wanted a share in the seemingly illimitable forest hunting-grounds; in Karura the occupants would be impinged upon by a people very unlike themselves whose mode of life would mean eventually a serious diminution in the type of land where they could practice theirs. It cannot be supposed that the Kiambu Dorobo were ignorant of this. They must have known that happened in Fort Hall, and probably among them were some of those (or some of their descendants) who had been ejected from the northern districts whether forcibly or by chicanery or simply by increasing economic pressure; there was almost certainly a southward crossing of the Chania by Dorobo families before the first Kikuyu crossing started (1). The Dorobo must have

D [619 641]

1. The Keriita Dorobo told me that they had no intercourse with the Dorobo north of the Chania, the "Dorobo of Karuri" or "Nguchuri" or "Tongiik" as they call them. They explained, however, that they meant they have no intercourse now, the northern Dorobo being, to them, so Kikuyu-ised as to be Kikuyu. Formerly Dorobo from the north had crossed the Chania and settled south of it.

had, if not a first-hand knowledge, at least a tribal memory of expulsion from their northern happy hunting-grounds by hordes of aliens who, starting as small bands of friendly strangers, hunters like

7: Wayland N-5 (ca. 1926) 1931 FL6 Dorobo FL6

Social Organization.—The Tribe.—The Wanderobo are very few in number, and are divided among three sections, each of which has its own habitat as follows (according to the Chief, who was my informant on this point):— 631 618

Section.	Habitat.	Approximate Numbers.
Kakuswa	Kokonga	60
Ulugum	Nasungum	60
Lotuvim	Lotuvim	60

Each section lives in a single village of its own, similar in structure to that already described. The sections are not totemic, but they are exogamous, and descent is in the male line. The tribe has but one chief, who lives at Kokonga (north of Kamoon). Chieftainship is hereditary, and no woman is ever permitted to wield the powers of a chief. The Ulugum and the Lotuvim are each presided over by a headman (*paterfamilias*). 643 622

Birth.—When a child is born the mother is assisted by female relations. There are no official deliveries, as among the Labwor. The Wanderobo allege that there are no special ceremonies connected with birth. Should a child come feet foremost into the world he will be lucky throughout life. It is stated that the afterbirth is thrown away with the rubbish. After weaning, a child occupies his father's hut, if a boy, and her mother's if a girl. 844 858

Betrothal and Marriage.—The rules for betrothal seem to be very similar to those usual among the Labwor, except that the prospective husband goes to the girl's people direct, without representation in the first instance. The consent of the girl and of the parents on both sides is necessary, and the number of gifts is not specified as it is among the Labwor. 584

Marriage is celebrated by a feast in which the people of the two sections to which the contracting parties belong take part. There is no dance peculiar to the marriage feast. After marriage a man lives for two days and nights in the hut of his betrothed, after which she returns with him to his own village, there to occupy a new hut already built for the newly married couple by the male partner, after he has consulted the wizard with regard to the luckiest time for erecting it. 585 591 342

Burial.—All the dead are buried without special ceremony.[1] There is no special burial ground, but graves are dug "out in the bush," well away from the village. 764

Age Classes.—These appear to be quite unknown. 561

Crime and Punishment.—The chief offence is adultery. This, however, is a private affair, and is dealt with privately, for it is not a sin against the community. A woman who is guilty in respect of this is cast out by her husband, who seeks the offending man with a view to slaying him. Murder is, however, a tribal affair, for which the punishment is death. The Labwor practice in this respect is not followed. 684 682

[1] This statement was subsequently contradicted, in so far as it was stated that the wizard attends at all burials.

THE DOROBO OF THE NORTH TINDERET FOREST (KIPSIGIS)

HISTORY

193 It is clear from traditions of the Nandi, Masai, and Kikuyu, as well as of the Dorobo themselves, that the Dorobo (whatever their origin) were living in the Kenya Highlands when the Nilo-Hamites and Bantu arrived there. Since most of the Dorobo hunting bands are found within areas which under the British Administration became Native Reserves (Native Land Units), the land rights of these groups were accepted as far as mere domicile was concerned. But the western Dorobo, including the Kipkoromik, occupied land which was excluded from Native Land Units and became mostly Forest Reserve; hence their land rights were not considered.

498 About 1937 the Government began to investigate the possibility of removing these Dorobo, largely on the grounds that occupation of Forest Reserves by primitive hunters, who were considered to be Nandi Land Unit. This move was not successful, for within a few months about 3 per cent of these transferred had crept back to the edge of the North Tinderet forest, there and hence, where they were living precariously when I did field-work among them in 1938-9.

[14]

DEMOGRAPHY

161 The Kipkoromik Dorobo of the western part of the North Tinderet Forest Reserve numbered 256 when I made a census of them in 1938-39. Since part of the horde was on longer, or temporarily living in the forest, it was found necessary to classify the people according to the nature of their domicile or their lack, and this resulted in the distinction of four domicile categories:

163

A. Inside the forest, at an altitude of 6,000 ft. and over.

B. Forehand on the edge of the forest, mostly between 7,000 and 6,000 ft., and within a mile of the edge of the forest.

C. Forehand on North Reserve (Land Unit), within 10 miles of the forest in natural conditions generally similar to B, but sometimes at a slightly lower altitude.

D. Distant areas, i.e., the Kipsi and Kamasian Land Units, and Lumbwa; in the first two there is usually similar to A.

People classed under C and D were still considered to belong to the horde, and were regarded as members of their original domicile (band), and accordingly the census can be analysed (1) by districts, with domicile categories, and (2) by districts, according to sex and age:

(1)

Domicile category	Kipkoromik	Kamasian	Kipsigis	% of total	Totals
A B C D Unknown	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

(2)

Sources: Huntingford, 1936, 1942, 1951, and unpublished material. There are no other sources for the Eighteenth Dundee, and except in the case of the Kaleq (p. 10 below) there is no material for a description of any other tribe; nor are any other population figures available.

PHYSICAL ENVIRONMENT

The Dundee Land Unit, which runs from [illegible] to [illegible], consists of two great rock-cut ridges reaching an altitude of about 6,000 ft. divided by the deeply cut river Eighteenth, "valley river," the ridges sweeping some 10 miles from the western edge to the high ground round Timbuktu which rises to over 6,000 ft. The region is three-cornered, "high forest," with trees of 100 ft. and over, and thick impenetrable undergrowth, growing to a height of 8 or 9 ft. The average rainfall on a long row valley from the edge of the forest was 54.08 ins. over a period of nine years. For within the last 20 years the Dundee Land by small isolated settlements, right inside the forest. Across two gaps by two parallel tracks across the south western corner of the forest, and cultivated paths [illegible] all from there leading to the settlements. In addition to providing a permanent [illegible] the forest was [illegible] and wooden hunting ground, to [illegible] the Dundee used to hunt for [illegible] Knight and the Upper Lower Forest, and down to the Bob Valley. In 1937 they were [illegible] removed from the forest, and a number of them (of domestic occupation A and B) settled round the edge of the forest, along a narrow strip of grassland and bush [illegible] forest the upper edge of the forest which occupy the foothills [illegible] forest and the Knight Land Unit. But the inhabitants of the Government had been [illegible] consider the Dundee to the Knight Land Unit. This the Dundee did not agree to, but [illegible] settlement along the edge of the forest were not officially occupied, and they lived there without legal rights unless they became squatters of certain landowners on the lands they settled on.

MAIN FEATURES OF ECONOMY

The standard by European settlement, the Dundee had a purely hunting economy, though during the last 20 years they have been taking some interest in the [illegible] of cattle and in small-scale cultivation. In their hunting days, [illegible] only livestock were bees and dogs.

Economy

The group was divided into two seasons, monsoonal, the dry season, when they [illegible] game of all sorts with bow and arrow both in the forest and [illegible] plains, and [illegible] the wet season, when they are [illegible] in the forest. In the past they hunted buffalo and elephant, and [illegible] in the plains, trapped and dug pit and hunted. Smaller game hunted and eaten include antelope and monkey of all kinds; almost any kind of meat was eaten, except that of lizards, snakes, and

[TEXT CONTINUES ON P.5E --Analyst]

1: Huntingford E-4, 5 (1938-1939) 1953 FLA Dorobo FLA

AGRICULTURE

The Dorobo began to cultivate in a small way about 30 years ago (or even a little earlier) and at first they grew only sheuion. Though their inclination was to become cattle-owners, conditions were unfavourable to the development of cattle-breeding as a primary activity and they have been forced to make agriculture a serious business; for the methods, implements, and even the seed used in this, they have been indebted to the Nandi.

Land

Those who live in A and B domicile categories (with whom alone we are concerned here) cultivate small plots in the open land which surrounds the forest. They have no rights of tenure, except the temporary ones acquired, according to Kenya law, if they live there as squatters under the Resident Native Labourers Ordinance. Their plots, *imbaret, pl. imbaresuk*, range in size from one acre divided into four individual holdings, to half an acre divided into four holdings; in other cases, plots of a quarter to one-fifth of an acre worked by one person. All plots are fenced, and sometimes a living-hut is built inside the fenced area; occasionally it was found that elderly Dorobo were allowed by Nandi squatters to have a little piece of their cultivated land to work.

European farmers in the district, with whom the Dorobo land question was discussed, seemed not unwilling to let the Dorobo live unmolested on their land provided they gave no trouble; but the government authorities thought otherwise, and the position of a Dorobo who did not choose to become a squatter in order to live on what he considered his own land was thus precarious.

Cultivation Methods and Crops

Two main crops are grown, *sheuion, pairik*, and *maize, tyendek*. Millet has not been grown by 1940, though they bought it from the Nandi. Sweet potatoes, *rajeuuik*, are sometimes grown in very limited quantities. Implements are the hoe, *shagwal* hoe and the panga or cutlass, both obtained from the Nandi. They have also small axes, *adoliet*, and knives, *ratuet or tyendoiuet*.

The growing of crops is regulated by the dry and wet seasons, *mogiuenik*, from October to March, and *mutiet*, from April to September. The land is prepared between January and April, and planted in April or May according to the rain. Cultivation follows the Nandi method, with pearling and burning of tree land. The seed of sheuion and maize is bought from the Nandi, usually from squatters living nearby. Maize and sheuion are planted together in the same plot, though potatoes are generally grown separately. Sheuion is reaped in the Nandi manner by cutting off the heads; maize is picked by hand. Granaries of Nandi type are sometimes made, but are seldom needed, as the yields are so small that the loft of a hut can generally hold all that is not eaten on the field (as is often the case with maize). Cereals are roughly ground on slabs of granite in the Nandi manner.

Food

Food in the old days consisted entirely of meat supplemented by honey, wild vegetables, and grain bought by exchange from the Nandi. The food supply is now based on their own agricultural produce, supplemented by milk when they have any, and by certain other foods when they can be got. Meat is still obtained by trapping, though seldom by hunting; it includes the flesh of antelopes, monkeys, pigs, and leopards. Honey is got, as already described, from honey-barrels. Wild food, collected in the forest, includes fruit of the *mesemwet* (*rubus rigidus*), *kwanyet* (*solanum aculeatissimum*), and *sosyet* (*musa ensete*, wild banana), the sap of the same plant, and leaves of nettle, *sisot*.

Intoxicating drink is of two kinds: the Dorobo honey-wine, *kipkwonik or kwonik ap lo*, made from honey, and fermented with the long seed-pods of the "*mosop*"

Lithuaingford R-4, 5 (1938-1939) 1953 FLA Dorobo FLA

ears," rubbed (thereby polishing) and worked, shoulder belt, made, though seldom, in the Masai way. They also drink a mixture of honey and water called *lukumek*.

Trade and Exchange

The inability of the Dorobo to produce many of the things they need has led to the development of a system of exchange with the Masai, who till recently were almost the only people with whom they had dealings. Relations between Dorobo and Masai have been, on the whole, friendly, maintaining their complete independence, the Dorobo have not only obtained goods by trade, but have acquired and assimilated much Masai culture, including language, clan names, agriculture, and many material features like dress and ornaments. Their relations are in general friendly, for the Masai like honey and furs which they get most easily from the Dorobo, and there has been an increasing number of marriages of Dorobo men with Masai women, as well as of Dorobo women with Masai men. But neither side takes liberties with the other: the Dorobo fear the physical superiority of the Masai, and the Masai fear the close-to-nature life of the Dorobo, as well as a certain mystical force or ruse-wisdom which they attribute to them.

From the Masai the Dorobo get objects of iron, pottery, beads, tobacco, cattle (see below, p. 91), and the word of contact for planting. The Masai get skins and honey from the Dorobo. There are no special places for trade, but the Dorobo go to the nearest manyatta or putter or other persons who can supply them, and make their bargains. This means a journey into the Masai Land Unit, but other things can be got from the nearest friendly Masai. The exchange values in 1938 were:

- 1 arm for 1 basket of honey;
- 1 bundle of tobacco (about) } for 1 basket of honey;
- 1 arrowhead for 1 gourd full of honey;
- 1 bundle of trade beads for a gourd full of honey;
- 1 goat for a day's weeding in the owner's garden;
- large earthenware pot for 1 large pregnant ewe, also (usually both ewes);
- small earthenware pot for 1 small pregnant ewe, also (usually ewes);
- 3 bundles of wood for planting for 1 acre Dorobo.

The bag, *mutchot*, is made of skin and measures about 6 ins. by 7 ins.; the gourd is about 10 ins. long; the large pot is about 20 ins. high, the small pot about 10 ins. high; and the basket is about 6 ins. deep and 6 ins. wide.

Cattle

The Dorobo interest in cattle is probably due to their long contact with the Masai, but though they desire cattle, they have not the land for them. The Ilkiu have specialized about cattle (*ilmotiok*), and by 1938 had worked out definite rules which they had scarcely had opportunities of testing. When they were ordered from the forest in 1937 they were already combined with about 2,000 head of cattle, but no census of other people's stock appears to have been made in preparation for this event, and most of these cattle did not belong to real Dorobo. In 1938-9 the numbers of stock which I counted during the completion of my census were:

	Cattle	Goats	Sheep
Ilkiu of Kiptunich ...	80	60	4
Ilkiu of Sabatia ...	60	40	6
Ilkiu of Kaigat ...	10	6	6
	90	86	7

Methods of cattle-management are based on those of the Masai.

1:Huntingford E-4,5 (1938-1939) 1953 FLÁ Dorobo FLÁ

that cow-dung be used for both the *hondo* and *koroiet*, and if there are no cattle in the bridegroom's settlement it must be procured from somewhere else. Marriage is patrilocal.

Marriage with Nandi

Eighteen marriages were recorded in genealogies between Dorobo and Nandi or members of the Nandi group:

Dorobo and Nandi women: 6	Dorobo and Nandi men: 10
Dorobo and Kipsigis women: 1	Dorobo and Kipsigis men: 1
Dorobo and Terik women: 1	

Marriage of Dorobo women to outsiders seems to be due to the poverty of the Dorobo, which in these cases would have meant that the women would have remained unmarried; such marriages also mean the accession of stock to the Dorobo.

Polygyny

Although there is no objection to polygyny, Dorobo seldom have the means of acquiring more than one wife at a time, though several cases occurred of re-marriage after a wife's death or desertion. In one genealogy a woman had no less than four successive husbands, none of them her husband's brother, and her only issue was one daughter.

Re-marriage of Widows

Unlike the Nandi, the Dorobo recognize the re-marriage of widows in the normal manner on payment of bridewealth to their fathers, brothers, or other representatives; it is, however, unusual. Widows normally live with their husband's brothers, return to their parents, or else live alone.

Divorce

Divorce is rare, and is of one kind only—permanent. The husband can claim the return of the bridewealth. But a wife who has borne a child cannot be divorced for any cause whatsoever.

Birth

Intercourse between husband and wife stops at the fourth or fifth month of pregnancy, and is not resumed till the child is about six months old. Birth takes place in the husband's hut, the husband going to live elsewhere nearby. The wife is attended by a midwife, *ogokiyoriot*, and her mother is present if possible. She stays in the hut for six or seven days after the birth, and the child's body must be kept covered for several weeks, even the father being allowed to see only its face. The mother must be purified by her husband, who kills a goat (which he must acquire somehow if he has none of his own) and rubs the fat and undigested grass (*ariet*) from the stomach on her face, breasts, and belly. Children are weaned at the age of about a year. Twins are not liked, and the mother's ritual uncleanness caused by their birth must be removed by the killing of a goat which is eaten by the mother and her women friends. The Dorobo say that if a man has set a trap at the time when his wife bears twins, the trap will never again catch an animal.

Children receive their first name, the *ogik*-name, soon after birth; as among the Nandi, this name is not used, but links the child with a protecting spirit. The second or principal name is given before the child can walk, at the time when it is first given solid food, and is called "porridge name" in imitation of the Nandi custom. Children may also be given nicknames which often refer to some physical peculiarity. After circumcision, boys become *kwak*, men of, eldest sons taking their

I: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

patronymic from their father's porridge name. Younger sons generally take their patronymic from the father's nickname, or else from some circumstance in their own lives.

Circumcision

Boys are circumcised at the same intervals as the Nandi, and the Dorobo keep watch for the opening of the Nandi circumcision. Occasionally boys are circumcised in Nandi with other Nandi boys, but more often in the forest, as in the circumcision of 1926–30. Sometimes a Dorobo acts as operator for the Nandi. The whole procedure of circumcision (*tum*) is identical with that of the Nandi. Girls undergo the operation of clitoridectomy whenever there are enough ready to be done, and not at any stated intervals.

Age-sets

The Dorobo have borrowed the whole age-set system from the Nandi, and it works exactly as among the Nandi, with the same set-names and 15-year intervals synchronized with those of the Nandi. The reader may therefore be referred to the account of the Nandi system, p. 31. A slight difference in the sub-divisions called *mat* may be noted: the Dorobo have only three, called *Cepinish*, the senior; *Taparik*[1] *or Kipalkonyek*, the middle; and *Ruwakenik* or *Kiptoumik*, the junior. A more significant difference is that the sets have no military or political force, for the Dorobo are not fighters, and the practical effect of the system is to introduce further behaviour patterns, as well as to modify the traditional rules of hospitality; for while no Dorobo would refuse to shelter one of his own horde, the degree of hospitality varies according to the age-set situation.

Political Structure

Land Divisions

The Dorobo live mainly in clan settlements divided between a number of districts or parishes (*koruseek*, sing. *koret*). Till about 1930 these settlements were in small clearings inside the forest; after 1937 they were spread round the outer edge of the forest.

The Clan

The clan, *oret*, is an exogamous patrilineal group with a name and a totem, *kind ap oret*, the animal of the clan. The existence of eight clans is attested by genealogies and the census; three others are reputed to exist or to have existed, though none occurred in my records; they were, however, mentioned to me in 1927 as well as in 1938–9. Each of these clans has one totem, except Moi which has three, one of which it shares with another clan; it is not the totem which is important, but the group itself, the clan being a social group, not a group of people mystically related through their totem. The emphasis is therefore on the clan name and not on the animal, though marriage, nevertheless, is forbidden within the clan. An exception to this rule is found in the case of Moi, where intermarriage is allowed between people of different totems, an anomalous feature due possibly to the influence of the Nandi, among whom Moi marriages are common between people of different totems. (See p. 27.) There seem to be no restrictions either on marriage between clans (as among the Nandi), or on killing or eating the clan animal, which suggests that originally the Dorobo clans were non-totemic, and that their present totemism is a feature borrowed from the Nandi along with the clan names, which except for one of the reputed clans are all Nandi.

[1] The Nandi occasionally use *taparik* for this *mat*; it is a Nandi word meaning "the tarsus."

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

find lying about on the farms. The only weapon is the bow, *kwyagda*, which the Dorobo make themselves from the *kwiot* tree (*lovilea* sp.); it is about 5 ft. long, and the bowstring, *inet*, is made from gut of the giant pig, *tumda*. Arrow-shafts are made from the *koromandet* and *masaila* trees, or from bamboo, *sosoiyat*; arrow-heads are bought from the Nandi, and are of the Nandi patterns. Arrows are carried in quivers made of hide. Arrow poison is made from the *keñot* bush (*acocanthera Schimperi*).

Baskets

Making baskets, *kerepet*, is a common occupation of Dorobo women. They are made from fibre of the *phœnix reclinata* palm, *sosiet*, and sewn with bast made from a plant called *taparuriet*. The technique is a spiral foundation with a flat then gradually ascending coil, of the simple over-sewn type and bee-skep variety, the stitches being spaced out and not close together.

Miscellaneous

Salt used to be made from the ashes of the plant *tepenguat* (*emilia integrifolia*). Red and white earth is found near Timboroa on the east of the Dorobo country, and men go in parties of four or five to dig it, carrying home the earth in large leather bags, mainly in order to sell it to the Nandi who, in 1930, gave them 2s. a bag. Red earth, *orokoit*, is mixed with fat or simsim oil for rubbing on the hair; white earth, *euoriot*, has magico-religious uses. For carrying a number of small objects a carrying-net called *lekuelet* is used; it is made of a pair of oval rims 3 ft. 6 ins. long with pieces of liana stretched across them, somewhat resembling a pair of handleless tennis rackets. These are sometimes used by the Nandi.

Ritual and Beliefs

Religion

Asista, the sun, is recognized as a being that can supply or withhold the needs of people: *Asis, ipūyec panyek, "Asis,* fill us with meat," is a common prayer. Some say that *Arasa* the moon is his sister, others that she is his mother. Besides *Asis*, it is believed that there is a being called *Ilet*, the thunder, who produces rain, and "the rainbow is his arm which draws up water for him." The Dorobo also believe in spirits, good and bad, both of which are called *ceuowiñit*, a word which includes the *oiik* (ancestral spirits) and *masambaasik* (evil spirits) of the Nandi. The ancestral spirits have the same significance and functions as those of the Nandi, and though they punish the living for doing evil, they are otherwise friendly and visit the living, travelling in the bodies of snakes, both to see their people and to get food in the form of *lokomek* (honey and water); spirit-snakes should not be killed.

Divination

The Dorobo appear to have no diviners of their own, and when they have recourse to divination, as in cases of illness or witchcraft, they go to Nandi diviners of the type called *sakeyuat*, by whom they are charged a small fee. The people called *orkoiyot* (pl. *orkoik*) among the Dorobo are no more than leeches or physicians who prepare healing medicines from trees and plants. Although the Dorobo have a reputation among other tribes as powerful rain-makers, they themselves say that they have no rain-makers, which is probably true.

Death and Burial

Very old men and women are buried in narrow holes about 5 ft. deep in which the bodies are laid full length wearing their clothes; one year after an old man's death his children plant a branch of *mukuperet* (*dracæna* sp.) on his grave and let it grow. Other people are laid out for the hyenas, both sexes on the right side with

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

THE DOROBO OF KIDOQ (KERIITA)

History

The group described by Lambert as living at Keriita on top of the escarpment, on the edge of the Forest Reserve 10 miles north of Limuru, is that classed as Kidoq in *Anthropos* 1951.[1] It was seen by Thomson in 1883 at the place known to the Swahili as Mianzini (" place of bamboos ") where, he says, a Dorobo village was established for selling food bought from the Kikuyu to the Masai and the traders.[2] This group is part of the Kikuyu Dorobo who occupied the land before the Kikuyu came. The process by which the Dorobo had completely lost their land by 1887 when Teleki passed through is summed up by the Kenya Land Commission as one " partly of alliance and partnership and partly of adoption and absorption, partly of payment, and largely of force and chicanery."[3]

Organization

There are no chiefs, control being in the hands of a council of elders, with a leading elder called *kiruokindet*, as among the Kipkurerek. Marriage is patrilocal, and descent patrilineal. Polygyny is permitted. Boys are circumcised, and girls are subjected to clitoridectomy. There appears to be some sort of age-set system, but Lambert's statement is not very clear on this point.

There are said to be nine clans, with Nandi-looking names beginning with the prefix *kap-* (which does not imply territoriality, but simply means " group of "). These clans are sometimes referred to by Masai clan names, or even by Kikuyu clan names. The word for clan is *ol-gilatait*, derived from the Masai *oil-gilata*, " clan," and not, as Lambert suggests, from *ol-gelata*, which means not " plain," but " side path."

Religion

A so-called supreme being called *Tururit*[4] is recognized; and the statement describing ancestral spirits as " active members " of a lineage implies the existence of an ancestor cult.

FL6 Dorobo FL6

descendants of the hardier members of the Masai tribe, who were forced to adopt a life of hunting when supplies were short, as on the occasions when rinderpest swept through the Masai herds, leaving famine in its wake.

The changes from the original stock wrought by environment alone in many Western races are more marked than the differences to be observed between the *Balaŋga* and their parent tribe. It may be said, in the case of the *Balaŋga*, that environment would seem to have done its work with remarkable swiftness if any outward difference can be detected between the *Balaŋga* and the Masai to-day, but is not Africa a country of mushroom growths?

Il-Kinyalaŋgat

The *Kinyalaŋgat* Dorobo would seem to be to the Kwavi or Lumbwa [1] Masai what the *Balaŋga* is to the Masai proper. The Lumbwa, with the *Kinyalaŋgat*, live on the southern border of the Tanganyika Masai Reserve and in various small communities throughout the Dodoma, Kilosa and Handeni Districts. There are, also, Lumbwa in Usambara, east of the Pangani river. The Lumbwa state that the *Kinyalaŋgat* Dorobo originated in or near Morogoro, but as many *Kinyalaŋgat* are found wherever the Lumbwa live, I do not think this assertion can be relied on except insomuch as it refers to the *Kinyalaŋgat* who sprang from that section of the Lumbwa which itself "originated" in Morogoro.

I have listened to the speech of the *Kinyalaŋgat* (who have no language but Masai),[2] and in it can be detected the typical characteristics which distinguish the pronunciation of the Lumbwa from that of the Masai proper. The *Kinyalaŋgat* call themselves Lumbwa,[3] live with the Lumbwa and move when they move. They have, as a general rule, small herds of

[1] *'l-Oikop*. The Lumbwa and the Masai proper are not friendly. Any account of their differences would be too lengthy to insert here, as the original cause of discord is of some antiquity. There were some small skirmishes between the Lumbwa and the Masai of adjoining areas during the late war. The Lumbwa are said to have assisted the Germans on many occasions to locate hidden Masai cattle.

[2] See note 3, p. 131.

[3] Kwavi, rather, as the name "Lumbwa" is not in favour among the Kwavi, being a term of contempt applied to those who, pastoralists born, have adopted agricultural habits.

2: Maguire G-5 (ca. 1926) 1927-28
FL6 Dorobo FL6

clans or families,[1] after the manner of the Masai, but there is no difference between their several bearers at the present time. *Mósiro* and *Médiak* Dorobo live and hunt together all over the southern half of the Masai Reserve to-day. They are fairly numerous[2] (for Dorobo), and in many cases are almost indistinguishable, outwardly, from the Masai.

There, however, the similarity ends, as these Dorobo (referred to, henceforward, as *Mósiro* collectively) are the first with whom we have had to deal possessing a language of their own. Reference to the comparative lists of numbers and the list of names of common objects given elsewhere will show the wide difference there is between the language spoken by these people and that of the Masai.

According to Lekite, who was the only man in recent years holding even a semblance of authority among these people, the "home" of the *Mósiro* is at Talamai.[3] He, in common with many Masai and Dorobo elders, admits that the Dorobo originally came from a country designated vaguely as *Juu*,[4] but no living *Mósiroi* can remember the time when the majority of his people did not live at or near to Talamai.

The *Mósiro* are to be found, occasionally, living with the Masai in the kraals of the latter. They are sometimes (particularly when game and honey are scarce) to be found in small rude kraals of their own, close to the Masai. In these kraals will sometimes be seen a few goats or sheep and almost always fowls.[5] More often, however, the *Mósiro* live in tiny communities (sometimes a man, his wife and their children alone) in the depths of the bush. There they exist, houseless save for a rude shelter of skins within a primitive thorn stockade, by hunting and gathering roots and honey. When supplies run short they beg from the Masai. When a large animal is shot or dies from natural causes the *Mósiro* in the vicinity seem to become aware of the event in the most uncanny way. They will appear unexpectedly, make their camp, and remain until the carcass has been completely denuded of flesh. The meat is not eaten quite raw, but is subjected to a hasty charring, the

[1] More probably the former.
[2] Possibly 1000 souls, including the women and children.
[3] See note 3, p. 127. [4] *Abese*: in this case meaning the north.
[5] The Masai regard the eating of fowls or eggs as unclean.

FL6 Dorobo FL6

duration of which is in inverse ratio to its toothsomeness and the severity of the cook's hunger.

The Masai are good to the *Mósiro* and seldom refuse them a share in whatever food is obtainable—be it milk, meat or grain. The *Mósiro* expect this; in fact, many of them seem to look on free rations from the Masai as their right. The reason for this is stated to be that the *Mósiro* helped the Masai on many occasions in the past (particularly during the great rinderpest epidemic in the early 'nineties) by hunting for them when starvation had overcome the ingrained antipathy of the Masai to venison. In addition, before the coming of European rule many elephants were killed by the *Mósiro* at the request of the Masai. Lekite told me of one drive in which he and about thirty *Mósiro* were engaged during which sixteen elephants were killed.

When a *Mósiroi* obtained cattle he used, unless restrained by his more prudent friends, to slaughter and eat them in the shortest possible time. Up to quite recently, a beast was valued by the *Mósiroi* only for the amount of meat it was capable of providing, but nowadays a few of them are beginning to herd cattle in a small way and some even live as Masai. It is interesting to note that many of the older generation, particularly the women, profess an aversion to having cattle in the vicinity of their own dwelling- or sleeping-places.

A few *Mósiro* till the land, but in a half-hearted way. They are extremely improvident and prefer to risk almost inevitable famine rather than to exert themselves in cultivating grain. They never expect their women to work in such small plantations as they may have. A *Mósiroi* will cheerfully tramp the bush for a week or more, picking up a most precarious existence on tubers and roots, and will consider himself well repaid if he returns with a few pounds of honey. He will be horrified at the idea of putting in one hour's work each day on a mealie patch for the same length of time.

In the bush, very little in the way of food comes amiss to the *Mósiroi*. Failing meat, his favourite food is honey, but this is regarded as a delicacy and would be eaten wholesale only under the most exceptional circumstances. If meat and honey are unobtainable, the *Mósiroi* has at his command an extensive

2: Maguire G-5 (ca. 1926) 1927-28
FL6 Dorobo FL6

or whether they are as closely connected as the *Mósiro*, *Médiak* and *Kisankasa*, I am unable to say, as I have had little opportunity of meeting them or of making inquiries about them.

The *Kitokorda* and *Kisangara* live in the country of the Wanguu and Wazigua,[1] and are stated to have lived always with or on the outskirts of these Bantu tribes. On the formation of the Tanganyika Masai Reserve in 1923, the Wanguu and Wazigua inhabiting the Talamai–Gitu–Mtambalo area were moved eastwards. With them went the *Kitokorda* and *Kisangara*. Rumour says that many of them would have preferred to remain in Masailand where honey is plentiful, but their Bantu masters were adamant and insisted on the Dorobo following them. The *Kitokorda* and *Kisangara*, dependent for the necessities of life on the Wanguu and Wazigua (particularly in a bad season when honey and game are scarce) went perforce.

The *Kitokorda* and *Kisangara* spend a considerable amount of time in the bush, honey-gathering. They are entirely ignorant of the Masai language, as a general rule, but know Kinguu and Kizigua and often both. They are stated to have a primitive tongue of their own, but on this point I am unable to speak definitely. It has also been said that some of them speak the *Mósiro* language, and although this may be the case, I am inclined to think that the presence of a few *Mósiro*, who live in scattered settlements just on the Handeni–Masai border and who cultivate small gardens of maize and millet, may have given rise to this belief.

The *Kitokorda* and *Kisangara* Dorobo may be impoverished Wanguu and Wazigua, but I think it more likely that they are Nilotic [2] in origin. There would seem to be little reason for an agriculturist to turn into a bushman.[3] The few *Kitokorda* and *Kisangara* I have seen differ entirely in general physical characteristics from their Bantu neighbours (who do not admit consanguinity with them), and their speaking only Kinguu or

[1] They are the names current among the Masai and the Dorobo in Masailand, but it may be that different names are used in the Handeni country.

[2] To the west of Handeni Station in the Pangani District.

[3] Perhaps it would be better to say Hamitic.

[4] [But is not this the case with the Bakalahari in South Africa, stated on good authority to be impoverished Bechuana?—A. W.]

2: Maguire G-5 (ca. 1926) 1927-28
FL6 Dorobo FL6

difficult matter to explain how the *Mósiro* of Talamai penetrated so far south—assuming them to have been Nandi originally. In addition to the other points of resemblance between the *Mósiro* and the Nandi that may have been noted throughout this paper, it may be of interest to state that the *Mósiro* possess and use a four-stringed lyre[1] of much the same shape and construction as that illustrated on p. 39 of Sir Claud Hollis's work on the Nandi. The *Mósiro* are skilful performers on this lyre, which is quite foreign to the Masai. The other Nandi musical instruments (with the exception of the war-horn) are not known to the *Mósiro*, as far as I have been able to discover.

I have said elsewhere that the bulk of the Kenya Dorobo would seem (according to the statements made by the Dorobo from whom the present information has been derived) to be *Aramanik* and *Balaŋga*. This was with reference to the Dorobo living among the Kenya Masai and was not intended to include such Dorobo as there may be among the Nandi to-day.

On one occasion I was lured to walk over twenty miles by the promise of being shown some "rock-paintings" alleged to have been made by the *Mósiro* or other Dorobo and to be extremely ancient. My informant assured me that no man could remember the time when they had been done and that the cave in which they were was regarded with great reverence throughout the countryside. I went, only to discover that the place was a disused *Ol-pul* and that the paintings (most of them were of Masai shields, but some were of a character bordering on the lascivious) had obviously been made by Dorobo or Masai Muran within the last five years or so.[2] Some were even fresher. Charcoal, red ochre, lime and wood-ash were the mediums used.

To the casual observer (particularly one new to Africa) the Dorobo, Masai, Kwavi, Logo and even the Arusha warrior when in panoply might all seen to belong to the same tribe. To the habituated eye there would be many differences readily

[1] *Kipokandet* (Nandi); *Hombi* (*Mósiro*).

[2] When the Masai Muran go into *Ol-pul*, they are often accompanied by one or more Dorobo, generally *Mósiro*. The duties of the latter are to plait the Masai warriors' hair, cook and make themselves generally useful. Their reward is as much meat as they can consume.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

9000 feet, watered by one main river, the Kipkurere, with its tributaries, and other streams which rise in the forest and flow down into Nandi.

The country which the Dorobo claim as their own is part of the North Tindiret Forest Reserve. Most of it is dense forest with tall trees and thick undergrowth; and till recently most of the Dorobo lived right inside it. Their settlements were isolated, though often not very far removed spatially from one another; but they were separated by a solid wall of trees, of which a few hundred yards form a more effective barrier than a mile of open country. Even in the past, however, the Dorobo did not live exclusively inside the forest, and on the southern side overlooking the Meteitei valley in particular, where the Nandi were less frequent, they often lived in glades near the edge of the forest. Thus the chief settlement of the district called Sosoiyo was situated between the forest proper and the belt of flat-topped acacia thorn trees which surrounds it. Those who preferred to live in the open, however, still kept close to the forest, and a strip of thorn and scrub kept them well enough concealed from the outside world. A man who lived thus, though still close to his trees, might escape some of the damp of the forest, and was just as well placed for hunting and trapping as those who lived inside. In the old days, when there were only Nandi about them, people could live in or out of the forest as they pleased, and could alternate between forest and glade according to season or preference. Nowadays they are not allowed by the Government to live in the forest, and those who survive and still cling to their own land, living on the surrounding farms as labourers or by charity of the farmers, are all settled as close to the boundary of the forest reserve as they can get, and seldom are they more than 500 yards from it. This boundary is marked by a broad strip from which the bushes and grass are cut, and it acts both as a line of demarcation and as a firebreak.

In the old days, Dorobo used to range far from their permanent homes to hunt, coming down to the plains which in those days were swarming with game of all sorts. The Dorobo of the Eastern Mau, Mount Kenya, and Saleta used to descend to the floor of the Rift Valley to hunt, for the only inhabitants were scattered Masae whom it was easy to avoid; and the Kipkurerek wandered at will over the Uasin Gishu plateau, also thinly inhabited by Masae, and latterly, during the second half of the 19th century, by still less frequent Nandi herdsmen. Even thirty years ago the Plateau carried a good deal of game, and before the coming of the European it was a hunter's paradise.

To-day, the Kipkurerek Dorobo are the survivors of a once flourishing and autonomous horde which has lost both its land and the right to its own identity. It was decided by the Government, for several reasons, that the Dorobo should be removed from the forest and settled in Nandi. They were transferred in 1937; but the transaction was not a success, for both Dorobo and Nandi resented the movement, and in a short time the Dorobo were back round the forest, where they were living up to 1940 without any legal right unless as squatters or labourers.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

In 1938 and 1939 I made a census of the three Dorobo districts which were still inhabited, which showed that out of a total of 226 surviving members of the Kipkurerek horde, 67 % were living in the forest or on farms close to it. The remaining 33 % were settled in groups in certain areas of Nandi (where they had been for many years, having gone there by private arrangement with the Nandi), and in Uasin Gishu, with a few in the Kamasya and Keyo Reserves. Most of these 33 % maintained fairly constant contact with the forest people, and all were recognized as members of one or other of the three Dorobo districts. Under these conditions it is surprizing that they have retained so much of their traditional organization; but the disruption of their life accounts for some of the difficulties experienced in studying them, and for some of the gaps in the record. Nevertheless it was not too late in 1938 to gain a record which, however imperfect, does substantially increase our knowledge of the Dorobo.

The dispersal of the Dorobo made it necessary to classify the people according to their domiciles, and this resulted in a grouping of the horde in four "domicile categories":

A. Inside the forest, at an altitude of 8000 ft. and over.
B. Farmland on the edge of the forest, mostly over 7500 ft. and within a mile of the trees.
C. Farmland or Nandi Reserve within 10 miles of the forest, with natural conditions generally similar to B, but a little lower.
D. Keyo, Kamasya, and Laikipya, where conditions in places are similar to B.

An analysis of the census and domicile categories will be found in the Appendix p. 8.

Since in this paper we can deal only with those parts of the social organization that concern the family and clan, a short summary of other aspects of Dorobo life may be helpful. The social and political life of the Dorobo is based on the clan, which has its own council to deal with internal affairs, and even to-day people live in clan groups. This is contrast to the Nandi, where the clans are dispersed and play but a small part in outward political life. The forest is divided into nine districts or parishes (*koret* plur. *koroosek*) of which only three are now inhabited. These districts, from north to south, are: 1. Cepurur[1]; 2. Kelpui; 3. Sirua; 4. Kipkorom; 5. Sosoiyo; 6. Meteitei; 7. Mokopic; 8. Puret; 9. Sangalo. In 1938-40 only Kelpui, Kipkorom, and Sosoiyo were inhabited; the latter had been amalgamated with Meteitei. Each district had a council, which dealt with matters appertaining to the district as a whole irrespective of clans. The Dorobo never acquired the council habit of the Nandi; district councils were held only when there was something important to talk about; and the clan council was both a more frequent and less formal affair than the district council.

There is no chief of the horde, nor an elected chief or leader in either clan or district council, the leading man (*kiruokindet* — the councillor)

[1] *C* ch in English 'church', and is used with this value throughout.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

though in Nandi such a marriage is forbidden. This statement is based on the evidence of genealogies, which show as well that (1) a man may marry into the clan of his mother or his mother's mother, (2) a man who marries two wives may take both from the same clan, and (3) two brothers may marry women of the same clan.

V. Marriage

1. Circumcision

Circumcision is a preliminary to marriage; but since the whole process is almost identical with that of the Nandi, it is not necessary to describe it, and the reader may be referred to HOLLIS's description for the details [14]. It is probable that the practice was borrowed from the Nandi along with the age-set system with which it is closely connected. The fact that the Nandi sometimes use a Dorobo to perform the operation on their boys, and that the Masae in the past normally did so might suggest that the Dorobo practised it before they came in contact with the Masae or Nandi. But in view of the close resemblance of the Dorobo to the Nandi procedure, and the use of Nandi terms, there seems to be nothing particularly significant in the employment of Dorobo as operators; and since the operation of clitoridectomy which is performed on the girls is undoubtedly of Hamitic origin, we may be justified in assuming that the Dorobo have borrowed the whole business from the Nandi [15].

Dorobo boys are often circumcised in Nandi along with Nandi boys by an operator who may be either Nandi or Dorobo. Arap Mining was circumcised at Cepkunyuk together with another Dorobo named Arap Eitusi and eight Nandi, the operator being a Dorobo. The periods of circumcision correspond with those of the Nandi, for the Dorobo have not worked out a method of time-reckoning of their own, but contented themselves with watching the doings of the Nandi. When they saw that they were preparing for circumcision, they collected their boys between the ages, roughly, of 15 to 18 years, and made the necessary arrangements. Although boys are sometimes circumcised in the Nandi country, the Dorobo prefer to do it on their own, and the circumcision of 1929-1930 was done in the forest. No Nandi initiates take part in a forest circumcision, but Nandi assemble as spectators, both to see the fun and to get some free honey, a good deal of which has been collected beforehand in readiness for the circumcision. As well as collecting honey, the initiates' parents do a round of visits to both Dorobo and Nandi friends in order to beg or buy food for their sons to live on after the operation.

In both sexes the effect of the circumcision (*kwet*) is that it makes

[14] See his book „The Nandi, their language and folk lore", pp. 59-69.

[15] This use of outsiders to circumcise is perhaps analogous to the employment by the Somali of Yibir women to perform clitoridectomy on their girls, the Yibir being one of the non-Somali outcast groups.

The Political Organization of the Dorobo

By G. W. B. Huntingford, B. Sc.

Contents:

1. The Effect of Contact with the Nandi
2. The Clan and its Place in Public Life
3. The Kiret
4. Crime and its Results
5. Religion and Magic
   a) Belief and Practice
   b) Analysis of Beliefs

1. The Effect of Contact with the Nandi

Although the wording of a Dorobo text suggests that the Dorobo[1] were originally in contact with the Masai before the Nandi appeared on the scene[2], nevertheless before 1925 the effective outside contacts of the Dorobo were mainly with the Nandi; and their political system has acquired so much superficial resemblance to that of the Nandi that any investigation of the Dorobo system must begin with a short survey of the contact between the two peoples. Since the establishment of relations between the Dorobo and the Nandi (in particular those of SE Nandi and their blacksmiths), there has been, with certain reservations, a state of friendliness between the two peoples. The Nandi have always tolerated the Dorobo as long as they live outside Nandi, and have always been half afraid of them as rainmakers and magicians; the Dorobo in turn fear the Nandi because they are a group much larger and stronger than they themselves are.

The two groups thus brought into contact are of very unequal size (the population of the Nandi is close on 50 000), and of unequal advancement

[1] For the first part of this study, see Anthropos 46, 1951, pp. 1-48.

[2] When describing circumcision during the course of telling me his life-story, Arap Mining used these words: *Ngot kejwa kun Obiot kwoy kondoiwe Kimalish, kejwa ab Ephrayim*, by which I understand him to mean that Dorobo acted as circumcisers for the Uasin Gishu Masai before the Nandi had come. The passage is a little obscure, for the verb *kejwa* is plural, and the apparent subject *Obiot* singular. When I wrote it down, I did not realize its significance.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

to marry her, and should the affair become known (as such things usually do), the clan council can prevent, if necessary by force, any attempt of the man to do so. Although such intercourse is not technically an offence, it is nevertheless regarded with great disapproval, and may result in the man's temporary ostracism, for as an elder told me, *ingorwiyo ol ok cept ap tilial, calaubin ne ne kol, anee meeome ahaliaich apt meeome caawilik*, "if a man lies with a girl of his *tilial* (by which he must clan), it is a very great sin, for not only do the old men disapprove, but the spirits also disapprove". If, however, the act should result in a baby, then it becomes incest, and a very serious offence, treated as if it were intercourse with a relative in the *tilial*, and summary punishment is inflicted on both offenders, for the crime of incest offends the *caawilik*, the spirits of the dead, and if the guilty are not punished there is a danger that the spirits in their wrath may hurt indiscriminately not only them but innocent people as well. So in such cases, when it is known that a girl has had a baby, the man is beaten by the men and women of his own clan, his hut is burned, his honey-barrels are destroyed, and he must provide a goat to be eaten by the male and female relatives of the girl. She herself is also beaten by women of her clan. This punishment is inflicted after due discussion at the clan council, and is therefore not just a spontaneous expression of group-resentment, but the deliberate action of public authority.

Much of what has just been written applies to the past, that is, to the time before the Government attempted to establish the Dorobo in Nandi in 1937; and my census in 1939 revealed the fact that there were comparatively few old men left, many less, in fact, than there were in 1927. The clan groupings therefore do not show as many old men as would have appeared normally, and most of the existing seniors of to-day are elder members of the Nyongi age-set, whose maximum age in 1939 was fifty. Reminder of the composition of a clan settlement in that year is given by the following particulars from my census:

At Kipaka and Kipkoros, 2 miles apart; all Moi clan.	1 Kajelar. 1 married Nyongi, wife and children. 1 married Maina, wife and children. 5 unmarried Maina. 1 Jua. 3 children and 1 girl.
At Kapro; Moi and Kaparkol clans	1 Kimyiko. 3 married Nyongi, wives and children. 3 unmarried Nyongi. 6 unmarried Maina.
At Ndarross and Ngaingkong, 3 miles apart; all Kipaka.	1 married Nyongi, wife absent. 4 unmarried Maina. 3 Jua. 3 wives and 3 girls living with them. 1 married Nyongi, wife and children. 1 married Maina, wife and children. 1 unmarried Nyongi.

9:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

These of course are relatively small settlements; but there were more people living round and inside the forest in 1927, and a number of them has been scattered owing to the effect of the 1937 move. The manner in which clan settlements are distributed may be seen from the map.

8. The Karet

The methods by which primitive people govern themselves and maintain law and order can usually be studied in operation, even if they are not immediately obvious to the casual visitor. The observation of concrete facts and events can elucidate even the uncentralized organizations that are so difficult to understand, and so common in East Africa, where there may often be no chiefs, and no visible authority but groups of old men. Some of the more important peoples of Kenya, like the Masai, Nandi, and Akamba had systems of this type, and the Dorobo also were similarly organized. But in the case of the Dorobo the difficulties in the way of investigation were greatly increased as a result of the move of 1937, an action which it was hoped would place the Dorobo in more favourable conditions and increase their chances not only of cultural advancement, but of ultimate survival; and in 1938 I was told that no *karet* council had been held since before 1937. I was therefore unable to observe this aspect of Dorobo life, and the account of their district organization that follows is based on their own statements. Information was obtained from a number of senior Dorobo, and it was possible to check their statements to a certain extent, so that taken in conjunction with the information I collected in 1927 the somewhat slight and unavoidably incomplete picture is, I think, correct as far as it goes.

The Dorobo are divided into three age-grades: *ajelilisiê*, elders; *murenik*, circumcised men; and *asiik*, boys. The *ajelilisiê* and *murenik* are those who take part in public affairs; *asiik* have no voice in them. Women, too, though they have the grades of *ongishkisiê*, old women; *yeuvik*, married women; and *sipik*, girls; have no official share in public affairs, however much influence they may have at home over their husbands and relations. Neither they nor boys may attend council meetings, unless they happen to be *major* participants in some affair, as for instance, where a widow accuses someone of an offence against her.

The Dorobo divide their forest country into a number of districts called *kwet*, pl. *kwenuik*. The names of nine districts are recorded, and these are, from north to south:

1. Cepurur, on the northern edge of the forest.
2. Kelpai: the NW corner of the forest.
3. Sirua: south of Kelpai.
4. Kipkenura: from Sirua to the SW corner of the forest.
5. Sondyo: east of Kipkenura.
6. Motoloi: between the forest and the Motoloi river.
7. Molompit: east of Kipkenura.
8. Pureet: east of Sirua.
9. Sengalo: east of Sirua.

5:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

or goat where the Dorobo are concerned); *mumit ap tongina*, lit. the fat of cow's udder, or butter, i.e. solidified whole milk; honey-wine; and white earth.

Illness is generally believed to be due to the anger of an ancestral spirit, to the spite of an evil spirit, or to witchcraft. Sometimes, on the other hand, it is thought to have a natural cause. When a person is taken ill the relatives, unless they can be sure that the illness has a natural cause, go to a Nandi diviner of the kind called *sokoyot*. Diviners used to charge the Dorobo a fee of 2/— if the cause was witchcraft, and 1/— if it was due to a spirit. But if a man went down to the lower country where there is malaria, and after his return was taken with ague and fever, they knew it was a natural illness, *kwoito par*, and did not consult a diviner.

If the cause was found by the diviner to be witchcraft, the witch was indicated according to the methods employed by Nandi diviners, and the sick man's relatives went to the witch's hut, pulled him or her outside, spat in the face and said: "Come and sit bo-and-so that he may recover". The sick person must then be oiled on the face, chest and belly with the fat of a she-goat or with *mumit ap tongina*. If the witch refused, the practice was, especially if it was a woman, to tie her to a tree by a thong the other end of which was drawn tightly round the forehead, and then flog her soundly till she promised to do what was necessary. When this had been done, the witch was driven out of the *kraal*.

A witch might be of either sex, but they were generally women; in fact it is said that there have been no male witches among the Dorobo for many years; they say, too, that they have now no female witches either. Whether or not this is true, I certainly could hear of no case of witchcraft where a Dorobo was believed to be responsible. This does not mean,however, that the Dorobo are entirely free from this evil thing, for sometimes they are bewitched by Nandi. When this has been shown, by divination, to have been done, the Dorobo go to the Nandi who live near the witch and ask for their help in dealing with him or her. This the Nandi generally agree to, for they like witches no more than the Dorobo; and the witch is then dealt with according to Nandi procedure. One of the allegations made by the Dorobo against the Nandi in 1939 was that they did not want Dorobo to live in the Nandi Land Unit (Reserve), and that they were using Nandi witches to get rid of them.

The reason that Dorobo go to a Nandi diviner (*sokoyot*) for the detection of the cause of illness and witchcraft is that they have no diviners of their own, for the people among them known as *orkoik* are not, like the Nandi *orkoik*, diviners, but simply people who know how to cure illness with *kwosuk ap kotik*, medicines from trees and plants, herbalists whom the Nandi would call *kiptorotwoik*. These *orkoik* (sing. *orkoiyot*), besides being able to make herbal medicines, prepare charms to protect people from sickness and the evil eye. Children wear necklaces of *lepyenuet* seeds (called *lepsowik* in Nandi) to protect them against the evil eye, and old men wear small pieces of the *mendet* tree, each about 3 ins. long, tied to their belts as a charm against rheumatism.

Schoolcraft R-1 (1938-1939) 1994 F1A Dorobo F1A

the forces of nature, a belief which (I am convinced) does have the effect of giving him confidence in his ability to deal with an imperfectly understood world. All those parts of human life in which there is an element of uncertainty or danger can be "controlled" by means of magic, not always completely, but with enough coincidental result to reinforce the belief that what has been done is the right thing to do and to keep on doing.

The main occupation of the Dorobo was hunting. Unfortunately this is one of the things we know least about, because owing to external pressure the Dorobo have had to give up real hunting and now confine themselves to trapping. It was therefore impossible to get hold of anything more than a few allusions to the hunting magic of the old days. On the one hand, fear of the government has undoubtedly sealed the lips of some of the older Dorobo, for hunting is now forbidden, and they were afraid, quite mistakenly, that if they talked about it, they might get into trouble, as people might think they were still hunting; and on the other hand, ignorance prevents the younger men from talking about it, for most of them have never hunted to the real sense of the word. But there was hunting magic. There was, for example, not only a seasonal division of hunting activities, but a magical division as well. In the dry weather people used to hunt for eland with bow and arrow; in the wet weather they set traps close to home. Now from the magical point of view it is the bow and arrow work that needs help, for in it there is an element of danger to the hunter, and of uncertainty as to whether he will make a kill. In trapping, the process is mechanical, a mere matter of being able to make a trap. All that need be done is to set the trap and wait: sooner or later it will catch something without any danger to the trapper. So when a man was going out with bow and arrow he had to abstain from sexual intercourse immediately before setting out on an expedition, but the act should not put him into mystical danger. Prayers and the observation of omens before going out gave a man further confidence. But when setting traps this abstinence is not necessary.

We have already come across a good deal of magic. The forms of purification after killing people, for instance, are magical as much as religious; so is the cleansing of women after childbirth; and all sorts of things people do in daily life are nothing else but manifestations of the belief in the efficacy of magic. When a man puts a new honey-barrel into a tree and calls out to the bees to enter it, he call is as much a magical utterance as a mere invitation to enter the barrel.

Omens include the following:

If the birds called *kipiti* and *kiptundon* or *kiptundon* (both species of woodpecker) are seen or heard on the right hand side when starting out to hunt or on a journey, a man will be successful; but if they are on the left, he will be unsuccessful.

If a snake crosses the path from right to left, having first been lying still on the side of the path, it is a bad sign, and a man should return home and wait till the next day. But a snake which is seen in the act of crossing a path is of no significance, "for it also is travelling".

This area is a gazetted Forest Reserve, and the official boundary, marked by a broad line where the bush and trees have been cut, runs some distance outside the actual area of trees; this boundary line is kept clear by the Forest Department, for it acts in some measure as a firebreak. It is also the upper boundary of a belt of European farms which occupy the land between the forest and the Trust Reserve. On this strip of open ground between the trees and the farms most of the Dorobo now live, and it is on these farms that some of them work.[1]

The forest itself is bordered in many places by a narrow belt of scrub, there (erecta robusta, the fist-nagged Aloe-tree), as is often the case in western Kenya. Between the Aloes and the forest are glades (ovoka) affording open spaces concealed from the outside world. The forest is evergreen "high forest", the trees, many of them 100 ft. and more in height, growing close together so that the branches and foliage which are mostly at the top form a crown or canopy that shades the ground from the sun. At ground level the space between the trees is largely covered with thick, rough undergrowth and giant thistles, up to a height of more than six feet, which make it impossible to travel except along a path. The rainfall is heavy and even on frequent, in the dry weather there is occasional heat-haze in open ground. As a result of the dense tree cover, the forest is always wet during the rains and in the dry weather some moths stays before the damp disappears.

From our commercial point of view the forest is perhaps not of outstanding value, but it is first class natural cover and an ideal home for the Dorobo who do not judge trees by their value as marketable timber. Of the many kinds of tree in the forest, the following have been identified:

Cassia, Senna sp.	Bersama, englerana mackinderum
Kokwi, arnoseriform, lobongwet.	Cuphea, pallescens sp.
Kipsiyet, Olea sp.	Casearia, ossea sapota
Lowoiyet, olivetia stenotoma.	Croatoni, ovalis dictyoneuroya.
Kimbiriyet, polygonum senegalense.	Cretoni, erecta robusta.
Kiptagiet, Brucaea sp.	Cupkoiti, Senna sp.
Mwenjoni, olea chrysophylla.	Cassiyet, ornamentalis alpina.
Cassia, Senna sp.	Fork, podocarpus gracilis.
Podet, Dombeya sp.	

When the Dorobo lived in the forest, their homesteads were marked by narrow and hardly discernible paths through the undergrowth; somethese some of these paths are still used as approaches to honey-hunting and game traps. The forest can be traversed by two motor roads, one running from Kijabe-town to Kwanza, the other parallel to it from Kijabe to Kwanza. These being the only through routes, people going to Timboroa have to go along either the northern or the southern edge of the forest.

[1] The farms are extensive, and only their home parts are actually occupied and worked, so that a small tract there is an interval of 1–2 miles between the Dorobo and all signs of European activity.

a himself; but this was regarded as unusual in the case of a married man with a comparatively young wife (his wife Cephasmoone was at that time about 30).

While the areas within the bands are interdependent, the bands as a whole is dependent on the outside world as represented by the Kundi. But only do some Dorobo now actually live with Kundi, but they depend on them entirely for all their articles of iron, without which they cannot hunt. Socially, however, symbiosis is increasing. Sometimes unattached old men like Arap Cigandet, who was about 70 at the time of my visit, live in huts occupied by Kundi: Arap Cigandet himself was then living with an old woman at Kipkomoss, sharing her hut, and growing a little shamba at one end of her shamba, but merely as a lodger, having no sexual relations with her, for which both were too old. As he was a poor old man, she fed him and looked after him for nothing. This is true symbiosis, as the late Dr. Seligman called it, and the principle is greatly extended by the Dorobo. For, whatever may be the collective attitude of Kundi to Dorobo, and of Dorobo to Kundi, the Dorobo depend on the Kundi for certain essentials, and the Kundi look to the Dorobo for certain things which they can get most easily from them. To the Dorobo, the Kundi, in the shape of the Kundi blacksmith, is indispensable, and the good will of the Kundi people is equally essential if they are to make use of his services.

The Dorobo do not specialize. Every man learns to make all the things he needs for his hunting and hunting (except those made of iron); every woman learns to make baskets and prepare skins. The raw materials exist close at hand, and may be grouped under 5 heads:

(a) Wood: used for huts, implements, heavy-barrels, traps, fuel.
(b) Plant materials: used for food, medicine, salt, baskets, and tinder.
(c) Skins and other animal products: used for clothing, bags, rawls, etc.; thong, used to a limited extent for plastering walls.
(d) Earth and stone: coloured earth for painting; granite for grindstones; earth for plastering walls.

(e) Wood. The following trees are used for making weapons, utensils, etc.:
Kaiset (*cedrus sp.*): bows; house-building; heavy-barrels.
Kiwanda: arrow-shafts; firewood.
Kwenwandit: arrow-shafts.
Kwenyet (*Juniperus*): arrow-shafts; intermediate used as water jars.
Kimyenet: traps.
Kiwaldet (*Juniperus*): traps.
Kokor (*Leucosidea fulvinerva*): arrow-poison.
Lipaldet (*Dracaena sp.*): house-building; heavy-barrels.
Kipaldet (*Olea sp.*): house-building; heavy-barrels.
Kiyondo: house-building; heavy-barrels; fire-wood.
Kwonet (*Ficus*): house-building; heavy-barrels.
Tinetet: heavy-barrels; fire-wood.
Ponet (*Ficus*): traps; heavy-barrels; house-building; any purpose for which rope is required.

6:Huntingford E-1 (1926-1929) 1953 FLS Dorobo FLS

through the piece of comb. After eating honey a Dorobo wipes his hands in the earth to clean them; whereas a Kenté uses leaves.

One of the accusations often made against the Dorobo by forest dwellers is that by burning grass and firing trees when taking honey they cause forest fires. Apart from the fact that there is no evidence to support this allegation, for the Dorobo do not burn trees, a very good reason why they do not destroy them was given by a Dorobo who said, with reference to some people in the settlement,

Kopel lakak ap Kaplakeiat ewonik ap Cheiboinyon. Kakiromo
They burn the children of Lelakin family the grass of forest over. We do not like (it)
ane mutyik Okiik Cimdo ne Cinyo lakak ar Kimet,
for they do not burn the Dorobo the forest which it contains the things which we eat,
agul ne ani pasonet ap ochemik ngul kakiio kaptet ne
also where there is the honey-barrel of the bees; also it is burned the flower which
ewo ochemik.
they eat the bees.

(The children of the Kelelat family are in the habit of burning the grass beside our forest. We disapprove of this, for the Dorobo do not burn the forest which contains the things they eat, and where they keep their honey-barrels; moreover, grass-burning destroys the flowers from which the bees get their honey.) The Dorobo in fact love their trees, and with these very practical reasons for not destroying them, it is absurd to accuse them of what amounts to an anti-social practice among themselves. Nor did the forest fault either in 1927 or in 1930 show signs of the alleged wanton destruction by fire attributed by some to the Dorobo.

Although wild honey is to be found in hollow trees and holes in rocks, the Dorobo do not rely on such chance finds for their supply, though they will eat it if necessary. They rely on the honey which they get from their own honey-barrels.

They recognize four varieties of bee:

Ochemik, social bees, *Apis mellifera*, the honey-producing bees which live in hollow trees and honey-barrels.

Imotik, solitary bees, *Gania*, which live in trees and hollow stems of shrubs and make honey.

Kwamek, earth bees, *Halictus*, slightly longer bees which live in holes in the ground and make honey.

Kiptalamik, mason bees, *Chalicodoma*, which live in cells made of a sort of cement formed of earth, minute stones, and their own saliva. These are very small bees, which make only a small amount of honey, and are not found in the forest, but in huts below the escarpment.

The Nandi word *kokomdenik* meaning another variety of bee, is used by the Dorobo, not of bees, but of small stinging insects like mosquitoes.

The bees that provide the Dorobo with their honey are the *ochemik*, drones. The queen, *kwonat ap ochemik* or "the mother of the bees", is

Fig. 4. Plan of a Dundee dwelling at Kalpur showing a Kundi Shelter.

at Kalpur in 1938 its crop was so much damaged by monkeys, pigs, and a sort of mole called Dwarsa, that the original dwelling had to be given up, and the occupiers took up new and separate plots elsewhere. Sometimes a Dundee has a dwelling all to himself; more often, however, several people divide the area between a town, each contributing to the labour of making it; and in some cases Dundis share part of a fenced dwelling with Kundi (Fig. 4).

Though not connected with cultivation, we may mention here the subject of earth digging, because it is concerned with the ground. Red and white earth is found near Tambarwa (or Tambarwa, as the Dundis call it), and men go in parties of four or five to dig it. They use nothing but a digging earth, (sarat), made of a shortpoint stake, and the earth is carried home in large leather bags. In former days, when other Dundis lived in the earth-producing area, a digging party would ask leave to dig from the man who owned over that tract of land, and though we for some to have been paid it is said that if a man should refuse his consent, the party would go home without digging. But as no Dundis own this area, this could not be verified. To-day the Dundis sell coloured earth to the Kundi, who pay them at the rate of a shillings for a large bag of earth. Red earth, evidently is sent mixed with fat (or sometimes cheese oil) for rubbing on the body; white earth, mentioned, is sent as a magical remedy in cases of lumbago.

d. Cattle

Of the Dundis had not been in such close contact with a people whose ultimate interest in life was cattle, it is possible that they would have cultivated [illegible] have inevitably led them to take an interest in cattle, and to think that the possession of cattle is a desirable thing. Therefore they are always ready to acquire cattle, and are in process of making them their ultimate objective. But

Kaffeehaus Bd 1 (1938-1939) 1951 FLA Dresden FLA

they have been much overseen for too short a time, and as too small a scale to have formulated or developed any cattle customs of their own; they do not think (like the Nandi) in terms of cattle, and their main efforts are at present concentrated on trying to acquire cattle. For the last, three ways are open to them, all slow and laborious: bride-payment, gift exchange, and purchase.

Bride-payment. A Dorobo whose daughter is married to a Nandi receives for her the number of stock that a Nandi would give for a girl of his own tribe, i.e. 1 cow and 1 ox or bull, together with a variable number of goats; and when a Dorobo marries a Nandi woman he has to pay at the same rate. Arap Kotet acquired his cattle from the marriages of his three sisters: the eldest, Kipsitibeny, was married while his father was still alive, and on the old man's death he inherited the cattle paid for her; the other two, Cheron and Tigerondo were married after their father's death, and the cattle for them (amounting in the case of Tigerondo to 1 bull, 1 cow, and 5 goats) was paid to Arap Kotet.

Gift exchange. Nandi from time to time make friends with Dorobo chiefly for the purpose of getting honey. The first move after two men have come to regard each other as friends, usual, is for the Dorobo to give the Nandi some honey, without expectation of any immediate return. After a time, the Nandi gives the Dorobo a goat, and thus the way is prepared for the handing over of cattle. Arap Maina became the friend of a Nandi at Mbware called Kogilik, and eventually got from him an ox in exchange for a fat cheek; and on another occasion he got an ox in exchange for seven goats which he bought with his wages for working on a farm. Arap Kimaru in the south district of Kapsiyot to Nandi, and shot four monkeys, from which he made fat cheeks which he exchanged for cattle. To-day he has five head of cattle which are herded for him by a Nandi named Kipkorir arap Kimaru on Farm 1079: the Nandi looks after them in return for the use of their milk, Arap Kimaru being given a small amount of it. This process of acquiring cattle is, of course, a form of purchase, but it is purchase under the peculiar conditions of forming a friendship by exchange of gifts first. The Nandi do not readily part with their cattle, and it is therefore necessary to lead up to the final stage, as the Dorobo expect it, by the preparatory exchange of other things. And as a method of acquiring cattle it is limited by the fact that the Nandi are willing to exchange only male stock in this way, so that for breed stock the Dorobo have to rely on bride-payment.

Purchase. The Nandi do not sell cattle to the Dorobo except as just described, that is, in the form of bride-payment or by exchange. But they will sell goats for cash. The Dorobo do not seem to own sheep, but in 1937 were possessed any.

At the time of their move in 1937 the Dorobo were credited officially with a large number of cattle, some 2000 head in fact. But in 1939 the actual numbers that I saw and counted (and I have reason to believe that they were [illegible] numbers it will be evident that there were not goats, were very substantially

part of Ashelland to the neighbouring area of Lolowo in Kamonja. No details will be given of this journey, which proved a difficult one on account of the heavy rains. It may be noted, however, that the administrative boundary between Longo and Ashelli was found unconformable with the tribal boundary. The line of march after leaving Lolowo is indicated on the accompanying map. From the beginning of the journey to Kabanani, in Dedeilan, I was accompanied by Captain F. Bracy, then O.C. Northern Garrison, to whom I am deeply indebted. Indeed, but it was from his ever-willing help, many of the enquiries to which this report relates could not have been undertaken. My best thanks are due to the Every Bluden missions for generous assistance. Further, I wish gratefully to acknowledge much good advice from Professor C. G. Seligmann, Dr. A. C. Haddon, and Mr. Simon Fraser.

2.—Kamonja.

The administrative purposes the boundaries of Kamonja, enclosing an area of 1,110 square miles, are defined in the Handbook of Uganda (Second Edition) as follows:—

"Commencing at a point on the boundary between the Uganda and Belgian Protectorates, being the source of the stream of Mount Elgon, the boundary runs in a straight line to the source of the River Kimuchwanga (also known as the Kibisi or Greek River) which river it follows to its junction with the Glodon River, which river it follows to its junction with Lake Salisbury; thence in a north-easterly direction to a point on 1° 0. Latitude due north of the highest point on Kimuchwanga mountain. From this point it follows the western boundary of Lolowo District until it meets the southern boundary of Dedeili Province; thence along the southern boundary until it meets the Turkwel (lower) boundary of Dedeili Province; thence in a south-easterly direction along the Turkwel (lower) boundary until it meets the River Turkwel or Suam; thence along the Turkwel or Suam to the source of the Suam in Mount Elgon; thence in a straight line to the point of commencement."

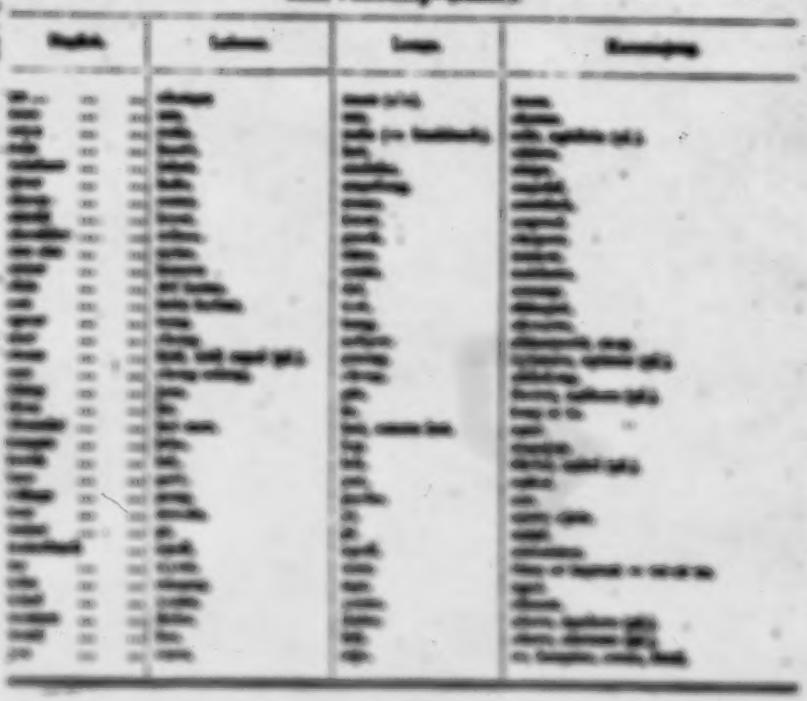
Until almost the middle of 1926 Kamonja was unadministered, except that part of it generally known as Lolowo which was treated as part of the Ashelli District. Kamonja is a vast alluvial plain rising very gently to the vicinity of the mountains which must be mainly grouped as the western and northern sides. The watercourses, towards the Nile escarpment, is exclusively conglomerate. Most of the plain consists of "cotton soil" to and on which are generally occurring many beds of a very primitive volcanic (Fl. 1933, Fig. 1.)

The hills and mountains are all composed of coarse crystalline rocks of various sizes except in the south-west where Tertiary lavas and volcanic beds are conspicuous. Generally speaking the crystalline rocks are of the Basement type.[1] They have been but they are not very extensive. There are also to be seen [illegible] plain [illegible] to the Tertiary hills where [illegible] occurs.

The area is drained by a big river, and it [illegible] to be treated a becoming steadily drier. There are no permanent rivers and during the dry months water is obtained from holes [illegible]

[1] The Basement Complex [illegible] is also referred to the Every Bluden missions for a great [illegible]

(Short Proceedings—[illegible].)



Tree Worcestonia.

Of all the tribes living in Kenmuir the Lahore are the best primitives and the Worcestonia the worst so. It will be convenient to deal with them next.

Environment. The Worcestonia are a hill people. They live in rough mountainous country on the edge of the Kenmuir Plateau escarpment, in the north-west of the district, in places [illegible] of across (Pl. [illegible], Fig. 2, and Pl. [illegible]). They are hemmed in by the neighbouring tribes who, however, make use of them in several ways. The very recently, the Worcestonia served as a "go-between" during raids, assisting the Dobbites by selling the [illegible], on the one hand, and helping the "Kobold" or Yorkmen with regard to supplying plants on the other. The Dobbites often refer to the Worcestonia as "speaking men" on account of their agility. The Worcestonia claim that they have never been raided.

Jiye FK8
Acholi FK4

In this connection it is interesting to note that when in Kavirondo in 1920 I was told that on the occasions stone vessels, much the same in shape as the wooden ones described by Dr. Gerald Thompson, are found in the Turkana country. Nobody, it is said, knows who *made* them, and they are seldom seen. I, for one, have not seen any. Perhaps it may not be altogether out of place to mention here the occurrence of ancient blue beads that are, from time to time, dug up by natives when cultivating the low ground near Kisazi Kigoa (Nasolot), on the extreme south-east of Kavirondo, and that there are legends that seem to refer to a pre-westerly migration of a people from the region of Abyssinia into Uganda some centuries ago. These people are said to have been the followers of one Kimbo (a prince and brother to a ruling monarch) who during a sojourn in Budde (in the Buganda Province), constructed the remarkable earthworks known as *Kigge Kya Mugenyi* (the strangers' fort). This legend, it may be added, can be connected very interestingly, but with what validity I know not, with the ancient buildings of the Zimbabwe type in Rhodesia.

Concluding Remarks.

In collecting information, it was found that the tribes were not all equally willing to impart it, of considerable difficulty in this respect was experienced with the Wanderobo. Much of the knowledge that is ethnologically interesting among the people is followed purely because it is customary, and more often than not even the Elders have any knowledge of the remote significance of many of the acts of almost everyday performance. Moreover, the origin of most practices is lost in antiquity. The Elders, too, are suspicious of close enquiry. They have heard (from the Native troops of the K.A.R.) that elsewhere in the Protectorate the Government is doing its best to stamp out witchcraft, and they fear lest anything they say may in any way injure them support. On the other hand, the common people usually think it odd that Europeans should be very curious behind long-established precedent; and if friendly disposed evince suspicions of the enquirer's motives, and if they are anxious to please, they will, when questioned, invent what seems to them probable explanations and customs that do not. Differences differ as their makers, and in order to be helpful the people will often discuss their views among themselves for the purpose of coming to conclusions. The value of these is therefore doubtful, and it is invariably best to arrive at results, if possible, by indirect methods. Leading questions must, of course, be avoided.

My enquiries led to the accumulation of a very large collection of notes, some of which prove valuable, while much of the information was contradictory. All the material was worked through, and the eventually incompatible results discarded. The issue is not very encouraging; however, better than nothing, and clearly indicates that the tribes of Kavirondo are deserving of fuller study.

As far as positive results are concerned, it is extremely tempting to draw comparisons between the customs and ideas obtained by other investigators in neighbouring territories with a view to drawing conclusions as to the origin, migrations, &c., of the tribes, especially as to their more pretentious ethnologies. But perhaps one may point out that some of the negative results are not entirely without interest. One may note, for instance, the absence of clan (totemic)

/54 cont'd/

in the dense forests of Kenia and Kikuyu, the forest-clad escarpment of Mau, the top of Elgeyo, Maraqwet, Chibcharagnani, Buru, Dondote etc. They are rarely found in numbers and usually in very small villages, so that there is nothing like tribal /55/ life among them. They enjoy considerable immunity from attack by the Masai, as they are sources of wealth to the latter by attracting the coast traders; usually, too, the Masai fall heir to a considerable share of the ivory. They also act as go-betweens or middlemen in getting the married people the vegetable food they require. To such an extent is this system carried, that on the plateau to the east of Naivasha at the place called by the traders Mianzi-ni, a very large village of Andorobbo have altogether given up hunting, and subsist entirely by buying vegetable food from the Wa-kikuyu and selling it again to the Masai or it may be the traders.

"The language spoken by the Andorobo is allied to that of the Masai, but they can all speak the latter in its purity. They build regular villages, and in general appearance they resemble the inferior class of Masai. As I have already remarked, they make the buffalo-hide shields of the warriors as well as the coarse earthen cooking-pots of the women. They are on the whole looked upon as a species of serf, and treated accordingly. Their transactions with the traders must be done secretly, or everything would be stolen from them."

Mr. C.W. Hobley, in the glossary to his Bantu Beliefs and Magic, says:

"Dorobo in Masai means tsetse fly. The name for an aboriginal race of hunters who inhabit the great forests of the highlands in East Africa. They call themselves Ani and the Kikuyu call them Aci. The name of the Athi River is believed to be a corruption of Aci."

/60 cont'd/
from the north and east which forced the Bantu /61/ immigrants in turn to settle down to a more intensive agricultural life in the higher, safer country, where by an exploitation of the forest soils a density of population hitherto unknown in Eastern Africa could be maintained by shifting cultivation. One can well imagine that this change in subsistence-culture was not an altogether welcome one to the Bantu tribes who had hitherto lived on game and other natural produce of the plains and occasionally reaped, perhaps, some short-term annual. Increasing population-density as well as virile enemies had forced a settled life of agricultural drudgery on the Bantu, especially on their women. Many, no doubt, would try to retain the freedom of the former life by wandering in the forests and any other kind of country still unoccupied, provided an adequate supply of game and water could be found there. So there would be some slight degree of inter-penetration and intermarriage, and the pre-Dorobo tribe would undergo some change from blood-infusions of a Bantu type. Others of the pre-Dorobo tribe would find themselves excluded from the lower forests by the increasing mass of Bantu immigrants and, to a large extent, excluded from the plains as well, by Hamite tribes with mobile armies well organised for war and rapine. These others would, no doubt, either be destroyed or move still further off or, if they stayed and managed to survive, be relegated to a state of semi-serfdom[1].

174

---

1. So one hears of Masai Dorobo, Kikuyu Dorobo, Lumbwa Dorobo, and so on. The "Dorobo Commitee" remarked that the Sanye were actually slaves of the Galla and had for ages acted as their hunters and that those living in the Goriama Reserve had passed from the ownership of the Galla to that of the Goriama. But probably protection would be a better word than ownership, the relationship being a symbiotic one on ostensibly equal terms, for as the Committee remarked the Sanye supplied ivory and meat to the Goriama in exchange for bows, poison and maize. The position of all such Dorobo appears to be dependence on the protecting race for livelihood, whereas the protecting race merely depends to some extent on the Dorobo for hunting and service. The institution of "Sheger" among Somalis and similar peoples seems to involve the same idea of inferior status and dependence of the Sheger section, who have the less remote a theoretical freedom to the body politic.

459
[7]

/81 cont'd/

freemen in theory but only while the tolerance of the far more powerful tribes who were their neighbours could be gained by service and their power to appease - service as hunters and possibly as spies on other peoples, potentially the rivals of their hosts, and appeasement by their readiness to seek protection, to renounce their tribal pride and unity in favour of adoption[2] into other clans. They would become, if not the parasites on social orders different from their own, at best the junior partners in a symbiosis which, while to them it meant individual preservation at the risk of tribal death, would, to their seniors, mean no more than a corps of military intelligencers costing nothing.

And as to those electing to continue their former mode of life or to re turn to it, not among Africans alone are people[3] who find the "madding crowd" so irksome that they readily go back a stage or two in cultural trends in order to avoid it. To many a member of a "highly cultured" race a back-to-nature substitution of a complex, regimented, shoulder-rubbing life by pasturage or venery connotes no retrogression, but rather the reverse. For though the "noble savage" may have been discredited by later study, modern humankind, still ill-adapted to a repetition of itself in every acre, is prone to envy him.

/82/ 88. Dorobo and Kiora

We must now see to what extent these Dorobo peoples - whatever they were - impinged on the tribes of the Land Unit when the latter entered the countries they now occupy. The Kiora people

---

1. In the case of the Dorobo from whom the Karuna Kikuyu "bought" their lands, it seems that it was often the Dorobo who sought adoption. No doubt the Kikuyu in such a case would make the right to cultivate a condition of compliance.

3. I have heard the Embu refer to professional big-game hunters

/83 cont'd/

It would seem that the Il Imwesi, though known to European settlers as "Meru Dorobo", affected the Meru very little. They were squeezed out of Kathiri by the Meru and then out of the Loldaigas and the Lewa area by Europeans. They were moved back to the Meru District about 1925 and out of it again some twelve years later. 194

71. Dorobo and Mwimbi

The Mwimbi told the 1929 Committee that the Dorobo used to come and go, and the implication was that there was little contact between the two tribes. It was, however, generally believed that their spokesman himself, Mbogoe, had Dorobo blood in his veins. The Mwimbi failed to mention the Mwoko (Mukoko), who were possibly, according to Mr. Gurney's account, connected with them. They are noticed here because it does not seem too far-fetched to identify the "ancient Mukoko" of that account with the present Mukogodo of Nyeri District, and these Mukogodo claim, according to Mr. K.G. Lindsay's memorandum to the Land Commission, to be pure Dorobo, though the "Dorobo Committee" reported that they were said not to be Dorobo at all, but a separate tribe living on and around the Mukogodo hills and believed to have been there from time immemorial, and that there were two sections of them, a stock-owning section who lived on the plains, and a stockless section who lived on shelves in the hills. The former might well be of the type the Meru encountered on the Tigania plains and fill Mr. Lindsay's description of the Mukogodo as "probably of Galla origin", and the latter may be true Dorobo hunters and identifiable with the Mukoko of Mr. Gurney's account. If so, one must suppose that the Mukogodo afford another instance of a symbiosis between a pastoral Hamitic tribe and a forest-dwelling hunting Dorobo type. Mr. Huntingford[2] expresses doubts about the Mukogodo similar to those of the "Dorobo Committee" and remarks:

GFS 101

---

1. Memorandum submitted to the Land Commission.

2. Ibid., p.[illegible].

/83 cont'd/

"There are nine gous of true Dorobo in Kenya Colony, and a tenth, called Il-Mukogodo, who do not appear to be true Dorobo."

648 ● 101

That the Mwimbi have a good deal more intercourse with the Dorobo or the Mwoko or bth than they are prepared to admit in open baraza seems to be edicated by the fact that the Meru proper associate the Mwimbi wit the Dorobo and call the Il-Imwesi the Mwethi or the Mwimbi Dorobo, and say that the present Mukogodo, whom they sometimes cal Mokuru, contain numbers of Mwimbi Dorobo and some Mwimbiwho went off with them. A Mwimbi elder told me (not in openbaraza) that not long ago there were Dorobo living close to theMwimbi and trading skins with them for grain. Their leader was amed Thiathui or Chachui and he went off somewhere to the nort with most of his people. [439]

/84/ 72. Dorobo as Chuka, etc.

There is very litle evidence of any contact between the Dorobo and the Muthambi Chuka, Embu or Mbere tribes. No doubt there had been such contat in the past, but possibly it was so long ago and so slight that any memory of it had faded before the European occupation. But that the nieor tribes know of the Dorobo is evident from the fact that they distinguished them from the Gumba in answer to Major Orde Browne's enquiries. It may be that the east and south-east of the mountain had not been occupied by the Dorobo at all or, more probably, hat there was so little distinction between the minor tribes and the Dorobo in general culture and appearance that the latter left a less lating impression on the tribal memory than the very much more primitive and strikingly different Bushmen. Some the are there is credible evidence (not advanced by the Embu) of a Dorobo settlement on Manyatta Camp in the Embu District about the beginning of th present century, and that there were Dorobo in Mbere, not far from the territories of the Embu, Mbere, Gichugu and Ndia, in the vicinity, in fact, of two of the most important sacred groves of the two former tribes, is suggested by

/64 cont'd/ 648 ● 101

a statement made by Kivoi and recorded by Krapf in his Travels and Missionary Labours in East Africa to the effect that he (Kivoi) was going to "Muea, in the Wandurobo country".

73. The Tharaka say that they used to see Dorobo in the old days, but they seem to have had little if any contact with them. They call them Antorobo, the singular of which is Ntorobo, or, using the common convention for the recording of Meru names, M'Robo, that is, Muntu wa Robo, "person of Robo".

74. Dorobo and Gaki Kikuyu

A note in the Nyeri Political Record, referring to January 1911, states:

> "The District is divided up into agricultural, pasture and forest land. The agricultural portion is densely populated with natives. The West Kenya farms comprise the greater part of the pasture land while the forests are at present the home of the Dorobo."

It was by the clearing of the forest that the Nyeri Kikuyu obtained their agricultural land and they must certainly have met the Dorobo in the process. This is borne out by another note of the same date in the same record: "The Kikuyu may not intermarry with the Dorobo". This injunction may have been operative at the time it was recorded but there seems to have been considerable intermarriage in earlier times. [ETS]

The Nyeri Kikuyu, however, told the 1929 Commission that the Dorobo were among the Masai, not among themselves. Yet there were men present at the baraza who knew perfectly well that the Dorobo had quite recently lived just north of them and had had considerable intercourse with them from time to time and that, in fact, there was quite a lot of Dorobo blood in their own veins. The evidence, native and non-native, given to the Land Commission makes this quite clear. Mr. E.C. Lindsay's memorandum refers to the Dorobo called Ndigiri, who, he says, claim to be of pure Dorobo descent and

/64 cont'd/

"to have occupied the land along both banks of the Aboni[1] or Amboni River. They intermarried and traded in famine years with the Kikuyu, and cannot remember having come from any other part of the country. For the most part, they lived apart, hunting in the /65/ Loldaika Hills. Between 1905 and 1912, when the alienation of land to Europeans took place, they were pressed northwards to their hunting grounds, and eventually settled down with the Mukogodo, having acquired cattle from the Masai and early traders, such as Mr. John Boyes. They included the El Choki plain within their grazing area. Their language is similar to Masai."

Mr. John Boyes told the Commission of a meeting between himself, a Dorobo chief Olemondo, and the Kikuyu chief Wangombe, and Wangombe's son Ndirango, in a memorandum to the Commission, speaks of "Chief Olemondo of Dorobo of Donkeys". The Dorobo referred to are clearly the Ndigiri[2], that being the common Kikuyu word for "donkeys".

The "Dorobo Committee" classified the Loldigiri among the group living north of Laikipia and Mr. Hemingford puts the Digiri among the true Dorobo of his Eastern Group.

---

1. The Gabi Kikuyu also call the river Ikeni. Aboni in Kikuyu means "the Ikeni people", and boni may be related to an original Nyika stem boni (? bilabial) which, prefixed by ki, would give mboni in Ndia and boni in Kikuyu. Some relationship between the Ndigiri and the Chuka Ikeni might possibly be indicated.

2. Perhaps it was among the Dorobo that the Kikuyu first saw donkeys, which appear to have been unknown to the Bantu tribes of the East until comparatively recently. A Dorobo elder told me that the Ndigiri used donkeys instead of women for the transport of the meat of animals killed in the chase.

/53 cont'd/

The Ndigiri may have been on the eastern side of the mountain as well. An old man from Igoji told me that the Dorobo formerly thereabouts were known as the Ndigiri or Mukuru, and there is a place in Imenti called "Muromo-Ndigiri" - "Doorway of the Ndigiri" - said to be on the track by which the Ndigiri migrated northwards, though the name might possibly refer to nothing but a path once used for donkey transport.

It is possible, indeed, that the Ndigiri are (or were) very widespread in the eastern half of Kenya, for it seems unreasonable not to identify them with the Wadegere of the southern coast, of whom Captain C.T. Davenport, in a memorandum to the Land Commission, says:

> "The Aboriginal inhabitants of the (Duruma) country were a tribe of hunters called Wadegere, who, but for two or three small settlements where their language is still spoken, are extinct, either through disease or through absorption by the surrounding tribes; probably the latter".

Possibly the Ndigiri "clan" of the Taveta are also Ndigiri Dorobo in origin.

53. Dorobo and Waruma Kikuyu

The Fort Hall Kikuyu told the 1929 Commission:-

> "There were no Loodis here" (i.e. when the Kikuyu arrived)
> "the nearest were on the West".

Sir Commander Lawford appears to have been informed a good many years before, when he was District Commissioner, Fort Hall, that "in years long past" the Kikuyu cousins, then living somewhere "in the mount of Wandorobo"[1], and, earlier still, Mr. E. Taylor Smith, who was District Commissioner from 1908 to 1911, recorded in the Political Record that

1. Quoted by Routledge, loc. cit.

"The various members of the several tribes with the exception of the Andorobo appear to have been driven to what is now known as Kikuyu country by stress of famine and found it occupied by Andorobo. The Andorobo seem to have received these emigrants hospitably and to have sold them sharples which were originally demarcated by planting 'mbaria' trees and which growing up formed permanent landmarks, the sharples to the day descending from father to son. In the course of time owing to the gradual spreading of the Kikuyu sharples the bulk of the Andorobo were driven from the country".

16. Dorobo and Kaveye Kikuyu

In regard to the territory south of the Chania River (the present Kiambu District) it may be said with confidence that the forest areas (much more extensive then than now) were in the occupation, probably somewhat sparse, of a Dorobo people at the time of the Kikuyu influx. The Kiambu Kikuyu told the 1929 Commission that:

"In the very first place the country about here was occupied by Wandorobo who were hunters.... There were Dorobo in this District as far as the Chania".

The Commission recorded the opinion that "the Kiambu District was certainly the last to be occupied and Dorobo were hunting even it."

Dr. L.S.B. Leakey, in his study of the Southern Kikuyu, has recorded a number of facts and opinions concerning the Dorobo with whom the Kikuyu came into contact. The following are extracts:

"There is no record that the Wandorobo hunting tribe were ever in effective occupation of that part of the country" i.e. the Fort Hall area, "and the only previous inhabitants seem to have been a tribe called by the Kikuyu Gumba, or Mumbi a Ciamp. These people, from all accounts, must have been a pygmy race, few in numbers, and having no organised land occupation even for hunting purposes.

"In spite of the fact that only such a small number of Wandorobo are left to represent the tribe, it would be erroneous to consider that the tribe was ever more numerous, as in fact, there were probably several hundreds of families representing more than a thousand people in the not very distant pa. The reason for the decrease in these numbers is due, not to starvation, but to absorption, for when the Kikuyu bought the land many Wandorobo families gave up their hunting and married into Kikuyu families as well as giving their daughters in marriage to the Kikuyu, until in the course of a generation or two they were completely absorbed ...

"... it was the custom of the Wandorobo [the Kikuyu] ... to live in fairly large villages where their rulers gave them and their families reasonable security from attack, and where they could organize their social life in such a way as to have courts of justice and other amenities of the type ...

[illegible] Social Organization

With regard to organization, a Dorobo woman told the [illegible] initiation is a very important "[when a Kikuyu we had our ritual]". But this does not in itself mean by much as other [illegible] extended family and the extension is by no single [illegible] all we can infer from the remark, if we believe, is that the family was the unit of the social order. But the word [illegible] the same statement, said: "The name 'Kikuri Chelos' is the name applied to us all, as Kikuyu is the name for other Kikuyu tribes. Within the Kikuri ya Chelos there are other [illegible]", and the remark[illegible] suggests a recognition of the [illegible] as part of a clan, though the [illegible]

The following brief account of their tribal organization was given me at a meeting of the Dorobo who are living at Karima on the edge of the Forest Reserve, and subsequently checked with the statements of two others, Barbuda ole Lesemo, who lives on a European farm close to the Forest Reserve (in the Naivasha area), and Dorobo ng'ati Nderitu, who lives at Karima.

516 cont'd

Succession is patrilineal and marriage patrilocal. Polygyny is practised. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and commemoration, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Dondo reckoned as joined in the mutiko of the Kikuyu and the ruanda of the Maasai. The word they use for the handing-over ceremony is kuumiana. Alternating ages or generations are distinguished as mori ya-kia (the right hand) and mori ya-kenji (the left hand). When the Kikuyu system is referred to kiama is the former and kiama the latter, but the expressions were probably used originally of the Maasai right-hand and left-hand circumcision groups.

There are no indigenous chiefs, the judiciary and legislature being a council of elders. Each an elder is called kiraguindo (pl. kiragiti). A kiraguindo has much the same function as a Kikuyu muthamaki. There is an ieiben but formerly the Dondo owed allegiance to the laibon of the Maasai.

They recognise one Supreme Being, called Tararit (compare the Sub Tararit). There appears to be no cult of ancestral hut worship. The sacred trees, used for prayers to Tararit, are, as with the Samburu (a military clump), for keeping the mutego, and, in connection with circumcision ceremonies, the mutiki and the mutethiaini.

N. Little is nothing is known of the relationship of the Dondo of Southern Kikuyu with other Dondo sections. The "Dondo Committee" called them the Kikuyu Development group, and remarked that they were first found in the plantations but left them and went to the Maasai Reserve, whence they were ejected. At the time the Committee met this group was living on forest squatters in the

/98 cont'd/

Aberdare and at Kisale. In Mr. Huntingford's classification they are presumably included in the Nandi group, called Kitosh, or in the Kikuyu group, called Digiri.

78. It is probable that the Dendo who lived well inside the forest south of the Chania were entirely independent of any other tribe until the Kikuyu arrived and occupied their country and gradually forced them into the half-starved, half-expelled people now known as the Kikuyu Dendo, but that those living in the fringes of the forest and carrying their hunting expeditions into the plains were already under the influence -- almost under the reign, if not the suzerainty -- of the Masai. We find them referred to occasionally as the Kapotei Dendo and it is not altogether an exercise of a strain on the imagination to suppose that the /99/ relationship was really not so much one of symbiosis or even dependence as one of common origin but different culture, the Dendo and the Kapotei representing respectively the section of a tribe which had preferred to remain in its original state of untrammelled freedom and the section of the same tribe which had assumed a pastoral life and had had a Masai civilisation thrust upon it, and had as well perhaps absorbed a modicum of the Masai blood. Such a flight of the imagination could merely be meant to be. Carbutt Lord's hypothesis that the "Kabi" Masai were originally Dendo, and possibly serve to explain the Kikuyu name of "Kabi a Kuleru" for the more southerly section of Dendonians, of whom he says, "There is a third group generally called the Kuleru Kikuyu ... who have intermarried with Masai, mainly Kabi, and with their Dendo". The word Kuleru (or Kapte) certainly has more of a Masai (and consequently, perhaps, Dendo) than Masai flavour, and it is among the Southern Kikuyu that the two guilds, to which history called attention and which in turned the Kikuyu and the Masai, with differing results to certain aspects of the social life, such as initiation, are particularly prominent. The Kikuyu call the latter the Ilutio guild, wherein we see perhaps a recurrence of the same root lug, though the word Ilutio is generally been related to the English stupid, derived by Dundas from the Masai root ugog. The Rev. Canon Leakey, in a memorandum to the Land Commission, said:

01. Within Kerma area we find the arrival of the Cal impinged upon by Dongola people only where comparatively recent movements have brought the two together. Elsewhere the Dongola people had either been expelled or else absorbed or both. The circumferential movement of the Kerma brought them into touch with the Ji Ground, the northerly extension of the Cal Kibuya with the Ndigir, and the southerly invasion of Kibuya from Kerma into Kurma with the Kalma (or whatever they should be called). In the last two cases there was, at the time of the British occupation, a relationship between the impinging tribes involving expulsion of the Ji-Nandi (not by war but by continued pressure), symbiosis in groups of two degree, and absorption still in progress but so far incomplete.

SUMMARY OF CHAPTER IV

(a) Apart from the Kipsen, the Marakwet, and the Masai, who were all cattle-keepers on the plains, the names of peoples believed to have been in previous occupation of the Land Unit are Cumba, Okiek and Dorobo.

(b) The Cumba were a Bushman or Pygmy tribe, probably the latest.

(c) The word Okiek probably denotes a [illegible] rather than a separate people.

(d) The Dorobo possibly represent an early Nilo-Hamitic invasion of a Hamitic type.

000-000

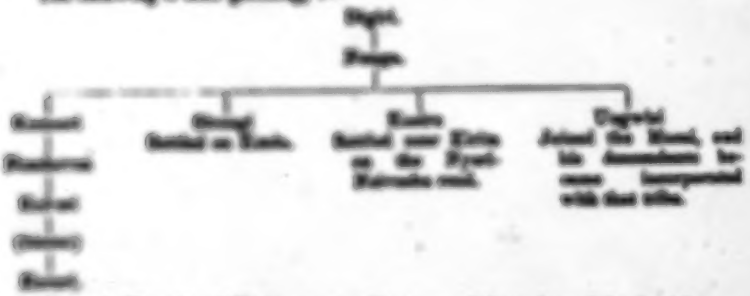
Notes on the Dorobo People and other Tribes; gathered from Akikuyu Informants and others. By C. W. Hobley, C.M.G.

The true Dorobo people are called Aa by the Elkuyu people and call themselves Aaguk (or Ogaiak) or Ogiaiakua.

Mr. Gulin tells me that the Ruath call them Chirk (singular Chiru), the Masai Il-Torobo (singular Ol-Torobon).

They inhabited the whole of the East Africa highlands from Kenia to Kavirondo before the Kikuyu invaded the country. The most important clan among the Aggiak is the Digiri (see Man, 1908, 87), the name Digiri being that of their earliest known ancestor. Digiri, however, appears to have lived so long ago that all details about him are lost, and the first ancestor remembered by name is one Dongo, who was a very powerful person, and nearly all the Aggiak are said to trace their origin to this chief.

The following is their genealogy:—



Kenani, Chong'i, and Kenia are now the names of three clans of the Aggiak.

Before the Masai came some of the Aggiak circumcised and they all spoke one language. The name of the Aggiak in the northern, which is called Digiria, they do not eat carnivorous animals or birds of prey, but eat all other animals and birds.

The Digiri have a curious legend of the formation of the Masai: they describe how one day a Digiri hunter on the Kenia Ruath saw a great company of people coming from the north; the hunter was afraid and hid among the rocks, but he was seen,

Department, were held guilty of a crime they did not understand. In 1937, in accordance with the decision of the Kenya Land Tenure Commission of 1933, they were forcibly driven out of the forest and settled in the Trans Nzoia. This attempt to settle them outside their native forest was a failure, and they are now an excised but landless group of nomads living a precarious existence on the forest which comes up to the edge of the forest. Unless they work on a farm, their very existence here is illegal, and although they are permitted to live in Trans Nzoia, the majority do not want to, and are bitterly resentful of being kept out of their own home. I had fortunately made my first acquaintance in 1937, and when I returned to make fuller investigations in 1938, I had little difficulty in overcoming the fear and distrust engendered by the government's actions, and I found that in spite of everything they were still living as far as possible in accordance with their traditional organization.

As regards their numbers, the census I took in 1938 showed a total of 370 people. This is probably not the full total, but I do not think it is very much short of the real total. The census and genealogies also revealed that they were divided into seven clans; the census results may be summarized thus:—

[P 191, A]

Apart from the rule of exogamy, there are certain other marriage regulations:

1. A person may not marry anyone who stands [illegible] to him or relationship (except P. Sis. D. D.), that is, anyone addressed by a relationship term, or an empire.
2. A man may not marry his wife's sister, because such unions are thought to be sterile.
3. A person may marry into the clan of his or her M., M.Br., Br.W., or Si.H.

Pre-marital intercourse with anyone to the effect [illegible] is forbidden; but with a classificatory cousin, though not approved of.

The marriage of women and the lack of wealth [illegible] have resulted in the Dorobo being largely cross-cousins, though if a man has the wealth, he may have more than one wife. The Dorobo [illegible] price is said to have been formerly 4 cows for daughters; today it is 1 cow, 1 ox and 3 goats, which go to the bride's father and become his personal property. This holds in fact for [illegible] people who own little or no stock, but by custom [illegible] of gift exchange cattle can be obtained from [illegible] Thirsk (See below, p. 191.) Rarity of divorce is [illegible] mention much of this marriage, and does not [illegible] is something unexpected) [illegible] is seen by the [illegible] that it would among other [illegible] where women are plentiful. The inability [illegible] to get wives has produced a tendency to what may be called wealth, that is, concentration [illegible] Some of whom were many) live entirely alone, and do all their domestic work, as well as looking [illegible] and cultivation, without assistance.

III

[illegible]

A. [illegible]

The home of the Kipsigis and Dorobo is the eastern part of the high ground which occupies the country between Kisumu Nyanza and the Masai escarpment. The greater part of it is [illegible] covered with dense forest, and is crossed on the [illegible] by two parallel paths from Kisumu [illegible] to the north to Nakuru to the south. The former begins about the 6,000 ft. contour, and a small [illegible] from one side wealth a steep slope of [illegible] the [illegible] are "Mau-grass or sengeta," thrift,

[illegible]

[illegible] ft. to steep places. Once the forest is reached, the slope is gradual, ranging from 2,200 ft. to 2,400 ft., through the main river, the Kipkaren, flows through a valley 1,200 ft. deep. The rainfall, taken at Kapchorua farm about nine miles from the W. boundary of the forest, averages 60.04 inches over 9 years from 1928 to 1937: the maximum was 70.22 inches in 1937, the minimum 50.01 inches in 1933. In the forest itself the rainfall is undoubtedly higher. The forest is always damp: mists are frequent, and even in the dry months it is not always quite dry, a condition which is responsible in part for the rather light yellow normally among the Cheridos. On the edge of the forest are glades with a fringe of trees (yonde olkoeng), and between the forest and the farms is a strip of land, included in the Forest Reserve, which is suitable for cultivation and stock-keeping. The year is divided into two seasons, Mwaitwondi, the dry season from October to March, and Imet, the wet season, from April to September. These determine both the main [illegible] activities, and the [illegible]

B. Economic Activities.

The economic life of the Cheridos may be divided into two phases: (1) the old hunting existence, which began to disappear about 1906 when the Government started actively to control their lives, and (2) the present mingling agricultural life to which cultivation is [illegible] of increased importance.

The economic group is either the [illegible] family or the domestic family (or the [illegible] family). Social division of work overlaps in some cases, but most of the work outside the settlement is done by men (hunting, trapping, woodcutting, and bee-keeping with the outside world), while the women do the work inside the settlement, except that they collect all the vegetable food from the forest. Agricultural work is performed by both sexes. Things peculiar to women are: the making of clothes, bodies (work), and baskets; to men: making weapons and other utensils, digging ditches (work), and putting mud on the fire to melt (though the women help after it has fallen to the fire).

[P. 192, 4]

[illegible] control by concerned action, and still are, to a limited extent, by individuals, as well as several species of monkey.[illegible] There seems to have been no very strict class system, as pig were considered to belong to the war creation, though sea often, since the former is difficult to consume when wet. There are now no lions or elephants, but they are said to have existed when the Town and Kingdom were very young ones, i.e. about 1800. Leopards are still common, and are still shot if one runs up a tree after being put up by dogs. Many are sometimes caught in traps made of wire, which is now bought, but searched for or made from forks. Sometimes, a trap made by one long forked stick weighs a leopard during one of its visits into said to be exceptional. Buffalo or ranger rise in the western end of the forest where the Kaiyukuyuni live, but they never ever trouble[illegible] a few cattle in the east.

Hunting parties varied from ten to eight men. If ten, eight went out, half would go along one track of a stream, and half along the other bank, so that no or other party would be sure to get something. They met after the kill, and ended the meat and an equal of it on the spot. The rest was divided among the hunters and other Pokot for their families, the accountable members of the tree receiving a share from those who made the kill. The hunter has to provide, not only his own (Chemorere) family, but also his father, mother, and wife's father with meat, and the distribution of meat is under of priority, to—

Hunter. Share is

1. Wife and children.
2. Father and mother.
3. Wife's father.
4. Neighbours (Chemorere).

[illegible] law (or had till they were ordered by the government) as hereditary right over a piece of forest, [illegible] which included hunting, trapping, bee keeping and bird-catching. Other people who wished to hunt there asked permission to do so, [illegible] otherwise the right-holders might kill anyone [illegible]

[illegible] hunting animals.
[illegible] Full confidence given orally.

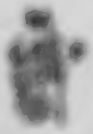
[illegible]

[illegible]

[illegible]



In these mighty mists that followed was another of long memories, the oldest people knew how the earth knew except the oceans. The long separation from one another in space and time, their different height of existence in the sea the [illegible] beneath, and the different shaping of their fins [illegible] by their underlives appear to us today as three branches of the oldest people.

The ancestors of the earliest immigrant band are the [illegible], more generally known under the name of [illegible] ('Anadromous') or Many Ascenders from the Greek word [illegible] ; the poetry of whose they have only a part.

Although the inhabitants of the Hall live nothing to say about a former population of Ancients, one most remarkable absence, especially on the basis of their ethnography, that they immigrated at [illegible] [illegible] [illegible] [illegible] of large parts of the steppes. From among themselves, Ancient symbolisms, and, finally, the pressure by the Troops enclosed the Hall to such an extent that it was easy for the second band of Ideas, the [illegible] the Ceb services of which were the [illegible], and the Ceb also the [illegible], when it came to, to drive out the oldest ones altogether. A part of these fused refuge among the neighboring agriculturalists, with whom they merged, another part among their opponents, who adapted them as ancestors of the tribe; the rest, however, withdrew into the forests and bush of the steppes, where and today, in great poverty, they scale a poor living by hunting.

The fate of the Hall, however, was not to be spared the [illegible] bush settlers. After a rather long period during which they coexisted with the Troops the descendants of the steppes, the Arabaspes appeared again around Ideas and, as before, brought poverty and death. And again, as before, the new settlements did not exceed ideas. The third band, the [illegible] [illegible], immigrated from the north, and it lasted a though it would rarely [illegible], by means of bloody fighting, the destructive work of the epidemics. Nor the presence of the Troops, who in place were just as powerful as they were heavily, thinned the fertility of the Ideas. They gained the [illegible] for the common fight against the Europeans.

[illegible]

[illegible]

[illegible]

(950) Clothing and adornment. — Cloth materials. — The individual articles of clothing and adornment, compared with those of the Masai. — Head and body hair. — Ears. — Painting. — Tattooing.

Cloth materials, such as are the media of the exercise peoples to the Native tribes, have been adopted only to an extremely slight extent among the Ndi. The principal reason for this is that they will rarely come into direct contact with the Europeans either, under pressure from the Masai. Only they are forced to deliver to them their yield in elephant tusks, hippopotamus teeth, and horns of Rhinoceros bicornis for a small compensation. There is no question of a high barter trade the Masai buy here cows [illegible] with them, as the coastal peoples or gain bargains this type of trade.

The Europeans see the Ndi chiefs often to their original leather clothing finds evident one before, especially [illegible] which, in use and manner of wear, is identical with that of the Masai, but lacks pearls and other orgies. This person is particularly noticeable by the front and many capes, called [illegible] and [illegible] by the Masai, which the Europeans name the skins, and which here are also worn by older men because in bearing the [illegible] is the [illegible] because of its length. The following elements to be generally seen the [illegible] called [illegible] often as [illegible] made of red [illegible], which they bring from the desert cities and often have it made out of the [illegible] from [illegible] antelope. The manner of the women is here called [illegible], as in the upper part of it [illegible] of the desert to mark, while the lower one is worked after the Masai fashion [illegible] [illegible]. The [illegible] is of material is here called [illegible] and is considerably shorter than the female, only a little longer than the [illegible]. Several [illegible] worn from a [illegible], which, however, is general are not seen. To ornament the [illegible] of the Ndi is [illegible] among the following, though one sees also [illegible] that [illegible] in the [illegible] as [illegible], as a result of circumstances, very considerably [illegible]

[illegible]
[illegible] contain the camp to the evening, or even leave a dish piece of game [illegible] contain during the night, they walk around the spot, before the approach of darkness, with a burning twig of the [illegible] bush. They assert that if one has done this, no predatory animal can approach. On the two not bird diagonally upward in shooting, one frequently finds a design like a wavy line, which, in the belief of the people, God himself ought down long ago, and which is supposed to have the effect that in hunting they will kill only fat game.

The nature of the sorcery through which sickness and death can be brought about they explain like the Hindus. Evil, supernatural spirits have nothing to do with it. It is solely the work of evil human beings, who are despised, feared, and therefore exploited; they are called [illegible], to which are recognized the least evil of sorcerers. Persons with the evil eye, who are called [illegible], are likewise feared and exploited. If one knows an enemy's name he or there or a sudden death, it is regarded as the work of these sorcerers.

(2)

[illegible] Law. = General morality. = Property. = Sharing the hunting booty. = Things found. = Rumor. = Debts. = Liability. = Gift. = Blood friendship. = Murder and manslaughter. = Negligent homicide. = Bodily injury. = Innocent offenses. = Theft. = Inquiry about an unknown culprit. = Legal procedure. = Swearing. = Torture. = Ordeals. = Blue vue. = Women before justice. = Immorality (?).

The legal views and legal practices of the Fiji in general resemble those of the Hindus.[1] We find the same binding ideas everywhere. Here, too, might often comes before right, even if not to the same extent as there.

There is nothing new to be said about the rights of families and persons. The sole court in litigation is a [illegible] even chosen by both parties. If plaintiff and defendant belong to the same tribe, litigation or criminal cases in which plaintiff and defendant belong to two different tribes are not settled by the [illegible] among themselves, but handed over to the chief of the nearest local [illegible]. A possession of punishable offenses by legal ways is unknown.

1. [For information on legal views of the Hawaii, see Fiji Island, 19 Section, [illegible] category 114, pp.[illegible]—Australian]

/301 cont./

to peasant or elk. The heir of the warmonger is also liable. The giver is offended by a refusal to accept a gift. A counter-gift of approximately the same value follows gift-giving. The giver spits upon the gift when he hands it over. The Wandorobbo never conclude into blood friendships among themselves, but only -- and, to be sure, very rarely -- with members of other tribes. The ceremony observed for this resembles the one described above among the Masai. If a stranger has bought ivory from him and paid only part of the price, the ol dombani often likes to conclude blood friendship with him because he thinks that then the debtor must die if he does not repay the debt as quickly as possible (1).

1. This view is in general vogue; it was not originally peculiar to the Asa, but adopted.

As among the Masai, the legal view makes no distinction between murder and manslaughter, but indeed between the latter and negligent homicide. A murderer caught in the very act is subject to blood revenge, for the execution of which every man belonging to the family of the one murdered and in some districts also any of his friends and companions are justified. If the avengers do not succeed in capturing the murderer on the day of the murder, /302/ the latter is safe from blood revenge, for people see in the unsuccessful search for him a command of God to let him live. To atone for his deed, however, he must pay the principal heir of the deceased one large and two small ivory tusks. Negligent homicide is punished by the payment of a medium-sized ivory tusk. If the perpetrator and the one who was killed belong to the same lineage, the punishment is considerably less than if they are from different lineages of the same tribe. On the other hand, if the two belong to different tribes, the ones entitled to blood revenge often hand over the execution of it to the Masai, who kill the perpetrator, even if they do not capture him until after several months. Up to the completed payment the perpetrator is regarded as pori-wedge, corresponding to the ol olkeiyani of the Masai. If an Asa kills a Masai blacksmith, the deed remains unpunished because the blacksmiths are too weak for revenge and the Masai would

Private delicts include trespass, that is, leaving an outsider's land to the town; theft, or unauthorized appropriation of other things in general; murder; adultery; and assault. There are offences for which compensation is payable, or for which a man may kill the offender, e.g. for theft, though it is then at his own risk any compensation for murder. Offences which concern tribal elsewhere are dealt with by the clan council. Offences come within the province of the town council, which may act in both cases, and both at council times, but only where there was a definite reason. Thus a person had some feelings which caused the calling of a council, he told the householder who passed such report the town that people should assemble on a certain day. If, for example, a man had been robbed of a heavy sword, and knew who had stolen it, he would put the matter before the council, partly to decide on the amount of compensation, for the amount might vary according to the thief's circumstances, and partly to have public opinion behind him when he collected the debt for payment. I believe that on the whole theft among the Ibadan themselves was not very common, and certain kinds of theft are regarded by them as so mean that a man must be very depraved indeed who will commit them. Besides, in a small town where members feel that outside their own circle every man's hand is against them, and to whom a stranger is a potential enemy until proved a friend, the need for unity and absence of friction is overwhelming if they are to survive. I certainly heard of no cases of theft during the period of my investigations.

We may now pass on to describe some of the traditional measures taken against offenders.

Incest. Incest means intercourse between a man and a woman of the clan (that is, one whom he calls by a relationship term), and a chief crime. We have already described the punishment for this (see above, p. 107), which is the first case is carried out with the approval of the town council, and in the second, under the authority of the clan council.

Killing a Member. When a man killed a member belonging to another clan, the council of the dead man's clan met to discuss the amount of compensation that was to be paid (*gan*), and then sent word to the council of the murderer's clan. This meant that the offence had been recognized, and that action must be taken. The council of the murderer's head then assembled so that arrangements for payment could be made and became known to everybody. The murderer also had to be purified, in the same way as when the victim was a clansman. The head council then met again to discuss the amount of the compensation. This, it seems, was usually collected at nine head of cattle (male or female), though it is doubtful if the full number was ever collected *, and if the murderer was a poor man with

* The number nine is probably due to imitation of the Yoruba procedure, where nine is the amount payable as compensation for homicide.

TABLE OF CLANS

Clan name	Corresponding Nandi name, used also by Dorobo	Source	Dorobo totem
Kaparkui *	Kipkokoo Moi	Nandi clan	crested crane
Moi *	Moi	Nandi clan	crested crane buffalo small red bird
Kipiekes *	Kipiekes	Nandi clan	baboon
Kipamui *	Kipamui	Nandi clan	duiker
Kapil *	Kipsirkui	Nandi clan	bush pig
Toipui *	Toipui	Nandi clan	rain
Kurapur *	Tungo	Nandi clan	hyena
Talui *	Talui	Nandi clan	lion

The three reputed clans are: Kiponqui,* corresponding to the Nandi Kaswalka, totem partridge; Kipasiso,* corresponding to the Nandi Kipasiso, totem the sun; and Kopot, apparently a Dorobo name, totem snake.

(All names marked * are of *Nandi* origin.)

The clan is the basis of political organization, and people tend to live in clan settlements under the control of a clan council. This council consists of all the old men of the clan. People meet at the house of a clansman who, upon notice being given to him, prepares honey-wine or bitr, for the business of the council is done in an informal way with a jar of honey-wine as if it were a social gathering, which in a sense it is. Business is done first and the drinking follows. The council deals with clan matters, including disputes between clansmen, boundaries of hunting areas, homicide of a clansfellow, incest, and the preliminary arrangements when a clansman has killed a member of another clan. Disputes are settled by discussion, and the result is announced by the council leader, *kirwokindet*, who is not necessarily the oldest member of the clan, but someone fairly senior who acquires his position in much the same way as does the Nandi *poiyot ap kokwet* (p. 32).

The Kovet

Superimposed on the clan areas is a system of districts (*koveseek*, sing. *kovet*) possibly due to Nandi influence. Each district includes several clan settlements, and has a council which is formed of the elders and circumcised men of all the clan settlements within it; the council sits under a tree (there are no special council trees) in an open space from which the bush has been cleared. The function of the *kovet* council is to handle inter-clan affairs. It has a leader, also known as *kirwokindet*, whose position and duties resemble those of the leader of the clan council, and he acquires his office in the same way. There was no chief of the horde.

The forest is divided into nine *koveseek*, named (from north to south), Ceparur, Kelpui, Sirun, Kipkorom, Sociyo, Meteitei, Mokopic, Puret, and Sagalo. In 1939 only three of these were occupied: Kelpui, Kipkorom, and Sociyo (which had by then been amalgamated with Meteitei).

Legal Sanctions

Crimes against which primary sanctions are directed include incest, witchcraft, and disobedience to the council. Secondary sanctions deal with trespass, theft, homi-

623 live under such conditions as the Dorobo. The dense forest, crossed by a
[987] path only at one corner, the scattered groups of huts each in the old days
[36] shut off from the next by a wall of trees, and the precarious hand to mouth existence of a hunting economy, all operate against the spending of much time in meeting others away from home merely to talk. And so the council was a more serious affair and held only when necessary; moreover its seriousness was emphasized, in the case of the clan council, by the provision of honey-wine so that it became a social as well as an administrative institution.
623 Though Dorobo had their quarrels and disputes, they were not cattle men,
691 and so were saved from one of the commonest causes of litigation in Africa, disputes over stock ownership and inheritance, which can occupy so much of the time of a pastoral tribe. The possessions of a Dorobo — his bow, his knife, his honey-barrels — do not reproduce themselves, and his bees and dogs, important as they are, have not the same significance as cattle when questions of inheritance are raised.

4. Crime and its Results

681 When a man had heard the decision of the council go against him, and knew that he should do this or that, did he always do it? As often as not, I believe, he obeyed because he felt the force of public opinion. Africans are very sensitive to what their own people think of them, and as a last resort the elders could call on the young men, the *murenik*, to enforce their decisions. If a man, knowing that he had to pay an ox as compensation, persisted in his failure to produce the animal, two or three *murenik* could be sent by the council to persuade him by moral or if necessary physical force to obey. But in a small community like that of the Dorobo a man just could not afford to have everybody's disapproval or resentment directed against him; and the strength of public opinion as an incentive to obey orders is very real. It is a strong element in horde cohesion. Moreover, behind it is the fear of the spirits, to which we shall return later on.

674 Crimes and offences for which some form of action is taken fall into
673 two categories, public delicts, or crimes against the horde as a whole, and private delicts, or offences against individuals. The former are the more serious, since their commission may affect not only the offender, but also
674 others with whom he is connected. Such crimes include incest, intercourse with a clanswoman, killing a clansfellow, witchcraft, killing an enemy (but see below), and disobedience to the council. These crimes are "public" because their commission is regarded as likely to affect others besides the criminal. Incest and intercourse with a clanswoman (equivalent to incest) are displeasing to the *cesoriloi*, the spirits, and unless appropriate action is taken, the people may suffer. Murder of a clansman, though in one sense a private delict, is really to be classed among public delicts because it strikes at the foundations of horde unity, the clan. And though killing an enemy is not in itself a crime, it nevertheless brings the killer into the same state of danger to himself and others as killing a Dorobo, and thus necessitates ceremonial cleansing.

M D 682 648 M [824] [326]

/262 cont./
never have anything to do with taking their part. On the other hand, if an Asá is killed by a blacksmith, the Masai immediately place themselves on the side of the ones injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wandorobo, to be sure, would themselves be in a position to execute the revenge, but the Masai do not permit this because they see in it an encroachment on their rights as masters of the land and in particular also of the el konono.

D 683 [682]

Bodily injury with a fatal outcome, if caused intentionally, is regarded as murder; if negligently, as negligent homicide. Minor bodily injuries are atoned for with the payment of a specific number of beehives. For the destruction of a finger one beehive is paid, for one hand eight; among some Wandorobo who live in close contact with the Masai the atonement for the destruction of a finger or the whole hand amounts to a fat-tailed sheep. Bodily injury leading only to the loss of an index finger or an eye often remains unpunished,

D [847] [839] [674]

as does indecent assault. Abortion is said to be unknown, and perversion not to occur. Kidnapping and sale are unknown.

D 685

A theft committed in the camp by an inhabitant or stranger is atoned for by the return of the stolen goods; that of a beehive hanging outside the camp, with the payment of ten new ones. Anyone who steals honey from a beehive pays five beehives. Arson is said

D 683

not to occur; one who is the cause of the illness of another through sorcery is not infrequently killed, after he has been persuaded to

D 689

charm the sick one back to health. The shooting of poisoned arrows in the camp is strictly forbidden, because of the danger connected with it. Anyone who transgresses this law must expect to be killed immediately by his campmates.

D 681

Unknown are: aggravated kinds of death, the principle of repaying like with like, compensation in the culpable body part, symbolism, imprisonment, enslavement, public punishments, the right of pardon.

D 787

For the inquiry concerning an unknown culprit, the injured one turns -- /263/ as has already been mentioned -- to a sorcerer, who is also called ol goiatiki[1] among the Wandorobo. Instead of the manipulations with the en gidoh, he throws a pair of sandals on the ground in front of him eight times, then picks them up and puts

1. [ol goiatiki is a Masai word also meaning sorcerer--Analyst]

The Koret

63
60
[623]

Superimposed on the clan areas is a system of districts (*korosuek*, sing. *koret*) possibly due to Nandi influence. Each district includes several clan settlements, and has a council which is formed of the elders and circumcised men of all the clan settlements within it; the council sits under a tree (there are no special council trees) in an open space from which the bush has been cleared. The function of the *koret* council is to handle inter-clan affairs. It has a leader, also known as *kiruokindet*, whose position and duties resemble those of the leader of the clan council, and he acquires his office in the same way. There was no chief of the horde.

The forest is divided into nine *korosuek*, named (from north to south), Cepurur, Kelpui, Sirua, Kipkorom, Sosoiyo, Meteitei, Mokopic, Puret, and Sanalo. In 1930 only three of these were occupied: Kelpui, Kipkorom, and Sosoiyo (which had by then been amalgamated with Meteitei).

Legal Sanctions

● 681

Crimes against which primary sanctions are directed include incest, witchcraft, and disobedience to the council. Secondary sanctions deal with trespass, theft, homi-

1: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

cide, adultery, and assault. In the first category, incest is punished under the authority of the clan council: the man is beaten, his hut burnt, his honey-barrels destroyed; the woman also is beaten. Witches might be killed under authority of the *kovet* council. In cases of persistent disobedience to the council, the elders could call upon two or three men to force the offender, by moral and physical persuasion, to mend his ways. Of offences in the second category, trespass has already been mentioned (p. 58). Theft, when not dealt with summarily, can be brought to the *kovet* council, which can order payment of compensation. A man accused of stealing food may say, "If I am a thief, may this grass eat me," and place a blade of grass between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-cattle. If a man incapacitates another by assaulting him, he must feed him till he recovers. Homicide of a Dorobo of another clan, though not involving primary sanctions, was a serious offence because it meant that the murderer had to get cattle in order to pay compensation. The usual number was nine head of cattle, though when the murderer was a very poor man living alone the number might be reduced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could, from his own herd if he had one, or by exchange from the Nandi, or by any other means, including theft. The deficiency had to be made up by his fellow-clansmen.

Summary

The Dorobo horde consists of a loosely integrated group of districts held together partly by the feeling that they are all Dorobo, but much more by the clan ties which cut across the district boundaries. The clan is therefore one of the chief institutions in the life of the Dorobo.

MAIN CULTURAL FEATURES

Crafts

Housing

(*a*) Forest type: the *koconget*, in use as late as 1927, was a framework of sticks bent over to form an oblong, dome-shaped structure, covered on the outside with banana leaves and leaves of trees; height, 6 ft.; length, 11 ft.; width, 7 ft. (*b*) New types: the *keriet* has a circular wall about 5 ft. high plastered with mud, and an almost flat thatched roof supported by a centre post; the *kot* is a hut of ordinary Nandi type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of three or four *koconget* huts, were situated in clearings just big enough to hold the huts, and were approached by concealed paths which branched in a bewildering manner that made it impossible to find them without a guide. Settlements outside the forest are arranged in small groups usually close to the cultivated land.

Dress and Ornaments

Clothing is made largely from the skins of wild animals, and the forms are mainly copied from those of the Nandi, as are most of the ornaments, which include, among other things, iron wire armlets and leglets, necklaces, and married women's ear-rings (*taok*). The ear-lobes are pierced and elongated (sometimes getting torn in the forest), and a small hole is bored in the top of the ear. Some but not all remove the two lower middle incisors. Hair is allowed to grow to a length of about 2 ins., when it is sometimes covered with a bladder cap, and sometimes dressed with red earth and fat. Occasionally a man has his hair done in pigtails like the Nandi.

Tools and Weapons

Axes and knives are obtained from Nandi smiths, the Dorobo making the wooden handles. Needles are made from old nails and bits of wire which the Dorobo

1: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

legs straight and hands crossed on the breast. Babies are also laid out for the hyenas, though if there is a dung-heap, they are buried there.

Witchcraft

Witches, *posik* (defined as among the Nandi, p. 39), may be of either sex; females are said to be more common, though in 1939 the Dorobo said there were no witches at all in the three districts of Kelpui, Kipkorom, and Sosoiyo, and certainly no trace of witchcraft was encountered. Formerly, in cases of witchcraft where the witch's identity was unknown, the Dorobo went to a Nandi diviner, *saheyuot*, and on her identity becoming known the witch was required to oil the victim on the face, breast, and belly with the fat of a she-goat. If she refused, she was tied to a tree by a thong drawn tightly round her forehead and flogged till she agreed.

Affinity with Wild Animals

Possessing a "hunting outlook," the attitude of the Dorobo to wild animals is unlike that of the African to whom hunting is at most of secondary importance. They seem to be closer to the wild life round them, perhaps because they are wild men themselves. The conversation of Dorobo going through the forest turns quickly to the wild life there, for they have what they and the Nandi call *comiet*, "affinity," with the beasts of the forest. This was described in a text, in which a Dorobo said: "The Dorobo know the spoor of all the animals, and they like to see the animals. The animals are not bad, for we and they all dwell in the forest together. The intelligence of animals is not like that of people, but it is not very different, for animals also are intelligent. All animals of the forest are alike, though we eat some and not others, because we the Dorobo and they the animals all live side by side in the forest."

Musical Instruments

The Dorobo have no musical instruments, and they seldom sing or dance. They used to have water-buck horns which were blown to call people together in the forest.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

live under such conditions as the Dorobo. The dense forest, crossed by a path only at one corner, the scattered groups of huts each in the old days shut off from the next by a wall of trees, and the precarious hand to mouth existence of a hunting economy, all operate against the spending of much time in meeting others away from home merely to talk. And so the council was a more serious affair and held only when necessary; moreover its seriousness was emphasized, in the case of the clan council, by the provision of honey-wine so that it became a social as well as an administrative institution. Though Dorobo had their quarrels and disputes, they were not cattle men, and so were saved from one of the commonest causes of litigation in Africa, disputes over stock ownership and inheritance, which can occupy so much of the time of a pastoral tribe. The possessions of a Dorobo — his bow, his knife, his honey-barrels — do not reproduce themselves, and his bees and dogs, important as they are, have not the same significance as cattle when questions of inheritance are raised.

4. Crime and its Results

When a man had heard the decision of the council go against him, and knew that he should do this or that, did he always do it? As often as not, I believe, he obeyed because he felt the force of public opinion. Africans are very sensitive to what their own people think of them, and as a last resort the elders could call on the young men, the *murenik*, to enforce their decisions. If a man, knowing that he had to pay an ox as compensation, persisted in his failure to produce the animal, two or three *murenik* could be sent by the council to persuade him by moral or if necessary physical force to obey. But in a small community like that of the Dorobo a man just could not afford to have everybody's disapproval or resentment directed against him; and the strength of public opinion as an incentive to obey orders is very real. It is a strong element in horde cohesion. Moreover, behind it is the fear of the spirits, to which we shall return later on.

Crimes and offences for which some form of action is taken fall into two categories, public delicts, or crimes against the horde as a whole, and private delicts, or offences against individuals. The former are the more serious, since their commission may affect not only the offender, but also others with whom he is connected. Such crimes include incest, intercourse with a clanswoman, killing a clansfellow, witchcraft, killing an enemy (but see below), and disobedience to the council. These crimes are "public" because their commission is regarded as likely to affect others besides the criminal. Incest and intercourse with a clanswoman (equivalent to incest) are displeasing to the *cesowiloi*, the spirits, and unless appropriate action is taken, the people may suffer. Murder of a clansman, though in one sense a private delict, is really to be classed among public delicts because it strikes at the foundations of horde unity, the clan. And though killing an enemy is not in itself a crime, it nevertheless brings the killer into the same state of danger to himself and others as killing a Dorobo, and thus necessitates ceremonial cleansing.

5:Huntingford E-5 (1938-1939) 1954 FLÓ Dorobo FLÓ

Private delicts include trespass, that is, hunting on another's land in the forest; theft, of honey-barrels in particular and of other things in general; murder; adultery; and assault. These are offences for which compensation is payable, or for which a man may kill the offender, e. g. for theft, though if he does so he must pay compensation for murder. Offences which concern fellow clansmen are dealt with by the clan council. Others came within the province of the *koret* council, which was not a daily affair, nor held at stated times, but only when there was a definite reason. When a person had some business which needed the calling of a council, he told the *kirsokindet*, who passed word round the *koret* that people should assemble on a certain day. If, for example, a man had been robbed of a honey-barrel, and knew who had stolen it, he would put the matter before the council, partly to decide on the amount of compensation, for the amount might vary according to the thief's circumstances, and partly to have public opinion behind him when he enforced his claim for payment. I believe that on the whole theft among the Dorobo themselves was not very common; and certain kinds of theft are regarded by them as so mean that a man must be very depraved indeed who will commit them. Besides, in a small horde whose members feel that outside their own circle every man's hand is against them, and to whom a stranger is a potential enemy until proved a friend, the need for unity and absence of friction is overwhelming if they are to survive. I certainly heard of no cases of theft during the period of my investigations.

We may now pass on to describe some of the traditional measures taken against offenders.

Incest. Incest means intercourse between a man and a woman of his *tiliet* (that is, one whom he calls by a relationship term), and a clanswoman. We have already described the punishment for this (see above, p. 127 f.), which in the first case is carried out with the approval of the *koret* council, and in the second, under the authority of the clan council.

Killing a Dorobo. When a man killed a Dorobo belonging to another clan, the council of the dead man's clan met to discuss the amount of compensation that was to be paid (*pas*), and then sent word to the council of the murderer's clan. This meant that the offence had been recognized, and that action must be taken. The council of the murderer's *koret* then assembled so that arrangements for payment could be made and become known to everybody. The murderer also had to be purified, in the same way as when the victim was a clansman. The *koret* council then met again to discuss the amount of the compensation. This, it seems, was usually reckoned at nine head of cattle (male or female), though it is doubtful if the full number was ever enforced [1], and if the murderer was a poor man with

[1] The number nine is probably due to imitation of the Nandi procedure, where nine is the amount payable as compensation for homicide.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

681 The principle of compensation enters into the legal consequences of offences against the individual, as well as the principle that in certain cases where the injury is grave the injured party may get satisfaction by killing the offender. Of course when he does this, he has to pay for his satisfaction, but the need for satisfaction may override the knowledge that it must be paid for; and the fact that public opinion recognizes a man's right to kill one who offends against him prevents any display of public resentment when he exercises his right. On the other hand, some of the traditional penalties seem to be both excessive and impracticable, even when the need for satisfaction is taken into account. When we are told, for instance, that a man may kill a man who hunts without permission on his land, but that if he does so he must pay compensation, we may be inclined to wonder how such a rule could remain in existence. The explanation is, I believe, that the apparently excessive punishment and the consequent liability to pay compensation act as a deterrent in two directions: the offender may be restrained from trespassing and doing what to his people, from the nature of their life and environment, cannot be anything but economically bad; and the owner may be made to pause before he takes a man's life, even if the offence is considered so serious that by customary law he is entitled to get satisfaction for it. The Dorobo is no fool; he could not have survived if he was. And the African, when engaged in his own affairs, is just as capable as anyone else of restraining his actions.

5. Religion and Magic

a) Belief and Practice

791 Briefly, the basic principles of Dorobo religion are these: There is a God, who is the sun and is behind everything, but beyond the reach of men, who must therefore approach him through intermediaries, the chief of which are the spirits of the dead, which having once been people are still able to maintain contact with the living. If they are offended, catastrophe comes to the living. By means of various observances and ritual practices men manage to keep on the right side of the Unseen World and to maintain the spiritual and material welfare of both horde and individual.

796 "There is one whom we call *Asista*, and he it is who lives above; he is the sun which we see in the sky, and we know no other name for him". Thus did an old Dorobo describe what he understood when he thought of *Asista*, the word which means both "sun" and "god", yet does not imply that the Dorobo are sun-worshippers. Some say that *Arawa*, the moon, is his sister; others, that *Arawa* is his mother; and he appears to have no father. People make no offerings to *Asista* or *Arawa*, but pray to them for help:

Kipendi samak si kesakas kiilencin Asista, Asista, ipiiyec omdit, ngut Asis, ipiiyec kumik, ngut Asis, ipiiyec panyek, "When we go to the forest to hunt we say to *Asista*, '*Asis*, fill us with food', or '*Asis*, fill us with honey', or '*Asis*, fill us with meat'." Similar words are spoken to *Arawa Arawa, ipiiyec omdit*, etc.

M D 682 648 M [564] [326] /262 cont./ never have anything to do with taking their part. On the other hand, if an Asá is killed by a blacksmith, the Masai immediately place themselves on the side of the ones injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wandorobo, to be sure, would themselves be in a position to execute the revenge, but the Masai do not permit this because they see in it an encroachment on their rights as masters of the land and in particular also of the el konono.

D 683 [682] Bodily injury with a fatal outcome, if caused intentionally, is regarded as murder; if negligently, as negligent homicide. Minor bodily injuries are atoned for with the payment of a specific number of beehives. For the destruction of a finger one beehive is paid, for one hand eight; among some Wandorobo who live in close contact with the Masai the atonement for the destruction of a finger or the whole hand amounts to a fat-tailed sheep. Bodily injury leading only to the loss of an index finger or an eye often remains unpunished, as does indecent assault. Abortion is said to be unknown, and perversion not to occur. Kidnapping and sale are unknown.

D [847] [839] [674] A theft committed in the camp by an inhabitant or stranger is atoned for by the return of the stolen goods; that of a beehive hanging outside the camp, with the payment of ten new ones. Anyone who steals honey from a beehive pays five beehives. Arson is said not to occur; one who is the cause of the illness of another through sorcery is not infrequently killed, after he has been persuaded to charm the sick one back to health. The shooting of poisoned arrows in the camp is strictly forbidden, because of the danger connected with it. Anyone who transgresses this law must expect to be killed immediately by his campmates.

D 685 D 683 D 689

D 681 Unknown are: aggravated kinds of death, the principle of repaying like with like, compensation in the culpable body part, symbolism, imprisonment, enslavement, public punishments, the right of pardon.

D 787 For the inquiry concerning an unknown culprit, the injured one turns -- /263/ as has already been mentioned -- to a sorcerer, who is also called ol goiatiki[1] among the Wandorobo. Instead of the manipulations with the en gidon, he throws a pair of sandals on the ground in front of him eight times, then picks them up and puts

1, [ol goiatiki is a Masai word also meaning sorcerer--Analyst]

l: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

cide, adultery, and assault. In the first category, incest is punished under the authority of the clan council: the man is beaten, his hut burnt, his honey-barrels destroyed; the woman also is beaten. Witches might be killed under authority of the *koret* council. In cases of persistent disobedience to the council, the elders could call upon two or three men to force the offender, by moral and physical persuasion, to mend his ways. Of offences in the second category, trespass has already been mentioned (p. 58). Theft, when not dealt with summarily, can be brought to the *koret* council, which can order payment of compensation. A man accused of stealing food may say, " If I am a thief, may this grass eat me," and place a blade of grass between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-cattle. If a man incapacitates another by assaulting him, he must feed him till he recovers. Homicide of a Dorobo of another clan, though not involving primary sanctions, was a serious offence because it meant that the murderer had to get cattle in order to pay compensation. The usual number was nine head of cattle, though when the murderer was a very poor man living alone the number might be reduced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could, from his own herd if he had one, or by exchange from the Nandi, or by any other means, including theft. The deficiency had to be made up by his fellow-clansmen.

Summary

The Dorobo horde consists of a loosely integrated group of districts held together partly by the feeling that they are all Dorobo, but much more by the clan ties which cut across the district boundaries. The clan is therefore one of the chief institutions in the life of the Dorobo.

MAIN CULTURAL FEATURES

Crafts

Housing

(*a*) Forest type: the *koconget*, in use as late as 1927, was a framework of sticks bent over to form an oblong, dome-shaped structure, covered on the outside with banana leaves and leaves of trees; height, 6 ft.; length, 11 ft.; width, 7 ft. (*b*) New types: the *keriet* has a circular wall about 5 ft. high plastered with mud, and an almost flat thatched roof supported by a centre post; the *kot* is a hut of ordinary Nandi type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of three or four *koconget* huts, were situated in clearings just big enough to hold the huts, and were approached by concealed paths which branched in a bewildering manner that made it impossible to find them without a guide. Settlements outside the forest are arranged in small groups usually close to the cultivated land.

Dress and Ornaments

Clothing is made largely from the skins of wild animals, and the forms are mainly copied from those of the Nandi, as are most of the ornaments, which include, among other things, iron wire armlets and leglets, necklaces, and married women's ear-rings (*taok*). The ear-lobes are pierced and elongated (sometimes getting torn in the forest), and a small hole is bored in the top of the ear. Some but not all remove the two lower middle incisors. Hair is allowed to grow to a length of about 2 ins., when it is sometimes covered with a bladder cap, and sometimes dressed with red earth and fat. Occasionally a man has his hair done in pigtails like the Nandi.

Tools and Weapons

Axes and knives are obtained from Nandi smiths, the Dorobo making the wooden handles. Needles are made from old nails and bits of wire which the Dorobo

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

and speak at it. People meet at the house of a clansman who, upon notice being given to him, prepares as much honey-wine as he can for the entertainment of the gathering, and what he provides may be supplemented by wine brought by other members. The business of the council is done with the aid of a jar of honey-wine in an informal way as if it were a social gathering, which in a sense it is, for the clan council through its informality has become a social bond between clansmen. Business is done first, and the drinking soon follows. The subjects which may be discussed include:

1. Disputes between members of the clan.
2. Hunting disputes.
3. Disputes about boundaries of hunting areas.
4. The preliminary business when a clansman has killed a member of another clan.
5. Homicide within the clan.
6. Sexual intercourse between a man and a girl of the clan. Disputes under heads 1-3 are settled by discussion, the leader of the council swaying, by his opinion, the views of the members. The leader, *kiruokindet*, is not necessarily the oldest member of the clan, for such a man might be too senile to act properly; but someone fairly senior in age, with his faculties intact, who is liked and respected, becomes in course of time (as in the case of the leader of the *koret* council) looked upon as a responsible person who can be safely listened to and whose judgement is sound.

More serious matters, like those under heads 4-6, are dealt with like the rest by discussion, but there is as well a certain traditional procedure to follow. When a clansman has killed a member of another clan, the council of the dead man's clan meets to discuss the compensation payable, and to choose a messenger who will be sent to the council of the murderer's clan to start proceedings, which after a preliminary discussion, are heard before the *koret* council, since two different clans are involved, and the matter is not purely the affair of one clan. When a man kills a member of his own clan, the whole matter is settled within the clan. First, the murderer has to brew some honey-wine and kill a goat from which the fat is collected. Then old men of both the families concerned meet at the house of the murderer and drink the wine he has provided, after which two of the old men oil the murderer all over with the goat's fat. The animal from which this fat is obtained must be a goat, and if the murderer has none of his own, he must get one by purchase or theft. He is therefore put to some trouble and even danger, for if he has to steal a goat he risks being speared if caught, and this constitutes an act of faith which, together with the anointing of his body, frees him from the uncleanness caused by the shedding of human blood. There is no payment of compensation for the murder of a clansman, but the murderer must if he can give his victim's wife one cow to help towards her maintenance. This last is a Nandi custom and was probably introduced in recent times after the Dorobo had begun to acquire cattle in a small way.

Sexual intercourse between a man and a girl of his clan is not an offence provided the girl does not have a baby, though the lover is not allowed

5:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

I noticed that when Dorobo

were having a meeting of any sort, however informal, at which they wanted to speak of anything important, they were careful to exclude Nandi from it; and if a Nandi insisted on intruding, they would talk only of trivial matters till he had gone. One day when I was talking to some Dorobo about their land, they insisted on my sending out of earshot a Nandi who was with me — they even took me out of his sight and spoke in low voices, for the subject was too serious to be heard and perhaps ridiculed by a Nandi. It is thus not difficult to understand how an acquired feature like the *koret* can fall into disuse; and this is what I believe has happened among the Dorobo. Pressure of various kinds was by 1927 forcing the Dorobo to be more wary than ever, and the clan system could give them all the administrative organization they needed. Hence the *koret* council could lapse, and with it the office of *kiruokindet*, though the *koret* names remained, as they had become useful terms of reference.

Nevertheless, the *koret* council is closely associated with the punishment of crime, and it is therefore necessary to understand something of the way in which it did its work in the past.

All the elders and circumcised men of a district formed the council. They met at the foot of a tree where the undergrowth was cleared away to make an open space. Any tree would do, for unlike the Nandi they had no special trees which mark the *koroset*. The functions of the *koret* council were described briefly by a Dorobo in the following words: *Keruoc nalek si kesic ce miyac ak ce yac, si kohas plk tukul. Ingoesio cit ake tukul, keoon si kua emet ake*, "We take counsel that we may find what is good and leave what is bad so that all men may understand. If any man refuses, he is driven out of our country". Questions of theft and homicide were discussed by the council; it considered what steps to take when food was scarce; and disputes of all sorts between people of different clans were heard and settled. The decision of the council was announced by the *kiruokindet*, who after sensing the opinion of the meeting, would stand up and say what ought to be done. It was then left to the people concerned to carry out the suggestion, for such it was, in effect, rather than an order.

The way in which the law is enforced is liable to be something of a puzzle to the casual observer. The mainspring of Dorobo political organization is public opinion, and behind public opinion is the fear of the dead. People know that it is wrong, that is, contrary to custom, to do a certain thing; they know also that if they do it, their friends will do someting unpleasant to them, and, what is really most important of all, they know that *mecome cesowiloi*, "the spirits of the dead disapprove". Hence in order to understand how Dorobo law works, one must know something about their religious beliefs. To the European these reasons no doubt seem feeble; but they are effective in that the Dorobo have been able to survive till to-day as a unit sufficiently law-abiding to hold its own and carry on its existence in face of human and non-human enemies, and to maintain its place as a living organization.

Among people like the Nandi, the council habit has become an almost daily business, has in fact almost come to be the equivalent of a club, though without the conviviality of a club; but this is not possible for people who

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

Private delicts include trespass, that is, hunting on another's land in the forest; theft, of honey-barrels in particular and of other things in general; murder; adultery; and assault. These are offences for which compensation is payable, or for which a man may kill the offender, e. g. for theft, though if he does so he must pay compensation for murder. Offences which concern fellow clansmen are dealt with by the clan council. Others came within the province of the *koret* council, which was not a daily affair, nor held at stated times, but only when there was a definite reason. When a person had some business which needed the calling of a council, he told the *kiruokindet*, who passed word round the *koret* that people should assemble on a certain day. If, for example, a man had been robbed of a honey-barrel, and knew who had stolen it, he would put the matter before the council, partly to decide on the amount of compensation, for the amount might vary according to the thief's circumstances, and partly to have public opinion behind him when he enforced his claim for payment. I believe that on the whole theft among the Dorobo themselves was not very common; and certain kinds of theft are regarded by them as so mean that a man must be very depraved indeed who will commit them. Besides, in a small horde whose members feel that outside their own circle every man's hand is against them, and to whom a stranger is a potential enemy until proved a friend, the need for unity and absence of friction is overwhelming if they are to survive. I certainly heard of no cases of theft during the period of my investigations.

We may now pass on to describe some of the traditional measures taken against offenders.

Incest. Incest means intercourse between a man and a woman of his *tiliet* (that is, one whom he calls by a relationship term), and a clanswoman. We have already described the punishment for this (see above, p. 127 f.), which in the first case is carried out with the approval of the *koret* council, and in the second, under the authority of the clan council.

Killing a Dorobo. When a man killed a Dorobo belonging to another clan, the council of the dead man's clan met to discuss the amount of compensation that was to be paid (*pas*), and then sent word to the council of the murderer's clan. This meant that the offence had been recognized, and that action must be taken. The council of the murderer's *koret* then assembled so that arrangements for payment could be made and become known to everybody. The murderer also had to be purified, in the same way as when the victim was a clansman. The *koret* council then met again to discuss the amount of the compensation. This, it seems, was usually reckoned at nine head of cattle (male or female), though it is doubtful if the full number was ever enforced [1], and if the murderer was a poor man with

[1] The number nine is probably due to imitation of the Nandi procedure, where nine is the amount payable as compensation for homicide.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

682 few relatives it would be very much less. The murderer had to provide as
623 many of the number decided upon as he could, either from his own herd if
692 he had one, or by getting them from the Nandi in exchange for furs, which meant, of course, that the cattle would be either oxen or worn-out old cows, and that he would not be able to provide many himself. It therefore fell to his relatives and clansmen to make up the number, which needed a clan council to apportion the balance among them, and also resulted in a good deal of feeling against the murderer for a time. Until the amount had been
[614] agreed upon by both clan and *kerat* councils, the murderer was liable (in theory at least) to be killed by his victim's relatives, so he had to lie low till the negotiations were completed, though again it is doubtful if they would actually have gone as far as killing him, for then they themselves would merely have had to return the cattle as compensation for their own act. In dividing cattle between the murdered man's relatives, the order of priority was brother, wife, father, mother, father's brother, father's brother's son, father's sister's son.

683 **Killing a witch.** Though in 1939 I could hear of no Dorobo who were
754 reputed to be witches (*ponik*), such people certainly existed in the past. Apart from killing people by spells, their principal activities seem to have been centred on hunting — putting spells on game traps and on men who were going to hunt. If a witch was shown by a diviner to be guilty of a person's death, he or she might be killed, and no compensation was payable (*mepese*).

609 **Killing an enemy.** This means killing any person who is not a Dorobo
682 and is believed or known to have performed any unfriendly act against the
[701] Dorobo. The Dorobo have no sort of war organization, and their enemies
[727] were generally shot at from the cover of under-growth. Though not a crime,
[783] killing an enemy none the less makes the killer ritually unclean and therefore dangerous to others because he has shed human blood. This action is thus brought into the same category as homicide of a Dorobo, and though there is naturally no compensation, purification is required. The face of a man
[802] who has killed an enemy is painted (*kemase tokat*) with stripes of white earth (*emoriot*) on the forehead, down each cheek, and down both sides of the nose. The paint is allowed to remain till it flakes off, and the man does not have to stay in his hut, but goes about as usual; though if he had killed a Nandi he would take care to go to some other part of the forest till he thought it safe to return. In actual fact, Nandi were seldom killed, but one who strayed into the forest might get shot by accident: the body would be taken to a lonely place for the hyaenas to eat, and at any sign of Nandi activity the Dorobo would vanish into the depth of the forest where the Nandi would have little chance of finding them even if they had the inclination to search.

685 **Theft.** Stealing honey is the worst kind of theft, and is almost comparable with intra-tribal cattle-theft among the Nandi. A man who steals honey from someone else's barrels is considered very low indeed, and if found

S:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

a clear, windless sky. About 10 o'clock a curious whistling noise began to come from a certain part of the forest, and continued, on the same note, and without a break, for several hours. It was certainly no human or machine-made noise, and the Dorobo professed complete ignorance of it. A Nandi who had lived there before the Nandi War told me afterwards that it was an evil spirit whistling in the forest, "for we used to hear them whistling to each other like that in the forest when I was a child".

Between people and the things on which they depend for their existence both spiritual and material there is a connexion which is best expressed in terms of a ritual relationship. Things have a ritual value for people, and people themselves have a ritual status which is a relationship with their surroundings that can be altered for better or for worse according to the way in which they respect the ritual value of the things around them. Religion and magic form the procedure which protects these ritual values and status, while political organization is, in a sense, no more than an effort to maintain the ritual status of the horde in spite of the tendency of its members to injure their own ritual status and in consequence that of the horde also.

Certain things that a person does, whether voluntarily or involuntarily, cause deterioration of ritual status; but the original status may be recovered by the performance of certain ritual actions which may involve some personal effort or sacrifice. Examples of acts which cause loss of ritual status, and the means taken to restore it, are: (1) A girl who bears a child before marriage must have the undigested grass (*eiyat*) from the stomach of a goat rubbed over her face, neck, and breasts, and must then wash it off. (2) After a woman has given birth, she is in a condition of much reduced ritual status, and her husband must rub goat's fat and *eiyat* over her face, breasts, and belly. (3) A man who has killed a Dorobo must have goat's fat rubbed all over him. (4) One who has killed an enemy must have stripes of white earth painted on his face. In all these cases the people have done something which causes loss of ritual status, making them ritually unclean (*sawa* or *sowis*) and so a source of danger to others till they have been purified. The potential danger is removed by means of something which has a ritual value. Moreover, an essential element in the cleansing process is sacrifice, that is, the use of the material must either involve giving up something which is valued, or it must require some effort or even risk to get hold of. The *eiyat* or fat must be from a domestic animal: if the person concerned has one, he must use it; if he has none, then he must get one, and without delay, which for a Dorobo usually meant that he had to steal it, and thus risk getting killed while doing so. Therefore there is an act of faith in these magico-religious performances, and people believe so firmly in the efficacy of what they do that they are prepared to risk danger in order to get the necessary materials. The use of white earth may entail no more than a journey to get it, but that still means a personal effort on somebody's part. Materials which are used for the restoration of ritual status, and in consequence have a special ritual value, include: the flesh of goats, which is eaten when twins are born, and in cases of incest; *eiyat*, the undigested grass from the stomach of a ruminant (a sheep

7:Wayland N-5 (ca. 1926) 1931 FL6 Dorobo FL6

Social Organization.—The Tribe.—The Wanderobo are very few in number, and are divided among three sections, each of which has its own habitat as follows (according to the Chief, who was my informant on this point):—

Section.	Habitat.	Approximate Numbers.
Kokwaro	Kokwaro	40
Ulupun	Ruabongora	40
Lotwero	Lotwelo	40

Each section lives in a single village of its own, similar in structure to that already described. The sections are not totemic, but they are exogamous, and descent is in the male line. The tribe has but one chief, who lives at Kokwaro (north of Kamaera). Chiefainship is hereditary, and no woman is ever permitted to wield the powers of a chief. The Ulupun and the Lotwero are each presided over by a headman (paterfamilias).

Birth.—When a child is born the mother is assisted by female relatives. There are no official deliveries, as among the Lolwor. The Wanderobo allege that there are no special ceremonies connected with birth. Should a child come feet foremost into the world he will be lucky throughout life. It is stated that the afterbirth is thrown away with the rubbish. After weaning, a child occupies his father's hut, if a boy, and her mother's if a girl.

Betrothal and Marriage.—The rules for betrothal seem to be very similar to those usual among the Lolwor, except that the prospective husband goes to the girl's people direct, without representation in the first instance. The consent of the girl and of the parents on both sides is necessary, and the number of gifts is not specified as it is among the Lolwor.

Marriage is celebrated by a feast in which the people of the two sections to which the contracting parties belong take part. There is no dance peculiar to the marriage feast. After marriage a man lives for two days and nights in the hut of his betrothed, after which she returns with him to his own village, there to occupy a new hut already built for the newly married couple by the male partner, after he has consulted the wizard with regard to the luckiest time for erecting it.

Burial.—All the dead are buried without special ceremony.[1] There is no special burial ground, but graves are dug "out in the bush," well away from the village.

Age Classes.—These appear to be quite unknown.

Crime and Punishment.—The chief offence is adultery. This, however, is a private affair, and is dealt with privately, for it is not a sin against the community. A woman who is guilty in respect of this is cast out by her husband, who seeks the offending man with a view to slaying him. Murder is, however, a tribal affair, for which the punishment is death. The Lolwor practice in this respect is not followed.

[1] This statement was subsequently contradicted, in so far as it was stated that the wizard attends at all burials.

[P.193, A]

hunted by concerted action, and still are, to a limited extent, by individuals, as well as several species of monkey.[1] There seems to have been no very strict close season, as pig were occasionally hunted in the wet weather, though not often, since the forest is difficult to traverse when wet. There are now no lion or elephant, but they are said to have existed when the Sawe and Kipkoiimet ages were young men, i.e. about 1860. Leopards are still common, and are still shot if one runs up a tree after being put up by dogs; they are sometimes caught in traps made of wire, which is not bought, but searched for or stolen from farms. However, a trap made by one Arap Mogani which caught a leopard during one of my visits was said to be exceptional. Buffalo no longer exist in the western end of the forest where the Kapchepkond' live, but they occur near Londiani, a few miles to the east.

224 [136] [193] [231]

Hunting parties varied from two to eight men. If, say, eight went out, half would go along one bank of a stream, and half along the other bank, so that one or other party would be sure to get something. They met after the kill, and cooked the meat and ate some of it on the spot. The rest was divided among the hunters and taken home for their families, the unsuccessful members of the hunt receiving a share from those who made the kill. The hunter has to provide, not only his own (elementary) family, but also his father, mother, and wife's father with meat, and the distribution of meat in order of priority, is:—

[364]

Hunter: Meat to

1. Wife and children.
2. Father and mother.
3. Wife's father.
4. Neighbours (clansmen).

A man has (or had till they were evicted by the government) an hereditary right over a piece of forest, which included hunting, trapping, bee-keeping, and food-gathering. Other people who wanted to hunt there asked permission to do so, for otherwise the right-holder might kill anyone

423 [648] [428] [682]

[1] Saiset, Colobus guereza;

he found hunting on his area, though he would be liable to pay blood-cattle for homicide. 423 [682]

As for trapping, it is said that nobody steals meat from traps because their bellies would swell [illegible] opinion, too, is strongly against such a mean crime, and is of itself a powerful deterrent. Nowadays trapping is the chief source of meat, and the common practice is for a man to set three or four traps at a time in different places, and to visit them every two days or so to see if anything has been caught. 224 [685] [626]

Monkeys and buck[1] are killed for their meat and skins; pig provide meat and gut for bow-strings. [237]

2. Agriculture.[2]

The Dorobo are in process of changing from a hunting to an agricultural existence, from the uncertain hunting economy to the more certain one of agriculture; and the same economic pressure which has forced them to till the soil is now encouraging a desire for cattle, which are being slowly and laboriously acquired. This leads in turn to a more self-supporting state, with less dependence on the Nandi for grain crops; and agricultural techniques, both in tillage and stock, are being learnt from the Nandi and from Europeans. 178 [224] [241] [233] [648]

Both sexes work in the cultivated plots (*inkuret*), and are helped by children, who weed the crops, herd the stock, and milk the cows. The crops grown at present are eleusine (*eleusine coracana*, called *wimbi* in Swahili) and maize; millet and tobacco are still bought from the Nandi, from whom the Dorobo also get eleusine and maize seed when necessary. Unlike the distribution of the forest into hunting areas, people cultivate the ground close to their own homes, and a group 241 [462] [857] [839] 241 423 [351]

[1] The buck killed are:
Kipoket, blue duiker (cephalophus sequatorialis). [136]
Mindet, red duiker (c. ignu-fumei.)
Karemaiit, bush buck (tragelaphus scriptus.)
Irukutet, reed-buck
Ketyalet, oribi
Kipoomwet, water-buck (cobus ellipsiprymnus).

[2] I prefer the term 'agriculture' to 'horticulture,' for the latter implies mere cultivation, with no livestock, and in East Africa agriculture is almost always practised in conjunction with stock-rearing, even if only on a small scale.

000
262

come now and make honey here." Then, blood and fruit must not be eaten on the same day as honey, nor must bits of the comb be left lying about; they must be carefully covered up. The first of these prohibitions is analogous to the Nandi avoidance of meat and milk on the same day; the second, though the Dorobo say it is done "so that other people shall not see it," is also due to the ritual value of honey, and the consequent necessity of showing respect towards it.

In the ritual treatment of certain actions the use of certain materials is essential if the ritual is to be effective. Thus, a homicide must be rubbed with *eiyat*, the undigested grass from the stomach of a goat or sheep, and he must also be oiled with 'butter' (milk shaken in a gourd till it has gone oily and semi-solid); an unmarried girl who has had a child must also be rubbed with *eiyat*; a sick person whose illness is due to witchcraft must be oiled with goat's fat or butter; and a man who has killed an enemy must paint his face with five stripes of white earth—one across the forehead,

Acquisition in lieu of blood-money

But there were other ways beside these two (adoption and security against a loan) by which the Kiambu Kikuyu, according to themselves, as recorded in previous studies of the subject, managed to secure a hold on land. Land, it is said, was sometimes handed over by Dorobo in payment of "blood-money," that is in compensation for a homicide. That compensation, in Kikuyu custom, took the form of livestock, mostly goats. The Dorobo had no goats, or very few; the Kikuyu would insist on goats—but would graciously accept a stretch of land in lieu. Payment in land, though rare, was not unknown where the Kikuyu came from, but there the clan would intervene whenever possible and find the necessary goats rather than allow any of its land to be alienated to another clan; somehow or other the elders of the clan would find the goats and keep their land intact. But the Kikuyu who had acquired Dorobo land in such a way could keep a quiet mind; the Dorobo could never accumulate the goats except by mortgaging more land. We find herein an instance of the type of culture-clash (obtaining years before the European came to native Africa) arising from essential similarities as well as differences of culture; from the one, assessment of the value of its members to the kinship group in terms of local currency, and, from the other, variation in the objects used as currency according to the alimentary culture of the tribe. In the present case—Kikuyu agriculturists impinging on Dorobo hunters—whenever compensation by the latter was required by inter-tribal law the clash of cultures meant in almost every case the loss to them of sovereignty in land. A vicious circle was created—land (instead of goats), goats to redeem the land, more land to get the goats, and so on—in the end the series might as well have stopped just where it started—land. We may be well assured that the land-obsessed Kikuyu would not miss the chance to utilize the clash to gain his object. In theory of course there were other ways to satisfy the claim for compensation. The slayer or his brother could renounce his clan and become adopted in the family of the murdered man in place of him, but the Kikuyu would have none of it—adoption not involving at least a share of rights in land was not an item in his programme. Another possible way to meet the claim would be to hand over a girl or girls in marriage. As a rule this method would find no favor in Kikuyu eyes. Dorobo girls were

-D
K

174 not addicted to the digging-stick, the use of which, Kikuyu husbands
425 thought, was what a wife, apart from bearing more Kikuyu, brewing
682 beer, and being generally a willing slave, was mainly married for.
But he might take her, being satisfied that long before the harvest of her first attempt at growing things was in he would have got more land in lieu of her, and she would be happily at home again. Or he could argue that, her father having failed to provide more land and she refusing steadfastly to stay, the marriage must be deemed a matrilocal one and he be given cultivation rights in her father's land and bring along a relative to do the digging she declined to do. One can imagine endless sophistry along such lines and understand how in the end the slayer's kin would have to yield the only kind of property they had at their disposal that their Kikuyu creditors would deign to take in compensation, that is, virgin land.

[p. 111] Payment in girls

174 Another way in which the Kikuyu have alleged that they acquired
Dorobo land is mentioned in the records; this was paying for it, not
425 in goats, but girls. The evidence before the Land Commission gave
583 instances of this, or at least of payments said to have been made in both, partly goats and partly girls. The Kiambu Kikuyu told the 1929 Committee: "Sometimes he (the 'seller') accepted a Kikuyu girl instead of stock in which case he had to stay." They had previously (in 1920) told Colonel Ainsworth much the same. Colonel Watkins in his note of 1920 considered the arrangement similar to that between the Giriama and the Sanya, of which he said:

> "The Wa-Giriama, driven like most immigrants by the desiccation of their former haunts, are drifting to better watered and better timbered areas. They naturally clear ground first where timber is thin, on the outskirts. To the family soon comes a Sanya who through sickness or scarcity, complains of hunger and asks for a goat. This is given on condition he brings in ivory when recovered. Thus trade relations are established, and he becomes a hunter to the agricultural community, on no fixed wage, but friendly and vaguely attached to it. Later on perhaps he builds a hut near and accepts, in trade, girls of the agricultural community (1), possibly in return for permission to clear more

/261 cont./

000 D 431 O 572 is present at all. The heir of the warrantor is also liable. The giver is offended by a refusal to accept a gift. A counter-gift of approximately the same value follows gift-giving. The giver spits upon the gift when he hands it over. The Wandorobo never conclude into blood friendships among themselves, but only -- and, to be sure, very rarely -- with members of other tribes. The ceremony observed for this resembles the one described above among the Masai. If a stranger has bought ivory from him and paid only part of the price, D [177] [426] the ol doroboni often likes to conclude blood-friendship with him because he thinks that then the debtor must die if he does not repay the debt as quickly as possible (1).

D [177]

1. This view is in general rare; it was not originally peculiar to the Asá, but adopted.

D 682 628 [171] [672] As among the Masai, the legal view makes no distinction between murder and manslaughter, but indeed between the latter and negligent homicide. A murderer caught in the very act is subject to blood revenge, for the execution of which every man belonging to the family of the one murdered and in some districts also any of his friends and campmates are justified. If the avengers do not succeed in capturing the murderer on the day of the murder, /262/ the latter is safe from blood revenge, for people see in the unsuccessful search for him a command of God to let him live. To atone for his deed, however, he must pay the principal heir of the deceased one large and two small ivory tusks. Negligent homicide is punished by the payment of a medium-sized ivory tusk. If the perpetrator and the one who was killed belong to the same lineage, the punishment is considerably D [648] less than if they are from different lineages of the same tribe. On the other hand, if the two belong to different tribes, the ones entitled to blood revenge often hand over the execution of it to the Masai, who kill the perpetrator, even if they do not capture him until after several months. Up to the completed payment the perpetrator is D M 682 648 regarded as puni-andet, corresponding to the ol oikobani of the Masai. If an Asá kills a Masai blacksmith, the deed remains unpunished because the blacksmiths are too weak for revenge and the Masai would M [664] [326]

M D 682 648 M [564] [326]

/262 cont./ never have anything to do with taking their part. On the other hand, if an Asá is killed by a blacksmith, the Masai immediately place themselves on the side of the ones injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wandorobo, to be sure, would themselves be in a position to execute the revenge, but the Masai do not permit this because they see in it an encroachment on their rights as masters of the land and in particular also of the el konono.

D 683 [682]

Bodily injury with a fatal outcome, if caused intentionally, is regarded as murder; if negligently, as negligent homicide. Minor bodily injuries are atoned for with the payment of a specific number of beehives. For the destruction of a finger one beehive is paid, for one hand eight; among some Wandorobo who live in close contact with the Masai the atonement for the destruction of a finger or the whole hand amounts to a fat-tailed sheep. Bodily injury leading only to the loss of an index finger or an eye often remains unpunished, as does indecent assault. Abortion is said to be unknown, and perversion not to occur. Kidnapping and sale are unknown.

D [847] [839] [674]

D 685

A theft committed in the camp by an inhabitant or stranger is atoned for by the return of the stolen goods; that of a beehive hanging outside the camp, with the payment of ten new ones. Anyone who steals honey from a beehive pays five beehives. Arson is said not to occur; one who is the cause of the illness of another through sorcery is not infrequently killed, after he has been persuaded to charm the sick one back to health. The shooting of poisoned arrows in the camp is strictly forbidden, because of the danger connected with it. Anyone who transgresses this law must expect to be killed immediately by his campmates.

D 683

D 689

D 681

Unknown are: aggravated kinds of death, the principle of repaying like with like, compensation in the culpable body part, symbolism, imprisonment, enslavement, public punishments, the right of pardon.

D 787

For the inquiry concerning an unknown culprit, the injured one turns -- /263/ as has already been mentioned -- to a sorcerer, who is also called ol goiatiki[1] among the Wandorobo. Instead of the manipulations with the en gidon, he throws a pair of sandals on the ground in front of him eight times, then picks them up and puts

1, [ol goiatiki is a Masai word also meaning sorcerer--Analyst]

1: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

cide, adultery, and assault. In the first category, incest is punished under the authority of the clan council: the man is beaten, his hut burnt, his honey-barrels destroyed; the woman also is beaten. Witches might be killed under authority of the *koret* council. In cases of persistent disobedience to the council, the elders could call upon two or three men to force the offender, by moral and physical persuasion, to mend his ways. Of offences in the second category, trespass has already been mentioned (p. 58). Theft, when not dealt with summarily, can be brought to the *koret* council, which can order payment of compensation. A man accused of stealing food may say, " If I am a thief, may this grass eat me," and place a blade of grass between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-cattle. If a man incapacitates another by assaulting him, he must feed him till he recovers. Homicide of a Dorobo of another clan, though not involving primary sanctions, was a serious offence because it meant that the murderer had to get cattle in order to pay compensation. The usual number was nine head of cattle, though when the murderer was a very poor man living alone the number might be reduced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could, from his own herd if he had one, or by exchange from the Nandi, or by any other means, including theft. The deficiency had to be made up by his fellow-clansmen.

Summary

The Dorobo horde consists of a loosely integrated group of districts held together partly by the feeling that they are all Dorobo, but much more by the clan ties which cut across the district boundaries. The clan is therefore one of the chief institutions in the life of the Dorobo.

MAIN CULTURAL FEATURES

Crafts

Housing

(*a*) Forest type: the *koconget*, in use as late as 1927, was a framework of sticks bent over to form an oblong, dome-shaped structure, covered on the outside with banana leaves and leaves of trees; height, 6 ft.; length, 11 ft.; width, 7 ft. (*b*) New types: the *koriet* has a circular wall about 5 ft. high plastered with mud, and an almost flat thatched roof supported by a centre post; the *kot* is a hut of ordinary Nandi type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of three or four *koconget* huts, were situated in clearings just big enough to hold the huts, and were approached by concealed paths which branched in a bewildering manner that made it impossible to find them without a guide. Settlements outside the forest are arranged in small groups usually close to the cultivated land.

Dress and Ornaments

Clothing is made largely from the skins of wild animals, and the forms are mainly copied from those of the Nandi, as are most of the ornaments, which include, among other things, iron wire armlets and leglets, necklaces, and married women's ear-rings (*taok*). The ear-lobes are pierced and elongated (sometimes getting torn in the forest), and a small hole is bored in the top of the ear. Some but not all remove the two lower middle incisors. Hair is allowed to grow to a length of about 2 ins., when it is sometimes covered with a bladder cap, and sometimes dressed with red earth and fat. Occasionally a man has his hair done in pigtails like the Nandi.

Tools and Weapons

Axes and knives are obtained from Nandi smiths, the Dorobo making the wooden handles. Needles are made from old nails and bits of wire which the Dorobo

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

682 623 692 few relatives it would be very much less. The murderer had to provide as many of the number decided upon as he could, either from his own herd if he had one, or by getting them from the Nandi in exchange for furs, which meant, of course, that the cattle would be either oxen or worn-out old cows, and that he would not be able to provide many himself. It therefore fell to his relatives and clansmen to make up the number, which needed a clan council to apportion the balance among them, and also resulted in a good deal of feeling against the murderer for a time. Until the amount had been [614] agreed upon by both clan and *koret* councils, the murderer was liable (in theory at least) to be killed by his victim's relatives, so he had to lie low till the negotiations were completed, though again it is doubtful if they would actually have gone as far as killing him, for then they themselves would merely have had to return the cattle as compensation for their own act. In dividing cattle between the murdered man's relatives, the order of priority was brother, wife, father, mother, father's brother, father's brother's son, father's sister's son.

683 754 **Killing a witch.** Though in 1939 I could hear of no Dorobo who were reputed to be witches (*ponik*), such people certainly existed in the past. Apart from killing people by spells, their principal activities seem to have been centred on hunting — putting spells on game traps and on men who were going to hunt. If a witch was shown by a diviner to be guilty of a person's death, he or she might be killed, and no compensation was payable (*mepase*).

609 682 **Killing an enemy.** This means killing any person who is not a Dorobo and is believed or known to have performed any unfriendly act against the Dorobo. The Dorobo have no sort of war organization, and their enemies [701] were generally shot at from the cover of under-growth. Though not a crime, [721] killing an enemy none the less makes the killer ritually unclean and therefore [783] dangerous to others because he has shed human blood. This action is thus brought into the same category as homicide of a Dorobo, and though there is naturally no compensation, purification is required. The face of a man [302] who has killed an enemy is painted (*kemase toket*) with stripes of white earth (*enoriot*) on the forehead, down each cheek, and down both sides of the nose. The paint is allowed to remain till it flakes off, and the man does not have to stay in his hut, but goes about as usual; though if he had killed a Nandi he would take care to go to some other part of the forest till he thought it safe to return. In actual fact, Nandi were seldom killed, but one who strayed into the forest might get shot by accident: the body would be taken to a lonely place for the hyaenas to eat, and at any sign of Nandi activity the Dorobo would vanish into the depth of the forest where the Nandi would have little chance of finding them even if they had the inclination to search.

685 **Theft.** Stealing honey is the worst kind of theft, and is almost comparable with intra-tribal cattle-theft among the Nandi. A man who steals honey from someone else's barrels is considered very low indeed, and if found

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

out might be shot by the owner, who, if he killed the thief, would have to pay compensation for homicide. 685

If a man steals a honey-barrel from a man's recognized area in the forest, the case can be brought before the *koret* council, and the usual compensation is the payment of a goat, which the thief has to get from the Nandi if he has none of his own, though if the thief's circumstances were good, he might have to pay more. The Dorobo say that stealing honey-barrels is apt to be dangerous, because if a barrel is full of bees, the thief might be injured by their stings if they got his scent and did not recognize it.

I was told that theft of an animal caught in someone else's trap never occurred, partly because of the deep-seated public hatred of such an act, and partly because of the belief that after eating meat stolen from a trap the thief's belly would swell to a great size and he would die.

A person accused of stealing food may, to attest his innocence, take a blade of grass between his teeth and say: *Ingo a corin, kuama susuonno*, "If I am a thief, may this blade of grass eat me". [695]

A man who is found stealing ordinary property is beaten by the owner if he can catch him, but if in doing so the thief is killed, the owner must pay the compensation for homicide. In cases of serious theft, like stealing a man's bow and arrows, the case could be referred to the *koret* council, and the thief might have to pay adequate compensation. A man accused of theft might protest that he was innocent by throwing his knife at a tree and saying: *Ingo a corin, kuama rotuanno*, "If I am a thief, may this knife eat me". [692] [623] [695]

Trespass. To the Dorobo, trespass means hunting on somebody else's land. Normally this is no more than either following an animal across the boundary into another man's land, or else in the heat of the chase picking up the trail of another animal on someone else's land. If the hunter gives the owner of the land some of the meat, this accidental trespass is not considered as an offence. But if a man were deliberately to set out to hunt or trap on another man's land without permission or promise of meat, then the owner might, if he thought fit, kill him, though he would have to pay compensation for homicide. Trespasss can occur only in the horde's own forest area. In the old days, when people roamed over the plains below, they could hunt where they pleased, and all they had to do was to keep out of the way of the Masae or Nandi herdsmen.

Adultery. A man who lies with another man's wife is said to *cor*, that is, steal her. He thereby commits an offence against her husband, who may kill him if he catches him in the act, and then, of course, must pay compensation; the wife may get a beating. A woman is not divorced for one act of adultery. 684

Assault. If a man injures another and incapacitates him, he must feed him till he recovers; and should the man eventually die as a result of the injury, the offender will have to pay compensation for homicide. 683

M D 682 648 M [564] [326] /262 cont./ never have anything to do with taking their part. On the other hand, if an Asá is killed by a blacksmith, the Masai immediately place themselves on the side of the ones injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wandorobo, to be sure, would themselves be in a position to execute the revenge, but the Masai do not permit this because they see in it an encroachment on their rights as masters of the land and in particular also of the el konono.

D 683 [682] Bodily injury with a fatal outcome, if caused intentionally, is regarded as murder; if negligently, as negligent homicide. Minor bodily injuries are atoned for with the payment of a specific number of beehives. For the destruction of a finger one beehive is paid, for one hand eight; among some Wandorobo who live in close contact with the Masai the atonement for the destruction of a finger or the whole hand amounts to a fat-tailed sheep. 4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

597 [848] Adoption is also practised when an unmarried girl has a baby. In such cases it may be adopted by a childless couple, i. e. who have lost their children, or whose children have grown up and left them, but mostly (on the rare occasions when it occurs) the former. An adopted child has the status of a man's own child. Adoption may in certain cases be by previous arrangement. It has happened, I was told, that a person who has cattle or means of getting milk may hear that a certain girl has got pregnant, and gives notice that he will adopt the child when it comes. The mother of the girl accordingly tells him when the girl "enters the but", and the adopter's wife fetches the baby to her own home as soon as it born. She feeds it with milk from a small horn, and the Dorobo reckon that such babies will do all right, for they say, "such a child need not suck for very long". [848] [847] Illegitimate children are killed if nobody can be found to adopt them.

5. Adultery and divorce

● 684 Adultery may be punished by a husband who catches his wife with another man, by shooting the male offender with an arrow. If he kills him, he has to pay the normal compensation for homicide. He may also beat his wife, after which he "waits till she has got sense", as they put it, when he buys a goat for her, which they eat together. A man does not divorce his wife for a single act of adultery, but only if she is a bad and neglectful wife who is continually caught with other men.

586 When a man has, after much thought, made up his mind to divorce his wife, he calls in one of his relatives to help him perform the divorce ceremony. Taking a piece of liana, he rubs earth on it and gives one end to his relative to hold, taking the other end himself, the wife being present and looking on. They then break the liana in two, the man saying to his wife, *Kaail katunisiet kun kiil poroanni, ni ka, pakaktan* ("I have broken our marriage as this liana has been broken: go home and leave me"). He can then claim the return of the live stock which he paid to her father. But only a woman who has not borne her husband a child can be divorced; [581] once there has been a child, no divorce is possible, for the birth of a child completes the union, which once completed is indissoluble.

6. Polygyny

595 In theory a Dorobo can have as many wives as he can pay for, which means that usually a man has but one wife at a time. Polygyny may therefore be said to be non-existent. The only thing that does occur is the 587 occasional re-marriage of a man after the death or desertion of his wife, of which I recorded three cases. Widows, again, seldom re-marry, living normally either with their husbands' brothers, returning to their parents, or even living alone. In one genealogy, however, I found a woman who was married to four successive husbands, none of whom was her husband's brother, and having as issue but one daughter. The Dorobo themselves remarked upon this succession of marriages as being a most unusual occurrence.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

and speak at it. People meet at the house of a clansman who, upon notice being given to him, prepares as much honey-wine as he can for the entertainment of the gathering, and what he provides may be supplemented by wine brought by other members. The business of the council is done with the aid of a jar of honey-wine in an informal way as if it were a social gathering, which in a sense it is, for the clan council through its informality has become a social bond between clansmen. Business is done first, and the drinking soon follows. The subjects which may be discussed include:

1. Disputes between members of the clan.
2. Hunting disputes.
3. Disputes about boundaries of hunting areas.
4. The preliminary business when a clansman has killed a member of another clan.
5. Homicide within the clan.
6. Sexual intercourse between a man and a girl of the clan. Disputes under heads 1-3 are settled by discussion, the leader of the council swaying, by his opinion, the views of the members. The leader, *kiruokindet*, is not necessarily the oldest member of the clan, for such a man might be too senile to act properly; but someone fairly senior in age, with his faculties intact, who is liked and respected, becomes in course of time (as in the case of the leader of the *koret* council) looked upon as a responsible person who can be safely listened to and whose judgement is sound.

More serious matters, like those under heads 4-6, are dealt with like the rest by discussion, but there is as well a certain traditional procedure to follow. When a clansman has killed a member of another clan, the council of the dead man's clan meets to discuss the compensation payable, and to choose a messenger who will be sent to the council of the murderer's clan to start proceedings, which after a preliminary discussion, are heard before the *koret* council, since two different clans are involved, and the matter is not purely the affair of one clan. When a man kills a member of his own clan, the whole matter is settled within the clan. First, the murderer has to brew some honey-wine and kill a goat from which the fat is collected. Then old men of both the families concerned meet at the house of the murderer and drink the wine he has provided, after which two of the old men oil the murderer all over with the goat's fat. The animal from which this fat is obtained must be a goat, and if the murderer has none of his own, he must get one by purchase or theft. He is therefore put to some trouble and even danger, for if he has to steal a goat he risks being speared if caught, and this constitutes an act of faith which, together with the anointing of his body, frees him from the uncleanness caused by the shedding of human blood. There is no payment of compensation for the murder of a clansman, but the murderer must if he can give his victim's wife one cow to help towards her maintenance. This last is a Nandi custom and was probably introduced in recent times after the Dorobo had begun to acquire cattle in a small way.

Sexual intercourse between a man and a girl of his clan is not an offence provided the girl does not have a baby, though the lover is not allowed

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

614 to marry her, and should the affair become known (as such things usually
623 do), the clan council can prevent, if necessary by force, any attempt of the
684 man to do so. Although such intercourse is not technically an offence, it is
[848] nevertheless regarded with great disapproval, and may result in the man's temporary ostracism, for as an elder told me, *ingoruiyo ci ok cepi ap tiliet, caluokto ne oo kut, amu mecome apaiitiek ngut mecome cesowilōk*, "if a man lies with a girl of his *tiliet* (by which he meant clan), it is a very great sin, for not only do the old men disapprove, but the spirits also disapprove". If, however, the act should result in a baby, then it becomes incest, and a very serious offence, treated as if it were intercourse with a relative in the *tiliet*, and summary punishment is inflicted on both offenders, for the crime of incest offends the *cesowilōk*, the spirits of the dead, and if the guilty are not punished there is a danger that the spirits in their wrath may hurt indiscriminately not only them but innocent people as well. So in such cases, when it is known that a girl has had a baby, the man is beaten by the men and women of his own clan, his hut is burned, his honey-barrels are destroyed, and he must provide a goat to be eaten by the male and female relatives of the girl. She herself is also beaten by women of her clan. This punishment is inflicted after due discussion at the clan council, and is therefore not just a spontaneous expression of group-resentment, but the deliberate action of public authority.

[M5]

614 Much of what has just been written applies to the past, that is, to the
648 time before the Government attempted to establish the Dorobo in Nandi
162 in 1937; and my census in 1939 revealed that there were comparatively few old men left, many less, in fact, than there were in 1927. The clan groupings therefore do not show so many old men as would have appeared normally, and most of the existing seniors of to-day are elder members of the Nyongi age-set, whose maximum age in 1939 was fifty. Some idea of the composition of a clan settlement in that year is given by the following particulars from my census:

[561]

614
162
561

At Kipukua and Kipkorom, 2 miles apart; all Moi clan.	1 Kaplelac. 1 married Nyongi, wife and children. 1 married Maina, wife and children. 5 unmarried Maina. 1 Juma. 3 old women and 1 girl.
At Kepen; Moi and Kapsekoi clans.	1 Kimnyike. 2 married Nyongi, wives and children. 3 unmarried Nyongi. 6 unmarried Maina.
At Ndoroton and Ngatepkong, 3 miles apart; all Kipieken.	1 married Nyongi, wife absent. 4 unmarried Maina. 2 Juma. 3 widows and 2 girls living with them. 1 married Nyongi, wife and children. 1 married Maina, wife and children. 1 unmarried Nyongi.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

Private delicts include trespass, that is, hunting on another's land in the forest; theft, of honey-barrels in particular and of other things in general; murder; adultery; and assault. These are offences for which compensation is payable, or for which a man may kill the offender, e. g. for theft, though if he does so he must pay compensation for murder. Offences which concern fellow clansmen are dealt with by the clan council. Others came within the province of the *koret* council, which was not a daily affair, nor held at stated times, but only when there was a definite reason. When a person had some business which needed the calling of a council, he told the *kiruokindet*, who passed word round the *koret* that people should assemble on a certain day. If, for example, a man had been robbed of a honey-barrel, and knew who had stolen it, he would put the matter before the council, partly to decide on the amount of compensation, for the amount might vary according to the thief's circumstances, and partly to have public opinion behind him when he enforced his claim for payment. I believe that on the whole theft among the Dorobo themselves was not very common; and certain kinds of theft are regarded by them as so mean that a man must be very depraved indeed who will commit them. Besides, in a small horde whose members feel that outside their own circle every man's hand is against them, and to whom a stranger is a potential enemy until proved a friend, the need for unity and absence of friction is overwhelming if they are to survive. I certainly heard of no cases of theft during the period of my investigations.

We may now pass on to describe some of the traditional measures taken against offenders.

Incest. Incest means intercourse between a man and a woman of his *tiliet* (that is, one whom he calls by a relationship term), and a clanswoman. We have already described the punishment for this (see above, p. 127 f.), which in the first case is carried out with the approval of the *koret* council, and in the second, under the authority of the clan council.

Killing a Dorobo. When a man killed a Dorobo belonging to another clan, the council of the dead man's clan met to discuss the amount of compensation that was to be paid (*pas*), and then sent word to the council of the murderer's clan. This meant that the offence had been recognized, and that action must be taken. The council of the murderer's *koret* then assembled so that arrangements for payment could be made and become known to everybody. The murderer also had to be purified, in the same way as when the victim was a clansman. The *koret* council then met again to discuss the amount of the compensation. This, it seems, was usually reckoned at nine head of cattle (male or female), though it is doubtful if the full number was ever enforced [1], and if the murderer was a poor man with

[1] The number nine is probably due to imitation of the Nandi procedure, where nine is the amount payable as compensation for homicide.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

out might be shot by the owner, who, if he killed the thief, would have to pay compensation for homicide. 685

If a man steals a honey-barrel from a man's recognised area in the forest, the case can be brought before the *koret* council, and the usual compensation is the payment of a goat, which the thief has to get from the Nandi if he has none of his own, though if the thief's circumstances were good, he might have to pay more. The Dorobo say that stealing honey-barrels is apt to be dangerous, because if a barrel is full of bees, the thief might be injured by their stings if they got his scent and did not recognise it.

I was told that theft of an animal caught in someone else's trap never occurred, partly because of the deep-seated public hatred of such an act, and partly because of the belief that after eating meat stolen from a trap the thief's belly would swell to a great size and he would die.

A person accused of stealing food may, to attest his innocence, take a blade of grass between his teeth and say: *Ingo a corin, kuama sussonge*, "If I am a thief, may this blade of grass eat me". [695]

A man who is found stealing ordinary property is beaten by the owner if he can catch him, but if in doing so the thief is killed, the owner must pay the compensation for homicide. In cases of serious theft, like stealing a man's bow and arrows, the case could be referred to the *koret* council, and the thief might have to pay adequate compensation. A man accused of theft might protest that he was innocent by throwing his knife at a tree and saying: *Ingo a corin, kuama ratuanno*, "If I am a thief, may this knife eat me". [692] [623] [695]

Trespass. To the Dorobo, trespass means hunting on somebody else's land. Normally this is no more than either following an animal across the boundary into another man's land, or else in the heat of the chase picking up the trail of another animal on someone else's land. If the hunter gives the owner of the land some of the meat, this accidental trespass is not considered as an offence. But if a man were deliberately to set out to hunt or trap on another man's land without permission or promise of meat, then the owner might, if he thought fit, kill him, though he would have to pay compensation for homicide. Trespass can occur only in the horde's own forest area. In the old days, when people roamed over the plains below, they could hunt where they pleased, and all they had to do was to keep out of the way of the Masae or Nandi herdsmen.

Adultery. A man who lies with another man's wife is said to *cor*, that is, steal her. He thereby commits an offence against her husband, who may kill him if he catches him in the act, and then, of course, must pay compensation; the wife may get a beating. A woman is not divorced for one act of adultery. 684

Assault. If a man injures another and incapacitates him, he must feed him till he recovers; and should the man eventually die as a result of the injury, the offender will have to pay compensation for homicide. 683

?: Wayland N-S (ca. 1926) 1931 FLA Dorobo FL6

Social Organization.—The Tribe.—The Wanderobo are very few in number, and are divided among three sections, each of which has its own habitat as follows (according to the Chief, who was my informant on this point):— 631 618

Section.	Habitat.	Approximate Numbers.
Kakamera — — — —	Kakamega — — — —	40
Chepsire — — — —	Shamalagala — — — —	40
Lakwabe — — — —	Lakwabe — — — —	40

Each section lives in a single village of its own, similar in structure to that already described. The sections are not totemic, but they are exogamous, and descent is in the male line. The tribe has but one chief, who lives at Kakamega (north of Kaimosi). Chiefainship is hereditary, and no woman is ever permitted to wield the powers of a chief. The Chepsire and the Lakwabe 643 622 are each presided over by a headman (paterfamilias).

Birth.—When a child is born the mother is assisted by female relations. There are no 644 official deliveries, as among the Lakwor. The Wanderobo allege that there are no special ceremonies connected with birth. Should a child come feet foremost into the world he will be lucky throughout life. It is stated that the afterbirth is thrown away with the rubbish. After weaning, a child occupies his father's hut, if a boy, and his mother's if a girl. 858

Betrothal and Marriage.—The rules for betrothal seem to be very similar to those usual 589 among the Lakwor, except that the prospective husband goes to the girl's people direct, without representation in the first instance. The consent of the girl and of the parents on both sides is necessary, and the number of gifts is not specified as it is among the Lakwor.

Marriage is celebrated by a feast in which the people of the two sections to which the 585 contracting parties belong take part. There is no dance peculiar to the marriage feast. After 591 marriage a man lives for two days and nights in the hut of his betrothed, after which she returns with him to his own village, there to occupy a new hut already built for the newly married 342 couple by the male partner, after he has consulted the wizard with regard to the luckiest time for erecting it.

Burial.—All the dead are buried without special ceremony.[1] There is no special burial 764 ground, but graves are dug "out in the bush," well away from the village.

Age Classes.—These appear to be quite unknown. 561

Crime and Punishment.—The chief offence is adultery. This, however, is a private affair, 684 and is dealt with privately, for it is not a sin against the community. A woman who is guilty in respect of this is cast out by her husband, who seeks the offending man with a view to slaying him. Murder is, however, a tribal affair, for which the punishment is death. The Lakwor 682 practice in this respect is not followed.

[1] This statement was subsequently contradicted, in so far as it was stated that the wizard attends at all burials.

/339 cont./

IV.

600 Marital relations. -- Polygyny. -- Betrothal. -- State of being betrothed. -- Conversion of the young men to the state of the married. -- Bride price. -- Forcing the consent of the father of the bride. -- Exchange of wives. -- Obstacles to marriage. -- Entering into marriage. -- Dissolution of the marriage.

595 The marital relations also offer little that is new. Polygyny exists only to a limited extent; most of the people are too poor to acquire and support more than one wife; only a few have two wives, 584 and if a man has three of them it is a rarity. Betrothal in earliest 1971 childhood seem to be more frequent here than among the Masai, but no more binding and without legal consequences. As a rule after circumcision the youth is betrothed to a girl eight to ten years old, after his father has proposed for him to her parents. As among the Masai, the /340/ betrothed persons live apart and may not even see each other. The bridegroom lives with a girl in the one camp, and [836] in the other, the bride with another youth. If the bride becomes [598] pregnant before the wedding, dissolution of the betrothal does not [845] always take place, as among the Masai, but rather the one who made her pregnant must reimburse the bridegroom by the payment of a head of cattle.

561 Here, just as among the Masai, the young men of an age class 582 together decide upon their entering the standing of the married, and 574 their fellow campmates confirm this intention by a feast corresponding to the ol gonâ ! ol lê, in which friends and neighbors participate. [273] They are served game and honey beer, the latter of which, however, [224] the marriage candidates may not yet drink. They like to set the feast for the day after a successful elephant hunt, so that the guests can feast heartily on meat.

583 Before marriage can be entered into, the bride price is to be [439] paid. The bridegroom usually gives the father of the bride, even before her circumcision, five pots of honey and five beehives, and, soon after her circumcision, half of a slain female elephant with the rank that belongs to its furthermore, two head of cattle, which

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

other scavengers. Nowadays, all hunting activities are carried on illegally with the risk of being punished if caught by the police.

Weapons are the bow and poisoned arrows carried in a quiver. Knives are used to skin game and to make springes. Spears have never been used. The Dorobo used to have hunting dogs, but in the North Tindiret Forest the breed seems to have died out, though it existed in 1927. They have two kinds of trap: (i) The pit trap, *ngwet*, formerly used for buffalo, consisting of a pit 8 ft. long, 3 ft. wide, and 6 ft. deep, with wooden spikes set in the bottom. (ii) The springe or snare, *porosat*, which consists, briefly, of a springy stick bent over, with a noose attached to it connected with a platform: the arrangement is such that when an animal treads on the platform its head enters the noose, and the pressure on the platform releases the springy stick, which flies up, tightening the noose, and holding the animal suspended. Such traps can be made in less than ten minutes. This type is used chiefly to catch antelopes, but leopards have been caught in them. Cross-bar traps with a drop-spear were not used by the Kipkurerek Dorobo.

The only hunting taboo recorded is that the night before he goes out hunting a man must abstain from sexual intercourse. This does not apply to the setting of traps.

As regards land rights, the forest was divided into districts, *koret*, pl. *koroosek*, and in his district each man had an hereditary block of land in which he hunted, set traps, kept his honey-barrels, and collected wild food. Occupation rights were recognized by public opinion, and trespass on a man's forest area, i.e., deliberate entry in order to start hunting without permission or the promise of a piece of meat, might result in the trespasser's death at the hands of the owner, who would then have to pay compensation for homicide. Theft of game from a trap is said never to have occurred, not only because the thief might be killed, but because his belly would swell to a great size and he would die after eating meat stolen from a trap.

Bees

Honey is to the Dorobo what milk is to the Nandi: it is "sacred," and its supply must be protected by the observance of taboos. Fruit and blood must not be eaten on the same day as honey (though meat may be eaten); when a comb is emptied, it must be carefully hidden in the undergrowth; and after eating honey a Dorobo cleans his hands in earth, not (like the Nandi) by wiping them with leaves.

The Dorobo recognize four varieties of bee: *sekemik*, the honey-producing kind: *imeiik*, solitary bees which live in trees; *koosoosek*, earth bees, which live in the ground; and *kiptalosik*, mason bees, which live in cells made of earth and particles of stone cemented together by their own saliva. The Dorobo divide the honey-bees, *sekemik*, into three kinds: the queen, *komet ap sekemik*, "the mother of the bees"; the workers, called simply *sekemik*, considered to be males, which make honey by eating the "sap" (*pek*) of flowers and then vomiting it into the empty honey-combs; and the drones, *kapuresik*, considered to be idle females which do nothing useful.

Hives or honey-barrels (*pasanet*) are made either of slats of wood tied together, with circular wooden end-pieces; or of the two halves of a piece of log split longitudinally and tied together. They are set in trees, and when a new hive is put up, the owner calls the bees, in a high-pitched tone, to come and occupy it: "Bees, bees, from all the country, come here now, and pour in honey, pour in honey." Bees are said to recognize their owners by their body-smell, and do not sting them when taking honey. Certainly taking honey does not appear to be a painful or dangerous process to the Dorobo owner. Theft of honey from a barrel is considered very low, and a man might kill a thief, though he would have to pay compensation for homicide.

Honey is an important article in Dorobo economy: it is eaten as food, made into an intoxicant, used for ritual purification, and it forms an article of commerce.

I: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

cide, adultery, and assault. In the first category, incest is punished under the authority of the clan council: the man is beaten, his hut burnt, his honey-barrels destroyed; the woman also is beaten. Witches might be killed under authority of the *koret* council. In cases of persistent disobedience to the council, the elders could call upon two or three men to force the offender, by moral and physical persuasion, to mend his ways. Of offences in the second category, trespass has already been mentioned (p. 58). Theft, when not dealt with summarily, can be brought to the *koret* council, which can order payment of compensation. A man accused of stealing food may say, "If I am a thief, may this grass eat me," and place a blade of grass between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-cattle. If a man incapacitates another by assaulting him, he must feed him till he recovers. Homicide of a Dorobo of another clan, though not involving primary sanctions, was a serious offence because it meant that the murderer had to get cattle in order to pay compensation. The usual number was nine head of cattle, though when the murderer was a very poor man living alone the number might be reduced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could, from his own herd if he had one, or by exchange from the Nandi, or by any other means, including theft. The deficiency had to be made up by his fellow-clansmen.

Summary

The Dorobo horde consists of a loosely integrated group of districts held together partly by the feeling that they are all Dorobo, but much more by the clan ties which cut across the district boundaries. The clan is therefore one of the chief institutions in the life of the Dorobo.

MAIN CULTURAL FEATURES

Crafts

Housing

(*a*) Forest type: the *koconget*, in use as late as 1927, was a framework of sticks bent over to form an oblong, dome-shaped structure, covered on the outside with banana leaves and leaves of trees; height, 6 ft.; length, 11 ft.; width, 7 ft. (*b*) New types: the *keriet* has a circular wall about 5 ft. high plastered with mud, and an almost flat thatched roof supported by a centre post; the *kot* is a hut of ordinary Nandi type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of three or four *koconget* huts, were situated in clearings just big enough to hold the huts, and were approached by concealed paths which branched in a bewildering manner that made it impossible to find them without a guide. Settlements outside the forest are arranged in small groups usually close to the cultivated land.

Dress and Ornaments

Clothing is made largely from the skins of wild animals, and the forms are mainly copied from those of the Nandi, as are most of the ornaments, which include, among other things, iron wire armlets and leglets, necklaces, and married women's ear-rings (*taok*). The ear-lobes are pierced and elongated (sometimes getting torn in the forest), and a small hole is bored in the top of the ear. Some but not all remove the two lower middle incisors. Hair is allowed to grow to a length of about 2 ins., when it is sometimes covered with a bladder cap, and sometimes dressed with red earth and fat. Occasionally a man has his hair done in pigtails like the Nandi.

Tools and Weapons

Axes and knives are obtained from Nandi smiths, the Dorobo making the wooden handles. Needles are made from old nails and bits of wire which the Dorobo

2; Maguire G-5 (ca. 1926) 1927-28
FL6 Dorobo FL6

have lived in the country of the Kitĕto Masai, since they are stated to have been the precursors of the Masai in this part of the world.

I was unable to elicit any folk-tales from the *Aramanik*, who say that they know no stories or legends except those they have learned from the Masai. It is possible that further efforts in this direction might meet with better success. The *Aramanik* are not as friendly or as ready to discuss their own affairs as are the cheerful, happy-go-lucky *Mósiro*.

Many Masai superstitions and superstitious practices are to be found among the Dorobo. There are, however, certain customs and observances of a superstitious nature practised only by the Dorobo. Of the following three examples, the last two given are in this category.

The *Mósiro* will not kill a python. They say it is a hunter of meat, as are they themselves. Furthermore, if it be killed, the ground where it dies and where its blood is split is ever afterwards fatal to cattle grazing there.[1] No explanation is given of this, and it would seem worthy of note that the Dorobo are exceptionally quick and skilful killers of all other snakes.

When following a native path or a road, if a Dorobo comes to the place where the track of a snake crosses the path, he will never step over it without first kicking up the sand or earth in order to break the continuity of the snake's track. This is done in order to avert evil, and is stated to be the only efficacious way of ensuring that the snake in question will not eventually kill the man who has crossed its path.[2]

If a Dorobo has been robbed and if the thief cannot be found, the following procedure is sometimes resorted to. The man who has suffered the loss heats his sword in the fire until it is red and then, plunging it into the earth, he says: "The thief shall die to-morrow." This is regarded as a very bad practice and is seldom indulged in, as the injured party, no matter how much he may have lost, knows that he will become extremely unpopular as a result of his action.

It seems likely that in a few years' time there will be no *Balañga* and no *Kinyalañgai* Dorobo. As I have said elsewhere, it is now almost impossible to find *Balañga* or *Kinya-*

[1] See Hollis: *The Nandi*, p. 80.

[2] *Ibid.*, p. 79.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

and speak at it. People meet at the house of a clansman who, upon notice being given to him, prepares as much honey-wine as he can for the entertainment of the gathering, and what he provides may be supplemented by wine brought by other members. The business of the council is done with the aid of a jar of honey-wine in an informal way as if it were a social gathering, which in a sense it is, for the clan council through its informality has become a social bond between clansmen. Business is done first, and the drinking soon follows. The subjects which may be discussed include:

1. Disputes between members of the clan.
2. Hunting disputes.
3. Disputes about boundaries of hunting areas.
4. The preliminary business when a clansman has killed a member of another clan.
5. Homicide within the clan.
6. Sexual intercourse between a man and a girl of the clan. Disputes under heads 1-3 are settled by discussion, the leader of the council swaying, by his opinion, the views of the members. The leader, *kiruokindet*, is not necessarily the oldest member of the clan, for such a man might be too senile to act properly; but someone fairly senior in age, with his faculties intact, who is liked and respected, becomes in course of time (as in the case of the leader of the *koret* council) looked upon as a responsible person who can be safely listened to and whose judgement is sound.

More serious matters, like those under heads 4-6, are dealt with like the rest by discussion, but there is as well a certain traditional procedure to follow. When a clansman has killed a member of another clan, the council of the dead man's clan meets to discuss the compensation payable, and to choose a messenger who will be sent to the council of the murderer's clan to start proceedings, which after a preliminary discussion, are heard before the *koret* council, since two different clans are involved, and the matter is not purely the affair of one clan. When a man kills a member of his own clan, the whole matter is settled within the clan. First, the murderer has to brew some honey-wine and kill a goat from which the fat is collected. Then old men of both the families concerned meet at the house of the murderer and drink the wine he has provided, after which two of the old men oil the murderer all over with the goat's fat. The animal from which this fat is obtained must be a goat, and if the murderer has none of his own, he must get one by purchase or theft. He is therefore put to some trouble and even danger, for if he has to steal a goat he risks being speared if caught, and this constitutes an act of faith which, together with the anointing of his body, frees him from the uncleanness caused by the shedding of human blood. There is no payment of compensation for the murder of a clansman, but the murderer must if he can give his victim's wife one cow to help towards her maintenance. This last is a Nandi custom and was probably introduced in recent times after the Dorobo had begun to acquire cattle in a small way.

Sexual intercourse between a man and a girl of his clan is not an offence provided the girl does not have a baby, though the lover is not allowed

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

I noticed that when Dorobo were having a meeting of any sort, however informal, at which they wanted to speak of anything important, they were careful to exclude Nandi from it; and if a Nandi insisted on intruding, they would talk only of trivial matters till he had gone. One day when I was talking to some Dorobo about their land, they insisted on my sending out of earshot a Nandi who was with me — they even took me out of his sight and spoke in low voices, for the subject was too serious to be heard and perhaps ridiculed by a Nandi. It is thus not difficult to understand how an acquired feature like the *koret* can fall into disuse; and this is what I believe has happened among the Dorobo. Pressure of various kinds was by 1927 forcing the Dorobo to be more wary than ever, and the clan system could give them all the administrative organization they needed. Hence the *koret* council could lapse, and with it the office of *kiruokindet*, though the *koret* names remained, as they had become useful terms of reference.

Nevertheless, the *koret* council is closely associated with the punishment of crime, and it is therefore necessary to understand something of the way in which it did its work in the past.

All the elders and circumcised men of a district formed the council. They met at the foot of a tree where the undergrowth was cleared away to make an open space. Any tree would do, for unlike the Nandi they had no special trees which mark the *korosuek*. The functions of the *koret* council were described briefly by a Dorobo in the following words: *Keruoc walek si kesic ce miyac ak ce yac, si kokas pik tukul. Ingoesio cit ake tukul, keoon si kua emet ake*, "We take counsel that we may find what is good and leave what is bad so that all men may understand. If any man refuses, he is driven out of our country". Questions of theft and homicide were discussed by the council; it considered what steps to take when food was scarce; and disputes of all sorts between people of different clans were heard and settled. The decision of the council was announced by the *kiruokindet*, who after sensing the opinion of the meeting, would stand up and say what ought to be done. It was then left to the people concerned to carry out the suggestion, for such it was, in effect, rather than an order.

The way in which the law is enforced is liable to be something of a puzzle to the casual observer. The mainspring of Dorobo political organization is public opinion, and behind public opinion is the fear of the dead. People know that it is wrong, that is, contrary to custom, to do a certain thing; they know also that if they do it, their friends will do someting unpleasant to them, and, what is really most important of all, they know that *mecome cesowiloi*, "the spirits of the dead disapprove". Hence in order to understand how Dorobo law works, one must know something about their religious beliefs. To the European these reasons no doubt seem feeble; but they are effective in that the Dorobo have been able to survive till to-day as a unit sufficiently law-abiding to hold its own and carry on its existence in face of human and non-human enemies, and to maintain its place as a living organization.

Among people like the Nandi, the council habit has become an almost daily business, has in fact almost come to be the equivalent of a club, though without the conviviality of a club; but this is not possible for people who

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

Private delicts include trespass, that is, hunting on another's land in the forest; theft, of honey-barrels in particular and of other things in general; murder; adultery; and assault. These are offences for which compensation is payable, or for which a man may kill the offender, e. g. for theft, though if he does so he must pay compensation for murder. Offences which concern fellow clansmen are dealt with by the clan council. Others came within the province of the *koret* council, which was not a daily affair, nor held at stated times, but only when there was a definite reason. When a person had some business which needed the calling of a council, he told the *kiruokindet*, who passed word round the *koret* that people should assemble on a certain day. If, for example, a man had been robbed of a honey-barrel, and knew who had stolen it, he would put the matter before the council, partly to decide on the amount of compensation, for the amount might vary according to the thief's circumstances, and partly to have public opinion behind him when he enforced his claim for payment. I believe that on the whole theft among the Dorobo themselves was not very common; and certain kinds of theft are regarded by them as so mean that a man must be very depraved indeed who will commit them. Besides, in a small horde whose members feel that outside their own circle every man's hand is against them, and to whom a stranger is a potential enemy until proved a friend, the need for unity and absence of friction is overwhelming if they are to survive. I certainly heard of no cases of theft during the period of my investigations.

We may now pass on to describe some of the traditional measures taken against offenders.

Incest. Incest means intercourse between a man and a woman of his *tiliet* (that is, one whom he calls by a relationship term), and a clanswoman. We have already described the punishment for this (see above, p. 127 f.), which in the first case is carried out with the approval of the *koret* council, and in the second, under the authority of the clan council.

Killing a Dorobo. When a man killed a Dorobo belonging to another clan, the council of the dead man's clan met to discuss the amount of compensation that was to be paid (*pas*), and then sent word to the council of the murderer's clan. This meant that the offence had been recognized, and that action must be taken. The council of the murderer's *koret* then assembled so that arrangements for payment could be made and become known to everybody. The murderer also had to be purified, in the same way as when the victim was a clansman. The *koret* council then met again to discuss the amount of the compensation. This, it seems, was usually reckoned at nine head of cattle (male or female), though it is doubtful if the full number was ever enforced [1], and if the murderer was a poor man with

[1] The number nine is probably due to imitation of the Nandi procedure, where nine is the amount payable as compensation for homicide.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

682 few relatives it would be very much less. The murderer had to provide as
623 many of the number decided upon as he could, either from his own herd if
692 he had one, or by getting them from the Nandi in exchange for furs, which meant, of course, that the cattle would be either oxen or worn-out old cows, and that he would not be able to provide many himself. It therefore fell to his relatives and clansmen to make up the number, which needed a clan council to apportion the balance among them, and also resulted in a good deal of feeling against the murderer for a time. Until the amount had been
[614] agreed upon by both clan and *koret* councils, the murderer was liable (in theory at least) to be killed by his victim's relatives, so he had to lie low till the negotiations were completed, though again it is doubtful if they would actually have gone as far as killing him, for then they themselves would merely have had to return the cattle as compensation for their own act. In dividing cattle between the murdered man's relatives, the order of priority was brother, wife, father, mother, father's brother, father's brother's son, father's sister's son.

683 **Killing a witch.** Though in 1939 I could hear of no Dorobo who were
754 reputed to be witches (*ponik*), such people certainly existed in the past. Apart from killing people by spells, their principal activities seem to have been centred on hunting — putting spells on game traps and on men who were going to hunt. If a witch was shown by a diviner to be guilty of a person's death, he or she might be killed, and no compensation was payable (*mepase*).

609 **Killing an enemy.** This means killing any person who is not a Dorobo
687 and is believed or known to have performed any unfriendly act against the Dorobo. The Dorobo have no sort of war organization, and their enemies
[701] were generally shot at from the cover of under-growth. Though not a crime,
[721] killing an enemy none the less makes the killer ritually unclean and therefore
[788] dangerous to others because he has shed human blood. This action is thus brought into the same category as homicide of a Dorobo, and though there is naturally no compensation, purification is required. The face of a man
[802] who has killed an enemy is painted (*kemase tokot*) with stripes of white earth (*emoriot*) on the forehead, down each cheek, and down both sides of the nose. The paint is allowed to remain till it flakes off, and the man does not have to stay in his hut, but goes about as usual; though if he had killed a Nandi he would take care to go to some other part of the forest till he thought it safe to return. In actual fact, Nandi were seldom killed, but one who strayed into the forest might get shot by accident: the body would be taken to a lonely place for the hyaenas to eat, and at any sign of Nandi activity the Dorobo would vanish into the depth of the forest where the Nandi would have little chance of finding them even if they had the inclination to search.

685 **Theft.** Stealing honey is the worst kind of theft, and is almost comparable with intra-tribal cattle-theft among the Nandi. A man who steals honey from someone else's barrels is considered very low indeed, and if found

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

out might be shot by the owner, who, if he killed the thief, would have to pay compensation for homicide. 685

If a man steals a honey-barrel from a man's recognized area in the forest, the case can be brought before the *koret* council, and the usual compensation is the payment of a goat, which the thief has to get from the Nandi if he has none of his own, though if the thief's circumstances were good, he might have to pay more. The Dorobo say that stealing honey-barrels is apt to be dangerous, because if a barrel is full of bees, the thief might be injured by their stings if they got his scent and did not recognize it.

I was told that theft of an animal caught in someone else's trap never occurred, partly because of the deep-seated public hatred of such an act, and partly because of the belief that after eating meat stolen from a trap the thief's belly would swell to a great size and he would die.

A person accused of stealing food may, to attest his innocence, take a blade of grass between his teeth and say: *Ingo a corin, kuama susuonno*, "If I am a thief, may this blade of grass eat me". [695]

A man who is found stealing ordinary property is beaten by the owner if he can catch him, but if in doing so the thief is killed, the owner must pay the compensation for homicide. In cases of serious theft, like stealing a man's bow and arrows, the case could be referred to the *koret* council, and the thief might have to pay adequate compensation. A man accused of theft might protest that he was innocent by throwing his knife at a tree and saying: *Ingo a corin, kuama rotuanno*, "If I am a thief, may this knife eat me". [692] [693] [695]

Trespass. To the Dorobo, trespass means hunting on somebody else's land. Normally this is no more than either following an animal across the boundary into another man's land, or else in the heat of the chase picking up the trail of another animal on someone else's land. If the hunter gives the owner of the land some of the meat, this accidental trespass is not considered as an offence. But if a man were deliberately to set out to hunt or trap on another man's land without permission or promise of meat, then the owner might, if he thought fit, kill him, though he would have to pay compensation for homicide. Trespasss can occur only in the horde's own forest area. In the old days, when people roamed over the plains below, they could hunt where they pleased, and all they had to do was to keep out of the way of the Masae or Nandi herdsmen.

Adultery. A man who lies with another man's wife is said to *cor*, that is, steal her. He thereby commits an offence against her husband, who may kill him if he catches him in the act, and then, of course, must pay compensation; the wife may get a beating. A woman is not divorced for one act of adultery. 684

Assault. If a man injures another and incapacitates him, he must feed him till he recovers; and should the man eventually die as a result of the injury, the offender will have to pay compensation for homicide. 683

he found hunting on his area, though he would be liable to pay blood-cattle for homicide. 423 [682]

As for trapping, it is said that nobody steals meat from traps because their bellies would swell to a great size if they ate stolen meat. Public opinion, too, is strongly against such a mean crime, and is of itself a powerful deterrent. Nowadays trapping is the chief source of meat, and the common practice is for a man to set three or four traps at a time in different places, and to visit them every two days or so to see if anything has been caught. 224 [685] [626]

Monkeys and buck[1] are killed for their meat and skins; pig provide meat and gut for bow-strings. [237]

2. Agriculture.[2]

The Dorobo are in process of changing from a hunting to an agricultural existence, from the uncertain hunting economy to the more certain one of agriculture; and the same economic pressure which has forced them to till the soil is now encouraging a desire for cattle, which are being slowly and laboriously acquired. This leads in turn to a more self-supporting state, with less dependence on the Nandi for grain crops; and agricultural techniques, both in tillage and stock, are being learnt from the Nandi and from Europeans. 178 [224] [241] [233] [648]

Both sexes work in the cultivated plots (*imbaret*), and are helped by children, who weed the crops, herd the stock, and milk the cows. The crops grown at present are eleusine (*eleusine coracana*, called *wimbi* in Swahili) and maize; millet and tobacco are still bought from the Nandi, from whom the Dorobo also get eleusine and maize seed when necessary. Unlike the distribution of the forest into hunting areas, people cultivate the ground close to their own homes, and a group 241 [462] [857] [439] 241 423 [351]

[1] The buck killed are: [136]
Kipseket, blue duiker (cehpalophus aequatorialis).
Mindet, red duiker (c. igna-issaci.)
Keremait, bush buck (tragelaphus scriptus.)
Irukutet, reed-buck
Kenyelet, oribi
Kipsomeret, water-buck (cobus ellipsiprymnus).

[2] I prefer the term 'agriculture' to 'horticulture,' for the latter implies mere cultivation, with no livestock, and in East Africa agriculture is almost always practised in conjunction with stock-rearing, even if only on a small scale.

M D 682 648 M [564] [326] /262 cont./ never have anything to do with taking their part. On the other hand, if an Asá is killed by a blacksmith, the Masai immediately place themselves on the side of the ones injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wandorobo, to be sure, would themselves be in a position to execute the revenge, but the Masai do not permit this because they see in it an encroachment on their rights as masters of the land and in particular also of the el konono.

D 683 [682] Bodily injury with a fatal outcome, if caused intentionally, is regarded as murder; if negligently, as negligent homicide. Minor bodily injuries are atoned for with the payment of a specific number of beehives. For the destruction of a finger one beehive is paid, for one hand eight; among some Wandorobo who live in close contact with the Masai the atonement for the destruction of a finger or the whole hand amounts to a fat-tailed sheep. Bodily injury leading only to the loss of an index finger or an eye often remains unpunished, as does indecent assault. Abortion is said to be unknown, and perversion not to occur. Kidnapping and sale are unknown.

D [847] [839] [674] A theft committed in the camp by an inhabitant or stranger is atoned for by the return of the stolen goods; that of a beehive hanging outside the camp, with the payment of ten new ones. Anyone who steals honey from a beehive pays five beehives. Arson is said not to occur; one who is the cause of the illness of another through sorcery is not infrequently killed, after he has been persuaded to charm the sick one back to health. The shooting of poisoned arrows in the camp is strictly forbidden, because of the danger connected with it. Anyone who transgresses this law must expect to be killed immediately by his campmates.

D 685 D 683 D 689

D 681 Unknown are: aggravated kinds of death, the principle of repaying like with like, compensation in the culpable body part, symbolism, imprisonment, enslavement, public punishments, the right of pardon.

D 787 For the inquiry concerning an unknown culprit, the injured one turns -- /263/ as has already been mentioned -- to a sorcerer, who is also called ol goiatiki[1] among the Wandorobo. Instead of the manipulations with the en gidon, he throws a pair of sandals on the ground in front of him eight times, then picks them up and puts

1. [ol goiatiki is a Masai word also meaning sorcerer--Analyst]

/263 cont./

787 them under his head at night; the next morning he throws the sandals again, this time five times, whereupon he states that the guilty one look thus and so and lives in such and such a camp, etc. If the tusks
789 of a slain elephant are stolen (the hunter does not remove them
685 immediately, but waits until they have been loosened by the decaying
754 of the gums), the one who killed the animal makes magic against the thief by shooting at the head of the elephant several times, using as an arrow the fire-twirling stick. Then he breaks the latter and lays it beside the head. According to the assertions of the Wandorobo, this magic is so effective that the thief must irretrievably die after a few days if he does not deliver the tusks to the owner in all haste -- which is supposed to happen almost always.

695 Only in criminal cases are there legal proceedings, which take
[171] place in the same manner as among the Masai. Every male individual is entitled to take part in them. The ones arriving greet the one
[782] presiding, who is already waiting with a few friends in the shade of a tree near his camp, with the customary greeting and handshake, whereupon the latter opens the meeting with a few of the above-mentioned supplication prayers, Uēd nge hawa, Uēd nge mai, Uēd ngeri' aga! and closes it at the end of the deliberation in the same manner.

[171] A swearing of the truth is made with the same gestures and the same words as among the Masai. Besides the latter, the formula, Uēd kiwēta = may God kill me, is also customary.

[171] To extort confessions one uses the torture customary among the Masai, wrapping a bow string around the upper arm. The Wandorobo call it andoga rasug. In their court sessions the Asá are not acquainted with any ordeals (momeg) other than the ones discussed for the Masai. Of these they use the following three: The ordeal of the bow, here gari waschá́á, the ordeal of the dry wood, here kaschingo waguruf, and that of the stool made of earth, which they designate the same as the Masai. The culprit must submit to the ordeal upon the demand of the plaintiff and may not put up a substitute. According to the statements of the Wandorobo, one who is really guilty always confesses before he submits to the ol momai, as it is also called here, besides momeg, because the belief that otherwise he would die the very next day is unshakably established in the minds of the people. For murder,

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

other scavengers. Nowadays, all hunting activities are carried on illegally with the risk of being punished if caught by the police.

Weapons are the bow and poisoned arrows carried in a quiver. Knives are used to skin game and to make springes. Spears have never been used. The Dorobo used to have hunting dogs, but in the North Tindiret Forest the breed seems to have died out, though it existed in 1927. They have two kinds of trap: (i) The pit trap, *nguret*, formerly used for buffalo, consisting of a pit 8 ft. long, 3 ft. wide, and 6 ft. deep, with wooden spikes set in the bottom. (ii) The springe or snare, *porousi*, which consists, briefly, of a springy stick bent over, with a noose attached to it connected with a platform: the arrangement is such that when an animal treads on the platform its head enters the noose, and the pressure on the platform releases the springy stick, which flies up, tightening the noose, and holding the animal suspended. Such traps can be made in less than ten minutes. This type is used chiefly to catch antelopes, but leopards have been caught in them. Cross-bar traps with a drop-spear were not used by the Kipkurerek Dorobo.

The only hunting taboo recorded is that the night before he goes out hunting a man must abstain from sexual intercourse. This does not apply to the setting of traps.

As regards land rights, the forest was divided into districts, *koret*, pl. *korosuek*, and in his district each man had an hereditary block of land in which he hunted, set traps, kept his honey-barrels, and collected wild food. Occupation rights were recognized by public opinion, and trespass on a man's forest area, i.e., deliberate entry in order to start hunting without permission or the promise of a piece of meat, might result in the trespasser's death at the hands of the owner, who would then have to pay compensation for homicide. Theft of game from a trap is said never to have occurred, not only because the thief might be killed, but because his belly would swell to a great size and he would die after eating meat stolen from a trap.

Bees

Honey is to the Dorobo what milk is to the Nandi: it is "sacred," and its supply must be protected by the observance of taboos. Fruit and blood must not be eaten on the same day as honey (though meat may be eaten); when a comb is emptied, it must be carefully hidden in the undergrowth; and after eating honey a Dorobo cleans his hands in earth, not (like the Nandi) by wiping them with leaves.

The Dorobo recognize four varieties of bee: *sekemik*, the honey-producing kind; *imeiik*, solitary bees which live in trees; *kosomek*, earth bees, which live in the ground; and *kiptulonik*, mason bees, which live in cells made of earth and particles of stone cemented together by their own saliva. The Dorobo divide the honey-bees, *sekemik*, into three kinds: the queen, *kamet ap sekemik*, "the mother of the bees"; the workers, called simply *sekemik*, considered to be males, which make honey by eating the "sap" (*pek*) of flowers and then vomiting it into the empty honey-combs; and the drones, *kapurenik*, considered to be idle females which do nothing useful.

Hives or honey-barrels (*pasanet*) are made either of slats of wood tied together, with circular wooden end-pieces; or of the two halves of a piece of log split longitudinally and tied together. They are set in trees, and when a new hive is put up, the owner calls the bees, in a high-pitched tone, to come and occupy it: "Bees, bees, from all the country, come here now, and pour in honey, pour in honey." Bees are said to recognize their owners by their body-smell, and do not sting them when taking honey. Certainly taking honey does not appear to be a painful or dangerous process to the Dorobo owner. Theft of honey from a barrel is considered very low, and a man might kill a thief, though he would have to pay compensation for homicide.

Honey is an important article in Dorobo economy: it is eaten as food, made into an intoxicant, used for ritual purification, and it forms an article of commerce.

3:Huntingford E-5 (1921-1928)1929 FL6 Dorobo FL6

together. The rim is made of a single stick bent in an oval and the ends bound together; across it are fastened pieces of tree-rope.[1] Grindstones (*littio*, N.) have already been mentioned.

The Dorôbo have no knowledge of metallurgy, and they have no musical instruments, pottery, or, apparently, objects of ivory. Metal-work and pottery they buy from the Nandi.[2]

Trade and Commerce.

Trade is by barter. The Dorôbo give the Nandi baskets, dressed skins, and bows in exchange for ironwork, tobacco, pottery, beads, and other necessaries which they cannot produce themselves. There are no special market-places, but goods are taken to any place where there are Nandi, and there exchanged.

Land.

(i) *Tenure.*—The forest is divided by the elders into sections, and each family has its own section of forest. The boundaries between family holdings may be paths or rivers.

(ii) *Geographical Divisions.*—The Dorôbo divide their country into divisions called *kwat*, pl. *kwosuek* (N.). The chief divisions appear to be called Kipkorom, Sirua, Kimurienge, Soociyo (bamboo, N. *tekut*), and Mokopich. The majority of the present place-names are Nandi.

The points of the compass are called as follows:—North and South: Murot (N.). East: Ye-torur (N. *ulin-durur* = up). West: Ye-'rek-to (= where(-the-sun)-descends-thither).

III.—Government.

The Kâmelilo-Kâpchepkendi Dorôbo have now no chief. The last to hold office was Parñgetuny[3] arap Ñgamñgam, who was chief at the time of the Nandi Punitive Expedition, 1905. He is still alive, though he no longer holds office. The chief was elected, and the office was not hereditary. The chief (*kiruogindet* (N.)=councillor) was chosen for "ñgelyepta kitio" ("tongue only" = sense, ability and position). The only form of Government that exists now is a council of elders (*kiruoget ap poiisiek*, N.), who meet and decide on matters which are brought to them. They seem to have little power of enforcing obedience to their decisions, though they claim

[1] This is described and illustrated, although it is a Nandi use, since H.N. does not mention it.

[2] On the use of horns, *see* V, "Miscellaneous." These can hardly be considered as instruments of music.

[3] N. = lion-killer.

3:Huntingford E-5 (1921-1928)1929 FL6 Dorobo FL6

623 [687] that continual disobedience is punished by expulsion from the tribe. They described their office in the following terms:—

Ke'ruoch ñgalek si kesich che mîyach ak che
We-take-counsel the-matters that we-may-get which-are good and which-are

[539] yach, si ko-kas piik tukul. Ingoesio chiit'
bad that they-may-understand (-obey) the-people all. If-he-refuses the-man

ake tukul, ke-oon, si kwa emet ake.
other any, we-expel (-him) that he-may-go the-country other.

["We take counsel that we may find what is good, and leave what is bad, that all men may obey. If any refuse, he is driven out of our country."]

IV.—RELIGIOUS BELIEFS, MAGIC, AND MEDICINE.

Religion.

771 The religious beliefs of the Dorôbo are even vaguer than those of the Nandi.
776 They believe in a god Asista (N.), who is the sun and masculine, and who has a
[782] sister Arawa* (N.), the moon.[1] No offerings are made to either, but the men pray to both before going on a hunt. The prayers seem to have one form:—

Asis,* ipiiy'-ech omdit.
God, fill-us-with the-food.

[539] or,

Arawa,* ipiiy'-ech omdit.
Moon, fill-us-with the-food.

[775] They believe also in ghosts and spirits (*oiindet*, pl. *oiik*, N.) which are good and
[782] bad. Prayers are addressed to the good oiik (*oiik che mîyach*) to obtain food and health, *e.g.*:—

Oiik, ipiiy'-ech omdit.
The-spirits, fill-us-with the-food.

[539] Oiik, ipiiy'-ech sapot.
The-spirits, fill-us-with the-health.

[782] Libations of honey and water (*logomek*)[2] and of honey-wine (*kipketîsik*, N.) are offered to the good oiik, in order to obtain food and health. These libations are made from gourds (*komda*), and while they are poured out, the formula,

[539] Ipiiy'-ech omdit si kiipiiye sapot.
Fill-us-with the-food that we-be-filled-with health,

is pronounced.

[171] [1] I have not come across this particular relationship before in the Nilo-Hamitic group; though other tribes of this group hold that the sun and moon are related, or are husband and wife (the latter Masai and Nandi). (*See* Beech, *The Suk*, for the ideas of the Suk, Enjemusi, Turkana, etc.)

[2] The Nandi offer milk.

M D 682 648 M [564] [326] /262 cont./ never have anything to do with taking their part. On the other hand, if an Asá is killed by a blacksmith, the Masai immediately place themselves on the side of the ones injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wandorobo, to be sure, would themselves be in a position to execute the revenge, but the Masai do not permit this because they see in it an encroachment on their rights as masters of the land and in particular also of the el konono.

D 683 [682] Bodily injury with a fatal outcome, if caused intentionally, is regarded as murder; if negligently, as negligent homicide. Minor bodily injuries are atoned for with the payment of a specific number of beehives. 5:3Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

623 [987] [361] live under such conditions as the Dorobo. The dense forest, crossed by a path only at one corner, the scattered groups of huts each in the old days shut off from the next by a wall of trees, and the precarious hand to mouth existence of a hunting economy, all operate against the spending of much time in meeting others away from home merely to talk. And so the council was a more serious affair and held only when necessary; moreover its seriousness was emphasized, in the case of the clan council, by the provision of honey-wine so that it became a social as well as an administrative institution.

623 691 Though Dorobo had their quarrels and disputes, they were not cattle men, and so were saved from one of the commonest causes of litigation in Africa, disputes over stock ownership and inheritance, which can occupy so much of the time of a pastoral tribe. The possessions of a Dorobo — his bow, his knife, his honey-barrels — do not reproduce themselves, and his bees and dogs, important as they are, have not the same significance as cattle when questions of inheritance are raised.

4. Crime and its Results

681 When a man had heard the decision of the council go against him, and knew that he should do this or that, did he always do it? As often as not, I believe, he obeyed because he felt the force of public opinion. Africans are very sensitive to what their own people think of them, and as a last resort the elders could call on the young men, the *murenik*, to enforce their decisions. If a man, knowing that he had to pay an ox as compensation, persisted in his failure to produce the animal, two or three *murenik* could be sent by the council to persuade him by moral or if necessary physical force to obey. But in a small community like that of the Dorobo a man just could not afford to have everybody's disapproval or resentment directed against him; and the strength of public opinion as an incentive to obey orders is very real. It is a strong element in tribal cohesion. Moreover, behind it is the fear of the spirits, to which we shall return later on.

674 693 Crimes and offences for which some form of action is taken fall into two categories, public delicts, or crimes against the horde as a whole, and private delicts, or offences against individuals. The former are the more serious, since their commission may affect not only the offender, but also

674 others with whom he is connected. Such crimes include incest, intercourse with a clanswoman, killing a clansfellow, witchcraft, killing an enemy (but see below), and disobedience to the council. These crimes are "public" because their commission is regarded as likely to affect others besides the criminal. Incest and intercourse with a clanswoman (equivalent to incest) are displeasing to the *ceuwiki*, the spirits, and unless appropriate action is taken, the people may suffer. Murder of a clansman, though in one sense a private delict, is really to be classed among public delicts because it strikes at the foundations of horde unity, the clan. And though killing an enemy is not in itself a crime, it nevertheless brings the killer into the same state of danger to himself and others as killing a Dorobo, and thus necessitates ceremonial cleansing.

Schmidt-Langford E-1 (1921-1922)/1929 FLA Dorobo FLA

together. The ribs is made of a single stick bent in an oval and the ends bound together; across it are fastened pieces of tree-rope.[1] Gourds (Sotto, N.) have already been mentioned.

The Dorobo have no knowledge of metallurgy, and they have no ~~ancient~~ [illegible] ~~remote~~, pottery, or, apparently, objects of ivory. Metal-work and pottery they buy from the Kenté.[2]

Trade and Commerce.

Trade is by barter. The Dorobo give the Kenté honey, dressed skins, and bows in exchange for beer-meth, tobacco, pottery, beads, and other necessaries which they cannot produce themselves. There are no special market-places, but goods are taken to any place where there are Kenté, and there exchanged.

Land.

(i) *Tenure.*—The forest is divided by the elders into sections, and each family has its own section of forest. The boundaries between family holdings may be paths or rivers.

(ii) *Geographical Divisions.*—The Dorobo divide their country into divisions called *kwal*, pl. *kwonuk* (N.). The chief divisions appear to be called Kiphoroon, Biwa, Kimwilingo, Sumiyo (location, N. sub-d), and Mokopiek. The majority of the present place-names are Kenté.

The points of the compass are called as follows:—North and South: Mwret (N.). East: Ya-wwar (N. *ulia-dawar* = up). West: Ya-'nik-te (= where(the sun) descends-thither).

III.—Government.

The Kimwilio Kipchapkondi Dorobo have now no chief. The last to hold office was Parkpiroyo[3] arap Ngumdigun, who was chief at the time of the Kenté Punitive Expedition, 1905. He is still alive, though he no longer holds office. The chief was elected, and the office was not hereditary. The chief (*kiruspindet* (N.)—counsellor) was chosen for "*kpilyopin kitin*" ("tongue only" = sense, ability and position). The only form of Government that exists now is a council of elders (*kiruspet ap pwinik*, N.), who meet and decide on matters which are brought to them. They seem to have little power of enforcing obedience to their decisions, though they claim

[1] This is described and illustrated, although it is a Kenté one, since N.N. does not mention it.

[2] On the use of bows, see V., "Miscellaneous." These may hardly be considered as instruments of trade.

[3] N. = Son-killer.

5:Huntingford E-5 (1938-1939) 1954 FLÁ Dorobo FLÁ

and speak at it. People meet at the house of a clansman who, upon notice being given to him, prepares as much honey-wine as he can for the entertainment of the gathering, and what he provides may be supplemented by wine brought by other members. The business of the council is done with the aid of a jar of honey-wine in an informal way as if it were a social gathering, which in a sense it is, for the clan council through its informality has become a social bond between clansmen. Business is done first, and the drinking soon follows. The subjects which may be discussed include:

1. Disputes between members of the clan.
2. Hunting disputes.
3. Disputes about boundaries of hunting areas.
4. The preliminary business when a clansman has killed a member of another clan.
5. Homicide within the clan.
6. Sexual intercourse between a man and a girl of the clan. Disputes under heads 1-3 are settled by discussion, the leader of the council swaying, by his opinion, the views of the members. The leader, *kiruktindat*, is not necessarily the oldest member of the clan, for such a man might be too senile to act properly; but someone fairly senior in age, with his faculties intact, who is liked and respected, becomes in course of time (as in the case of the leader of the *kuret* council) looked upon as a responsible person who can be safely listened to and whose judgment is sound.

More serious matters, like those under heads 4-6, are dealt with, like the rest by discussion, but there is as well a certain traditional procedure to follow. When a clansman has killed a member of another clan, the council of the dead man's clan meets to discuss the compensation payable, and to choose a messenger who will be sent to the council of the murderer's clan to start proceedings, which after a preliminary discussion, are heard before the *kuret* council, since two different clans are involved, and the matter is not purely the affair of one clan. When a man kills a member of his own clan, the whole matter is settled within the clan. First, the murderer has to brew some honey-wine and kill a goat from which the fat is collected. Then old men of both the families concerned meet at the house of the murderer and drink the wine he has provided, after which two of the old men oil the murderer all over with the goat's fat. The animal from which this fat is obtained must be a goat, and if the murderer has none of his own, he must get one by purchase or theft. He is therefore put to some trouble and even danger, for if he has to steal a goat he risks being speared if caught, and this constitutes an act of faith which, together with the anointing of his body, frees him from the uncleanness caused by the shedding of human blood. There is no payment of compensation for the murder of a clansman, but the murderer must if he can give his victim's wife one cow to help towards her maintenance. This last is a Nandi custom and was probably introduced in recent times after the Dorobo had begun to acquire cattle in a small way.

Sexual intercourse between a man and a girl of his clan is not an offence provided the girl does not have a baby, though the lover is not allowed

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

Private delicts include trespass, that is, hunting on another's land in the forest; theft, of honey-barrels in particular and of other things in general; murder; adultery; and assault. These are offences for which compensation is payable, or for which a man may kill the offender, e. g. for theft, though if he does so he must pay compensation for murder. Offences which concern fellow clansmen are dealt with by the clan council. Others came within the province of the *kerut* council, which was not a daily affair, nor held at stated times, but only when there was a definite reason. When a person had some business which needed the calling of a council, he told the *kiruokindat*, who passed word round the *kerut* that people should assemble on a certain day. If, for example, a man had been robbed of a honey-barrel, and knew who had stolen it, he would put the matter before the council, partly to decide on the amount of compensation, for the amount might vary according to the thief's circumstances, and partly to have public opinion behind him when he enforced his claim for payment. I believe that on the whole theft among the Dorobo themselves was not very common; and certain kinds of theft are regarded by them as so mean that a man must be very depraved indeed who will commit them. Besides, in a small horde whose members feel that outside their own circle every man's hand is against them, and to whom a stranger is a potential enemy until proved a friend, the need for unity and absence of friction is overwhelming if they are to survive. I certainly heard of no cases of theft during the period of my investigations.

We may now pass on to describe some of the traditional measures taken against offenders.

Incest. Incest means intercourse between a man and a woman of his *kilet* (that is, one whom he calls by a relationship term), and a clanswoman. We have already described the punishment for this (see above, p. 127 f.), which in the first case is carried out with the approval of the *kerut* council, and in the second, under the authority of the clan council.

Killing a Dorobo. When a man killed a Dorobo belonging to another clan, the council of the dead man's clan met to discuss the amount of compensation that was to be paid (*pas*), and then sent word to the council of the murderer's clan. This meant that the offence had been recognized, and that action must be taken. The council of the murderer's *kerut* then assembled so that arrangements for payment could be made and become known to everybody. The murderer also had to be purified, in the same way as when the victim was a clansman. The *kerut* council then met again to discuss the amount of the compensation. This, it seems, was usually reckoned at nine head of cattle (male or female), though it is doubtful if the full number was ever enforced [1], and if the murderer was a poor man with

[1] The number nine is probably due to imitation of the Nandi procedure, where nine is the amount payable as compensation for homicide.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

few relatives it would be very much less. The murderer had to provide as many of the number decided upon as he could, either from his own herd if he had one, or by getting them from the Nandi in exchange for furs, which meant, of course, that the cattle would be either oxen or worn-out old cows, and that he would not be able to provide many himself. It therefore fell to his relatives and clansmen to make up the number, which needed a clan council to apportion the balance among them, and also resulted in a good deal of feeling against the murderer for a time. Until the amount had been agreed upon by both clan and *koret* councils, the murderer was liable (in theory at least) to be killed by his victim's relatives, so he had to lie low till the negotiations were completed, though again it is doubtful if they would actually have gone as far as killing him, for then they themselves would merely have had to return the cattle as compensation for their own act. In dividing cattle between the murdered man's relatives, the order of priority was brother, wife, father, mother, father's brother, father's brother's son, father's sister's son.

Killing a witch. Though in 1939 I could hear of no Dorobo who were reputed to be witches (*ponik*), such people certainly existed in the past. Apart from killing people by spells, their principal activities seem to have been centred on hunting — putting spells on game traps and on men who were going to hunt. If a witch was shown by a diviner to be guilty of a person's death, he or she might be killed, and no compensation was payable (*mupase*).

Killing an enemy. This means killing any person who is not a Dorobo and is believed or known to have performed any unfriendly act against the Dorobo. The Dorobo have no sort of war organization, and their enemies were generally shot at from the cover of under-growth. Though not a crime, killing an enemy none the less makes the killer ritually unclean and therefore dangerous to others because he has shed human blood. This action is thus brought into the same category as homicide of a Dorobo, and though there is naturally no compensation, purification is required. The face of a man who has killed an enemy is painted (*kemase loket*) with stripes of white earth (*cworiot*) on the forehead, down each cheek, and down both sides of the nose. The paint is allowed to remain till it flakes off, and the man does not have to stay in his hut, but goes about as usual; though if he had killed a Nandi he would take care to go to some other part of the forest till he thought it safe to return. In actual fact, Nandi were seldom killed, but one who strayed into the forest might get shot by accident: the body would be taken to a lonely place for the hyaenas to eat, and at any sign of Nandi activity the Dorobo would vanish into the depth of the forest where the Nandi would have little chance of finding them even if they had the inclination to search.

Theft. Stealing honey is the worst kind of theft, and is almost comparable with intra-tribal cattle-theft among the Nandi. A man who steals honey from someone else's barrels is considered very low indeed, and if found

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

out might be shot by the owner, who, if he killed the thief, would have to pay compensation for homicide. 685

If a man steals a honey-barrel from a man's recognized area in the forest, the case can be brought before the *koret* council, and the usual compensation is the payment of a goat, which the thief has to get from the Nandi if he has none of his own, though if the thief's circumstances were good, he might have to pay more. The Dorobo say that stealing honey-barrels is apt to be dangerous, because if a barrel is full of bees, the thief might be injured by their stings if they got his scent and did not recognize it.

I was told that theft of an animal caught in someone else's trap never occurred, partly because of the deep-seated public hatred of such an act, and partly because of the belief that after eating meat stolen from a trap the thief's belly would swell to a great size and he would die.

A person accused of stealing food may, to attest his innocence, take a blade of grass between his teeth and say: *Ingo a corin, kuama susuonno*, "If I am a thief, may this blade of grass eat me". [695]

A man who is found stealing ordinary property is beaten by the owner if he can catch him, but if in doing so the thief is killed, the owner must pay the compensation for homicide. In cases of serious theft, like stealing a man's bow and arrows, the case could be referred to the *koret* council, and the thief might have to pay adequate compensation. A man accused of theft might protest that he was innocent by throwing his knife at a tree and saying: *Ingo a corin, kuama rotuanno*, "If I am a thief, may this knife eat me". [692] [623] [695]

Trespass. To the Dorobo, trespass means hunting on somebody else's land. Normally this is no more than either following an animal across the boundary into another man's land, or else in the heat of the chase picking up the trail of another animal on someone else's land. If the hunter gives the owner of the land some of the meat, this accidental trespass is not considered as an offence. But if a man were deliberately to set out to hunt or trap on another man's land without permission or promise of meat, then the owner might, if he thought fit, kill him, though he would have to pay compensation for homicide. Trespasss can occur only in the horde's own forest area. In the old days, when people roamed over the plains below, they could hunt where they pleased, and all they had to do was to keep out of the way of the Masae or Nandi herdsmen.

Adultery. A man who lies with another man's wife is said to *cor*, that is, steal her. He thereby commits an offence against her husband, who may kill him if he catches him in the act, and then, of course, must pay compensation; the wife may get a beating. A woman is not divorced for one act of adultery. 684

Assault. If a man injures another and incapacitates him, he must feed him till he recovers; and should the man eventually die as a result of the injury, the offender will have to pay compensation for homicide. 683

/67 cont'd/

"In spite of the fact that only such a small number of Wanderobo are left to represent this tribe, it would be erroneous to consider that the tribe was never more numerous, and in fact, there were probably several hundreds of families representing more than a thousand people in the not very distant past. The reason for the decrease in their numbers is due, not to extinction, but to absorption, for when the Kikuyu bought their land many Wanderobo families gave up their hunting life and married into Kikuyu families as well as giving their daughters in marriage to the Kikuyu, until in the course of a generation or two they were completely absorbed ...

"... it was the custom of the Wanderobo of the Kikuyu area to live in fairly large villages where their numbers gave them and their families reasonable security from attack, and where they could organise their social life in such a way as to have courts of justice and other amenities of this type".

77. Dorobo Organization

With regard to organization, a Dorobo witness told the Land Commission in a sworn statement: "Like the Kikuyu we had our mbaris", but this does not in itself mean very much; an mbari is only an extended family and the extension may be so slight that all we can infer from the remark, if we believe it, is that the family was the unit of the social order. But the same witness, later on in the same statement, said: "Our name 'Mbari ya Choiro' is the name applied to us all, as Kikuyu is the name for all the Kikuyu tribe. Within the Mbari ya Choiro there are other mbari", and this certainly suggests a recognition of the mbari as part of a clan, though the possibility of mere imitation cannot be ruled out.

The following brief account of their tribal organization was given me at a meeting of the Dorobo now living at Keriita on the edge of the Forest Reserve, and subsequently checked with the assistance of two elders, Ruchuba obo Lesuswa, who lives on a European farm close to the Forest Reserve (in the Naivasha area), and Gwamba ng'ab Sabaiya, who lives at Kerrita.

/243 cont./
551 named after the oldest living child. Among the Asá one likewise finds the custom whereby the son, after the father's death, is called by his name.

/244/ VII.

000 Circumcision of the boys. -- Age classes. -- Organization of the circumcised young men. -- Circumcision of the girls.

881 The circumcision of the boys and girls is exactly the same as
171 among the Masai and takes place at the same time as that of the
561 Masai boys. The newly circumcised boys (bogodendet, bogododig) form an age class (ebindadet), which borrows its name from that of
561 the Masai. For two to three years after their circumcision the boys
171 are called barnotig (sing. barnotendet), corresponding to the el barnot of the Masai. When the latter become el móran, the former correspondingly become dobonog (sing. dobonatog), and later, with their marriage, daɛ̄ma (sing. daɛ̄mog), corresponding to the el moruak of
[291] the Masai. The bogododig dress exactly like the es sibolio, and, like
[223] them, they set out to hunt small birds, with the skins of which they adorn themselves. When the corresponding age class (ol boror) of the Masai gets a new name, that of the Asá adopts it also. They
[178] cling to their old customs even when their present mode of life makes
[791] them unnecessary. The reason the Wandorobo have no names of their own for the age classes is -- also according to their own explanation -- that the ol oiboni,[1] whom the Asá also call ndĕarug, does not give them any and would regard it as extremely audacious if these poor, despised people came to him with such a request. The ebindadet also choose their head -- the ol aunoni of the Masai -- who here is called njīg or kisiridjo or also aunoni. As among the Masai, this is an honorary position without duties, but here without any privileges
• [692] either. Here the kirua kidet, whose task is chiefly to settle disputes, corresponds to the ol aigwenani of the Masai. The kirigit corresponds
[224] to the ol oiñoni of the Masai. He is the leader in hunting, especially
[555] on larger expeditions, which often lead the young Wandorobo in pursuit of elephants far from their camp. Only one who, in hunting

1, [Chief of the Masai people, and according to Merker, also chief of the Asa--Analyst]

/259 cont./

789 outside the camp in the steppe, or must leave a slain piece of game /260/ outside during the night, they walk around the spot, before the approach of darkness, with a burning twig of the mondeja bush. They assert that if one has done this, no predatory animal can approach.

789 531 411 224 On the bow end held diagonally upward in shooting, one frequently finds a design like a sentry box, which, in the belief of the people, God himself taught them long ago, and which is supposed to have the effect that in hunting they will kill only fat game.

754 [791] The nature of the sorcery through which sickness and death can be brought about they explain like the Masai. Evil, superterrestrial spirits have nothing to do with it. It is solely the work of evil human beings, who are despised, feared, and therefore expelled; they are called schogoto, in which one recognizes the Masai word ol osokutoni. Persons with the evil eye, who are called gallagumma, are likewise hated and expelled. If one knows no natural cause for an illness or a sudden death, it is regarded as the work of these sorcerers.

XV.

000 Law. -- General remarks. -- Property. -- Sharing the hunting booty. -- Things found. -- Barter. -- Debts. -- Liability. -- Gift. -- Blood friendship. -- Murder and manslaughter. -- Negligent homicide. -- Bodily injury. -- Immoral offenses. -- Theft. -- Inquiry about an unknown culprit. -- Legal procedure. -- Swearing. -- Torture. -- Ordeals. -- Bier test. -- Woman before justice. -- Mentally ill.

671 171 The legal views and legal practices of the Asá in general resemble those of the Masai.[1] We find the same leading ideas everywhere. Here, too, might often comes before right, even if not to the same extent as there.

692 [614] There is nothing new to be said about the rights of families and persons. The sole court in litigation is a respected man chosen by both parties, if plaintiff and defendant belong to the same tribe.

[648] Litigation or criminal cases in which plaintiff and defendant belong to two different tribes are not settled by the Wandorobo among themselves, but handed over to the Masai of the nearest kraal for settlement. A prosecution of punishable offenses by legal steps is unknown.

1. [For information on legal views of the Masai, see FL12 Masai, 18:Merker, category 116, pp.279-291--Analyst]

/263 cont./

695 besides the ordeals, the bier test also prevails as a means of convicting the one accused. In contrast to the Masai, here the innocent one accused receives no compensation.

562 694 695 Women may appear as witnesses before the court, but they are not entitled to make a complaint; rather, their husbands make the complaint for them.

672 734 Here, too, the mentally ill occupy an exceptional position in legal matters, /264/ in that they remain unpunished for offenses that are atoned for by fines. They are not chained, but are allowed to go about freely, and, as long as they are harmless, they are given shelter and food. This is denied to the mentally ill who are dangerous, because of which they quickly perish.

000 The story of the discovery of arrow poison. -- Other stories and fables.

538 The stories of the Wandorobo describe for the most part their own hunting experiences, especially, of course, those of a peculiar nature and with large, dangerous game. It is probably to be taken for granted that in this "hunter's yarns" also run through them.

The Discovery of Arrow Poison

539 224 278 411 A poor widow, whom no one wanted to take in and feed, roamed steppe and bush daily, in order to appease her hunger miserably with roots, berries, and tree bark. One day she chewed on a small piece of bark that was distinguished by a very bad taste. Soon afterwards vomiting set in so violently that she was sick for a few days. She thought: "I should probably have died if I had eaten any more of it; since I can not hunt game, perhaps I can kill it with this." When she was well again, she went with her pot to the place in the steppe where in a rocky basin there was water to which the wild animals came to drink. Here, for several days in succession, she boiled the wood of the poison bush and kept pouring the liquid into the little pool. Finally one morning she found ten dead buffalo lying in its

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

out might be shot by the owner, who, if he killed the thief, would have to pay compensation for homicide. 685

If a man steals a honey-barrel from a man's recognized area in the forest, the case can be brought before the *koret* council, and the usual compensation is the payment of a goat, which the thief has to get from the Nandi if he has none of his own, though if the thief's circumstances were good, he might have to pay more. The Dorobo say that stealing honey-barrels is apt to be dangerous, because if a barrel is full of bees, the thief might be injured by their stings if they got his scent and did not recognize it.

I was told that theft of an animal caught in someone else's trap never occurred, partly because of the deep-seated public hatred of such an act, and partly because of the belief that after eating meat stolen from a trap the thief's belly would swell to a great size and he would die.

A person accused of stealing food may, to attest his innocence, take a blade of grass between his teeth and say: *Ingo a corin, kuama susuonno*, "If I am a thief, may this blade of grass eat me". [695]

A man who is found stealing ordinary property is beaten by the owner if he can catch him, but if in doing so the thief is killed, the owner must pay the compensation for homicide. In cases of serious theft, like stealing a man's bow and arrows, the case could be referred to the *koret* council, and the thief might have to pay adequate compensation. A man accused of theft might protest that he was innocent by throwing his knife at a tree and saying: *Ingo a corin, kuama rotuanno*, "If I am a thief, may this knife eat me". [692] [623] [695]

Trespass. To the Dorobo, trespass means hunting on somebody else's land. Normally this is no more than either following an animal across the boundary into another man's land, or else in the heat of the chase picking up the trail of another animal on someone else's land. If the hunter gives the owner of the land some of the meat, this accidental trespass is not considered as an offence. But if a man were deliberately to set out to hunt or trap on another man's land without permission or promise of meat, then the owner might, if he thought fit, kill him, though he would have to pay compensation for homicide. Trespasss can occur only in the horde's own forest area. /263 cont./

787 them under his head at night; the next morning he throws the sandals again, this time five times, whereupon he states that the guilty one look thus and so and lives in such and such a camp, etc. If the tusks
789 of a slain elephant are stolen (the hunter does not remove them
685 immediately, but waits until they have been loosened by the decaying
754 of the gums), the one who killed the animal makes magic against the thief by shooting at the head of the elephant several times, using as an arrow the fire-twirling stick. Then he breaks the latter and lays it beside the head. According to the assertions of the Wandorobo, this magic is so effective that the thief must irretrievably die after a few days if he does not deliver the tusks to the owner in all haste -- which is supposed to happen almost always.

• 695 Only in criminal cases are there legal proceedings, which take
[171] place in the same manner as among the Masai. Every male individual is entitled to take part in them. The ones arriving greet the one
[782] presiding, who is already waiting with a few friends in the shade of a tree near his camp, with the customary greeting and handshake, whereupon the latter opens the meeting with a few of the above-mentioned supplication prayers, Uēd nge hawa, Uēd nge mai, Uēd ngeri' agai and closes it at the end of the deliberation in the same manner.

[171] A swearing of the truth is made with the same gestures and the same words as among the Masai. Besides the latter, the formula, Uēd kiwēta = may God kill me, is also customary.

[171] To extort confessions one uses the torture customary among the Masai, wrapping a bow string around the upper arm. The Wandorobo call it andoga rasug. In their court sessions the Asá are not acquainted with any ordeals (momeg) other than the ones discussed for the Masai. Of these they use the following three: The ordeal of the bow, here gari waschāā, the ordeal of the dry wood, here kaschingo waguruf, and that of the stool made of earth, which they designate the same as the Masai. The culprit must submit to the ordeal upon the demand of the plaintiff and may not put up a substitute. According to the statements of the Wandorobo, one who is really guilty always confesses before he submits to the ol momai, as it is also called here, besides momeg, because the belief that otherwise he would die the very next day is unshakably established in the minds of the people. For murder,

/263 cont./

695 besides the ordeals, the bier test also prevails as a means of convicting the one accused. In contrast to the Masai, here the innocent one accused receives no compensation.

425

undergrowth instead of following paths, as the bare-footed native not unnaturally prefers to do, and so getting stung on his legs by a vicious kind of creeping nettle, while he walked the boundary of the land which was about to change ownership. Can anyone be so foolish as to suppose that they made up stories of this kind on purpose to dupe the Europeans and make them believe that they bought land from other natives? I am told by well travelled men that land tenure is a practically unknown thing among primitive tribes before the advent of the white man. If that is true, and I have no reason to doubt it, then I venture to think that this particular characteristic of this tribe discoverable by a study of their folk-lore, should be considered a matter of extreme interest, and not lightly thrown aside because it happens to conflict with preconceived ideas, and in some cases does not fall in with what one wishes to prove is the case."

In a memorandum to the Land Commission Canon Leakey wrote: "*Turning now to the question* as to whether there is any truth in the statements made by the Kikuyu that they purchased their land from the Dorobo I can only say that I took infinite pains many years ago to try and find out if it really was a fact and I could [p. 917] never find anything to make me doubt it. I am absolutely convinced in my own mind that what they say about this is entirely correct."

Findings of Land Commission

•D
K
173
425
698

The Land Commission, like the 1929 Committee, found it difficult to come to any clear-cut conclusion as to the nature of the payments, if any, made by the Kikuyu to the Dorobo. The Committee had recorded:

"We need not define the exact implication of the claim that they 'bought the Dorobo out'. It is at least certain that payments were made, and that Kikuyu families are the undisputed successors in the occupation of areas over which Dorobo families once hunted. This, which is all that is important to our purpose, is common ground."

The Land Commission expressed its general conclusions as follows:

"The total number of claims made is 193, inclusive of certain claims by the Dorobo. There are 141 cases in which the claim

D
K
173
425
698

is accompanied by a statement of the payment alleged to have been made. The average payment, according to the claims, works out at 1,729 sheep and goats, 130 rams, 19 fat rams (or he-goats or ewes), 22 cattle and a number of other things, while the whole total of recorded payments is 250,849 goats, and the rest to match. We regard these figures as fantastic and ridiculous, whether one looks at them from the standpoint of the number of goats that the Kikuyu are known to have possessed, or the goat-consuming capacity of the Dorobo, or compares them with the payments recorded in Native Tribunal cases ... We do not suggest that these claims are deliberately false. There may be some which are true. No doubt there are also cases in which the claimants, being ignorant of the true history of their land, were led away into extravagant estimates by the general spirit of exaggeration which is very evidently abroad ... We feel that it would be rash for us to record any decided opinion on the amounts customarily paid to the Dorobo for land. We have not yet admitted that, in origin, they were payments for land at all. We can only say at this point that we are satisfied that payments of goats were sometimes made by Kikuyu to Dorobo either for the purpose of alliance or propitiation; that marriage-price or blood-money was often included and may originally have been the essence of the transaction, and that the sum in terms of goats was far more modest than the Kikuyu have represented ...

"A Dorobo witness, whose father had been adopted by the Kikuyu, informed us that, while it is true that payments were made progressively as the clearing proceeded and these according to the amount of land cleared, yet there was a stipulated sum for the land, and, though the payments were spread over generations, an end was eventually reached, and the payment was irrevocable. It seems improbable that the subsequent payments can be regarded as the balance of a stipulated purchase-price, because native custom dislikes hard and fast arrangements of that kind. The suggestion that the first payment was for the land and the subsequent payments for the clearing is hard to accept, because we cannot conceive that the land would have been worth anything without the right to clear it. But a finding that the original

aD
K
173
425
698

payment was in respect of alliance or goodwill and that the subsequent payments were for progressive clearing would be reasonably consistent with the evidence and with what we can bring ourselves to believe. If that is true, there would be nothing essentially irrevocable about the transaction ...

[p. 92]

"In claims Nos. 155 and 180 the mbari of the alleged Dorobo vendor has submitted a joint claim with the mbari of the alleged buyer, and other similar instances could be quoted.

"In most cases, however, it is certain that the Dorobo soon fell into an inferior position and either left the country or sought adoption by the Kikuyu. In some cases it seems from the evidence that they were forced into the adoption ceremony by the fear that their lives would not be safe otherwise. Even after adoption they claim that they kept some land back for their own use.

"The time at which the Kikuyu ceased making payments to the Dorobo in respect of the land is uncertain, but in the southern part of the district the practice evidently continued until after Kinanjui was chief and we regard it as probable that the idea of a finality of purchase as a definite transaction was an innovation introduced by him and copied from Europeans. Nevertheless, it is probable that in the northern part of the district the Dorobo had already become absorbed, or driven out, and payments, if they were ever made, had ceased.

"According to the Kikuyu Land Tenure Report, the effect of these transactions has been that 'Kikuyu families are the undisputed successors in the occupation of areas over which the Dorobo families once hunted'. We regard that as an over-statement in so far as the word 'undisputed' is concerned. Several claims have in fact reached us from Dorobo claiming large stretches of the Kikuyu Native Reserves. In some cases the claim is made in these words: 'Being Dorobo we inherited the land from our ancestors'. These claims are not confined to the Kiambu district, but embrace also a large part of the Fort Hall Native Reserve.

D
K
173
425
698

"Possibly the Kikuyu theory that their land rights in the Kiambu District rest on purchase from the Dorobo would not work out very favorably for them, if it were used as the only support of their rights. The Dorobo can reasonably contend: a) that the sales, generally speaking, are not proved, and that probably much of the land was not sold; b) that the obligation of protection conferred on these Kikuyu adopters was not carried out, and that, as soon as the Kikuyu had got his land, the Dorobo was sometimes 'de-adopted' as the Kikuyu themselves confessed to the 1929 Committee; c) that the alleged 'sales,' when they took place at all, were not final, but only redeemable loans, as the action of Chief Kinanjui proves, and that the alleged final payment was not generally agreed by the Dorobo and did not reach many of them; d) that in many cases they are still partners in the land; and e) that, when and in so far as they sold land, they frequently reserved a piece for themselves, as the Kikuyu Land Tenure Report admits.

K
[597]

"We shall not take the responsibility of pronouncing on these assertions, but we think that, if the Kikuyu were fully to realize their implication, they would be less ready to insist that every land question should be decided on historical grounds and would be more willing to concede something to the claims of beneficial occupation.

"By a process which consisted, as we have seen, partly of alliance and partnership and partly of adoption and absorption, partly of payment, and largely of force and chicanery, the Kikuyu had already succeeded the Dorobo when Count Teleki passed through Kikuyu land in 1887 . . ."

[p. 93] It must be remarked, however, that the Land Commission's findings that the process of succession consisted "largely of force and chicanery" does not entitle us, however fully we accept that finding, to reject at once the Kikuyu claim that the outright purchase of land was possible and in fact practiced. There is no doubt at all that today land can be, and frequently is, bought outright by one Kikuyu from another in the Kiambu District, but, as every District Officer who has served there knows only too well, to obtain it by chicanery or even force rather than by purchase is not altogether repugnant to modern Kikuyu ideas.

Schlesinger Lib. (1938-1939) 1994 FLA Docs FLA

683 few relatives it would be very much less. The murderer had to provide as
623 many of the murdered spoon as he could, either from his own herd if
692 he had one, or by getting them from the Kwoth in exchange for furs, which
meant, of course, that the cattle would be either cows or worn-out old ones,
and that he would not be able to provide many himself. It therefore fell
to his relatives and clansmen to make up the number, which needed a clan
council to apportion the balance among them, and also resulted in a good
deal of feeling against the murderer for a time. Until the amount had been
847 agreed upon by both clan and local councils, the murderer was liable (in
theory at least) to be killed by his victim's relatives, so he had to be low till
the negotiations were completed, though again it is doubtful if they would
actually have gone so far as killing him, for then they themselves would
merely have had to return the cattle as compensation for their own act. In
dividing cattle between the murdered man's relatives, the order of priority
was brother, wife, father, mother, father's brother, father's brother's son,
father's sister's son.

683 Killing a witch. Though in 1939 I could hear of no Dwoko who were
1854 reputed to be witches (kwoth), such people certainly existed in the past.
Apart from killing people by spells, their principal activities were to have
been centred on hunting — putting spells on game traps and on men who
were going to hunt. If a witch was shown by a diviner to be guilty of a person's
death, he or she might be killed, and no compensation was payable (neljwai).

688 Killing an enemy. This means killing any person who is not a Dwoko
687 and is believed or known to have performed any ordinarily act against the
Dwoko. The Dwoko have no sort of war organization, and their enemies
• 701 were generally shot at from the cover of undergrowth. Though not a crime,
707 killing an enemy even the law makes the killer ritually unclean and therefore
dangerous to others because he has shed human blood. This action is thus
683 brought into the same category as homicide of a Dwoko, and though there
is naturally no compensation, purification is required. The face of a man
705 who has killed an enemy is painted (kwaca kiba) with stripes of white earth
(nyorot) on the forehead, down each cheek, and down both sides of the nose.
The paint is allowed to remain till it flakes off, and the man does not have
to stay in the bat, but goes about as usual; though if he had killed a Kwoth
he would take care to go to some other part of the forest till he thought it
safe to return. In actual fact, Kwoth were seldom killed, but one who strayed
into the forest might get shot by accident: the body would be taken to a
lonely place for the kinsmen to eat, and at any sign of Kwoth activity the
Dwoko would rush into the depth of the forest where the Kwoth would
have little chance of finding them even if they had the inclination to search.

685 Theft. Stealing honey is the most kind of theft, and is almost com-
parable with horse-killed cattle-theft among the Kwoth. A man who steals
honey from someone else's hive is considered very low indeed, and if found

[P 189, A]

The age-grades, through which a person passes in turn are:

♂	♀
gotik: uncircumcised boys.	*Tipik*: girls.
Murenik: circumcised men.	*Tumik*: married women.
Apolonik: elders.	*Kipchipsiek*: old women.

Boys are *gotik* till circumcised, when they become *murenik* for the 15-year period of their age-set and then *apolonik* when the change over occurs.[1] The sub-divisions, *muteinik*, of the Dorobo age-sets—each set has the same three sub-divisions—are called:

Senior: *Chepsiek*.
Middle: *Tigarik* or *Kipsilyek*.
Junior: *Ramchenik* or *Kipsiliek*.

A man belongs normally to the age-set but one below that of his father, i.e.:

Age-set:	Elders are usually belongs to:	Women normally belong to:
Kipkuluer	*Kimojin*	*Nyogi*
Kapkiluk	*Nyogi*	*Mutai*
Kimojin	*Mutai*	*Jume*
Nyogi	*Jume*	*Sume*
Mutai	*Sume*	*Kipkuluer*
Jume	*Kipkuluer*	*Kapkiluk*
Sume	*Kapkiluk*	*Kimojin*

It may happen, as in Tumik, that a man will be classed with an age-set but two below that of his father (as in the last column above), because he was born so long after his father's marriage that he would be too young to be circumcised with the age he would normally belong to. [191]

With these terminological features, the constitution of the Dorobo age-sets is the Tumik ends. They have no military functions at all, and their sole significance is behavioristic. As an element in social structure the age-sets cut across the formal kinship patterns, and behaviour is not wholly reflected in the kinship system; when the two elements clash, the age-set pattern prevails. In a short summary it is not possible to go into details, but the following genealogy will illustrate it sufficiently: [191] [192] [193]

[1] See J.R.A.I. loc. cit., for further details of the Tumik age-set.

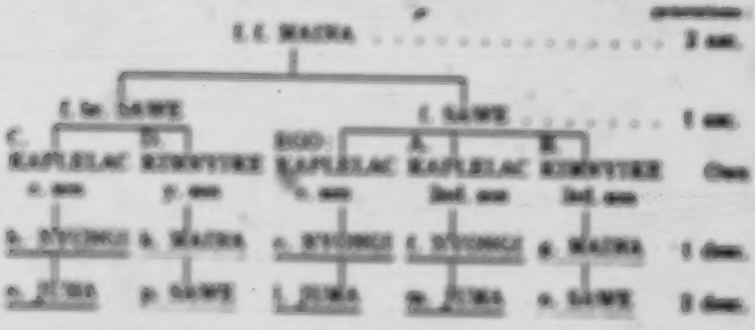
1908	1930	Ages	
7 *Sawe*	*Kipkoimet*	90	
6 *Kipkoimet*	*Kaplelac*	80	
5 *Kaplelac*	*Kimonjiki*	70	Old men: four sets.
4 *Kimonjiki*	*Nyongi*	60	
3 *Nyongi*	*Maina*	50	
2 *Maina*	*Jowa*	35	"Men": one set.
1 *Jowa*	*Sawe*	20	Initiates: one set.
		7	Small boys: one set.

In the third column are the maximum ages in years of the sets in 1930. By 1930 there were no *Sawe* alive, and the age-name started over again at the bottom as the name of the small boys' age-set. The times for changing are known by carefully watching the Nandi, and the Dorobo regulate their age-set periods and times of circumcision by the Nandi, having no method of time-reckoning of their own.

Each set is divided into three sub-sections called *mostiwek* or "*kwa*", a Nandi term, which the Dorobo call

Cengisiek, the senior sub-section;
Tayarik or *Kiyelkwayek*, the middle sub-section;
Kwenkenik or *Kiyenkeik*, the junior sub-section.

These '*kwa*' seem to have no particular function among the Dorobo, but to have been taken over along with the rest of the system when the Dorobo borrowed it from the Nandi, among whom the age-sets have first and foremost a military function in which the '*kwa*' have a definite part. To the Nandi the behaviour aspect, however important it may be in practice, is secondary. But the Dorobo are not a fighting people and have no sort of military organization, and the adoption of an age-set system means that patterns of behaviour may, under certain conditions, be transformed from kinship to age-set stratification, the function of the age-set being reduced to one of behaviour alone. A new stratification of the society is thus introduced, which has to work in with the existing kinship stratification:



In this diagram, Ego is an eldest son, and a *Kaplelac*. His two brothers are *Kaplelac* and *Kimonjiki*, and according to kinship rules all three

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

682 623 692 few relatives it would be very much less. The murderer had to provide as many of the number decided upon as he could, either from his own herd if he had one, or by getting them from the Nandi in exchange for furs, which meant, of course, that the cattle would be either oxen or worn-out old cows, and that he would not be able to provide many himself. It therefore fell to his relatives and clansmen to make up the number, which needed a clan council to apportion the balance among them, and also resulted in a good deal of feeling against the murderer for a time. Until the amount had been [614] agreed upon by both clan and *kowt* councils, the murderer was liable (in theory at least) to be killed by his victim's relatives, so he had to lie low till the negotiations were completed, though again it is doubtful if they would actually have gone so far as killing him, for then they themselves would merely have had to return the cattle as compensation for their own act. In dividing cattle between the murdered man's relatives, the order of priority was brother, wife, father, mother, father's brother, father's brother's son, father's sister's son.

683 754 Killing a witch. Though in 1939 I could hear of no Dorobo who were reputed to be witches (*pasiik*), such people certainly existed in the past. Apart from killing people by spells, their principal activities seem to have been centred on hunting — putting spells on game traps and on men who were going to hunt. If a witch was shown by a diviner to be guilty of a person's death, he or she might be killed, and no compensation was payable (*mepasa*).

689 687 Killing an enemy. This means killing any person who is not a Dorobo and is believed or known to have performed any unfriendly act against the Dorobo. The Dorobo have no sort of war organization, and their enemies were generally shot at from the cover of under-growth. Though not a crime, [701] killing an enemy none the less makes the killer ritually unclean and therefore [721] dangerous to others because he has shed human blood. This action is thus [683] brought into the same category as homicide of a Dorobo, and though there is naturally no compensation, purification is required. The face of a man [805] who has killed an enemy is painted (*kemase sokat*) with stripes of white earth (*mooriat*) on the forehead, down each cheek, and down both sides of the nose. The paint is allowed to remain till it flakes off, and the man does not have to stay in his hut, but goes about as usual; though if he had killed a Nandi he would take care to go to some other part of the forest till he thought it safe to return. In actual fact, Nandi were seldom killed, but one who strayed into the forest might get shot by accident: the body would be taken to a lonely place for the hyaenas to eat, and at any sign of Nandi activity the Dorobo would vanish into the depth of the forest where the Nandi would have little chance of finding them even if they had the inclination to search.

685 Theft. Stealing honey is the worst kind of theft, and is almost comparable with inter-tribal cattle-theft among the Nandi. A man who steals honey from someone else's barrels is considered very low indeed, and if found

come now and make honey here." Then, blood and fruit must not be eaten on the same day as honey, nor must bits of the comb be left lying about; they must be carefully covered up. The first of these prohibitions is analogous to the Nandi avoidance of meat and milk on the same day; the second, though the Dorobo say it is done "so that other people shall not see it," is also due to the ritual value of honey, and the consequent necessity of showing respect towards it. 000 262

In the ritual treatment of certain actions the use of certain materials is essential if the ritual is to be effective. Thus, a homicide must be rubbed with *eiyat*, the undigested grass from the stomach of a goat or sheep, and he must also be oiled with 'butter' (milk shaken in a gourd till it has gone oily and semi-solid); an unmarried girl who has had a child must also be rubbed with *eiyat*; a sick person whose illness is due to witchcraft must be oiled with goat's fat or butter; and a man who has killed an enemy must paint his face with five stripes of white earth—one across the forehead, 789 825 [682] [848] [754] 789 [726] [823]

[P. 197, B]

one down each side of the nose, and one down the centre of each cheek. 789 [726] [823]

Now it seems that a particular material is not always essential, i.e. for a homicide either a goat or a sheep may be killed to get the *eiyat*, and a sick man may be anointed either with goat's fat or with butter (though it must be a she-goat). An alternative is thus sometimes just as effective. But an essential feature is that the remedy must be something that is not easy to obtain; till quite recently, few Dorobo had any goats, sheep, or cattle from which they could get the necessary fat, *eiyat*, or butter, and even now many still lack them; nor does anybody keep a permanent stock of white earth in his hut. The whole procedure is an act of faith as much as anything else, and entails a possibly laborious search for the necessary material. There is also an economic implication, for when people have no stock they must buy the animals they need, so that into what might seem to be a purely ritual transaction, enters an element of business. 789 825 [231] 437

9:Hobley G-5 (ca. 1900) 1903 FL6 Dorobo FL6

They are said to be very prolific, having families of eight to ten children, but the infant mortality is so extremely heavy that their numbers increase very slowly: this mortality is probably due to the cold, damp climate of the Mau Forests, which are at an altitude ranging from 7,000 to 9,000 feet.

Their peace ceremony consists of cutting off a dog's ears, and the contracting parties then spatter one another with the blood.

They live principally on Colobus and other monkeys, which they shoot in the forest. At certain seasons, however, they go and hunt big game on the plains, known as the Rangata Nyuki; they wait till the grass is dry, and then burn it to facilitate their hunting. They use poisoned arrows for big game, and unpoisoned ones for monkeys, &c. They train dogs to assist in their hunting, and are very keen to get young dogs for the purpose. They told me that they first gave the dog certain medicine, and the animal could then track game.

They are very clever elephant hunters, and informed me that when they came across an elephant they went off and bathed and scrubbed themselves very carefully to remove all trace of the human scent, and that they were then able to approach a sleeping elephant and spear it with a poisoned dart.

They are most expert in the use of a firestick. The fire is produced in the ordinary way by the friction of one stick spun round vertically in a depression in another piece of wood, which is held firm between the bare feet of the operator; the lower piece of wood appeared to be the juniper of Mau.

A small vocabulary of their language is appended on the opposite page. They use the Nandi numerals.

The prefix "ki," and the suffixes "et," "it," and "ek," are, I think, brought in from the Nandi language, but most of the roots will be found to be quite distinct. Many of the tribe can only speak Nandi, and when collecting this vocabulary in many cases they appeared to have forgotten the Oggiek or Omotik word but gave the Nandi word, and had to consult among themselves and, as it were, hunt up the proper word. The language is thus evidently dropping into such disuse that it will probably become quite extinct in the near future.

C. W. HOBLEY.

[34]

12:Dundas G-5 (ca. 1900) 1908 FL6 Dorobo FL6
Kikuyu FL10
Masai FL12

Supi is said to have instructed the Dorobo to bring him a pair of sandals made of leather having hair on both sides, the Masai to bring him a bull, the dung of which was pure white, and the Kikuyu an animal called Huko (a burrowing rat or mole).

The Dorobo cut off the ears of a donkey, and produced these as the required sandals before Supi; the Masai brought a bull fed on milk only; and the Kikuyu the animal called Huko.

Supi then told each tribe to take its respective charm and to attack the enemy separately and at different points.

The Masai, marching into Kikuyu from Naivasha, fell upon the strangers first, and taking all their stock drove them on to the Kikuyu, who in their turn drove them on to the Dorobo, by whom they were finally routed.

The Somali or Galla were thus disposed of, and only by the name Irogi, which was given to the generation that fought with and expelled them, and by a few women of their tribe, taken prisoners by the Dorobo, are we reminded of their settlements in Kikuyu. Amongst these prisoners may be mentioned an old woman called Barabio, who is still alive and resides in one of Burgo's villages. She was formerly Chief Karuri's nurse.

Needless to say the Masai kept all the cattle which they captured, and this caused a rupture between them and the Dorobo and Kikuyu, who joined forces and waged war on them. After a truce had been made the Dorobo and Kikuyu fought amongst themselves.

If the Kikuyu were to live and increase they had to cultivate the ground, and to do so they were obliged to destroy the forests. The very existence, however, of the Dorobo depended on the preservation of the forests, and hence arose a struggle for survival, which allowed of no compromise and could have but one end.*

In an incredibly short time the great primæval forests, the home of the Dorobo, were destroyed, and with them this interesting people ceased to exist as a tribe. Deprived of the means of living, many died, some took to cultivation, whilst the majority migrated to other regions, where they formed small colonies, such as are to be found at Baringo, Naivasha, Ravine, Kijabe, on Laikipia and Mau, at Taveta, in German East Africa, and even, it is said, in places as remote as Kismayu—(the clan that went to this last place was the Agumba). This scattering of the tribe accounts for the peculiar fact that Dorobo living in widely different localities speak the same language.† The Baringo, Naivasha, Kijabe, and Ravine Dorobo, and those of similar colonies will, if questioned as to where they come from, usually mention Kururuma and Kairau‡ as the birthplace of their fathers.

As regards the origin of this interesting tribe, we know little or nothing. There appear to have been two branches, the Agumba and the Okiek: the former hunted the game on the plains, the latter in the forests. They lived in pits dug in the ground and covered over with leaves of the wild banana; these pits may to this day be seen anywhere in the Kikuyu country, though of course they become more numerous the nearer one approaches the forest. They are also said to have buried their

* The first Kikuyu to come into the country appear to have been almost without exception pastoral, and they accordingly did not interfere at all with the Dorobo. The later arrivals, who seem to have possessed less stock, purchased from individual Dorobo the right to certain pieces of land or forest. For some reason or other just about the time the Somali or Galla were driven out, a sudden very pressing demand for grain appears to have arisen amongst the Kikuyu; this may have been due to one of two causes—the Kikuyu may have lost through sickness a large amount of stock, or there may have been just at this time a sudden influx of agricultural natives.

† Nandi. (In colonies not in touch with Nandi-speaking tribes, the younger generation is rapidly forgetting this language.)

‡ The country lying between the Rivers Boyo and Nathyuya in Kikuyu

2: Maguire G-5 (ca. 1926) 1927-28
FL6 Dorobo FL6

duration of which is in inverse ratio to its toothsomeness and the severity of the cook's hunger.

The Masai are good to the *Mósiro* and seldom refuse them a share in whatever food is obtainable—be it milk, meat or grain. The *Mósiro* expect this; in fact, many of them seem to look on free rations from the Masai as their right. The reason for this is stated to be that the *Mósiro* helped the Masai on many occasions in the past (particularly during the great rinderpest epidemic in the early 'nineties) by hunting for them when starvation had overcome the ingrained antipathy of the Masai to venison. In addition, before the coming of European rule many elephants were killed by the *Mósiro* at the request of the Masai. Lekite told me of one drive in which he and about thirty *Mósiro* were engaged during which sixteen elephants were killed.

When a *Mósiroi* obtained cattle he used, unless restrained by his more prudent friends, to slaughter and eat them in the shortest possible time. Up to quite recently, a beast was valued by the *Mósiroi* only for the amount of meat it was capable of providing, but nowadays a few of them are beginning to herd cattle in a small way and some even live as Masai. It is interesting to note that many of the older generation, particularly the women, profess an aversion to having cattle in the vicinity of their own dwelling- or sleeping-places.

A few *Mósiro* till the land, but in a half-hearted way. They are extremely improvident and prefer to risk almost inevitable famine rather than to exert themselves in cultivating grain. They never expect their women to work in such small plantations as they may have. A *Mósiroi* will cheerfully tramp the bush for a week or more, picking up a most precarious existence on tubers and roots, and will consider himself well repaid if he returns with a few pounds of honey. He will be horrified at the idea of putting in one hour's work each day on a mealie patch for the same length of time.

In the bush, very little in the way of food comes amiss to the *Mósiroi*. Failing meat, his favourite food is honey, but this is regarded as a delicacy and would be eaten wholesale only under the most exceptional circumstances. If meat and honey are unobtainable, the *Mósiroi* has at his command an extensive

Illnesses.

757 For illnesses the Wandorobo use the same medicines as the Masai
171 and also prepare them in corresponding fashion. Those medicaments
that the latter take mixed with milk or blood, the former mix only
276 with water or game bouillon. The Wandorobo are also familiar with
171 the nerve-stimulating agents taken so much by the Masai warriors,
but they do not use them in such extensive measure and never in such
164 quantities that fits of rage appear among them. Their designations
192 for the principal illnesses are the following: Headache = sogog agēma =
sick head; toothache = ligá agema = sick tooth; cough, ohotu or ahotu;
chest pain, liba agema = sick chest; stomach-ache = waia agema =
sick stomach; diarrhea, waia katidji, constipation, waia gischungurgue;
dysentery allegedly is not supposed to occur. Smallpox, ol maschuggu
or ajōg; chickenpox, simireg. Gonorrheas, damōg; lues, en ebitiro.
Elephantiasis, as well as E. scroti, is said not to occur. Fever,
kaēsegomo; bilious fever, ol odoa. Taeniae, pinibēg; ascarids,
752 menána. Injured blood vessels are ligated, bone fractures splinted.
On bums one puts the soft, plushlike covering of the roots of the ol
[826] dungui bush. Excess fingers and toes are not amputated; they are not
[732] regarded as particularly unsightly.

755 If the well-known medicaments do not help, the patient turns to
the ol goiatiki, from whose magic medicine he expects a cure. The
759 surgeon is called asik-asa among the Wandorobo, the midwife gascha-
hatta-hawa-kerint.

4:Huntingford E-5 (1938-1939) 1951 FLÓ Dorobo FLÓ

a Nandi, and her husband is spoken of with less respect than Kicoti's, though both men are referred to as *konyit*. Their children are called *mama*.

His father's sister Cepulpul and her husband Turiepuku are both dead, and if he speaks of them it is by the terms *pukot* and *konyit*; but her son Kipkoiec is, as *macokor*, on the same footing as Leii and Kimaiyo, the sons of his father's elder brother Kaola, allowing for the difference of age-set. Pilo is a *Nyongi*, as also is Leii; but Kimaiyo is a *Maina*. On the other hand, Kimaiyo is a policeman, which somewhat outweighs the difference. Cepkemoi and Cerob, the daughters of Pilo's father's younger brother Kiptoo have lessened themselves to a certain extent in old-fashioned Dorobo eyes by marrying Nandi (though Dorobo-Nandi marriage has been practised for a long time), and they live at a distance. The wife of Leii and the husband of Cepkumuren, Pilo's other *macokor*, are both Dorobo, and although they live near the forest, there is a good deal of intercourse between their families. All these people are spoken of as *macokorenyon*, and addressed as *macokorosui*, *macokor*, or by name. Their spouses are spoken of as *konyit*. Though Kimopo Arap Mining, the husband of Cepkumuren, is *konyit* to Pilo, his relatives are outside the *tilist* as far as Pilo himself is concerned (though not of course for Cepkumuren), and this applies also to the relatives of his sisters' husbands; such people when on terms of friendship and visiting are addressed and referred to by name, or they may be spoken to by the word *kiiye*, a general term of address to any person of either sex with whom one is friendly. An old woman like Ceuikirikat, Arap Mining's mother (not named in the genealogy), would not be addressed as *kiiye*, however, but as *koko* "grandmother" or *cepisowani*, "old woman", though not related in any way, but out of respect because Pilo is a friend of Arap Mining, and often meets his relatives, including Ceuikirikat.

Kaola and Kiptoo, the brother's of Pilo's father, lived for many years at Cepkunyuk, four miles from Kiptarakom, close to and inside the boundary of the Nandi Reserve; but in 1929 they went to live in Soeniyo near the forest. At that time, both of them were more active than their brother Kipkatam (Pilo's father) who, if he had been a European, would have been described as "bed-ridden"; and for practical purposes Kaola took the place of a father to Pilo and his brothers and sisters. Kipkatam was deaf, nearly blind, almost speechless, and hardly able to move; so when Pilo wanted to consult anyone, he turned to Kaola, or if he was away, to the slightly younger Kiptoo.

It will be seen that a sister's children are not *apaa*, like a brother's, but *mama*. Pilo's sister's children are a typical case. They live at a distance, and so are as remote from him as all the descendants of his mother's brother (*mama*) Nekoi who, with his wife and his son in law Kilaeya and his family, lives at Ngatepkong on the far side of the forest and has little to do with Pilo. Moreover, the only link between Pilo and Nekoi, his mother Kwanie, is there no longer, for she died some years ago; so Nekoi and his family are just spoken of as *mama* — when it is necessary to speak of them at all, for though they exist they count very little in Pilo's life.

Between Pilo and his brother Cuimim there is a good deal of inter-

/263 cont./

695 besides the ordeals, the bier test also prevail as a means of convicting the one accused. In contrast to the Masai, here the innocent one accused receives no compensation.

562 694 695 Women may appear as witnesses before the court, but they are not entitled to make a complaint; rather, their husbands make the complaint for them.

672 934 Here, too, the mentally ill occupy an exceptional position in legal matters, /264/ in that they remain unpunished for offenses that are atoned for by fines. They are not chained, but are allowed to go about freely, and, as long as they are harmless, they are given shelter and food. This is denied to the mentally ill who are dangerous, because of which they quickly perish.

XVI.

000 The story of the discovery of arrow poison. --Other stories and fables.

538 The stories of the Wandorobo describe for the most part their own hunting experiences, especially, of course, those of a peculiar nature and with large, dangerous game. It is probably to be taken for granted that in this "hunter's yarns" also run through them.

The Discovery of Arrow Poison

539 222 278 411 A poor widow, whom no one wanted to take in and feed, roamed steppe and bush daily, in order to appease her hunger miserably with roots, berries, and tree bark. One day she chewed on a small piece of bark that was distinguished by a very bad taste. Soon afterwards vomiting set in so violently that she was sick for a few days. She thought: "I should probably have died if I had eaten any more of it; since I can not hunt game, perhaps I can kill [with this." When she was well again, she went with her pot to the place in the steppe where in a rocky basin there was water to which the wild animals came to drink. Here, for several days in succession, she boiled the wood of the poison bush and kept pouring the liquid into the little pool. Finally one morning she found two dead buffalo lying in its

shares the inducer, each house having its own 241
strip, the whole being surrounded by a thorn fence 223
which all help to make. Each is therefore a [961]
family or clan inducer, and the group is an [614]
independent labour unit.

The grain crops are stored either in granaries 251
of Nandi type, or else in the loft (ingot) of the hut; 261
but as most of the crop is eaten before or soon
after it is reaped, and as the yields are not large
owing to the small areas planted, storage problems
are not yet acute. Further supplies of food are [859]
got (1) by purchase or exchange; (2) by begging [916]

/7/

In three mighty surges that followed one another at long intervals, the Idoni people came from the north down toward the equator. The long separations from one another in space and time, their different length of entidance in the new Ik-Kiron homeland, and the different shaping of their fate conditioned by that realm does appear to be valid as three branches of the Idoni people.

The remnants of the earliest immigrant band are the Ariñ, more generally known under the name of Wandoobbo /Wandoobbo/ (a Swahi formation from the Idoni word Ø dwobbo = the poor), of whom they form only a part.

Although the tradition of the Ariñ has nothing to say about a former possession of livestock, one most nevertheless assume, especially on the basis of their ethnography, that they immigrated as stock-raising nomads and, as such, took possession of large parts of the steppes. When among themselves, livestock epidemics, and, finally, the pressure by the Teuso weakened the Ariñ to such an extent that it was easy for the second band of Idoni, the Ø kwoth, the first sections of which were the Ø kwoloya, and the later ones the Ø wuli, when it came in, to drive out the ruined once altogether. A part of them found refuge among the neighboring agriculturists, with whom they emerged, another part among their oppressors, who adopted them as members of the tribe; the rest, however, withdrew into the forests and bush of the steppes, where still today, in great poverty, they make a poor living by hunting.

The fate of the Ariñ, however, was not to be spared the Ø kwoth either. After a rather long period during which they competed with the Teuso for dominion in the steppes, the victorious opponent again several times and, as before, brought poverty and death. And again, as before, the few survivors did not remain alone. The third band, the Ø ngikwi (sing. ng ngikwi), immigrated here from the north, and it looked as though it would rapidly complete, by means of bloody fighting, the destructive work of the epidemics. But the presence of the Teuso, who in places were just as powerful as they were feared, divested the belligerency of the Idoni. They joined the Ø kwoth for the common fight against the former.

[illegible]

3:Huntington E-5 (931-1523)929 FLA Dorobo FLA

When a man is ill and dies, it is said that bad milk (*yiik ake gook*, N.) have killed him; if he recovers, a good obiokot has saved him. His offerings are made to the bad milk.

There is also a vague belief in a future life. A man's spirit is said to go at death to the *koot ap miik* (N.), or land of the spirits, which is under the earth, and is a bad place.

Magic.

There are *magicians* (*pondiokot*, pl. *pondi*, N.) who are bad, and who pretend people have gotten bad by means of their spells. There are also *diviners* (*ombigiet*, pl. *ombiik*, N.).[1] There is no equivalent of the modern Kenyi system of "ordeal tests" as rule by a medicine-man.

Medicines and Charms.

(a) *Medicines.*—For snake-bite, the gods of the chest tree is used, mixed with the honey of a species of bee, called "*kemenyet*" (N.), and man's fat. This concoction is rubbed on the affected part, and a little is also eaten. For coughs, a plant called "*ngoiyo*" is chewed; this is used for all chest complaints.

(b) *Charms.*—Children wear a charm to ward off the evil eye (*yaiwa*, N.), which is similar to that worn by Kenyi children. It consists of a necklace of seeds of the lepyrowet tree (N. *kipsonik*) strung on a cord, the seeds being separated by short pieces of bamboo (Text-fig. 24). Old men wear a charm to keep away rheumatism (*kimokengot*, or *kerosin* (*kerosin*), N.); it is made of two small pieces of the *simotion* tree,[2] about 1 in. long, which are tied to the belt (Text-fig. 25).

V.—Social Customs.

Social Divisions.

The male sex is divided into boys (*kipsiik*, N.), warriors (*moronik*, N.), and old men (*getoiniik*, or *ngotoiniik*, N.); the female sex, into girls (*kipsi*, N.) and women (*komoiniik*, or *chepiamik*, N.). At circumcision, a boy becomes a warrior and a girl a woman.

Married and unmarried people sleep separately. Married people and small children may sleep in the same hut, while unmarried men sleep elsewhere, often in the *sigiriotet* (N.), or "warriors' hut," where they cohabit with the unmarried girls. Though free love is practised, it is not carried to such an extent as among the Kenyi, and although girls sleep with warriors, they like to preserve their virginity till circumcision. Warriors frequently marry their sweethearts (*paramour*, N. *mosset*), whereas in Kenyi they usually marry someone else.

The position of women in the same as it is among the Kenyi, that is, they work on the men, do all the menial work, and are their husband's property.

[1] This word is not used with the same sense in Kenyi, originally it seems to have meant simply "medicine-man" (Swynnerton, *op. cit.*).

[2] *Euphorbia candelabrum.*

an goat where the Dverdre are concerned); *mund sjø tangbre*, lit. the fat of cow's udder, or butter, i.e. solidified whale milk; *bøeny-vinn*; and white earth.

Illness is generally believed to be due to the anger of an unnamed spirit, to the spite of an evil spirit, or to witchcraft. Sometimes, on the other hand, it is thought to have a natural cause. When a person is taken ill the relatives, unless they can be sure that the illness has a natural cause, go to a Fuedi diviner of the kind called *sabyssel*. Diviners used to charge the Dverdre a fee of 1/— if the cause was witchcraft, and 1/— if it was due to a spirit. But if a man went down to the lower country where there is malaria, and after his return was taken with ague and fever, they knew it was a natural illness, *bøvsle jøn*, and did not consult a diviner.

If the cause was found by the diviner to be witchcraft, the witch was *sabyssel* according to the methods employed by Fuedi diviners, and the sick man's relatives went to the witch's hut, pulled him or her outside, spat in the face and said: "Come and all its evil-ness that he may recover". The sick person must then be *sibd* on the face, chest and belly with the fat of a she-goat or with *mund sjø tangbre*. If the witch refused, the practice was, especially if it was a woman, to tie her to a tree by a thong the other end of which was drawn tightly round the forehead, and they flog her soundly till she promised to do what was necessary. When this had been done, the witch was driven out of the town.

A witch might be of either sex, but they were generally women; in fact it is said that there have been no male witches among the Dverdre for many years: they say, too, that they have never had female witches either. Whether or not this is true, I certainly could hear of no case of witchcraft where a Dverdre was believed to be responsible. This does not mean, however, that the Dverdre are entirely free from this evil thing, for sometimes they are bewitched by Fuedi. When this has been shown, by divination, to have been done, the Dverdre go to the Fuedi who live near the witch and ask for their help in dealing with him or her. This the Fuedi generally agree to, for they like witches no more than the Dverdre, and the witch is then dealt with according to Fuedi procedure. One of the allegations made by the Dverdre against the Fuedi in 1939 was that they did not want Dverdre to live in the Fuedi Land Unit (Reserve), and that they were using Fuedi witches to get rid of them.

The reason that Dverdre go to a Fuedi diviner (*sabyssel*) for the detection of the cause of illness and witchcraft is that they have no diviners of their own, for the people among them known as *sibdrå* are not, like the Fuedi *sibdrå*, diviners, but simply people who have how to cure illness with herbs and *sibd*, medicines from trees and plants, herbalists whom the Fuedi would call *bjølbrevnnå*. These *sibdrå* (sing. *sibdryn*), besides being able to make herbal medicines, prepare charms to protect people from witches and the evil eye. Children wear necklaces of bayonet seeds (called *bjønnnå* in Fuedi) to protect them against the evil eye, and old men wear small pieces of the *mundsjø* cow, and about 4 cm. long, tied to their belts

the other world, and movement is effected by ritual methods. The primary sanctions against such acts are upheld by the force of public opinion, which is based on disfavor or loss of well-being through offending the spirits, behind whom are the ultimate powers of nature expressed in the concept of *Aiza*.

But these ultimate powers cannot be reached by man, who can neither see nor understand them, and people like the Dwroho (and indeed many African peoples) must therefore have some kind of intermediary. First come the ancestor, the spirits of the dead, to whom each man addresses his own prayers, and with whom there is a private relationship based on the fact that the spirits were once human beings themselves. Their protection is looked for through the use of tangible material objects in the form of amulets, such as the talisman against the evil eye, ornaments against ghosts, and perhaps the double spiral earrings occasionally worn, although the significance of the last among the Dwroho is not known. These are material intermediaries in that they are between man and the source as protectors.

Formalized religion. The notion of a spiritual being which stands to the fore or 'extreme' is crystallized in the word *Aiza*[a], borrowed from the Nyadi with perhaps some of the Nyadi notions of its nature. *Aiza* is identified with the sun, and prayers are made to him for success, and sometimes to his mother (or sister, for the accounts vary) *Aroma* the moon as well. This is the extent of the formal part *Aiza* plays in Dwroho religious life, but he does the two perform the necessary function of being a recognized object to which men can turn, especially in thought, for restoration of confidence, which is no doubt one of the primary functions of the formalized concept of a major spiritual being, who provides people with an entity that they may look to for help and protection.

The belief in the existence of spirits is much more concrete, and more practical, for the actions of the spirits were seen (sometimes and are therefore much nearer to men than *Aiza* and well fitted to stand between men and the unseen world as mediators. The evil spirits are merely harmful or irritating according as the whim takes them, but they seem to play a relatively unimportant part in the religious life of the Dwroho, however much trouble and discomfort they may cause. They are just things that must be endured. A statement made by a Dwroho that his ancestors[b], the evil spirits, are the same as the evil or good spirits, is to be explained by the belief that even the good spirits can be malevolent at times, for malevolence is more evident than benevolence, and it is necessary to maintain proper ritual relations with them to prevent malevolence. But unlike the evil spirits the evil have a definite home somewhere under the earth, whence they return to visit and take care of the living, to whom they take an interest, and the part taken by the evil in Dwroho life may in fact be exaggerated [illegible] [illegible] [illegible]

3:Hastingsford E-5 (1921-1928)929 FLA Dorobo FLA

When a man is ill and dies, it is said that bad ndik (still the *gnuk*, N.) have killed him; if he recovers, a good ndiokit has saved him. No offerings are made to the bad ndik.

There is also a vague belief in a future life. A man's spirit is said to go at death to the *koret ap ntik* (N.), or land of the spirits, which is under the earth, and is a bad place.

Magic.

There are magicians (*pendindet*, pl. *pendi*, N.) who are bad, and who prevent people from getting food by means of their spells. There are also diviners (*ombolget*, pl. *ombolik*, N.).[1] There is no equivalent of the modern Nandi system of "ordeal-ment" or rule by a medicine-man.

Medicines and Charms.

(a) *Medicines.*—For snake-bite, the gum of the Ghost tree is used, mixed with the honey of a species of bee, called "kemenyet" (N.), and man's fat. This concoction is rubbed on the affected part, and a little is also eaten. For coughs, a plant called "ngoiro" is chewed; this is used for all chest complaints.

(b) *Charms.*—Children wear a charm to ward off the evil eye (*nakut*, N.), which is similar to that worn by Nandi children. It consists of a necklace of seeds of the lepuyoret tree (N. *legenodi*) strung on a cord, the seeds being separated by short pieces of bamboo (Text-fig. 24). Old men wear a charm to keep away circumcision (*kimolongot*, or *kwenin* (*kwenin*), N.); it is made of two small pieces of the elmedak tree,[2] about 1 in. long, which are tied to the belt (Text-fig. 19).

V.—Social Institutions.

Social Divisions.

The male sex is divided into boys (*kipsiik*, N.), warriors (*nemwosik*, N.), and old men (*getoiosik*, or *ngoiosiosik*, N.); the female sex, into girls (*kipsik*, N.) and women (*kemwosik*, or *ekopsiosik*, N.). In circumcision, a boy becomes a warrior and a girl a woman.

Married and unmarried people sleep separately. Married people and small children may sleep in the same hut, while unmarried men sleep elsewhere, often in the *ngoiosiosi* (N.), or "warriors' hut," where they cohabit with the unmarried girls. Though free love is practised, it is not carried to such an extent as among the Nandi, and although girls sleep with warriors, they like to preserve their virginity till circumcision. Warriors frequently marry their sweethearts (*nemwosi*, N. *nemwosi*), whereas in Nandi they usually marry someone else.

The position of women in the same as it is among the Nandi, that is, they work on the men, do all the menial work, and are their husband's property.

[1] This word is not used with the same sense in Nandi, originally it seems to have meant simply "medicine-man" (Nandi, *ngomgo*).

[2] *Kinyaletia ocuabbinus.*

/247 cont./

278 562 834 [388] arrows, not in the hut, but hung on a tree not far from the camp. Only in rainy weather do they bring the things into the kraal and keep them there in the hut of an old woman who herself, in their view, can no longer come into consideration in the above respect. They even make themselves responsible, relative to the intensity of the sexual intercourse, for the slow dying of the animal struck by the poisoned arrow. The poison is smeared on the arrow point with a wooden spatula, and, in order to protect the dried substance from crumbling or from dissolving in damp weather (since it is very hygroscopic), it is wrapped with a strip of thin antelope skin that is dehaired and made soft by being rubbed with fat. The poison acts very quickly, and, to be sure, by suddenly stopping the heart activity. In the case of a gener shot in the abdomen, breathing difficulty set in after five minutes, along with rapid movements of the nostrils and violent, crampllke muscle twitchings of the body and limbs. With brief interruptions of a quarter to a third of a minute the symptoms were repeated and increased in intensity. The pupils dilated to a circle. Nine minutes and 10 seconds after the shot the pupils, up to then blue-black, suddenly became sea-green, and, with violent twitching, death came. With quite fresh poison death is supposed to come in even a shorter time. In the steppe the poison is tested by shooting an antelope with an arrow newly poisoned. If on the trail of the fleeing animal one finds fresh urine and excrement, the poison is regarded as acting too weakly. Good poison put in the foot of a live turtle must lead to its death before it has crawled five or six steps away. Neither the Asa nor the Wandorobo are acquainted with a physiological antidote. For smaller, simple, and penetrating flesh wounds immediate washing with fresh urine is supposed to help. Aged Wandorobo often showed me scars on their own bodies, especially on arms and legs, which are supposed to have been caused by shots with poisoned arrows two to four centimeters deep. Both the appearance of the scars and the corresponding statements of people, which were separated in time and place from the former, corroborate this information.

278 411 224 [224] [221]

278 752

/254 cont./

X.

Illnesses.

757 For illnesses the Wandorobo use the same medicines as the Masai
171 and also prepare them in corresponding fashion. Those medicaments
that the latter take mixed with milk or blood, the former mix only
276 with water or game bouillon. The Wandorobo are also familiar with
191 the nerve-stimulating agents taken so much by the Masai warriors,
but they do not use them in such extensive measure and never in such
164 quantities that fits of rage appear among them. Their designations
192 for the principal illnesses are the following: Headache = sogog agéma =
sick head; toothache = ligé agema = sick teeth; cough, ohotu or ghotu;
chest pain, liba agema = sick chest; stomach-ache = wala agema =
sick stomach; diarrhea, wala katidji, constipation, wala giechudjugwe;
dysentery allegedly is not supposed to occur. Smallpox, ol manchogge
or aiñi; chickenpox, simingi. Gonorrhea, dambi; lues, ee ebiiro.
Elephantiasis, as well as E. scroti, is said not to occur. Fever,
kallegonu; bilious fever, ol odoa. Taeniae, ptaihéji; ascarids,
752 menéng. Injured blood vessels are ligated, bone fractures splinted.
On burns one puts the soft, plushlike covering of the roots of the ol
726 dungui bush. Excess fingers and toes are not amputated; they are not
732 regarded as particularly unsightly.

755 If the well-known medicaments do not help, the patient turns to
the ol gniatiki, from whose magic medicine he expects a cure. The
759 surgeon is called asib-ase among the Wandorobo, the midwife gaecha-
hama-hawa-keriai.

M 824

200. eí gélén gélé (Casia mimosoides L. and Sesbania punctata D.C.). Regarded as rich fodder for goats.

201. oi gélélélé (Myrica kilimandscharica var. macrophylla Engl.). A decoction of four finger-sized pieces of root is drunk with beef broth as a stimulant. A smaller dose acts as Tonicum roborans /strengthening tonic/.

D [152 829]

202. eí gérgía (Jatropha spec.). On bruises or sprains the El dorobo make incisions and drip into these the juice or rub in a powder of the charred twigs of the plant.

203. oi gér l oi sibolio (Cleome diandra Burch.). Good fodder for goats.

204. oi géwlgét (Schrebera Hoistii Gilg).

205. oi gibumbu. Good fodder gram.

206. oi gibumbul (Panicum spec.). Good fodder gram.

207. eí gidoá on dare = eí gaiadjat.

208. eí g(h)ér (Indigofera suaveolens Jacb.). Good goat fodder.

209. eí gilglgíz (Sonchus asper Vill.). The milky juice of the plant is dripped into the patient's eye for eye inflammation.

M [151]

210. eí ghólé (Pterolobium lacerans R. Br.). Secret medicine of the oi sibori. He makes an amulet out of the powder of various parts of the plant, which is supposed to protect one against all kinds of illnesses.

211. eí glinko. If the noses of small children, especially of babies, have been made sore at the nostrils by flies, the mother chews the herb and smears the sore places with the chewed-out juice.

212. oi gólól (Acacia abyssinica Hochst.). At the meat meals the warriors cook two handfuls of the bark in approximately 15 to 20 liters of water and drink the nerve-stimulating decoction as desired.

/364/ 213. oi gúk (Scilla spec.). An extract of the pounded bulb is given to calves to drink for fever.

214. oi gúrá (Ficus fruticosa). Edible fruits. A root decoction is drunk for spleen pain. The handle of the bow is made from the wood.

215. eí gúshi gúsh. The El kuofi give the small liverwurt, for diarrhea, a mush made of the pounded leaves and water, with the addition of wuppe salt.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

[175 782 825] you are a spirit". A man who kills a snake at night in his hut need not necessarily become ill as a result (as the Nandi believe he will), but the ancestor whose spirit was in the snake will show his anger by never going to see the man again and transferring his attentions to some other member of the family. This would no doubt result in bad luck, for the offender would be continually conscious of what he had done. Another account, however, which I think more nearly represents the common belief, is that after offering a snake honey-and-water or milk, the owner of the hut says to it: *Ui si nyom kan ingwil kakwat*, "Go and return when (my wife) bears a child", so that the name of the spirit may be given to the child. According to this account, if a man should kill a snake at night in his hut, he will probably be ill the next day unless he pours some honey-wine on the floor where the snake had been in the night. This should free him from the danger of illness. Snakes seen in the daytime may be killed without fear.

[553]

[782 825]

The spirits also appear in daylight as shadows (*sowet*) and they may make their presence known by slight noises, like the sound of a stick being broken. When a man sees an unaccountable shadow, or hears a noise for which he can see no cause, he concludes that it was a spirit which has come to see him, or perhaps just come up to take a walk on earth. But he need do nothing, nor need he be afraid, for at such times the spirits do no harm.

Before setting out to hunt, a man asks the spirits to help him:

[304 782]

Cowechik, chikwe ilowy ne kiptwo,
Spirits, give us animal which we may kill;
chikwe kowsik ne kiptilyo.
Give us honey enough to satisfy us.

Offerings of honey-and-water, *kokowek*, are sometimes poured on the ground from gourds with a request to the spirits to provide food in times of scarcity. Such offerings are made by people at their own homes when their affairs are going badly:

Cowechik, ogiiyan emdit,
Spirits, fill us with food,
ei kiptilyo ungat.
That we may be filled with health.

[782 825]

When a man is very ill, he sometimes sees what he takes to be another man lying beside him for a short time, who is invisible to other people. When he has recovered, he realizes that this other man was a spirit who had come to help him to get well, and to take into himself the sickness: *Kenyon ei kiptilyo, koro ne kowa chu ne asiosi, ei kosap*, "He came to guard him, and lay where the sick man lay, to make him well".

976

Evil spirits sometimes attack people when asleep and make them ill. [illegible] A man is walking, for example, and suddenly catches his foot, as he thinks, in a liana drawn right across the path, and falls. But he finds nothing there, and realizes that it was done by an evil spirit. In 1937 I was one night encamped on the edge of the forest between Kipkoren and Timogo, with

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

or goat when the Dorobo are concerned); *mwaii ap tangina*, lit. the fat of cow's udder, or butter, i. e. solidified whole milk; honey-wine; and white earth.

Illness is generally believed to be due to the anger of an ancestral spirit, to the spite of an evil spirit, or to witchcraft. Sometimes, on the other hand, it is thought to have a natural cause. When a person is taken ill the relatives, unless they can be sure that the illness has a natural cause, go to a Nandi *diviner* of the kind called *sakeyuat*. Diviners used to charge the Dorobo a fee of 2/ – if the cause was witchcraft, and 1/ — if it was due to a spirit. But if a man went down to the lower country where there is malaria, and after his return was taken with ague and fever, they knew it was a natural illness, *known for*, and did not consult a diviner.

If the cause was found by the diviner to be witchcraft, the witch was indicated according to the methods employed by Nandi diviners, and the sick man's relatives went to the witch's hut, pulled him or her outside, spat in the face of said: "Come and oil So-and-so that he may recover". The sick person must then be oiled on the face, chest and belly with the fat of a she-goat with *mwaii ap tangina*. If the witch refused, the practice was, especially if it was a woman, to tie her to a tree by a thong the other end of which was drawn tightly round the forehead, and then flog her soundly till she promised to do what was necessary. When this had been done, the witch was driven out of the *kwat*.

A witch might be of either sex, but they were generally women; in fact it is said that there have been no male witches among the Dorobo for many years they say, too, that they have now no female witches either. Whether or not this is true, I certainly could hear of no case of witchcraft where a Dorobo was believed to be responsible. This does not mean, however, that the Dorobo are entirely free from this evil thing, for sometimes they are bewitched by Nandi. When this has been shown, by divination, to have been done, a Dorobo go to the Nandi who live near the witch and ask for their help in dealing with him or her. This the Nandi generally agree to, for they like witches no more than the Dorobo; and the witch is then dealt with according to Nandi procedure. One of the allegations made by the Dorobo against the Nandi in 1939 was that they did not want Dorobo to live in the Nandi Land Unit (Reserve), and that they were using Nandi witches to get rid of them.

The reason that Dorobo go to a Nandi *diviner* (*sakeyuat*) for the detection of the cause of illness and witchcraft is that they have no diviners of their own, or the people among them known as *orkoiik* are not, like the Nandi *orkoi*-diviners, but simply people who know how to cure illness with herbal *medicines*, medicines from trees and plants, herbalists whom the Nandi would call *kiplamwaiik*. These *orkoiik* (sing. *orkoiyot*), besides being able to cure herbal medicines, sometimes also to prescribe specific forms of diet, cure also the evil eye. Children wear necklaces of *kipsyonet* seeds (called *kipsonek* in Nandi) to protect them against the evil eye, and old men wear small pieces of the *sarandat* tree, each about 3 cm. long, tied to their belts as a charm against rheumatism.

5:Huntingford E-5 (1938-1939) 1954 FLÁ Dorobo FLÁ

Sometimes people are made ill by evil spirits, which are capricious beings and take dislikes to people without any particular reason. They are said to come to a man when he is asleep and give him a sharp pull, which wakes him with a start. He looks round, and seeing nobody, knows that an evil spirit has attacked him. In a short time he becomes ill, and to cure him, the head of his family, (his father, father's brother or other old man) must sprinkle honey-wine over his head, saying as he does so: *Ui, ui*, "Go, go", ordering the spirit to leave him; and then he will have a chance of recovery.

When a man is about to die, he is allowed to lie undisturbed in his hut, and during the evening of the day on which he dies his body is taken out by his sons, or if he has none, by other men of his family or clan, and laid on its right side (men and women alike) with the legs straight and hands crossed over the breast, on the edge of the forest about three hundred yards away from the hut. If the hyaenas do not come and eat it, nothing is done, the body is just left to rot, and the bones are left lying there. (This, of course, very seldom happens.) The relatives lament on the day the person dies. Those who carry out the body are unclean for three days and remain in their huts, while their people make honey-wine. The old men of the clan are then called together and some of them go up to the carriers, one of them bearing a gourd full of honey-wine, from which he takes a little in his mouth and spits it over each of the men in turn; the other old men then rub their faces with the fat of a sheep or goat, saying: *Omenda anyun, ateiyo ak kakak*, "Go forth now, and mix with the children", meaning that you are now free to meet even children, since you are clean. The old men then drink the honey-wine.

Before a body is laid out for the hyaenas, all the ornaments are removed from a man's body by his sons, and from a woman's by her daughters, who then divide them among themselves. Before the ornaments are worn, however, they are laid aside for three months, after which some of the old men of the clan come and grease them with sheep's fat; and in preparation for the greasing the children make honey-wine for the old men etc.; after greasing the ornaments, spit some of it over the children and then drink what is left. Very old men and women are buried in narrow holes about 5 feet deep, in which they are laid wearing their clothes. A year after an old man has been buried, his children plant a branch of *mukuyiat* (*Strychnos* sp.) on the grave and let it grow. Babies are buried in the dung-heap if there is one, otherwise they are laid out for the hyaenas like other people. The hut in which a person has died is not dismantled, but remains occupied till, on account of normal deterioration it is abandoned.

The dead person's soul enters the body of a hyaena when the body is eaten, and leaves the hyaena when the animal goes to ground, whence it goes under the earth to spirit-land, from which it returns periodically to visit the living.

Closely linked with religion, so closely indeed that sometimes it is not easy to see where the one ends and the other begins, is magic. By this term I mean the belief that by doing or not doing certain things, man can control

I: Huntingford E-4,5 (1938-1939) 1953 FLA Dorobo FLA

side, arbitrary, and unsafe. In the first category, incest is punished under the authority of the clan council; the man is beaten, his hut burnt, his honey-barrels destroyed; the woman also is beaten. Witches might be killed under authority of the local council. In cases of persistent disobedience to the council, the elders could call upon two or three men to force the offender, by moral and physical persuasion, to mend his ways. Of offences in the second category, instances have already been mentioned (p. 86). Theft, when not dealt with summarily, can be brought to the local council, which can order payment of compensation. A more account of manslaying food many way. "If I see a thief, very fine grass eat me," and often a thief is given between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-cattle. If a man bewitched another by something him, he must find him all he required. Homicide of a Dorobo or another clan, though not involving primary sanctions, was a serious offence because it meant that the murderer had to get cattle in order to pay compensation. The usual number was nine head of cattle, though where the murderer was a very poor man living alone the number might be reduced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could, from his own herd if he had one, or by exchange from the Dorobi, or by any other means, including theft. The deficiency had to be made up by his fellow-clansmen.

Summary

The Dorobo tribe consists of a loosely integrated group of districts held together partly by the feeling that they are all Dorobo, but much more by the clan ties which cut across the district boundaries. The clan is therefore one of the chief institutions in the life of the Dorobo.

MAIN CULTURAL FEATURES

Clothing

Dressing

(a) Forest type: the Arowngol, in use as late as 1937, was a framework of sticks bent over to form an oblong, dome-shaped structure, covered on the outside with banana leaves and leaves of trees; height, 6 ft.; length, 11 ft.; width, 7 ft. (b) Kraal type: the kraal has a circular wall about 6 ft. high plastered with mud, and an almost flat thatched roof supported by a centre post; the hut is a hut of ordinary Bantu type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of three or four Arowngol huts, were situated in clearings just big enough to hold the huts, and were approached by concealed paths which branched in a bewildering manner that made it impossible to find them without a guide. Settlements outside the forest are arranged in small groups usually close to the cultivated land.

Dress and Ornaments

Clothing is made largely from the skins of wild animals, and the furnishings are mainly copied from those of the Masai, as are most of the ornaments, which include, amongst other things, iron wire armlets and rigets, necklaces, and pierced ornaments in the lobes (lasit). The necklaces are plaited and elongated sometimes getting very in the forest), and a small hole is bored in the top of the ear. Some but not all remove the two lower middle incisors. Hair is allowed to grow to a length of about 2 ins., often it is sometimes covered with a shuttle cap, and sometimes dressed with red earth and fat. Occasionally a man has his hair done in pigtails like the Masai.

Food and Drinking

Nuts and berries are obtained from Masai cattle, the Dorobo making the exchange himself. Dorobo are made from old nuts and bits of iron which the Dorobo

L: Huntington EL-4, 1 (1938-1939) 1953 FLA Dorobo FLA

legs straight and hands crossed on the breast. Babies are also laid out for the hyenas, though if there is a drag-hoop, they are buried there.

Witchcraft

Witches, *gwek* (defined as among the Nandi, p. 98), may be of either sex; females are said to be more common, though in 1938 the Dorobo said there were no witches at all in the three districts of Eldoret, Kipkaren, and Trans-Nzoia, and certainly no trace of witchcraft was encountered. Formerly, in cases of witchcraft where the witch's identity was unknown, the Dorobo went to a Nandi diviner, *oloiyot*, and on her identity becoming known she was required to sit the victim on the fore, breast, and belly with the fat of a she-goat. If she refused, she was tied to a tree by a drag-hoop rightly round her forehead and flogged till she agreed.

Affinity with Wild Animals

Possessing a "hunting outlook," the attitude of the Dorobo to wild animals is unlike that of the Africans to whom hunting is an asset of secondary importance. They seem to be closer to the wild life around them, perhaps because they are wild men themselves. The conversation of Dorobo going through the forest turns quickly to the wild life there, for they have what they and the Nandi call *ororiet*, affinity, with the beasts of the forest. This was described to a man, to which a Dorobo said: "The Dorobo know the speech of all the animals, and they like to see the animals. The animals are not bad, for we said they all dwell in the forest together. The beasts' speech of animals is not like that of people, but it is not very different, for animals also are intelligent. All animals of the forest are alike, though we are some cruel and others, because we, the Dorobo, and they the animals all live side by side in the forest."

Musical Instruments

The Dorobo have no musical instruments, and they seldom sing or dance. They used to have wood-hook horns which were blown to call people together in the forest.

Maguire G-5 (ca. 1926) 1927-2
FLADorobo FLA

have lived in the country of the Kitóto land, since they are stated to have been the precursors of the Lumi in this part of the world.

I was unable to elicit any folk-tales from the *Aramanik*, who say that they know no stories or legends except those they have learned from the Masai. It is possible that further efforts in this direction might meet with better result. The *Aramanik* are not as friendly or as ready to discuss their own affairs as are the cheerful, happy-go-lucky *Mûsiro*.

Many Masai superstitions and superstitious practices are to be found among the Dorobo. There is, however, certain custom and observance of a superstitious nature practised only by the Dorobo. Of the following the examples, the last two given are in this category.

The *Mûsiro* will not kill a python. They say it is a human of sorts, as are they themselves. Furthermore, if it be killed, the ground where it dies and where its land is split is ever afterwards fatal to cattle grazing there. No explanation is given of this, and it would seem worthy of note that the Dorobo are exceptionally quick and skilful killers of all other snakes.

When following a native path or a road, a Dorobo comes to the place where the track of a snake cross the path, he will never step over it without first kicking y the sand or earth in order to break the continuity of the snake's track. This is done in order to avert evil, and is said to be the only effectious way of ensuring that the snake question will not eventually kill the man who has crossed i path.*

If a Dorobo has been robbed and if the rat cannot be found, the following procedure is sometimes resorted to. The man who has suffered the loss heats his sword in the fire until it is red and then, plunging it into the earth, says: "The thief shall die to-morrow." This is regarded a very bad practice and is seldom indulged in, as the injured one, no matter how much he may have lost, knows that he will become responsible for a death of his action.

It seems likely that in a few years' time there will be no *Dalalîga* and no *Kimyakîyôgi* Dorobo. As I have said elsewhere, it is now almost impossible to find *Dalalîga* or *Kimya-*

* See Kikûyu: The Snake, p. 80.

* Ibid., p. 79.

normally go elsewhere for the night, leaving the hut to the man. In the matter of hospitality, relationship by blood, marriage, or clan is a deciding factor in the length of time for which a man may expect to be put up by his host. Thus, no matter what the age-set situation may be, a man who is neither a relative nor a clansman cannot claim more than two nights' hospitality on account of necessity, and will not be given beany-wine; while a relative or clansman may be fed for a week or even longer, and the host will give him beany-wine if he has any.

5. Behaviour

A brief summary of the modes of behaviour towards important relatives was given by a Dierske in the following words: *Makinaipi gagwa ne bwaia a kagiva tabwal; makinaipi tabwaq gagwa; makinaipi tavkwi ali aiga valali ai wawia, awwa ga, ngwi valali ali tamdzwa; kiwawwaiwaiwai tabwal.* ("A man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we all play together, i.e. we are on terms of friendliness and 'close fun'.") Generally speaking, seniority is a matter of age, except with regard to the father's brother and sons of senior age-sets.

It is unlikely that any Dierske ever sees his father's father's father, and the father's father is seen only by small children. The father's father is regarded much as one's own father. But the father's mother helps to rear the children, and so becomes an object not only of familiarity but of affection as well to the children. To all of the father's generation a man should show respect and obedience. He must not insult them, nor use unsuitable language in their presence. Corporal punishment may be inflicted on a male or diarbedwaw child with the hand or with a stick, by father, mother, and father's brother. Verbal correction is also a common method of dealing with naughty children, and though a man would not use a rude word to a naughty child who had made him angry anything as drastic as *kwara vakai* (away you dog of kwaraiki), in case the spirit world took him at his word, he might go so far as *kwa gisi tavi tavi*, an expression which if used by a child to a senior would certainly earn a beating.

Most Dierskes are fond of their parents, and even those in old age [illegible] living with their sons [illegible] the more helpless the parent, the greater the trouble taken to make them comfortable. The old father of Tito, to whom I have already referred, was such a one. Most feeble, hardly able to move without help, he spent his time lying outside in the sun when it was warm, and indoors beside the fire when it was cold. He had to be helped to and fro, and fed and looked after like a child, but it was all done cheerfully by Tumoia and his wife, to whose hut the old man lived, and if they could see amused to him. Tito and his wife did.

the other hand, there should be no avoidance, just greeting and a minimum of conversation, as between strangers. The children of his wife's brother and sister are treated as his own. A woman regards her husband's brother and sister and their spouses much as he regards her brother and sister.

When the father's mother does not live with her son, she may perhaps be in the next settlement. She will then visit her grandchildren, and they will go to see her. This interchange of visits teaches children a good deal about the treatment of important people like grandmother. Interchange of visits with the mother's mother also takes place, especially when the man is getting older. Thus, Ledekitwa the mother of Kioy Mbing went to visit her daughter Lwangary who was married to a Kyungi called Nguwwa and had three sons. She would stay a few days with her daughter (during which time Nguwwa would live in another hut) and then go home. Presently Lwangary would bring her children to see Ledekitwa, and while the children were all still young (before they had reached puberty) they slept together in Ledekitwa's hut. After reaching puberty they slept in the shelter with Kioy Mbing. Little mating then (after father's mother stop) to her hut whatever their age.

Children are generally fond of their father's mother, partly because she makes it her business to be nice to them, "for they are the children of her child, and people do not hate their grandchildren". But if they do not visit her as often as she would like and bring her presents of food, she will be annoyed and shows her anger by saying, *Nzoo ndaka ndeeo a mwiwa wakwatiti* ("Hmm, the you children who have not brought me food"), a name which is not dangerous because it is overridden by the word 'grace', and because she takes care to say it in the hearing of someone who will report it to the children, when some such conversation as this will take place:

Friend:	*Kyaau kyaitiko wasii, ko wendei, waa nwaiyeo wakwatiti* yesterday, she said, "Hmm, after they bathed".
Children:	*Wii, yeenyii waa ayyii ko kwaiyo kwiku, kiuka,* "Hmm, mother".
Mother:	*Ehaaaaaa, kiikwa, waaa wii kiiku kwaatuuli, a waa wa kyeto wiiniku.*
Friend:	*Eiiii, waaa wiiu, ai ko waa kiiku.*
Children:	*Eiiii, kiie kwaa, Eiiiyiiii wa, ai kwaa?*
Mother:	*Eiiyaali kwaa, a kiiyiiii nyeeyii ai kiiwaali.*

I saw at Ledekitwa's place yesterday, and she is angry because you have not brought her food for many months, and she cursed you and said, "Hmm, its, you children".

Alas! where shall I go, mother? Ledekitwa has cursed us and said, "Hmm, its."

Do not be afraid, children, grandmother does not hate you she loves you! [illegible] Ledekitwa she will go to her place to take her a present.

Yes, that's the best thing to do, so as to please grandmother.

Yes, let's go to-morrow. What shall we take her so that she shall be pleased? We'll go in the morning, and take her some meat and some honey and maize

Visit day the mother and the offending children home to grandmother's with food. The old woman accepts the food and spits on the children, saying at the same time, *Ore kawaniki ako ne ajanjaniikoo* ("There, I spit on you and curse you with illness"), then both laughing there and removing any possibility that her curse may have an ill effect. The mother's mother may do the same sort of thing, if she lives near enough for the children to visit her.

Inay Shinji's wife's mother and father lived at Kijikonoto, and the children used to visit them there, always taking presents with them. When Inay Shinji visited the old people, as he did sometimes in the company of his children, he met them on ordinary terms, entered their hut, sat on their mats, *e tawa kakai* ("to talk of our affairs"), and his mother-in-law gave him food to eat. By this time, the strictness of avoidance had been much relaxed, for he was a quiet and respectable man of forty or so. But though his children may stay in his hut, he may not do so on any occasion, and if he stays too long in the attic in which Inay Shinji sleeps, he must sleep in a neighbour's hut. His father-in-law Kuntu went to live at Ushinoyuki in Yuzuli, a good two hours' walk from Kijonkoo, but in July 1936 he moved to Kijikonoto, as his son Lyli was working on Kijikonoto Farm close by. A small hut was built for Kuntu and his wife in a maize shamba belonging to owen Yuzuli, and the old people were allowed to live there in return for weeding it. Lyli, a Gisiwa in Inay Shinji's wife's brother, and therefore owes to his children; but though his sister's children do not go to see him, he sometimes goes to Kijonkoo to see them. This was one of the few instances of a mother's brother being on all intimate with his sister's children, and Ujikomatoto taught her children to like Lyli, who would greet them by saying *hubei, bibere* ("greetings, children"), and then spitting on them and saying *tore, bibere* ("there, children") to which they would answer *Ejio, owwe* ("Blessing, uncle"). But in spite of this friendly intercourse, Lyli never played the part in their lives that Inay Shinji's brother Kimoma did, and the alarm in their crossing was very small.

19. The Clan

The clan, *ank, plural ankinuk*, is an exogamous patrilineal group with a name and a totem, *kinak ya ank*, or simply *kinak*, "the symbol (of the clan)". All the eleven clans listed, the existence of eight is attested by genealogies and the custom, the remaining three are reported to exist or to have existed. All but one of these clans have but one totem each, the exception has three, the principal of which it shares with another clan, an unusual feature in that it is the group and not the totem that is important, the clan being a social group rather than a group of people mystically related through the clan animal. All the clan names but one are taken from Yuzuli clan names, the exception seems to be of Nandia origin. Some of these names are taken from the principal name of a Yuzuli clan, others from subsidiary names, for the Yuzuli clan has (1) a principal name by which it is generally known, and (2) a subsidiary name or nickname which it

the relatives it would be very much less. The murderer had to provide as many of the murder-debited spirit as he could, either from his own kind if he had one, or by getting them from the Powrii in exchange for furs, which meant, of course, that the early wealth for either man or woman still rose, and that he would not be able to provide many himself. It therefore fell to the relatives and dependants to make up the number, which created a new reason to apportion the balance among them, and also resulted in a good deal of feeling against the murderer for a time. Until the avenger had been spared upon for both clan and land ownership, the murderer was liable (in theory at least) to be killed by the victim's relatives, as he had to be (as the negotiations were completed, though again it is doubtful if they would actually have gone so far as killing him, for then they themselves would surely have had to return the spirits as compensation for their own act). In dividing spirits between the murdered man's relatives, the order of priority was brothers, wife, father, mother, father's brother, father's brother's son, father's sister's son.

Killing a witch. Though in 1938 I could hear of no Dwrdo who were reputed to be witches (powrii), such people certainly existed in the past. Apart from killing people by spells, their principal activities were to have been created as hunting — getting spells on game traps and on men who were going to hunt. If a witch was shown by a diviner to be guilty of a person's death, he or she might be killed, and no compensation was payable (neglect).

Killing an enemy. This means killing any person who is not a Dwrdo and is believed or known to have performed any ostensibly evil against the Dwrdo. The Dwrdo have no sort of war organization, and their enemies were generally shot at from the cover of undergrowth. Though not a crime, killing an enemy over the line makes the killer ritually unclean and therefore dangerous to others because he has shed human blood. This action is thus brought into the same category as homicide of a Dwrdo, and though there is naturally no compensation, purification is required. The face of a man who has killed an enemy is painted (because killed) with stripes of white earth covered on the forehead, down each cheek, and down both sides of the nose. The paint is allowed to remain till it fades off, and the man does not have to stay in his hut, but goes about as usual. Though if he had killed a Powrii he would take care to go to some other part of the forest till he thought it safe to return. (In actual fact, Powrii were seldom killed, but one who stepped into the forest might get shot by accident.) His body would be taken to a lonely place for the ceremonies to set, and at any sign of Powrii activity the Dwrdo would vanish into the depths of the forest where the Powrii would have little chance of finding them even if they had the inclination to search.

Theft. Stealing honey is the most usual of theft, and is almost unknown except between Powrii and Dwrdo. A man who steals honey from someone else's hive/nest is considered very low indeed, and if found

Hollingsford R-1 (1918-1935) 1954 FLA Dorobo FLA

an goat where the Dorobo are concerned); *mwoi ap tangine*, lit. the fat of cow's udder, or butter, i.e. solidified whole milk; honey-wine; and white earth.

Illness is generally believed to be due to the anger of an ancestral spirit, to the spite of an evil spirit, or to witchcraft. Sometimes, on the other hand, it is thought to have a natural cause. When a person is taken ill the relatives, unless they can be sure that the illness has a natural cause, go to a Nandi diviner of the kind called *ankoyoot*. Diviners used to charge the Dorobo a fee of 1/ — if the cause was witchcraft, and 1/ — if it was due to a spirit. But if a man went down to the lowey country where there is malaria, and after his return was taken with ague and fever, they knew it was a natural illness, *kwoito pee*, and did not consult a diviner.

If the cause was found by the diviner to be witchcraft, the witch was followed according to the methods employed by Nandi diviners, and the sick man's relatives went to the witch's hut, pulled him or her outside, spat in the face and said: "Come and sit by-and-by that he may recover". The sick person must then be oiled on the face, chest and belly with the fat of a she-goat or with *mwoi ap tangine*. If the witch refused, the practice was, especially if it was a woman, to tie her to a tree by a thong the other end of which was drawn tightly round the forehead, and then flog her soundly till she promised to do what was necessary. When this had been done, the witch was driven out of the *kraal*.

A witch might be of either sex, but they were generally women; in fact it is said that there have been no male witches among the Dorobo for many years: they say, too, that they have now no female witches either. Whether or not this is true, I certainly could hear of no case of witchcraft where a Dorobo was believed to be responsible. This does not mean,however, that the Dorobo are entirely free from this evil thing, for sometimes they are bewitched by Nandi. When this has been shown, by divination, to have been done, the Dorobo go to the Nandi who live near the witch and ask for their help in dealing with him or her. This the Nandi generally agree to, for they like witches no more than the Dorobo; and the witch is then dealt with according to Nandi procedure. One of the allegations made by the Dorobo against the Nandi in 1930 was that they did not want Dorobo to live in the Nandi Land Unit (Reserve), and that they were using Nandi witches to get rid of them.

The reason that Dorobo go to a Nandi diviner (*ankoyoot*) for the detection of the cause of illness and witchcraft is that they have no diviners of their own, for the people among them known as *orkwik* are not, like the Nandi *orkwik*, diviners, but simply people who know how to cure illness with *kwosek ap kwik*, medicines from trees and plants, herbalists whom the Nandi would call *kipkwenindi*. These *orkwik* (*sing. orkwiyot*), besides being able to make herbal medicines, prepare charms to protect people from sickness and the evil eye. Children wear necklaces of *kiboyoond* seeds (called *kiboondi* in Nandi) to protect them against the evil eye, and old men wear small pieces of the *mosonkit* tree, each about 3 cm. long, tied to their belts as a charm against rheumatism.

R. J. Wenyon.—Preliminary Studies of Tribes of Kassanga.

In this connection it is interesting to note that when in Kassanga in 1949 I was told that no new societies were needed, much the same as those as the societies were described by Dr. Forsyth Thompson, are found in the Turkana country. Initially, it is said, boxes also made there, and they are seldom seen. I, for one, have not seen any. Perhaps it may not be altogether out of place to mention here the occurrence of ancient tree trunks that are, from time to time, dug up by natives when cultivating the low ground near Mount Elgon (Masaba), on the extreme south-east of Kassanga, and that there are legends that seem to refer to an ancient maternity migration of a people from the region of Kiyanzara into Uganda some considerable ago. These people are said to have been the followers of one Kintu to whom and brother to a reigning monarch, who during a sojourn in Kintu on the Uganda Province, constructed these remarkable earthworks known as Ziggo Bya Wayungu (the wrongers' fort). This legend, it may be added, was to unravelled very interestingly, but with what validity I have not, with the natural buildings of the Stanleyboro type in Rhodesia.

Conclusions Discussed.

In collecting information, it was found that the tribes were not all equally willing to impart it, and considerable difficulty in this respect was experienced with the Wanderobo. Much of the information that is ethnologically interesting among the people is followed purely because it is continuing, and even others have not even but the fullest have any knowledge of the esoteric significance of many of the acts of almost everyday performance. However, the origin of some practices is lost in antiquity. The Kikiru, too, are suspicious of their enquiry. They have learnt from the Native troops of the K.A.R.; that therefore to the Protectorate the Government is trying to look to stamp out witchcraft, and they fear this anything they can should receive them support. On the other hand, the common people usually think it safe that there should be any reason behind long-established procedure; and if broadly disposed and not suspicious of the enquirer's motives, and if they are anxious to please, they will, after questioned, invent what seems to them probable explanations and assurances them as fast that theories differ as their makers, and in order to be helpful the people will often discuss matters among themselves for the purpose of coming to conclusions. The value of these is more than doubtful, and is invariably lost by errors or results, if possible, by indirect methods. Leading questions must, of course, be avoided.

My enquiries led to the accumulation of a very large collection of notes, some of which proved valueless, while much of the information was contradictory. All the material was carefully revised, and the mutually incongruities results discarded. The task is a very interesting one. It is, however, better than nothing and clearly indicates that the tribes of Kassanga are deserving of detailed study.

So far as positive results are concerned, it is extremely insighting to draw comparisons between these and those obtained by other investigators in neighbouring territories with a view to establishing cultural origins and migrations, etc. It is also, however, to have title to the gratitude attaching. One garbage are very good, but that some of the negative results are now entirely without interest. One may note, for instance, the absence of [illegible]

[D 191, A]

[D 191, A]

cause sore and make honey sour." Then, Moses said that man can be made as the same day as honey, nor must fats of the lamb be left lying about; they must be carefully covered up. The first of these prohibitions is analogous to the Jewish avoidance of meat and milk on the same day; the second, though the Gentile say it is done "so that other people shall not see it," is also due to the ritual value of honey, and the consequent necessity of showing respect towards it.

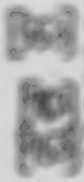
In the ritual treatment of certain animals the use of certain materials is essential if the ritual is to be effective. Thus a homicide must be rubbed with clean fat, lustrated grass from the stomach of a goat or sheep, and he must also be rubbed with honey; [illegible] dislikes to a ground rift in the ground [illegible] and sweetness); an unmarried girl who has had a child must also be rubbed with clean; a widow previous whose illness is due to witchcraft must be rubbed with goat's fat or butter; and a man who has killed an enemy must poke his face with [illegible] stripes of white earth-clay across the forehead [illegible]

[illegible]

[illegible]

[illegible]

one on a spirit". A man who kills a snake at night in his hut could not necessarily become ill as a result (as the Nandi believe he will), but the ancestor whose spirit was in the snake will show his anger by never going to see the man again and transferring his attentions to some other member of the family. This would no doubt result in bad luck, for the offender would be continually conscious of what he had done. Another account, however, which I think more nearly represents the common belief, is that after offering a snake honey-and-water or milk, the owner of the hut says to it - (I) or says the regular formula, "Go and return when (my wife) bears a child", so that the name of the spirit may be given to the child. According to this account, if a man should kill a snake at night in his hut, he will probably be ill the next day unless he pours some honey-wine on the floor where the snake had been to the night. This should free him from the danger of illness. Snakes seen in the daytime may be killed without fear.



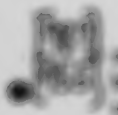
The spirits also appear in daylight as shadows (small) and they may make their presence known by slight noises, like the sound of a stick being broken. When a man sees an unaccountable shadow, or hears a noise for which he can see no cause, he concludes that it was a spirit which has come to see him, or perhaps just come up to take a walk on earth. But to avoid no evil, we send to be afraid, for at such times the spirits do us harm.

Before setting out on food, a man asks the spirits to help him:

> Cows-milk, children many, to Kipkoi,
> Spirits, give us animal which we may eat,
> Afraid [word] of Kipkoi,
> Give us honey enough to satisfy us.

Offerings of honey-and-water, (above), are sometimes poured on the ground from gourds with a request to the spirits to provide food in times of scarcity. Such offerings are made by people at their own homes when their affairs are going badly:

> Cows-(fat), children many, cattle,
> Spirits, [illegible] food,
> If Kipkoi sick,
> Then no way to [illegible] beasts.



When a man is very ill, he sometimes sees what he takes to be another man lying beside him for a short time, who is invisible to other people. When he has recovered, he realizes that this other man was a spirit who had come to help him to get well, and to take one towards the entrance. Groups of twelve lines as these are so seen, it (may), "He came to guard him, and by whom the sick man lay, to make him well".

Evil spirits sometimes attack people when asleep and make them ill. They also play tricks on people and do spiteful and irritating things to them. A man is walking, for example, and suddenly catches his foot, as he thinks, in a bone thrown right across his path, and falls. But he finds nothing there, and realizes that it was done by an evil spirit. In 1937 I was one night encamped on the edge of the forest between Kipkoimen and Tiongo, with

or goat where the Dorobo are concerned), would up imagine, to the fat of one's udder, or better, i.e. solidified whole milk, honey-wine, and white earth.

Illness is generally believed to be due to the anger of an ancestral spirit, to the spite of an evil spirit, or to witchcraft. Sometimes, on the other hand, it is thought to have a natural cause. When a person is taken ill the relatives, when they see for sure that the illness has a natural cause, go to a Kaalé diviner of the kind called *sakuyaat*. Diviners used to charge the Dorobo a fee of [illegible] if the cause was witchcraft, and [illegible] if it was due to a spirit. But if a man went down to the lower country where there is malaria, and after his return was taken with ague and fever, they knew it was a natural illness, therefore *gisi*, and did not consult a diviner.

If the cause was found by the diviner to be witchcraft, the witch was indicated according to the methods employed by Kaalé diviners, and the sick man's relatives went to the witch's hut, pelted him or his relatives with mud in the face and said: "Come and sit by us that we may recover". The sick person must then be rubbed on the face, chest and belly with the fat of a she-goat or with sweet up *angiroi*. If the witch refused, the position was especially if it was a woman, so he had to a cow by a thong the other end of which was thrown lightly round the forehead, and then flog her soundly till the consent to do what was necessary. When this had been done, the witch was driven out of the land.

A witch might be of either sex, but they were generally women. It [illegible] is said that there have been no male witches among the Dorobo for many years: they say, too, that they have ever no female witches either. Whether or not this is true, I certainly could hear of no case of witchcraft where a Dorobo was believed to be responsible. This does not mean, however, that the Dorobo are entirely free from this evil thing, for sometimes they are bewitched by Kaalé. When this has been shown, by divination, to have been done, the Dorobo go to the Kaalé who live near the witch and ask his help in dealing with him or her. This the Kaalé generally agree to, for they like witches no more than the Dorobo, and the witch is then dealt with according to Kaalé procedure. One of the allegations made by the Dorobo against the Kaalé is that they did not want Dorobo to live in the Kaalé Land Unit (Reserve), and that they were using Kaalé witches to get rid of them.

The reason that Dorobo go to a Kaalé diviner [illegible] for the detection of the cause of illness and witchcraft is that they have no diviners of their own, for the people among them known as *sakuyik* are not like the Kaalé *sakuyik*, diviners, but simply people who have had to cure illness and become up with medicines from trees and plants, herbalists whose the Kaalé would call *kipkororosiek*. These *sakuyik* sing *sakuyat*, besides being able to make herbal medicines, prepare charms to prevent people from sickness and the evil eye. Children wear necklaces of *kipkoyaat* (wild cattle) [illegible] to Kaalé to protect them against the evil eye, and did also wear small pieces of the *mokoiik* tree, split down it are hung, hair to them [illegible] as a charm against thunderstorm.

Sometimes people are made ill by evil spirits, which are mysterious beings and take dislikes to people without any particular reason. They are said to come to a man when he is asleep and give him a heavy push, which makes him wake with a start. His body reacts, and seeing nobody, knows that an evil spirit has attacked him. In a short time he becomes ill, and in some time, the chief of the family, the father, father's brother or other old man, must sprinkle heavy wine over the head, saying as he does so: (1), ai, "Go, go", ordering the spirit to leave him; and then he will have a chance of recovery.

When a man is about to die, he is allowed to be undisturbed in the hut, and during the evening of the day on which he dies his body is taken out by his sons, or if he has none, by other men of the family or clan, and laid on its right side (men and women alike) with the legs straight and hands crossed over the breast, on the edge of the forest about three hundred yards away from the hut. If the bystanders do not come and see it, nothing is done, the body is just left to rot, and the bones are left lying there. (This, of course, very seldom happens.) The relatives foretell on the day the person dies. Those who carry out the body are useless for three days and remain in their huts, while their people make heavy wine. The old men of the clan are then called together and some of them go up to the cemetery, one of them bearing a gourd full of heavy wine. Each should be taken a little in the mouth and spits it over each of the men in turn. He either will have them all face down with the tip of a sharp or grass sprigs. (Several persons, always of both, "Go forth ever, and live with the children", meaning that you are now free to have more children, since you are dead. The old men then drink the heavy wine.

Before a body is laid out for the bystanders all the ornaments are removed from a man's body by his sons, and from a woman's by her daughters, who then divide them among themselves. Before the ornaments are finally removed, they are laid aside for three months, after which some of the old men of the clan come and grease them with sheep's fat, and in preparation for the greasing the children make heavy wine for the old men who, after greasing the ornaments, put some of it over the children and then drink what is left. The old men and women are buried in separate holes about 4 feet deep, in which they are laid wearing their clothes. A year after an old man has been buried, his children place a branch of sweetpea (Dracaena sp.) on his grave and let it grow. Babies are buried in the living-room if there is one, otherwise they are laid out like the bystanders like other people. The hut in which a person has died is not disinfected, but remains occupied still, no account of actual circumstances to a disadvantage.

The death governs and enters the body of a bystander when the body is taken, and leaves the bystander when the animal goes to ground, whence it goes under the earth to spirit-land. Even when it remains comfortably in near the living.

Closely linked with religion, or closely linked that sometimes it is not easy to say where the one ends and the other begins, is magic. By this term I mean the belief that by doing or not doing certain things man can control

[illegible] or goat whom the Vandia are suspected), small go laughter. On the list of ever's edible or fishes ( ) a published whole milk, heavy-white and white earth.

Ghosa is generally believed to be due to the anger of an ancestral spirit, to the spite of an evil spirit, or to witchcraft. Sometimes, on the other hand, it is thought to have a natural cause. When a person is taken ill the relatives often see to see that the illness has a natural cause, go to a Vandi diviner of the kind called sakapan. Diviners used to change the Vandia [illegible] the of [illegible]. If the cause was witchcraft, and if [illegible] it was due to a spirit, the [illegible] was done in the same country where there is malaria, and after the wizard has taken with spun and knife, they have it was a natural illness, therefore plan, and did not consult a diviner.

If the cause was found by the diviner to be witchcraft, the witch was [illegible] followed according to the methods employed by Vandi diviners, and the sick man's relatives went to the witch's hut, pulled him or her violently open to the face and said: "Come and let be well so that he may recover". The sick person made them to which on his face, shook and fully with the tail of a [illegible] or with wood-ash laughter. If the witch refused, the practice was, especially if it was a woman, to tie her to a tree by a thong the other end of which was drawn tightly round the forehead, and then flog her severely till the prosecutor to do other was necessary. When this had been done, the witch was thrown out of the town.

A witch might be of either sex, but they were generally women. It can it is said that there have been no male witches among the Vandia for many years: they say, too, that they have also no female witches either. Whether or not this is true, I certainly could hear of no case of witchcraft where a Vandia was believed to be responsible. This does not mean, however, that the Vandia are entirely free from this evil thing, for sometimes they are [illegible] by Vandi. When this has been shown, by divination, to have been done, the Vandia go to the Vandi who live near the witch and ask for their help in dealing with him or her. This the Vandi generally agree to, so they the witches as were from the Vandia, and the witch is then dealt with according to Vandi procedure. One of the allegations made by the Vandia against the Vandi in 1928 was that they did not want Vandia to live in the Vandi Land Unit (Reserve), and that they were using Vandi witches to get rid of them.

The reason that Vandia go to a Vandi diviner (sakapan) for the discovery of the cause of illness and witchcraft is that they have no diviners of their own, for the people among them known as pakpiti are not like the Vandi sakapan, diviners, but simply people who HAVE been to own illness and consult go with assistance from more and plants, herbalists whom the Vandi would not [illegible]. These sakapan play witchcraft, besides being able to make herbal medicines, prepare charms to prevent people from sickness and the evil eye. Children may necklaces of specially [illegible] sakapan to Vandi to prevent them against the evil eye, and [illegible] small pieces of the wooden into, each about 1 cm. long, and to them [illegible] or a charm against thunderstorm.

/10 copy/

the Bi mini also have their own idiom, which will be briefly discussed at a later place.

Corresponding to the uniformity in language, the number words are the same among the Mimi and Wakaafi, whereas the Aaé and Bi mini have their own words for only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all three branches in their religious view, and the manner of circumcision customary among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tenga, closely related to the Mimi people. In birth and death, too, all three have the same customs, while in the rest of their customs one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their descent.

The people as a whole are divided into three large tribes, the Bi mimi, the Bi endelyan, and the Bi nenigana, each of which is made up of a number of lineages, and every Aaé, as well as every Ci kaafi and Ci nenemi, is a representative of one of these lineages.

If we now concern ourselves further with the ethnography of the Mimi in particular, which is at the same time that of the Wakaafi, we are thereby including the ethnographic traits of the entire people the stressing of individual differences that have developed among the Wandembo in the course of time and under the influence of changed conditions will be reserved for the third part.

/11/ Second Part

I.

Tribes, lineages, sublineages. -- The Bi gbiné lineage. -- The chief: his rule and policy, magic medicines, genealogical tree, village, ceremonies, feasts. -- The sorcerer. -- The Bi kibedin lineage. -- The rainmaker.

Every tribe (ni gbebeno) is divided, as has already been mentioned, into a number of lineages (ni gelete, ei gele). Among these, in turn, one distinguishes principal lineages (ni gelete kinik)

[illegible] are [illegible] on the [illegible]. The only weapon in the box [illegible] other [illegible] Scouts have [illegible] from the basic bolt [illegible] a [illegible] [illegible] [illegible] and the remaining [illegible] a small [illegible] gun of the [illegible] [illegible] [illegible]

Sometimes people are made ill by evil spirits, which are sometimes beings and take children or people without any particular reason. They are said to come to a man when he is asleep and give him a dream with which comes fear and a shock. So Sotho people, and among animals, dreams are evil spirits that persecute him. So a dream tries to terrorize it, and a man feels the breath of the beasts that torture. Sotho's brother or other old men, most powerful human-eaters over the beast, saying as he does so: It, as, "It's go" ordering the spirit to leave him, and then he will have a chance of recovery.

When a man is about to die he is allowed to lie undisturbed in the hut until having the evening of the day on which he dies the body is taken out by the door at the back near the other side of the hut and laid on its right side with knees and wrists pulled well up to the chin and head resting over the breast, on the edge of the bone pillow. Here headrest gently stays from the hut. If the deceased did not wear and eat it, nothing is done, the body is just left in one, and the bones are left lying there. (This of course, very seldom happens.) The relatives believe on the day the person dies. Those who were not the body are washed for three days and nights in their body, which their people made heavy wine. The old men of the clan are then called together and some of them go up to the corpse, one of them bringing a great tub of heavy wine. Some people he takes a knife to the mouth and gets it over each of his men to have. His other old men then sit here there with his tub of a sheep or goat skulls. (Sometimes several sheep at once). "To bind men and one with the children" meaning that one can ever live in peace even children, since you are alone. The old men then drink the heavy wine.

Before a body is laid out for the funerals all the ornaments are removed from a man's body by his sons, and from a woman's by her daughters, who then divide them among themselves. Before the ornaments are worn, however, they are laid aside for three months after which some of the old men of the clan come and grease them with sheep's fat, and in preparation for the grinding the children make heavy wine for the old men who, after grinding the ornaments, put some of it over the children and then drink what is left. Very old men and women are buried in narrow holes about 3 feet deep, in which they are laid wearing their clothes. A year after an old man has been buried the children plant a bunch of eucalyptus (Eucalyptus sp.) on the grave and on it grass. Babies are buried in the living-hut if there is one, otherwise they are laid out for the hyaenas like other people. The hut in which a person has died is not demolished, but remains occupied till, on account of several deaths, its abandonment.

The dead person's soul enters the body of a hyaena when the body is eaten, and leaves the hyaena when the animal goes to ground, whereupon it goes under the earth to spirit-land, from which it returns periodically to visit the living.

Closely linked with religion, so closely indeed that sometimes it is hard to say to see where the one ends and the other begins, is magic. By this term I mean the belief that by doing or not doing certain things, man can control

Ceremonies at the corpse -- Hereditary succession.

The ceremonies at the corpse differ from the practice customarily among the Ibanag only insofar as the persons at the bed differ. They continue hold a funeral feast and do they accord the corpse with [illegible] Wealthy people, i.e., those well with numerous progeny, are have buried by women, men, or by both, in the house near the bed; so that after death they may hear the conversations of their children and enjoy the happiness of their words. All other corpses are simply dragged out of the house and put down approximately 10 paces from it. If the corpse has not already been devoured by hyenas the 2nd night, which, however, is said not to happen very rarely, there is usually heard various voices about the weakly feet-smelling corpse every night. [illegible] Here are known as an offering for relief of the heavy load, consisting of raw particles, beside the corpse. A basket of copper coated for corpse is not necessary anywhere. The prayer beside the corpse of a family father run here [illegible] age progenies, age hour - Oshi, father, give silver, give dear. After one and above them the dance holds for the deceased [illegible]

In the right of succession the same principle holds as among the Ibanag. The insignificance of the goods left behind, however, often causes a division among those qualified to inherit impossible, and one can therefore very often observe in practice that the eldest son of the principal wife receives the entire inheritance consisting of house, corners, and heirlooms. The latter have the principal part of the estate sold, after the death of a man, are distributed among the sons in the same way as the cattle among the Ibanag. Just as the latter given each of his wives a number of cattle to care for and enjoy the use of, the [illegible] leaves each of his wives a part of his heirlooms, which the wife of the wife is exercise then inherit. Widows or a male pile a man of their age class and live with him. Surviving daughters pass into the possession of the eldest son insofar as the bride price is to be paid to him upon their marriage.

1. [See Manuel Pilo, 10-Series, Category 705--Analyst]

Sometimes people are made ill by evil spirits, which are sometimes beings and take children or people without any particular reason. They are said to come to a man when he is asleep and give him a sharp pain, which makes him cry a cry. He feels unwell, and during sickness, dreams that an evil spirit has prevented him. In a short time he becomes ill, and a sore falls. His head or the family, the father, father's brother or other old dead male ancestor comes over the head, saying as he does so: Ai, ai, "Ai, ai", pointing his spirit to have him, and then he will have a dream of recovery.

When a man is about to die, he is allowed to be unconscious to the last, and during the evening of the day on which he dies the body is taken out for the grave in the late area, by other men of the family or clan, and laid on its right side there and wrapped about with the legs straight and hands crossed over the breast, on the edge of the forest about three hundred yards away from the hut. If the deceased did not come and eat it, nothing is done, the body is just left in the hut and the house put left lying there. (This, of course, very seldom happens.) The objective however is for the grave also. Those who carry out the body are careful for three days and nights in their hands, while their people make heavy cries. The old men of the clan are then called together and some of them go up to the cemetery, one of them bearing a great ball of heavy wire, three others to take a knife to the wound and girls it over each of the men in turn. No other old men then all their faces with the ash of a strong or grass burning. (Female wounds, except of infant, the body was just wrapped with the children", meaning that one can see how to have more children, since you are dead. The old men then break the heavy wire.

Before a body is laid out for the funerals all the ornaments are removed from a man's body by his sons, and from a woman's by her daughters, who then divide them among themselves. Before the ornaments are worn, however, they are laid aside for three months, after which some of the old men of the clan come and grease them with young's fat, and in preparation for the grossing the children make heavy wire for the old men who, after grossing the ornaments, put some of it over the children and then divide what is left. Very old men and women are buried in narrow holes about 4 feet deep, in which they are laid wearing their clothes. If your other an old man has been buried, his children place a branch of eucalyptus (Eucalyptus sp.) on the grave and let it grow. Babies are buried in the living-living if there is one, otherwise they are laid out for the funerals like other people. The hut in which a person has died is not dismantled, but remains occupied still, on account of normal inconvenience it is abandoned.

The dead person's soul enters the body of a funeral when the body is eaten, and leaves the funeral when the animal goes to ground, whence it goes under the earth to spirit-land, from which it returns periodically to visit the living.

Closely linked with religious, or closely indeed that sometimes it is not easy to see where the one ends and the other begins, is magic. By this term I mean the belief that by doing or not doing certain things, man can control

4. Birth

Intercourse stops at the fourth or fifth month of pregnancy, and normally is not resumed till about six months after the birth of the child. When the woman's time has come, she sets up "where the hut", and the husband must then lodge elsewhere, either building himself a rough shelter or living with one of the neighbours in the settlement. During the act of birth the woman is helped by a midwife, ageabyanto, and her mother is present if possible. She stays for six or seven days in the hut after giving birth, and may then see her husband for the first time since she "entered the hut". The child's baby name is kept secret for several weeks after its birth, and only its real name is used, even by the father. At this stage the mother must be purified by her husband, who kills a goat (which he must buy or steal if he has none of his own), and rubs the fat and undigested grass from its stomach (nyara) over her face, breasts, and belly. After about three months the husband may come back to live in the same hut.

The birth of twins is not liked, for they are abnormal, and the mother may observe some several taboos ("they are bad because they make the mother unclean"). If the father should have set a trap at the time when twins are born to him, it is believed that that trap will never catch an animal. The most unpleasant aspect of the birth of twins is removed by the killing of a goat (which the husband must get by any means if he owns none) to be eaten by the mother and her female friends.

A girl who has a child before marriage is called, as among the Ganda, omufumbo, and becomes unclean ritually as a result. She may be purified, however, by the step responsible or one of the male relatives who must kill a he-goat. The meat is eaten by the men and women of the settlement, but not by the girl; and the stew or undigested grass from the stomach is rubbed by one of the women over her face, neck, and breasts, and then washed off. By this means she becomes clean again, unlike such people among the Ganda, who remain unclean all their lives.

A baby is suckled as a rule until the mother is well advanced with her next pregnancy: the standard period was given as "twelve months". If the mother has no milk, or not enough, she goes about begging for milk, sweet milk; but as often as not in such cases the baby dies of starvation. It is weaned by being stopped when it tries to suck, and by the application to the nipples of something bitter, generally a concoction made from the root of a bush called kwibwet (Ganda, kiwawuli). At this time it is fed with milk from a small gourd, and if no milk can be got, it is given honey instead. It is also given bits of meat cut up small and fed from a spoon made of a piece of gourd, and gruel made from maize or sorghum meal mixed with honey.

If the mother dies in child-birth, her husband's mother or some other female relative takes charge of the baby and feeds it with milk from a small horn: if milk cannot be got, honey and gruel are tried; but very small babies fed in this way seldom live. Sometimes the child may be adopted by a married couple.

Sometimes people are made ill by evil spirits, which are sometimes beings and take shelter in people without any particular reason. They are said to come to a man when he is asleep and give him a heavy pull, which makes him wake with a start. He talks wildly, and acting unlikely, knows that an evil spirit has attacked him. In a short time he becomes ill, and is seen by him, the head of the family, the father, father's brother or other old man, most suitable honey-wine over the head, saying as he does so: *Ii!*, as, "Go, go", ordering the spirit to leave him; and then he will have a chance of recovery.

When a man is about to die, he is allowed to be embraced on the side, and during the evening of the day on which he dies his body is taken out by his sons, or if he has none, by other men of his family or clan, and laid on its right side (men and women alike) with his legs straight and hands crossed over his breast, on the edge of the forest about three hundred yards away from his hut. If the hyaenas do not come and eat it, nothing is done, the body is just left as we, until the bones are left lying there. (This, of course, very seldom happens.) The relatives lament on the day the person dies. Those who carry out the body are unclean for three days and remain in their huts, while their people make honey-wine. The old men of the clan are then called together and some of them go up to the corpse, one of them bearing a gourd full of honey-wine, from which he takes a little in his mouth and spits it over each of the men in turn; the other old men then all duly have with the fat of a sheep or goat, saying: *Omondo anyore, anisyo ol kiliak*, "Go forth now, and rest with the children", meaning that you are now free to meet your children, since you are clean. The old men then drink the honey-wine.

Before a body is laid out for the hyaenas, all the ornaments are removed from a man's body by his sons, and from a woman's by her daughters, who then divide them among themselves. Before the ornaments are worn, however, they are laid aside for three months, after which some of the old men of the clan come and grease them with sheep's fat; and in preparation for the greasing the children make honey-wine for the old men who, after greasing the ornaments, spit some of it over the children and then drink what is left. Very old men and women are buried in narrow holes about 5 feet deep, in which they are laid wearing their clothes. A year after an old man has been buried, his children plant a branch of *mukagwet* (*Strychnos* sp.) on the grave and let it grow. Babies are buried in the dung-heap if there is one, otherwise they are laid out for the hyaenas like other people. The hut in which a person has died is not dismantled, but remains occupied still, on account of normal deterioration it is abandoned.

The dead person's soul enters the body of a hyaena when the body is eaten, and leaves the hyaena when the animal goes to ground, whence it goes under the earth to spirit-land, from which it returns periodically to visit the living.

Closely linked with religion, so closely indeed that sometimes it is not easy to see where the one ends and the other begins, is magic. By this term I mean the belief that by doing or not doing certain things, man can control

Interment of the corpse. — Hereditary succession.

The interment of the corpse differs from the practice customary among the Wakwafi only insofar as the poverty of the Dui affects it. They neither build a tomb[1] over nor do they anoint the corpse with fat. Wealthy people, i.e., those well-off with numerous progeny, are here buried by women, and, to be sure, in the kraal near the hut, so that after death they may hear the conversations of their children and enjoy the fragrance of their meals. All other corpses are simply dragged out of the kraal and put down approximately 100 paces from it. If the corpse has not already been devoured by hyenas the first night, which, moreover, is said not to happen only rarely, since in reality these carrion-eaters roam about the usually foul-smelling corpse every night, [illegible] does one hope as an offering the residue of the honey beer, consisting of cow petroleum, beside the corpse. A burial of corpses outside the camp is not customary anywhere. The prayer beside the corpse of a wealthy father can have [illegible] as [illegible] the [illegible] - God, father, give strife, give cows. What one said above about the Wakwafi holds for the remaining [illegible].

In the right of succession the same principles hold as among the Wakwafi. The insignificance of the goods left behind, however, often makes a division among those qualified to inherit impossible, and one can therefore very often observe in practice that the eldest son (of the principal wife) receives the entire inheritance consisting of bows, arrows, and bowstrings. The latter form the principal part of the estate and, after the death of a man, are distributed among the sons in the same way as the cattle among the Wakwafi. Just as the latter gives each of his wives a number of cattle to care for and enjoy the use of, the [illegible] leaves each of his wives a part of his bowstrings, which the sons of the wife in question then inherit. Widows as a rule join a man of their age class and live with him. Surviving daughters pass into the possession of the eldest son insofar as the bride price is to be paid to him upon their marriage.

1:Huntingford E-4, 5 (1938-1939) 1953 FLA Dorobo FLA

THE DOROBO OF KIDOÍ (KERITTA)

History

The group described by Lambert as living at Keritta on top of the escarpment, on the edge of the Forest Reserve 10 miles north of Limuru, is that classed as Kidoi in *Anthropos* 1951.[1] It was seen by Thomson in 1883 at the place known to the Swahili as Mianzini (" place of bamboos ") where, he says, a Dorobo village was established for selling food bought from the Kikuyu to the Masai and the traders.[2] This group is part of the Kikuyu Dorobo who occupied the land before the Kikuyu came. The process by which the Dorobo had completely lost their land by 1907 when Tolebi passed through is summed up by the Kenya Land Commission as one " partly of alliance and partnership and partly of adoption and absorption, partly of payment, and largely of force and chicanery."[3]

Organization

There are no chiefs, control being in the hands of a council of elders, with a leading elder called *kirumbindet*, as among the Kipkaruruk. Marriage is patrilocal, and descent patrilineal. Polygyny is permitted. Boys are circumcised, and girls are subjected to clitoridectomy. There appears to be some sort of age-set system, but Lambert's statement is not very clear on this point.

There are said to be nine clans, with Nandi-looking names beginning with the prefix *kap-* (which does not imply territoriality, but simply means " group of "). These clans are sometimes referred to by Masai clan names, or even by Kikuyu clan names. The word for clan is *ol-gilatat*, derived from the Masai *ol-gilata*, " clan," and not, as Lambert suggests, from *ol-gelata*, which means not " plain," but " side path."[4]

Religion

A so-called supreme being called *Tarwit*[5] is recognized; and the statement describing ancestral spirits as " active members " of a lineage implies the existence of an ancestor cult.

Africa, East. Hobley.

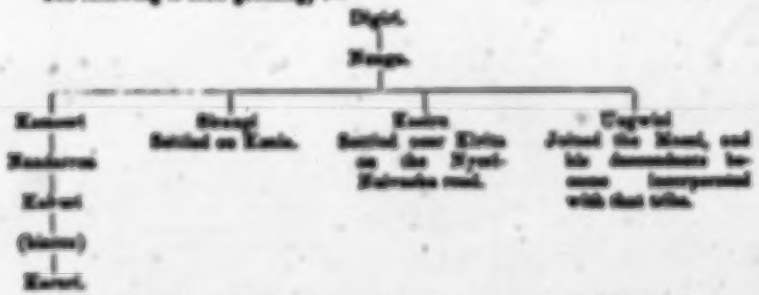
Notes on the Dorobo People and other Tribes; gathered from Chief Karuri and others. *By C. W. Hobley, C.M.G.* 78

101 The true Dorobo people are called Aat by the Elkuyu people and call themselves Aggish (or Oggish) or Ogiemboo.

Mr. Hollis tells me that the Nandi call them Okiek (singular Ureet), the Masai Il-Torobo (singular Ol-Torobonot).

131 [698] 193 614 [769] They inhabited the whole of the East Africa highlands from Nandi to Kenia before the Masai invaded the country. The most important clan among the Aggish is the Digirr (*see* MAN, 1905, 81), the name Digirr being that of their earliest known ancestor. Digirr, however, appears to have lived so long ago that all details about him are lost, and the first ancestor remembered by most is one Nenga, who was a very powerful person, and nearly all the Aggish are said to trace their origin to this chief.

The following is their genealogy :—



614 [304] [191] [362] 193 [698] Kamuri, Sirongi, and Kaiira are now the names of three clans of the Aggish.

Before the Masai came some of the Aggish circumcised and they all spoke one language. The totem of the Aggish is the ant-bear, which is called Ungwiri, they do not eat carnivorous animals or birds of prey, but eat all other animals and birds.

The Digirr have a distinct legend of the invasion of the Masai : they describe how one day a Digirr hunter on the Kinare Narok saw a great company of people coming from the north ; the hunter was afraid and hid among the rocks, but he was seen,

dead, and to have sacrificed to them: the few still surviving are believed to sacrifice every year (or more probably every Mwaka) to their ancestors. They spoke a *Nandi* language*: but languages go for nothing in this country, where a whole tribe will with the greatest facility in the course of a single generation change its language. The Dorobo themselves say that they, the Masai and the Elkeyo, are the descendants of a common ancestral tribe called the Eldigiri, and that their ancestors came from beyond Mount Kenya. They also maintain that the clans of all three tribes are identical: thus, for instance, the Aimbakwee clan in the Mokwon of the Masai: the Anjiro, the Tarsaro: the Ambui, the Molelyan: the Akhambiko, the Aisir: and so forth.

Their Masai name of ɔl Tarokʉt might, perhaps, imply that they are descended from a tribe of dwarfs: but though there are undoubtedly pigmy tribes of Dorobo, such as the Mɔtik of the bamboo forests of Mount Kenya, the Dorobo in existence at the present day are of much the same stature as other tribes in East Africa. The dwarfish figures of the Masai Dorobo may possibly be explained by the life they lead.

Compared with other natives the Dorobo are not deficient in intelligence: in fact, in many respects rather the contrary is the case. Dorobo wisdom and cunning are proverbial amongst the Elkeyo and Masai, who consult them in cases of sickness and accidents.

E. R. DUNDAS.

REVIEWS.

* It is difficult to account for the peculiar fact that they spoke Nandi. There are, it appears to me, reasons for believing that a large number of tribes now living in East Africa migrated from the north o/d Mount Kenya, and passed through the Elkeyo country. Many of these, and this may have been the case with the Nandi, Lumbwa, and Suk, may have settled down in those fertile regions for a period sufficiently lengthy to have impressed their language on the aboriginal inhabitants. It is quite possible that very large areas may have been abandoned during, and subsequent also, such emigrations.

† Dorop, pl. doropin, means short in Masai.

‡ Eldigiri and Masai are different names for the same people: they are also known to the Elkeyo as Amitkwiskwon. This name is said by some to have been applied originally to all the Dorobo or Aá. The name Aá itself might possibly mean the rulers, in which case it bears out the theory that the Dorobo were originally the ruling tribe in the country. It is, perhaps, worth mentioning that the word Aáki, one of East Africa's principal rivers, is possibly the same as Aá, the Elkeyo name for the Dorobo.

According to Mr. Hinderquer, of the Church Missionary Society, the name Amitkwiskwon means child-stealers. I think myself, however, that the name means the *fierce little people*, and is derived from —kwiskwa in the sense given by the Elkeyo to a *fierce people*—it, for instance, finds name for the Masai—the word Chinese means *children eat*, in a secondary sense, *little people*.

/68 cont'd/

Succession is patrilineal and marriage patrilocal. Polygyny is practised. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Dorobo imitated or joined in the ituika of the Kikuyu and the eunoto of the Masai. The word they use for the handing-over ceremony is eunotwet. Alternating ages or generations are distinguished as onet ap-tai (the right hand) and onet ap-katap (the left hand). When the Kikuyu system is referred to Mwangi is the former and Maina the latter, but the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups.

There are no indigenous chiefs, the judiciary and legislature being a council of elders. Such an elder is called kiruogindet (pl. kiruogik). A kiruogindet has much the same function as a Kikuyu muthamaki. There is no laibon but formerly the Dorobo owed allegiance to the laibon of the Masai.

They recognize one Supreme Being, called Tururit (compare the Suk Tororut). There appears to be no cult of so-called Sun Worship. The sacred trees, used for prayers to Tururit, are, for rain the bamboo (a solitary clump), for honey the mukeu, and, in connection with circumcision ceremonies, the muthai and the mutamaiyu.

78. Little or nothing is known of the relationship of the Dorobo of Southern Kikuyu with other Dorobo sections. The "Dorobo Committee" called them the Kikuyu Escarpment group, and remarked that they were first found in the Aberdares but left there and went to the Masai Reserve, whence they were ejected. At the time the Committee sat this group was living as forest squatters in the

C
715 souls of later generations of the dead find their last resting-place." (2)

2. op. cit.

We must suppose the Meru and the [p. 125] Mwimbi would have thought the departed spirits of the conquered tribes or, in the latter case, the blood of their dead remained to harry them. They probably arranged for some propitiation, and inasmuch as there was intermarriage between the conquerors and the conquered in each case the possibility of a final peaceful phase in acquisition cannot be ruled out.

C
715 So, as the spirits of the dead were believed in general to stay
626 just where they had lived on earth (though underground) and to retain in some degree (and possibly enhanced) the sanctions of the land-clan complex, we must suppose the cult of ancestors would operate to some extent to save the land from usurpation by another tribe by any means which left them unappeased. Exchange, adoption, intermarriage—yes; annihilation or ejection—no.

K
425 Implications of the cult of ancestors
769 But such exchange, if it occurred, would have to be conditioned in some way so that the seigniory remained unaltered or the new seigniory was adequately bonded with the old one in perpetuity. The Kikuyu say "we bought the Dorobo out, we did not drive them out." But though the cult of earth-bound ancestors affords sufficient reason to believe the second half of this assertion it gives us almost equally sufficient reason to reject the first. We must imagine the Dorobo had a similar belief (1); for otherwise we must not give it as

have lived in the country of the Kitêto Masai, since they are stated to have been the precursors of the Masai in this part of the world.

I was unable to elicit any folk-tales from the *Aramanik*, who say that they know no stories or legends except those they have learned from the Masai. It is possible that further efforts in this direction might meet with better success. The *Aramanik* are not as friendly or as ready to discuss their own affairs as are the cheerful, happy-go-lucky *Mósiro*.

Many Masai superstitions and superstitious practices are to be found among the Dorobo. There are, however, certain customs and observances of a superstitious nature practised only by the Dorobo. Of the following three examples, the last two given are in this category.

The *Mósiro* will not kill a python. They say it is a hunter of meat, as are they themselves. Furthermore, if it be killed, the ground where it dies and where its blood is split is ever afterwards fatal to cattle grazing there.[1] No explanation is given of this, and it would seem worthy of note that the Dorobo are exceptionally quick and skilful killers of all other snakes.

When following a native path or a road, if a Dorobo comes to the place where the track of a snake crosses the path, he will never step over it without first kicking up the sand or earth in order to break the continuity of the snake's track. This is done in order to avert evil, and is stated to be the only efficacious way of ensuring that the snake in question will not eventually kill the man who has crossed its path.[2]

If a Dorobo has been robbed and if the thief cannot be found, the following procedure is sometimes resorted to. The man who has suffered the loss heats his sword in the fire until it is red and then, plunging it into the earth, he says: "The thief shall die to-morrow." This is regarded as a very bad practice and is seldom indulged in, as the injured party, no matter how much he may have lost, knows that he will become extremely unpopular as a result of his action.

It seems likely that in a few years' time there will be no *Balañga* and no *Kinyalañgat* Dorobo. As I have said elsewhere, it is now almost impossible to find *Balañga* or *Kinya-*

[1] See Hollis: *The Nandi*, p. 80.

[2] *Ibid.*, p. 79.

623 [587] that continual disobedience is punished by expulsion from the tribe. They described their office in the following terms :—

Ke'ruoch ilgalek si kuich che mlyach ak che
We-take-counsel the-matters that we-may-get which-are good and which-are

[539] yuch, si ko-kas pûk tukul. Ingoonio chiit'
bad that they-may-understand (-obey) the-people all. If-he-refuses the-man

ake tukul, ke-oon, si kwa emet ake.
other any, we-expel (-him) that he-may-go the-country other.

[" We take counsel that we may find what is good, and leave what is bad, that all men may obey. If any refuse, he is driven out of our country."]

IV.—Religious Beliefs, Magic, and Medicine.

Religion.

● 771 The religious beliefs of the Dorôbo are even vaguer than those of the Nandi.
776 They believe in a god Aaista (N.), who is the sun and masculine, and who has a
[782] sister Arawa* (N.), the moon.[1] No offerings are made to either, but the men pray to both before going on a hunt. The prayers seem to have one form :—

Aaie,* ipiiy'-ech omdit.
God, fill-us-with the-food.

[539] or,

Arawa,* ipiiy'-ech omdit.
Moon, fill-us-with the-food.

[785] They believe also in ghosts and spirits (*oiindet*, pl. *oiik*, N.) which are good and
[782] bad. Prayers are addressed to the good oiik (*oiik che mlyach*) to obtain food and health, *e.g.* :—

Oiik, ipiiy'-ech omdit.
The-spirits, fill-us-with the-food.

[539] Oiik, ipiiy'-ech sapot.
The-spirits, fill-us-with the-health.

[782] Libations of honey and water (*lagomek*)[2] and of honey-wine (*kipkelsik*, N.) are offered to the good oiik, in order to obtain food and health. These libations are made from gourds (*komda*), and while they are poured out, the formula,

[539] Ipiiy'-ech omdit si kiipiiye sapot.
Fill-us-with the-food that we-be-filled-with health,

is pronounced.

[171] [1] I have not come across this particular relationship before in the Nilo-Hamitic group; though other tribes of this group hold that the sun and moon are related, or are husband and wife (the latter Maasai and Nandi). (See Beech, *The Suk*, for the ideas of the Suk, Enjemusi, Turkana, etc.)

[2] The Nandi offer milk.

5:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

681 The principle of compensation enters into the legal consequences of offences against the individual, as well as the principle that in certain cases where the injury is grave the injured party may get satisfaction by killing the offender. Of course when he does this, he has to pay for his satisfaction, but the need for satisfaction may override the knowledge that it must be paid for; and the fact that public opinion recognises a man's right to kill one who offends against him prevents any display of public resentment when he exercises his right. On the other hand, some of the traditional penalties seem to be both excessive and impracticable, even when the need for satisfaction is taken into account. When we are told, for instance, that a man may kill a man who hunts without permission on his land, but that if he does so he must pay compensation, we may be inclined to wonder how such a rule could remain in existence. The explanation is, I believe, that the apparently excessive punishment and the consequent liability to pay compensation act as a deterrent in two directions: the offender may be restrained from trespassing and doing what to his people, from the nature of their life and environment, cannot be anything but economically bad; and the owner may be made to pause before he takes a man's life, even if the offence is considered so serious that by customary law he is entitled to get satisfaction for it. The Dorobo is no fool; he could not have survived if he was. And the African, when engaged in his own affairs, is just as capable as anyone else of restraining his actions.

8. Religion and Magic

a) Belief and Practice

791 Briefly, the basic principles of Dorobo religion are these: There is a God, who is the sun and is behind everything, but beyond the reach of men, who must therefore approach him through intermediaries, the chief of which are the spirits of the dead, which having once been people are still able to maintain contact with the living. If they are offended, catastrophe comes to the living. By means of various observances and ritual practices men manage to keep on the right side of the Unseen World and to maintain the spiritual and material welfare of both horde and individual.

796 "There is one whom we call *Asista*, and he it is who lives above; he is the sun which we see in the sky, and we know no other name for him". Thus did an old Dorobo describe what he understood when he thought of *Asista*, the word which means both "sun" and "god", yet does not imply that the Dorobo are sun-worshippers. Some say that *Arusa*, the moon, is his sister; others, that *Arusa* is his mother; and he appears to have no father. People make no offerings to *Asista* or *Arusa*, but pray to them for help: *Kipendi samak si kesahas hiilencin Asista, Asista, ipiiyec omdit, ngut Asis, ipiiyec kumik, ngut Asis, ipiiyec panyek*, "When we go to the forest to hunt we say to *Asista*, '*Asis*, fill us with food', or '*Asis*, fill us with honey', or '*Asis*, fill us with meat'." Similar words are spoken to *Arusa Arusa, ipiiyec omdit*, etc.

Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

a clear, windless sky. About 10 o'clock a curious whistling noise began to come from a certain part of the forest, and continued, on the same note, and without a break for several hours. It was certainly no human or machine-made noise, and the Dorobo professed complete ignorance of it. A Nandi who had lived there before the Nandi War told me afterwards that it was an evil spirit whistling in the forest, "for we used to hear them whistling to each other like that in the forest when I was a child".

Between people and the things on which they depend for their existence both spiritual and material there is a connexion which is best expressed in terms of a ritual relationship. Things have a ritual value for people, and people themselves have a ritual status which is a relationship with their surroundings that can be altered for better or for worse according to the way in which they respect the ritual value of the things around them. Religion and magic form the procedure which protects these ritual values and status, while politics organization is, in a sense, no more than an effort to maintain the ritual status of the horde in spite of the tendency of its members to injure their own ritual status and in consequence that of the horde also.

Certain things that a person does, whether voluntarily or involuntarily, cause deterioration of ritual status; but the original status may be recovered by the performance of certain ritual actions which may involve some personal effort or sacrifice. Examples of acts which cause loss of ritual status, and the means taken to restore it, are: (1) A girl who bears a child before marriage must have the undigested grass (*eiyat*) from the stomach of a goat rubbed over her face, neck, and breasts, and must then wash it off. (2) After a woman has given birth, she is in a condition of much reduced ritual status, and her husband must rub goat's fat and *eiyat* over her face, breasts, and belly. (3) A man who has killed a Dorobo must have goat's fat rubbed all over him. (4) One who has killed an enemy must have stripes of white earth painted on his face. In all these cases the people have done something which causes loss of ritual status, making them ritually unclean (*usan* or *somis*) and so a source of danger to others till they have been purified. The potential danger is removed by means of something which has a ritual value. Moreover, an essential element in the cleansing process is sacrifice, that is, the use of the material must either involve giving up something which is valued, or it must require some effort or even risk to get hold of. The *eiyat* or fat must be from a domestic animal: if the person concerned has one, he must use it; if he has none, then he must get one, and without delay, which for a Dorobo usually meant that he had to steal it, and thus risk getting killed while doing so. Therefore there is an act of faith in these magico-religious performances, and people believe so firmly in the efficacy of what they do that they are prepared to risk danger in order to get the necessary materials. The use of white earth may entail no more than a journey to get it, but that still means a personal effort on somebody's part. Materials which are used for the restoration of ritual status, and in consequence have a special ritual value, include: the flesh of goats, which is eaten when twins are born, and in cases of incest; *eiyat*, the undigested grass from the stomach of a ruminant (a sheep

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

A comet is a sign of coming famine, not merely for the person who sees it, but for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general trend of knowledge of the Dorobo that the important parts of their life are helped and controlled by magic. The recovery of ritual status after child-birth and after the birth of twins is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with those powerful and capricious beings; the whole idea of circumcision (even if it is borrowed) is that of the transition by means of a magico-religious performance from the state of boyhood to that of manhood; these and other observances and avoidances are all magic, and are done because people believe that by doing them they will be enabled to go on existing.

b) Analysis of Beliefs

Ritual Values. Things which have ritual value fall into three categories: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status:

(1) Honey is sacred, like milk to the Nandi; and in addition to the taboo on eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the provision of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is burned. The last notion means that unlike the pastoral tribes, the Dorobo do not burn grass near forest.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that their use is directed to both the dead and the living.

(3) Things used for the recovery of damaged ritual status include goats and sheep, and certain of their products, i. e. *eiyat*, and fat, as well as 'butter' or *muait ap tangina* from cows. All these come from sources which formerly were hardly possessed at all by most Dorobo, and even to-day only on a small scale. Honey-wine is used a good deal, as well as white earth.

Each period of life has what might be called a standard ritual status, which is changed to a different standard on circumcision, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults is altered under certain conditions: (1) a man setting out to hunt is not in the same ritual state as when he is staying quietly at home, and he must not have sexual intercourse at such a time, i. e. just before he starts or, should he have an opportunity, while away; (2) a person sick of an illness has a status different from that of other people; (3) touching a corpse causes deterioration of ritual status; (4) the breaking of a taboo affects ritual status; (5) women suffer deterioration of ritual status through the birth of a child before marriage, the birth of twins, and even, to a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.

5:Huntingford E-5 (1938-1939) 1954 F16 Dorobo F16

Maintenance of ritual relations with the spirits is effected by the recognized offerings made to them; and with 'nature', on which the food supply depends, by other means (see below).

The World Order. In the myths related at the beginning of § 5, the thunder plays an important part, and is even portrayed as a man. One might almost assume from this that he was believed to be an earth-dweller who began a second life in the sky as the thunder-god who controls the rain, for the notions of rain, mist, and thunder are all interwoven, and the rainbow is "the arm of *Ilet* that draws water for him". These myths reflect the Dorobo attitude of the people to their surroundings. One of the chief features of the forest is heavy rain and frequent mist, and it would be surprising if we did not find among them the conception of some sort of rain-being who brought mist. Again, since rain is plentiful and droughts rare, the rainmaker is not needed, and although the lowest known rainfall, 28 inches in 1933 at a place two miles from the edge of the forest (and probably a little higher in the forest), would indeed constitute a drought year elsewhere, in the absence of both crops and cattle an occasional low rainfall does not matter so long as there is enough to make the plants flower. Even a heavy rainfall of 70 inches or over does no more than cause temporary inconvenience where there are no crops to be damaged and the slopes prevent flooding. The Tindiret forest is, in fact, an ideal place for hunters to live in. However prolonged the dry season, the conditions for wild life are better there than in the open plains below, and low rainfall has never yet prevented a supply of game to hunt or trap. Whether the people are able to kill enough game to ensure a supply of food is another matter, and the inter-relation is not so much that between man and nature in general, but between man and the animals. Man's wrong-doing is thought to produce either a failure of the supply of animals, or his inability to kill or catch what is there in abundance.

Social Values. Things which are important to man because they are indispensable to him have what is called a social value as well as a ritual value, because between man and them there is created a relationship which man must maintain if he is not to suffer. The food supply of a hunting people is got from day to day and depends on the skill of the hunter. It is uncertain, because on any given day the hunter may not find game, or having found it may not kill. But precarious as such a life might seem, there is no evidence that in the past there was often any great scarcity from either of these two causes. The old men say, in fact, that whereas food is scarce under present-day conditions, in the old days when hunting was not restricted it was, if not always abundant, at least enough. Such a statement is not, I think, merely an exaggerated memory of better days, the outcome of a longing to get back to the forest, but it explains in part the otherwise remarkable scarcity of hunting magic and ritual procedure. Some hunting magic there certainly was, and fear and ignorance prevent free talk about it; but it is clear that when the food supply throughout the centuries is found adequate,

5:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

A general statement made by one elder was that evil spirits cause illness, and good spirits cure it, which in the light of the total of what we know of Dorobo beliefs is more or less a reasonable summary, even though the good spirits can also bring illness. But the fact is that the good spirits are believed to be able to do both good and evil, and that the commission of public delicts reacts on them, so that, in the words of a Dorobo elder, "such things are not done, because they are bad, for the spirits do not like them".

It will be noticed that there is a good deal of similarity between Dorobo and Nandi religion [1], and there can be little doubt that much, though not all of it, has been borrowed from the Nandi along with other culture elements. It is, I think, necessary to mention this, in case anyone should be tempted to find 'parallels' which in reality do not exist. Dorobo religious beliefs are mainly not a parallel growth, but directly borrowed, and the resemblance to those of the Nandi will therefore be very strong both in general and in detail.

[1] As described e. g. in my booklet "The Nandi". (Peoples of Kenya Series.) Nairobi 1954.

/68 cont'd/

Succession is patrilineal and marriage patrilocal. Polygyny is practised. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Dorobo imitated or joined in the ituika of the Kikuyu and the eunoto of the Masai. The word they use for the handing-over ceremony is eunotwet. 805 192 Today is called legin or legilia, tomorrow lepe or lebe, yesterday areach; like the Masai, they have but one word for the day before yesterday and the day after tomorrow, namely, milek; the next day is called to samag, the one then following to hag; for the days after that the Masai words are used.

XIV.

000 Religion. -- Prayer. -- Supplication feasts. -- Amulets. -- Sorcery. -- Evil eye.

771 171 796 [821] The religious views of the Wandorobo are identical with those that we have become acquainted with among the Masai,[1] except that they do not call God 'Ng ai, but Uɛd. In songs God is also frequently called the black God, Uɛd kabiassa; on the other hand designations analogous to the Masai expressions for clouds and the redness of the sky are not found here; the former are called adja kabaka, the latter adja kahoma. Of the constellations they know the ones that the Masai also know, and designate them with the same names. They have no pictorial representations of Uɛd, for the same reasons as 782 the Masai. Everyone prays, married people and children at home, the dobonog along the way, if they are afflicted by trouble or illness; in everyday life the dobonog do not pray. The woman prays every morning while making the fire; when her husband and the children see this, they often place themselves beside her and also say a prayer. This always contains only a supplication, never any thanks. A supplication /259/ for protection runs: Uɛd sigima gemischin; for children, Uɛd nge hawa; for wives, Uɛd nge mai; for meat, Uɛd nge aga; for honey, Uɛd nge agung; for food, Uɛd nge e haiug; for health if 775 one is sick, Uɛd adudere an. They think about the fate of the soul -- [171] in contrast to the Masai -- only very rarely, even the old people. The author met only a few aged Wandorobo who were able to make statements about this. These coincided with the reports of the Masai.

5:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

The thunder, *Ilat*, is he who produces rain, and the rainbow, *cewaiwiriat*, is his arm, *se aaiyo pik*, which draws up water for "him". Long ago, according to a Dorobo myth, *Ilat* was a man, and one day a Dorobo met him standing on a rock on Tindiret Hill. And because the Dorobo thought him bad, for he brought mist which hid the sun and spoiled the hunting, he shot *Ilat* with a poisoned arrow, and so *Ilat* fled thundering to the sky, where he has been ever since.

Another Dorobo myth tells that once there lived on the earth some elephants and a Dorobo, and *Ilat* lived with them. One day the Dorobo was hungry and made poison from the *koliot* bush [6]. In the night he stuck a poisoned arrow into one of the elephants, and in the morning it was dead. When *Ilat* saw it, he said: "Who has been killing my donkeys?" The Dorobo cut up the dead elephant and dried the meat, and thus had food for many months. When it was finished he killed another elephant in the same way, and again *Ilat* said: "Who is killing my donkeys?" Then the Dorobo said to him: "I killed them, because I was hungry". Then *Ilat* said to himself: "I am afraid. If I stay here, the Dorobo will kill me too". So he called out to *Asista* to take him up to the sky, and he left the Dorobo with the elephants and went up to the sky. And to this day the Dorobo kill elephants with *koliot* poison, like that man of old [7].

Besides *Asista*, *Aruma*, and *Ilat*, the other inhabitants of the Unseen World are the spirits, which are of two kinds, those of the dead, who are on the whole good, and other spirits, which have never been human and are evil. Both are called *cewoiliai* [8], and this term includes the beings called *oiik* by the Nandi, the spirits of the dead, and those called *masambwanik*, the evil spirits. Both these words are used by the Dorobo. One statement made about them was to the effect that *masambwanik kapatak oiik, akenge tabai, kikere cewoiliai*, "the *masambwanik* are not different from the *oiik*, we call them both *cewoiliai*", because though the *masambwanik* are always bad, the *oiik* can at times be bad too. Nevertheless, the Dorobo draw a distinction between the two kinds, and refer to them as *oiik* (the good) and *masambwanik* [9] (the bad).

The spirits of the dead live in the *kwot ap cewoiliai* which is underground. "We haven't been there", said Arap Ceptoiko, "so we don't know anything about it". But the spirits are there, and they come thence from time to time to visit the living, not only in dreams to pregnant women, but actually into people's huts, to which they travel inside the bodies of snakes. When a snake comes into a hut at night, it is not killed, but some honey is offered to it with the words: *Ui, Aaam, i ninder*, "Go away, So-and-so, for

[6] Acocanthera schimperi.

[7] It will be noticed that there is a similarity between this and the Nandi myth given by HOLLIS, Nandi, p. 111, and that the myths printed in JRAI 57. 1927. p. 440 and HOLLIS, Masai, p. 304 are of a similar pattern. In the latter, the man is a Dorobo.

[8] The full form of this word is *cewoiliai* (*cewoilik*), pl. *cewoiliai* (*cewoilik*). It seems to be the same word as the *ewoiki* which MAHAN gives as the Kayo word for both good and evil spirits (Still Dwellers of Kenya, 1937).

[9] This word, which the Dorobo have borrowed from the Nandi, has in turn been borrowed by the latter from the Bantu Kavirondo *omusambwa*, "spirit".

5:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

Maintenance of ritual relations with the spirits is effected by the recognized offerings made to them; and with 'nature', on which the food supply depends, by other means (see below).

The World Order. In the myths related at the beginning of § 5, the thunder plays an important part, and is even portrayed as a man. One might almost assume from this that he was believed to be an earth-dweller who began a second life in the sky as the thunder-god who controls the rain, for the notions of rain, mist, and thunder are all interwoven, and the rainbow is "the arm of *Iat* that draws water for him". These myths reflect the Dorobo attitude of the people to their surroundings. One of the chief features of the forest is heavy rain and frequent mist, and it would be surprising if we did not find among them the conception of some sort of rain-being who brought mist. Again, since rain is plentiful and droughts rare, the rainmaker is not needed, and although the lowest known rainfall, 20 inches in 1933 at a place two miles from the edge of the forest (and probably a little higher in the forest), would indeed constitute a drought year elsewhere, in the absence of both crops and cattle an occasional low rainfall does not matter so long as there is enough to make the plants flower. Even a heavy rainfall of 70 inches or over does no more than cause temporary inconvenience where there are no crops to be damaged and the slopes prevent flooding. The Tinderet forest is, in fact, an ideal place for hunters to live in. However prolonged the dry season, the conditions for wild life are better there than in the open plains below, and low rainfall has never yet prevented a supply of game to hunt or trap. Whether the people are able to kill enough game to ensure a supply of food is another matter, and the inter-relation is not so much that between man and nature in general, but between man and the animals. Man's wrong-doing is thought to produce either a failure of the supply of animals, or his inability to kill or catch what is there in abundance.

Social Values. Things which are important to man because they are indispensable to him have what is called a social value as well as a ritual value, because between man and them there is created a relationship which man must maintain if he is not to suffer. The food supply of a hunting people is got from day to day and depends on the skill of the hunter. It is uncertain, because on any given day the hunter may not find game, or having found it may not kill. But precarious as such a life might seem, there is no evidence that in the past there was often any great scarcity from either of these two causes. The old men say, in fact, that whereas food is scarce under present-day conditions, in the old days when hunting was not restricted it was, if not always abundant, at least enough. Such a statement is not, I think, merely an exaggerated memory of better days, the outcome of a longing to get back to the forest, but it explains in part the otherwise remarkable scarcity of hunting magic and ritual procedure. Some hunting magic there certainly was, and fear and ignorance prevent free talk about it; but it is clear that when the food supply throughout the centuries is found adequate,

Huntingford E-4, 5 (1938-1939) 1953 FLA Dorobo FLA

412 411 [439] 378 And lying about on the horns. The only weapon is the bow, *kenyogda*, which the Dorobo make themselves from the *kwisi* tree (*Acokanthera* sp.); it is about 5 ft. long, and the bowstring, *tant*, is made from gut of the giant pig, *kondo*. Arrow-shafts are made from the *kotwamandet* and *mamalo* trees, or from bamboo, *sendyet*; arrow-heads are bought from the Nandi, and are of the Nandi patterns. Arrows are carried in quivers made of hide. Arrow poison is made from the *Acokanthera Schimperi*.

Baskets

415 [462] [124] 385 Making baskets, *kwopet*, is a common occupation of Dorobo women. They are made from fibre of the *pikwesia reclinata* palm, *sonet*, and sewn with heat made from a plant called *tuiyonwet*. The technique is a spiral foundation with a flat then gradually ascending coil, of the simple over-sewn type and low-step variety, the stitches being spaced out and not close together.

Miscellaneous

310 [63] [439] [302] 415 483 Salt used to be made from the ashes of the plant *tuiyonwet* (*acacia hamiltoniana*). Red and white earth is found near Timboroa on the east of the Dorobo country, and men go in parties of four or five to dig it, carrying home the earth in large leather bags, mainly in order to sell it to the Nandi who, in 1930, gave them 2s. a bag. Red earth, *ewkoit*, is mixed with fat or similar oil for rubbing on the hair; white earth, *ewowiet*, has magico-religious uses. For carrying a number of small objects a carrying-net called *kokwiket* is used; it is made of a pair of oval rims 3 ft. 6 ins. long with pieces of lions stretched across them, somewhat resembling a pair of lawn-tennis rackets. These are sometimes used by the Nandi.

Rites and Beliefs

Religion

996 *Asista*, the sun, is recognised as a being that can supply or withhold the needs of people: *Asis, tiyiyet pawyek*, "*Asis*, fill us with meat," is a common prayer. Some say that *Asista* the moon is his sister, others that she is his mother. Besides *Asis*, it is believed that there is a being called *Tiet*, the Guarder, who produces rain, and "the rainbow is his arm which draws up water for him." The Dorobo also believe in spirits, good and bad, both of which are called *ewomdet*, a word which includes the *mik* (ancestral spirits) and *mesembwanik* (evil spirits) of the Nandi. The ancestral spirits have the same significance and functions as those of the Nandi, and though they punish the living for doing evil, they are otherwise friendly and visit the living, travelling in the bodies of snakes, both to see their people and to get food in the form of *kokwanek* (honey and water); spirit-snakes should not be killed.

995

Divination

787 [48] 959 789 The Dorobo appear to have no diviners of their own, and when they have recourse to divination, as in cases of illness or witchcraft, they go to Nandi diviners of the type called *soleyonet*, by whom they are charged a small fee. The people called *orkoiyot* (pl. *orkoik*) among the Dorobo are no more than healers or physicians who prepare healing medicines from trees and plants. Although the Dorobo have a reputation among other tribes as powerful rain-makers, they themselves say that they have no rain-makers, which is probably true.

Death and Burial

764 Very old men and women are buried in narrow holes about 3 ft. deep in which the bodies are laid full length wearing their clothes; one year after an old man's death his children plant a branch of *mukuyuet* (*Ficus* sp.) on his grave and let it grow. Other people are laid out for the hyenas, both sexes on the right side with

that continued disobedience is punished by expulsion from the tribe. They described their ethics in the following terms:—

Ke'rumik kpâkit ai kumik ako ndyuk ak ako
We take counsel the-matters that we-may-get which-are good and which-are

ruch, ai ke-kee yâk tukul. Ingomin chûk'
bad that they-may-understand (-they) the-people ak. If-he-refuses the-man

ako tukul, ke-ere, ai kwa enut ako.
other say, we-expel (-him) that he-may-go the-country other.

["We take counsel that we may find what is good, and leave what is bad, that all men may obey. If any refuse, he is driven out of our country."]

IV.—Religious Beliefs, Magic, and Medicine.

Religion.

The religious beliefs of the Dorobo are even vaguer than those of the Nandi. They believe in a god Asista (K.), who is the sun and moonshine, and who has a sister Aruwa* (K.), the moon.† No offerings are made to either, but the men pray to both before going on a hunt. The prayers seem to have one form:—

Asis,* kpây'-ech emâk.
God, fill-us-with the-food.

or,

Aruwa,* kpây'-ech emâk.
Moon, fill-us-with the-food.

They believe also in ghosts and spirits (ntinda, pl. mik, K.) which are good and bad. Prayers are addressed to the good ntik (not the ndyuk) to obtain food and health, e.g.:—

Ntik, kpây'-ech emâk,
The-spirits, fill-us-with the-food,

Ntik, kpây'-ech ngoit,
The-spirits, fill-us-with the-health.

Libations of honey and water (*ngomik*)? and of honey-wine (*kipkelkel*, K.) are offered to the good ntik, in order to obtain food and health. These libations are made from gourds (*kumbe*), and while they are poured out, the formula,

kpây'-ech ntâkit ai kîpîyo ngoit,
Fill-us-with the-food that we-be-filled-with health,

is pronounced.

* I have not come across this particular relationship before in the Nile-Hamitic group; though other tribes of this group hold that the sun and moon are related, or are husband and wife (the Lotuko Nilote and Nandi). (See Nandi, *The Ark*, for the ideas of the Suk, Dajoland, Turkana, etc.)

† The Nandi also talk.

3:Huntingford E-5 (1921-1928)1929 FLA Dorobo FLA

When a man is ill and dies, it is said that bad silik (still the good, N.) have killed him; if he recovers, a good oloibiot has saved him. No offerings are made to the bad silik.

There is also a vague belief in a future life. A man's spirit is said to go at death to the *kwet ap nik* (N.), or land of the spirits, which is under the earth, and is a bad place.

Magic.

There are magicians (*pendindet*, pl. *pendi*, N.) who are bad, and who prevent people from getting food by means of their spells. There are also diviners (*orkoiyot*, pl. *orkoiik*, N.).[1] There is no equivalent of the modern Nandi system of "orkoiyotet" or rule by a medicine-man.

Medicines and Charms.

(a) *Medicines.*—For snake-bite, the gum of the tilmet tree is used, mixed with the honey of a species of bee, called "kemmyet" (N.), and ram's fat. This concoction is rubbed on the affected part, and a little is also eaten. For coughs, a plant called "epsito" is chewed; this is used for all chest complaints.

(b) *Charms.*—Children wear a charm to ward off the evil-eye (*sakat*, N.), which is similar to that worn by Nandi children. It consists of a necklace of seeds of the *kepenyweet* tree (N. *kepenuik*) strung on a cord, the seeds being separated by short pieces of bamboo (Text-fig. 20). Old men wear a charm to keep away rheumatism (*kimdwogot*, or *kwesito* (kwesito), N.); it is made of two small pieces of the strawberry tree,[2] about 1 in. long, which are tied to the belt (Text-fig. 19).

V.—Social Institutions.

Social Divisions.

The male sex is divided into boys (*kpetik*, N.), warriors (*moroonik*, N.), and old men (*pwiinik*, or *epwiinik*, N.); the female sex, into girls (*kpeti*, N.) and women (*kwenik*, or *ekpeinik*, N.). At circumcision, a boy becomes a warrior and a girl a woman.

Married and unmarried people sleep separately. Married people and small children may sleep in the same hut, while unmarried men sleep elsewhere, often in the *sigiriniet* (N.), or "warriors' hut," where they cohabit with the unmarried girls. Though free-love is practised, it is not carried to such an extent as among the Nandi, and although girls sleep with warriors, they like to preserve their virginity till circumcision. Warriors frequently marry their sweethearts (*morreiat*; N. *moreet*), whereas in Nandi they usually marry someone else.

The position of women is the same as it is among the Nandi, that is, they wait on the men, do all the menial work, and are their husband's property.

[1] This word is not used with the same sense in Nandi; originally it seems to have meant simply "medicine-man" (Swahili, *mganga*).

[2] *Hagenia abyssinica*.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

7. Names

A Dorobo man has normally at least four names: (1) spirit-name, (2) porridge-name, (3) nickname, (4) patronymic, though he does not use them all.

(1) Spirit-name. The choice of a spirit-name, *kainat ap cesserilak* (or, *aisik*), may be determined in one of three ways: (*a*) a pregnant woman may dream that an ancestor of her husband's visits her and tells her to call the child after him; (*b*) after the child is born, the father calls in his brother and his wife, and one or two other near relatives on the paternal side, and they recite a number of names borne by their ancestors, pausing after each name: when the child sneezes, the name last spoken is given to it, this being one of the ways in which the ancestors indicate their will in the matter of names; a little snuff is blown up the child's nostrils to make sure that it does sneeze; (*c*) by taking the name of a relative in the next generation but one, as in the case of Arap Mining's family, whose spirit-names were chosen in this manner:

	Porridge-name:	Spirit-name:
Father's father:	Kipoo	
Father:	Kimining	
Himself:	Kimopo	Kipoo
His son:	Tiongoi	Kimining
His son's son:	not yet born	Kimopo (will be)
		Tiongoi

The second and third methods seem to be the commonest, and their use depends on family custom; the first method was described to me, but I believe is seldom used. The spirit-name once given is never spoken, and is known only to the bearer and those who were present when it was given; its purpose is to link the bearer with a specific ancestor, and to ensure remembrance of his name.

(2) Porridge-name. This term is borrowed from the Nandi, who call it porridge-name because it is given at the time when a child is first fed with porridge or gruel (*kainat am musarek*). There are two methods of choosing this name. The father's parents, if alive, and other elderly paternal relatives, meet in the father's hut; they drink beer, which is not shared by the child's father and mother. The father's mother, or some female relative on the paternal side, then holds the child in her arms and says, *Kikuria Sioncu*, "we call you Such and such a name", announcing a name which the relatives have chosen from either (*a*) some circumstance connected with the child's birth, like the time of day when it was born, or some recent action of its father's; or (*b*) the name of an ancestor of the next generation but one, as in the case of spirit-names; this second choice is made when spirit-names are not based on the alternate generation system.

(3) Nickname. This is not an essential name, for all do not have a nickname. When given, it is generally derived from some physical peculiarity or habitual action of the person concerned, like Kipkatam, "left-handed", Kimnerkat, "fat neck", Parngetuny, "lionkiller".

S:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

614 to marry her, and should the affair become known (as such things usually
623 do), the clan council can prevent, if necessary by force, any attempt of the
684 man to do so. Although such intercourse is not technically an offence, it is
[848] nevertheless regarded with great disapproval, and may result in the man's temporary ostracism, for as an elder told me, *ingorsiyo ei ok cepi ap tiliet, caluakto ne oo kut, amu mocome apaiisich ngui mocome cesowilôh*, "if a man lies with a girl of his *tiliet* (by which he meant clan), it is a very great sin, for not only do the old men disapprove, but the spirits also disapprove". If, however, the act should result in a baby, then it becomes incest, and a very serious offence, treated as if it were intercourse with a relative in the *tiliet*, and summary punishment is inflicted on both offenders, for the crime of incest offends the *cesowilôh*, the spirits of the dead, and if the guilty are not punished there is a danger that the spirits in their wrath may hurt indiscriminately not only them but innocent people as well. So in such cases, when it is known that a girl has had a baby, the man is beaten by the men and women of his own clan, his hut is burned, his honey-barrels are destroyed, and he must provide a goat to be eaten by the male and female relatives of the girl. She herself is also beaten by women of her clan. This punishment is inflicted after due discussion at the clan council, and is therefore not just a spontaneous expression of group-resentment, but the deliberate action of public authority.

[M5]

614 Much of what has just been written applies to the past, that is, to the
648 time before the Government attempted to establish the Dorobo in Nandi
162 in 1937; and my census in 1939 revealed that there were comparatively few old men left, many less, in fact, than there were in 1927. The clan groupings therefore do not show so many old men as would have appeared normally, and [561] most of the existing seniors of to-day are elder members of the Nyongi age-set, whose maximum age in 1939 was fifty. Some idea of the composition of a clan
614 settlement in that year is given by the following particulars from my census:
162
561

At Kipukua and Kipkorom, 2 miles apart; all Moi clan.	1 Kaplelac. 1 married Nyongi, wife and children. 1 married Maina, wife and children. 5 unmarried Maina. 1 Juma. 3 old women and 1 girl.
At Kepen; Moi and Kapsekoi clans.	1 Kimnyike. 2 married Nyongi, wives and children. 3 unmarried Nyongi. 6 unmarried Maina.
At Ndoroton and Ngatepkong, 3 miles apart; all Kipieken.	1 married Nyongi, wife absent. 4 unmarried Maina. 2 Juma. 3 widows and 2 girls living with them. 1 married Nyongi, wife and children. 1 married Maina, wife and children. 1 unmarried Nyongi.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

I noticed that when Dorobo

were having a meeting of any sort, however informal, at which they wanted to speak of anything important, they were careful to exclude Nandi from it; and if a Nandi insisted on intruding, they would talk only of trivial matters till he had gone. One day when I was talking to some Dorobo about their land, they insisted on my sending out of earshot a Nandi who was with me — they even took me out of his sight and spoke in low voices, for the subject was too serious to be heard and perhaps ridiculed by a Nandi. It is thus not difficult to understand how an acquired feature like the *koret* can fall into disuse; and this is what I believe has happened among the Dorobo. Pressure of various kinds was by 1927 forcing the Dorobo to be more wary than ever, and the clan system could give them all the administrative organization they needed. Hence the *koret* council could lapse, and with it the office of *kiruokindet*, though the *koret* names remained, as they had become useful terms of reference.

Nevertheless, the *koret* council is closely associated with the punishment of crime, and it is therefore necessary to understand something of the way in which it did its work in the past.

All the elders and circumcised men of a district formed the council. They met at the foot of a tree where the undergrowth was cleared away to make an open space. Any tree would do, for unlike the Nandi they had no special trees which mark the *korosuek*. The functions of the *koret* council were described briefly by a Dorobo in the following words: *Kerwoc walek si kesic ce miyac ak ce yac, si kokas pik tukul. Ingoesio cit ake tukul, keoon si kua emet ake*, "We take counsel that we may find what is good and leave what is bad so that all men may understand. If any man refuses, he is driven out of our country". Questions of theft and homicide were discussed by the council; it considered what steps to take when food was scarce; and disputes of all sorts between people of different clans were heard and settled. The decision of the council was announced by the *kiruokindet*, who after sensing the opinion of the meeting, would stand up and say what ought to be done. It was then left to the people concerned to carry out the suggestion, for such it was, in effect, rather than an order.

The way in which the law is enforced is liable to be something of a puzzle to the casual observer. The mainspring of Dorobo political organization is public opinion, and behind public opinion is the fear of the dead. People know that it is wrong, that is, contrary to custom, to do a certain thing; they know also that if they do it, their friends will do someting unpleasant to them, and, what is really most important of all, they know that *mecome cesowiloi*, "the spirits of the dead disapprove". Hence in order to understand how Dorobo law works, one must know something about their religious beliefs. To the European these reasons no doubt seem feeble; but they are effective in that the Dorobo have been able to survive till to-day as a unit sufficiently law-abiding to hold its own and carry on its existence in face of human and non-human enemies, and to maintain its place as a living organization.

Among people like the Nandi, the council habit has become an almost daily business, has in fact almost come to be the equivalent of a club, though without the conviviality of a club; but this is not possible for people who

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

The thunder, *Ilet*, is he who produces rain, and the rainbow, *cemuisiriet*, is his arm, *ne naiyo pik*, which draws up water for "him". Long ago, according to a Dorobo myth, *Ilet* was a man, and one day a Dorobo met him standing on a rock on Tindiret Hill. And because the Dorobo thought him bad, for he brought mist which hid the sun and spoiled the hunting, he shot *Ilet* with a poisoned arrow, and so *Ilet* fled thundering to the sky, where he has been ever since.

Another Dorobo myth tells that once there lived on the earth some elephants and a Dorobo, and *Ilet* lived with them. One day the Dorobo was hungry and made poison from the *keliot* bush [6]. In the night he stuck a poisoned arrow into one of the elephants, and in the morning it was dead. When *Ilet* saw it, he said: "Who has been killing my donkeys?" The Dorobo cut up the dead elephant and dried the meat, and thus had food for many months. When it was finished he killed another elephant in the same way, and again *Ilet* said: "Who is killing my donkeys?" Then the Dorobo said to him: "I killed them, because I was hungry". Then *Ilet* said to himself: "I am afraid. If I stay here, the Dorobo will kill me too". So he called out to *Asista* to take him up to the sky, and he left the Dorobo with the elephants and went up to the sky. And to this day the Dorobo kill elephants with *keliot* poison, like that man of old [7].

Besides *Asista*, *Arowa*, and *Ilet*, the other inhabitants of the Unseen World are the spirits, which are of two kinds, those of the dead, who are on the whole good, and other spirits, which have never been human and are evil. Both are called *cesowiloi* [8], and this term includes the beings called *oiik* by the Nandi, the spirits of the dead, and those called *musambuanik*, the evil spirits. Both these words are used by the Dorobo. One statement made about them was to the effect that *musambuanik kopotok oiik, akenge tukul, kikure cesowiloi*, "the *musambuanik* are not different from the *oiik*, we call them both *cesowiloi*", because though the *musambuanik* are always bad, the *oiik* can at times be bad too. Nevertheless, the Dorobo draw a distinction between the two kinds, and refer to them as *oiik* (the good) and *musambuanik* [9] (the bad).

The spirits of the dead live in the *koret ap cesowiloi* which is underground. "We haven't been there", said Arap Cepsuku, "so we don't know anything about it". But the spirits are there, and they come thence from time to time to visit the living, not only in dreams to pregnant women, but actually into people's huts, to which they travel inside the bodies of snakes. When a snake comes into a hut at night, it is not killed, but some honey is offered to it with the words: *Ui, Anum, i oiindet*, "Go away, So-and-so, for

[6] Acocanthera Schimperi.

[7] It will be noticed that there is a similarity between this and the Nandi myth given by Hollis, Nandi, p. 111, and that the myths printed in JRAI 57. 1927. p. 448 and Hollis, Masai, p. 266 are of a similar pattern. In the latter, the man is a Dorobo.

[8] The full form of this word is *cesowilo* (*cesowilet*), pl. *cesowiloi* (*cesowilôk*). It seems to be the same word as the *cesoloi* which Massam gives as the Keyo word for both good and evil spirits (Cliff Dwellers of Kenya, 1927).

[9] This word, which the Dorobo have borrowed from the Nandi, has in turn been borrowed by the latter from the Bantu Kavirondo *umusambwa*, "spirit".

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

[775] [782] [825] you are a spirit". A man who kills a snake at night in his hut need not necessarily become ill as a result (as the Nandi believe he will), but the ancestor whose spirit was in the snake will show his anger by never going to see the man again and transferring his attentions to some other member of the family. This would no doubt result in bad luck, for the offender would be continually conscious of what he had done. Another account, however, which I think more nearly represents the common belief, is that after offering a snake honey-and-water or milk, the owner of the hut says to it: *Ui si nyon tun ingoii laknet*, "Go and return when (my wife) bears a child", so that the name [553] of the spirit may be given to the child. According to this account, if a man should kill a snake at night in his hut, he will probably be ill the next day [782] unless he pours some honey-wine on the floor where the snake had been in the night. This should free him from the danger of illness. Snakes seen in the daytime may be killed without fear. [753]

The spirits also appear in daylight as shadows (*urnet*) and they may make their presence known by slight noises, like the sound of a stick being broken. When a man sees an unaccountable shadow, or hears a noise for which he can see no cause, he concludes that it was a spirit which has come to see him, or perhaps just come up to take a walk on earth. But he need do nothing, nor need he be afraid, for at such times the spirits do no harm.

[204] [782] Before setting out to hunt, a man asks the spirits to help him:

Cesowilök, okónec tiony ne kipare,
Spirits, give-us animal which we-may-kill;
okónec kumik si kiipiiye.
Give-us honey enough-to-satisfy-us.

Offerings of honey-and-water, *lokomek*, are sometimes poured on the ground from gourds with a request to the spirits to provide food in times of scarcity. Such offerings are made by people at their own homes when their affairs are going badly:

Cesowiloi, opiiyec omdit,
Spirits, fill-us-with food,
si kiipiiye sapot.
That we-may-be-filled-with health.

[787] [755] When a man is very ill, he sometimes sees what he takes to be another man lying beside him for a short time, who is invisible to other people. When he has recovered, he realizes that this other man was a spirit who had come to help him to get well, and to take into himself the sickness: *Konyon si koritpe, korn ne korne cito ne mioni, si kosop*, "He came to guard him, and lay where the sick man lay, to make him well".

776 Evil spirits sometimes attack people when asleep and make them ill. They also play tricks on people and do spiteful and irritating things to them. A man is walking, for example, and suddenly catches his foot, as he thinks, in a liana drawn tight across the path, and falls. But he finds nothing there, and realizes that it was done by an evil spirit. In 1927 I was one night encamped on the edge of the forest between Kipkorom and Timopo, with

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

Sometimes people are made ill by evil spirits, which are capricious beings and take dislikes to people without any particular reason. They are said to come to a man when he is asleep and give him a sharp pull, which wakes him with a start. He looks round, and seeing nobody, knows that an evil spirit has attacked him. In a short time he becomes ill, and to cure him, the head of his family, (his father, father's brother or other old man) must sprinkle honey-wine over his head, saying as he does so: *Ui, ui*, "Go, go", ordering the spirit to leave him; and then he will have a chance of recovery.

When a man is about to die, he is allowed to lie undisturbed in his hut, and during the evening of the day on which he dies his body is taken out by his sons, or if he has none, by other men of his family or clan, and laid on its right side (men and women alike) with the legs straight and hands crossed over the breast, on the edge of the forest about three hundred yards away from the hut. If the hyaenas do not come and eat it, nothing is done, the body is just left to rot, and the bones are left lying there. (This, of course, very seldom happens.) The relatives lament on the day the person dies. Those who carry out the body are unclean for three days and remain in their huts, while their people make honey-wine. Tho old men of the clan are then called together and some of them go up to the carriers, one of them bearing a gourd full of honey-wine, from which he takes a little in his mouth and spits it over each of the men in turn; the other old men then oil their faces with the fat of a sheep or goat, saying: *Omanda anyun, oluiyo ok lakok*, "Go forth now, and mix with the children", meaning that you are now free to meet ever children, since you are clean. The old men then drink the honey-wine.

Before a body is laid out for the hyaenas, all the ornaments are removed from a man's body by his sons, and from a woman's by her daughters, who then divide them among themselves. Before the ornaments are worn, however, they are laid aside for three months, after which some of the old men of the clan come and grease them with sheep's fat; and in preparation for the greasing the children make honey-wine for the old men who, after greasing the ornaments, spit some of it over the children and then drink what is left. Very old men and women are buried in narrow holes about 5 feet deep, in which they are laid wearing their clothes. A year after an old man has been buried, his children plant a branch of *mukupcot* (dracaena sp.) on the grave and let it grow. Babies are buried in the dung-heap if there is one, otherwise they are laid out for the hyaenas like other people. The hut in which a person has died is not dismantled, but remains occupied till, on account of normal deterioration it is abandoned.

The dead person's soul enters the body of a hyaena when the body is eaten, and leaves the hyaena when the animal goes to ground, whence it goes under the earth to spirit-land, from which it returns periodically to visit the living.

Closely linked with religion, so closely indeed that sometimes it is not easy to see where the one ends and the other begins, is magic. By this term I mean the belief that by doing or not doing certain things, man can control

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

the other world, and atonement is effected by ritual methods. The primary sanctions against such acts are upheld by the force of public opinion which is based on the fear of loss of well-being through offending the spirits, behind whom are the ultimate powers of nature expressed in the concept of *Asis*.

But these ultimate powers cannot be reached by man, who can neither see nor understand them, and people like the Dorobo (and indeed many African peoples) must therefore have some kind of intermediary. First come the *cesowiloi*, the spirits of the dead, to whom each man addresses his own prayers, and with whom there is a private relationship based on the fact that the spirits were once human beings themselves. Then protection is looked for through the use of tangible material objects in the form of amulets, such as the *lepuynwet* against the evil eye, *rerendet* against rheumatism, and perhaps the double spiral ear-rings occasionally worn, although the significance of the last among the Dorobo is not known. These are material intermediaries in that they act between man and the unseen as protectors.

Formalized religion. The notion of a spiritual being which dwells in the Kiet or 'universe' is crystallized in the word *Asis(ta)*, borrowed from the Nandi with perhaps some of the Nandi notions of its nature. He is identified with the sun, and prayers are made to him for success, and sometimes to his mother (or sister, for the accounts vary) *Arasa* the moon as well. This is the extent of the formal part *Asis* plays in Dorobo religious life, but he none the less performs the necessary function of being a recognized object to which men can turn, especially in thought, for restoration of confidence, which is no doubt one of the primary functions of the formalized concept of a major spiritual being, who provides people with an entity that they may look to for help and protection.

The belief in the existence of spirits is much more concrete, and more practical, for one section of the spirits were once men themselves and are therefore much nearer to men than *Asis* and well fitted to stand between men and the unseen world as mediators. The evil spirits are merely harmful or irritating according as the whim takes them, but they seem to play a relatively unimportant part in the religious life of the Dorobo, however much trouble and discomfort they may cause. They are just things that must be endured. A statement made by a Dorobo that the *musambuanik*, the evil spirits, are the same as the *oiik* or good spirits, is to be explained by the belief that even the good spirits can be malevolent at times, for malevolence is more noticed than benevolence, and it is necessary to maintain proper ritual relations with them to prevent malevolence. But unlike the evil spirits the *oiik* have a definite home somewhere under the earth, whence they return to visit and take care of the living, in whom they take an interest, and the part taken by the *oiik* in Dorobo life may in fact be summarized thus: (a) they can provide or withhold food; (b) they can cause illness if angered; (c) they can desert a man and so spoil his luck and neutralize his skill; (d) they are at the back of the legal sanctions as intermediaries between man and the ultimate spiritual power that controls the universe.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

A general statement made by one elder was that evil spirits cause illness, and good spirits cure it, which in the light of the total of what we know of Dorobo beliefs is more or less a reasonable summary, even though the good spirits can also bring illness. But the fact is that the good spirits are believed to be able to do both good and evil, and that the commission of public delicts reacts on them, so that, in the words of a Dorobo elder, "such things are not done, because they are bad, for the spirits do not like them".

It will be noticed that there is a good deal of similarity between Dorobo and Nandi religion [12], and there can be little doubt that much, though not all of it, has been borrowed from the Nandi along with other culture elements. It is, I think, necessary to mention this, in case anyone should be tempted to find 'parallels' which in reality do not exist. Dorobo religious beliefs are mainly not a parallel growth, but directly borrowed, and the resemblance to those of the Nandi will therefore be very strong both in general and in detail.

[12] As described e. g. in my booklet "The Nandi". (Peoples of Kenya Series.) Nairobi 1944.

/68 cont'd/ 611

Succession is patrilineal and marriage patrilocal. Polygyny is practised. 591 595 The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by 613 769 the persons responsible (so to speak) for keeping them alive by acts of memory and communion, [775] the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys and a pre-marital 881 rite of clitoridectomy for girls. Age-grading is based on male 561 initiation. There are no generation-ages except in so far as the [177] Dorobo imitated or joined in the ituika of the Kikuyu and the eunoto of the Masai. The word they use for the handing-over ceremony is eunotwet. Alternating ages or generations are distinguished as onet ap-tai (the right hand) and onet ap-katap (the left hand). When the Kikuyu system is referred to Mwangi is the former and Maina the latter, but the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups.

There are no indigenous chiefs, the judiciary and legislature 622 being a council of elders. Such an elder is called kiruogindet (pl. 623 kiruogik). A kiruogindet has much the same function as a Kikuyu [171] muthamaki. There is no laibon but formerly the Dorobo owed 648 allegiance to the laibon of the Masai.

They recognize one Supreme Being, called Tururit (compare 776 the Suk Tororut). There appears to be no cult of so-called Sun 771 Worship. The sacred trees, used for prayers to Tururit, are, for rain 778 the bamboo (a solitary clump), for honey the mukeu, and, in connection with circumcision ceremonies, [881] the muthai and the mutamaiyu.

78. Little or nothing is known of the relationship of the Dorobo 101 of Southern Kikuyu with other Dorobo sections. The "Dorobo [628] Committee" called them the Kikuyu Escarpment group, and remarked that they were first found in the Aberdares but left there and [166] went to the Masai Reserve, whence they were ejected. At the time the Committee sat this group was living as forest squatters in the

K
775 the case of the Kikuyu we might include unlimited spiritual forest ripe for hacking.

K
423 [p. 122] Land in relation to the spirit world
775 One aspect of this belief in personal spirits who retain an interest in the welfare of their relatives on earth—and apparently a very human interest at that—is that the occupiers of the land go to reside beneath its surface when they die. It seems that some priority or extra potency is accorded in this belief to early occupation. The 1929 Committee said:

> "... the immanence of ancestral spirits appears to find illustration in the Butaka system of Uganda, where it is said that the graves of from three to five generations of ancestors are held to constitute a claim to the land."

Roscoe, indeed, in The Baganda, had written:

> "Chiefs had to be on the alert to prevent people from burying their dead in good gardens, because the gardens thereby became freehold lands."

Dr. L.P. Mair disputes this statement, qualifying it as follows:

> "... the graves of previous occupiers would be pointed out as evidence of the claim, but it is important to note that they were merely evidence, the claim itself resting on the original grant and the fact that successive kings had not interfered with it" (1);

1. "Baganda land tenure," Africa, April 1938

even so, early occupation was of great importance and apparently connected with some priority accorded to the dead.

K
D
423
775
We might perhaps find in some such principle a partial explanation of the Dorobo attitude concerning "sales." Karanja wa Waweru, a Dorobo, giving evidence in the Kiambu District Commissioner's Appeal Case No. 1 of 1931, affirmed that the land in question had been sold by his grandfather and was Kikuyu land, but that he, and his son after him, were entitled to receive goats in respect of it. He therefore admitted that the land was lawfully occupied by Kikuyu, but perhaps intended to intimate that the occupation could not be deemed complete until at least four generations of Kikuyu dead were

DK 423 775

underneath the soil. That was not in fact the explanation that he gave but there may have been at the back of his mind some feeling of the sort. For otherwise it is difficult to understand, on any principle of direct purchase, how he could reconcile the statements that the land was Kikuyu land and that his family was entitled to receive goats "to balance the profits." His previous statement that "in the old days there was no outright sale," though it confirms in some degree our contention that the Kikuyu brought their Metume customs with them, is no sufficient answer because all that could mean is that the land was still Dorobo land. There is, however, another possible explanation which will be noticed later.

However that may be, there was no doubt some consideration of the rights of disembodied early occupiers at the back of the reply an old Kikuyu gave me to the question as to why the Kikuyu immigrants did not drive the Dorobo out but "bought" them out instead. Like all the others questioned on the point he first of all replied that it would never have entered a Kikuyu head to do so dastardly a thing, but when invited to explain he said, "the earliest owners of the land were Gumba. They lived beneath the ground and when they disappeared they vanished into it. Our fathers, when they died, would go there too. And so they could not drive the Dorobo out by force." At first sight there is [p. 123] something of a non sequitur in this reply, but examination probably reveals the line of thought. The Dorobo who succeeded them in occupation of the land had presumably already made their peace with living Gumba or with the spirits of the Gumba dead. They were probably blood-brothers of the Gumba or the latter had expressed by ritual their acquiescence in the occupation following theirs. To drive that occupation out would rouse the Gumba in the spirit world and call forth spiritual opposition to the new invaders. In any case the Gumba were still there—beneath the ground—and any rapine of the land, still theirs within the spirit world in partnership perhaps with the Dorobo dead, would certainly offend them and be liable to undermine (the very word) Kikuyu operations in a stretch of land the like of which, for agriculture, they had rarely seen. Not only that, but what a reception would they get as guests when in their turn they ceased to live on top and joined the underworld!

/258 cont./

805 192 Today is called legîi or legîila, tomorrow lâpe or lâbe, yesterday aresch; like the Masai, they have but one word for the day before yesterday and the day after tomorrow, namely, mîlek; the next day is called to samag, the one then following to hag; for the days after that the Masai words are used.

XIV.

000 Religion. -- Prayer. -- Supplication feasts. -- Amulets. -- Sorcery. -- Evil eye.

771 171 796 [821] The religious views of the Wandorobo are identical with those that we have become acquainted with among the Masai,[1] except that they do not call God 'Ng ai, but Uêd. In songs God is also frequently called the black God, Uêd kabiassa; on the other hand designations analogous to the Masai expressions for clouds and the redness of the sky are not found here; the former are called adja kabaka, the latter adja kahoma. Of the constellations they know the ones that the Masai also know, and designate them with the same names. They have no pictorial representations of Uêd, for the same reasons as 782 the Masai. Everyone prays, married people and children at home, the dobonog along the way, if they are afflicted by trouble or illness; in everyday life the dobonog do not pray. The woman prays every morning while making the fire; when her husband and the children see this, they often place themselves beside her and also say a prayer. This always contains only a supplication, never any thanks. A supplication /259/ for protection runs: Uêd sigima gemischin; for children, Uêd nge hawa; for wives, Uêd nge mai; for meat, Uêd nge aga; for honey, Uêd nge agung; for food, Uêd nge e haiug; for health if 775 [171] one is sick, Uêd adudere an. They think about the fate of the soul -- in contrast to the Masai -- only very rarely, even the old people. The author met only a few aged Wandorobo who were able to make statements about this. These coincided with the reports of the Masai.

1, [For information on the religion of the Masai, see FL12 Masai, 18: Merker, category 116, pp. 268-279--Analyst]

1:Huntingford E-4, 5 (1938-1939) 1953 FLÁ Dorobo FLÁ

585 [237] [591] that cow-dung be used for both the *kumdo* and *koresiot*, and if there are no cattle in the bridegroom's settlement it must be procured from somewhere else. Marriage is patrilocal.

Marriage with Nandi

582 648 Eighteen marriages were recorded in genealogies between Dorobo and Nandi or members of the Nandi group:

Dorobo and Nandi women:	5	Dorobo and Nandi men:	10
Dorobo and Keyo women:	1	Dorobo and Keyo men:	1
Dorobo and Terik women:	1		

Marriage of Dorobo women to outsiders seems to be due to the poverty of the Dorobo, which in these cases would have meant that the women would have remained unmarried; such marriages also mean the accession of stock to the Dorobo.

Polygyny

595 [587] Although there is no objection to polygyny, Dorobo seldom have the means of acquiring more than one wife at a time, though several cases occurred of re-marriage after a wife's death or desertion. In one genealogy a woman had no less than four successive husbands, none of them her husband's brother, and her only issue was one daughter.

Re-marriage of Widows

587 Unlike the Nandi, the Dorobo recognize the re-marriage of widows in the normal manner on payment of bridewealth to their fathers, brothers, or other representatives; it is, however, unusual. Widows normally live with their husband's brothers, return to their parents, or else live alone.

Divorce

586 Divorce is rare, and is of one kind only—permanent. The husband can claim the return of the bridewealth. But a wife who has borne a child cannot be divorced for any cause whatsoever.

Birth

843 [834] 844 846 862 845 [224] Intercourse between husband and wife stops at the fourth or fifth month of pregnancy, and is not resumed till the child is about six months old. Birth takes place in the husband's hut, the husband going to live elsewhere nearby. The wife is attended by a midwife, *ngaitoyonit*, and her mother is present if possible. She stays in the hut for six or seven days after the birth, and the child's body must be kept covered for several weeks, even the father being allowed to see only its face. The mother must be purified by her husband, who kills a goat (which he must acquire somehow if he has none of his own) and rubs the fat and undigested grass (*eiyat*) from the stomach on her face, breasts, and belly. Children are weaned at the age of about a year. Twins are not liked, and the mother's ritual uncleanness caused by their birth must be removed by the killing of a goat which is eaten by the mother and her women friends. The Dorobo say that if a man has set a trap at the time when his wife bears twins, the trap will never again catch an animal.

553 [716] [883] Children receive their first name, the spirit-name, soon after birth; as among the Nandi, this name is not used, but links the child with a protecting spirit. The second or principal name is given before the child can walk, at the time when it is first given solid food, and is called " porridge name " in imitation of the Nandi custom. Children may also be given nicknames which often refer to some physical peculiarity. After circumcision, boys become *Arap*, son of, eldest sons taking their

1:Huntingford E-4, 5 (1938-1939) 1953 FLÁ Dorobo FLÁ

412 And lying about on the farms. The only weapon is the bow, *keyeyuda*, which the
411 Dorobo make themselves from the *kwiset* tree (*Grewia* sp.); it is about 5 ft. long, and
[439] the bowstring, *iset*, is made from gut of the giant pig, *kumda*. Arrow-shafts are
378 made from the *kerenundet* and *mamite* trees, or from bamboo, *sosiyat*; arrow-
heads are bought from the Nandi, and are of the Nandi patterns. Arrows are carried
in quivers made of hide. Arrow poison is made from the *kabot* bush (*Acocanthera Schimperi*).

Baskets

415 Making baskets, *kereyet*, is a common occupation of Dorobo women. They are
[462] made from fibre of the *phoenix reclinata* palm, *sosiet*, and sewn with bast made from
[824] a plant called *taberwiet*. The technique is a spiral foundation with a flat then
285 gradually ascending coil, of the simple over-sewn type and bee-skep variety, the
stitches being spaced out and not close together.

Miscellaneous

317 Salt used to be made from the ashes of the plant *teperyuet* (*acmella Integrifolia*).
[268] Red and white earth is found near Timboroa on the east of the Dorobo country, and
[439] men go in parties of four or five to dig it, carrying home the earth in large leather
[302] bags, mainly in order to sell it to the Nandi who, in 1930, gave them 2s. a bag.
415 Red earth, *orokoit*, is mixed with fat or simsim oil for rubbing on the hair; white
482 earth, *eworiet*, has magico-religious uses. For carrying a number of small objects a
1 carrying-net called *lekuelet* is used; it is made of a pair of oval rims 3 ft. 6 ins. long
with pieces of liana stretched across them, somewhat resembling a pair of handleless
tennis rackets. These are sometimes used by the Nandi.

Ritual and Beliefs

Religion

● 776 *Asista*, the sun, is recognised as a being that can supply or withhold the needs
of people: *Asis, ipiyos ponyek*, "*Asis*, fill us with meat," is a common prayer.
Some say that *Arawa* the moon is his sister, others that she is his mother. Besides
Asis, it is believed that there is a being called *Ilet*, the thunder, who produces rain,
and "the rainbow is his arm which draws up water for him." The Dorobo also
believe in spirits, good and bad, both of which are called *ereuwiki*, a word which
includes the *oiik* (ancestral spirits) and *mumumbwanik* (evil spirits) of the Nandi. The
775 ancestral spirits have the same significance and functions as those of the Nandi, and
though they punish the living for doing evil, they are otherwise friendly and visit
the living, travelling in the bodies of snakes, both to see their people and to get food
in the form of *lokowark* (honey and water); spirit-snakes should not be killed.

Divination

787 The Dorobo appear to have no diviners of their own, and when they have
789 recourse to divination, as in cases of illness or witchcraft, they go to Nandi diviners
of the type called *sakeryuet*, by whom they are charged a small fee. The people
759 called *orkoiyot* (pl. *orkoik*) among the Dorobo are no more than leeches or physicians
who prepare healing medicines from trees and plants. Although the Dorobo have a
789 reputation among other tribes as powerful rain-makers, they themselves say that they
have no rain-makers, which is probably true.

Death and Burial

764 Very old men and women are buried in narrow holes about 5 ft. deep in which
the bodies are laid full length wearing their clothes; one year after an old man's
death his children plant a branch of *mukupcot* (*dracaena* sp.) on his grave and let it
grow. Other people are laid out for the hyenas, both sexes on the right side with

1:Huntingford E-4, 5 (1938-1939) 1953 FLA Dorobo FLA

THE DOROBO OF KIDOI (KERIITA)

History

101 The group described by Lambert as living at Kerita on top of the escarpment, on the edge of the Forest Reserve 10 miles north of Lumbwa, is that classed as Kidoi in *Anthropos* 1951.[1] It was seen by Thomson in 1883 at the place known to the Dorobik as Mawaisi (" place of bamboos ") where, he says, a Dorobo village was established for selling land bought from the Kikuyu to the Masai and the Nandi.[2] This group is part of the Kikuyu Dorobo who occupied the land before the Kikuyu came. The process by which the Dorobo had completely lost their land by 1907 when Tribal passed through is summed up by the Kenya Land Commission as one " partly of silence and partnership and partly of adoption and absorption, partly of payment, and largely of force and chicanery."[3]

Organization

621 There are no chiefs, control being in the hands of a council of elders, with a leading elder called *kiruokindet*, as among the Kipkoimek. Marriage is patrilocal, and descent patrilineal. Polygyny is permitted. Boys are circumcised, and girls are subjected to clitoridectomy. There appears to be some sort of age-set system, but Lambert's statement is not very clear on this point.

There are said to be nine clans, with Nandi-looking names beginning with the prefix *kap-* (which does not imply territoriality, but simply means " group of "). These clans are sometimes referred to by Masai clan names, or even by Kikuyu clan names. The word for clan is *ol-ghatani*, derived from the Masai *ol-gatata*, " clan," and not, as Lambert suggests, from *ol-gotin*, which means not " plain," but " side path."

Religion

●716 A so-called supreme being called *Torosi*[4] is recognized, and the statement describing ancestral spirits as " active members " of a lineage implies the existence of an ancestor cult.

969 Source: H. E. Lambert, *The systems of land tenure in the Kikuyu Land Unit. Part I. History of the tribal occupation of the land*, pp. 67, 68.

that emotional disturbance is punished by expulsion from the tribe. They described their ethos in the following terms:—

Ko'nech kpâsh ol kwâsh che ndjwah ab che
We take counsel the-matters that we-may-go which-are good and which-are

nech, ol ko-kwa gâk tukul, Ingombe chûk'
bad that they-may-understand(-obey) the-people ab. If-he-refuses the-one

che tukul, ko-ura, ol kwa ceret che,
other say, we-expel(-him) that he-may-go the-country other.

["We take counsel that we may find what is good, and leave what is bad, that all men may obey. If any refuse, he is driven out of one country."]

IV.—Religious Beliefs, Magic, and Medicine.

Religion.

The religious beliefs of the Dorobo are even vaguer than those of the Nandi. They believe in a god Asista (N.), who is the sun and moonshine, and who has a sister Aruwa* (N.), the moon.† No offerings are made to either, but they are prayed to both before going on a hunt. The prayers seem to have one form:—

Asis,* kpây'-nch cmâk,
God, fill-us-with the-food,

or,

Aruwa,* kpây'-nch cmâk,
Moon, fill-us-with the-food.

They believe also in ghosts and spirits (ntindik, pl. ntik, N.) which are good and bad. Prayers are addressed to the good ntik (ntik che ndjwah) to obtain food and health, e.g.:—

Ntik, kpây'-nch cmâk,
The-spirits, fill-us-with the-food,

Ntik, kpây'-nch ngwâk,
The-spirits, fill-us-with the-health.

Libations of honey and water (kpomok)* and of honey-wine (kipkutuk, N.) are offered to the good ntik, in order to obtain food and health. These libations are made from gourds (kumbi), and while they are poured out, the formula,

kpây'-nch cmâk ol kâpâye ngwâk,
Fill-us-with the-food that we-be-filled-with health,

is pronounced.

* I have not come across this particular relationship before in the Nile-Hamitic group; though other tribes of this group hold that the sun and moon are related, or are husband and wife (the latter Masai and Nandi). (*See* Nandi, The Ant, for the ideas of the Sun, Supreme, Turkana, etc.)

† The Nandi also wife.

3:Huntingford E-1 (1921-1928)929 FLA Dorobo FLA

Where a man is ill and dies, it is said that bad silk (*silik che gook*, N.) have killed him; if he recovers, a good *silindet* has saved him. No offerings are made to the bad *silik*.

There is also a vague belief in a future life. A man's spirit is said to go at death to the *kwet ap nik* (N.), or land of the spirits, which is under the earth, and is a bad place.[1]

Magic.

There are *magicians* (*pendindet*, pl. *pendik*, N.) who are bad, and who prevent people from getting food by means of their spells. There are also *diviners* (*arkoiget*, pl. *arkoik*, N.).[2] There is no equivalent of the modern Kenâ system of "arbitrament" or rule by a medicine-man.

Medicines and Charms.

(a) *Medicines.*—For snake-bite, the gum of the tilmet tree is used, mixed with the honey of a species of bee, called "kwenyet" (N.), and man's fat. This concoction is rubbed on the affected part, and a little is also eaten. For coughs, a plant called "*ngoiyo*" is chewed; this is used for all chest complaints.

(b) *Charms.*—Children wear a charm to ward off the evil eye (*sakut*, N.), which is similar to that worn by Kenâ children. It consists of a necklace of seeds of the *kapyawet* tree (N. *kapsosiâ*) strung on a cord, the seeds being separated by short pieces of bamboo (Text-fig. 9b). Old men wear a charm to keep away circumcision (*kimolongot*, or *kimoiin* (*kimoiin*), N.); it is made of two small pieces of the *simotiet* tree,[3] about 1 in. long, which are tied to the belt (Text-fig. 10).

V.—Social Institutions.

Social Divisions.

The male sex is divided into boys (*kipsiâ*, N.), warriors (*murenik*, N.), and old men (*pariotik*, or *ngariotik*, N.); the female sex, into girls (*tipsiâ*, N.) and women (*korosiek*, or *chepisiek*, N.). As circumcision, a boy becomes a warrior and a girl a woman.

Married and unmarried people sleep separately. Married people and small children may sleep in the same hut, while unmarried men sleep elsewhere, often in the adjoining (N.), or "warriors' hut," where they cohabit with the unmarried girls. Though free love is practised, it is not carried to such an extent as among the Kenâ, and although girls sleep with warriors, they like to preserve their virginity till circumcision. Warriors frequently marry their sweethearts (*murenik*, N. *murani*), whereas in Kenâ they usually marry someone else.

The position of women in the same as it is among the Kenâ, that is, they wait on the men, do all the menial work, and are their husband's property.

[1] This word is not used with the same sense in Kenâ; originally it seems to have meant simply "*mysterious man*" (*kwenik*, sp.*ngo*).

[2] *Kipkoiko arokindinoon.*

S:Huntingford E-S (1938-1939) 1954 FLA Dorobo FLA

681 The principle of compensation enters into the legal consequences of offences against the individual, as well as the principle that in certain cases where the injury is grave the injured party may get satisfaction by killing the offender. Of course when he does this, he has to pay for his satisfaction, but the need for satisfaction may override the knowledge that it must be paid for; and the fact that public opinion recognises a man's right to kill one who offends against him prevents any display of public resentment when he exercises his right. On the other hand, some of the traditional penalties seem to be both excessive and impracticable, even when the need for satisfaction is taken into account. When we are told, for instance, that a man may kill a man who hunts without permission on his land, but that if he does so he must pay compensation, we may be inclined to wonder how such a rule could remain in existence. The explanation is, I believe, that the apparently excessive punishment and the consequent liability to pay compensation act as a deterrent in two directions: the offender may be restrained from trespassing and doing what to his people, from the nature of their life and environment, cannot be anything but economically bad; and the owner may be made to pause before he takes a man's life, even if the offence is considered so serious that by customary law he is entitled to get satisfaction for it. The Dorobo is no fool; he could not have survived if he was. And the African, when engaged in his own affairs, is just as capable as anyone else of restraining his actions.

5. Religion and Magic

a) Belief and Practice

791 Briefly, the basic principles of Dorobo religion are these: There is a God, who is the sun and is behind everything, but beyond the reach of man, who must therefore approach him through intermediaries, the chief of which are the spirits of the dead, which having once been people are still able to maintain contact with the living. If they are offended, catastrophe comes to the living. By means of various observances and ritual practices men manage to keep on the right side of the Unseen World and to maintain the spiritual and material welfare of both hordes and individual.

● 796 "There is one whom we call *Asista*, and he it is who lives above; he is the sun which we see in the sky, and we know no other name for him". Thus did an old Dorobo describe what he understood when he thought of *Asista*, the word which means both "sun" and "god", yet does not imply that the Dorobo are sun-worshippers. Some say that *Aruus*, the moon, is his sister; others, that *Aruus* is his mother; and he appears to have no father. People make no offerings to *Asista* or *Aruus*, but pray to them for help:

Kipendi nemak ni kwakwa kilimoin Asista, Asista, tipiyor sendit, ngai Asis, tipiyor kamik, ngai Asis, tipiyor pamyak, "When we go to the forest to hunt we say to *Asista*, '*Asis*, fill us with food', or '*Asis*, fill us with honey', or '*Asis*, fill us with meat'." Similar words are spoken to *Aruus Aruus, tipiyor sendit*, etc.

Schottingford K-5 (1936-1939) 1954 FLA Dorobo FLA

The Dorobo, *Ilat*, is he who produces rain, and the rainbow, *emoimoiat*, is his arm, *ne nanye pith*, which draws up water for "him". Long ago, according to a Dorobo myth, *Ilat* was a man, and one day a Dorobo met him standing on a rock on Timboret Hill. And because the Dorobo thought him bad, for he brought mist which hid the sun and spoiled the hunting, he shot *Ilat* with a poisoned arrow, and as *Ilat* fell thundering to the sky, where he has been ever since.

Another Dorobo myth tells that once there lived on the earth some elephants and a Dorobo, and *Ilat* lived with them. One day the Dorobo was hungry and made poison from the *kelee* bush*. In the night he struck a poisoned arrow into one of the elephants, and in the morning it was dead. When *Ilat* saw it, he said: "Who has been killing my donkeys?" The Dorobo cut up the dead elephant and dried the meat, and then had food for many months. When it was finished he killed another elephant in the same way, and again *Ilat* said: "Who is killing my donkeys?" Then the Dorobo said to him: "I killed them, because I was hungry". Then *Ilat* said to himself: "I am afraid. If I stay here, the Dorobo will kill me too". So he called out to *Asiata* to take him up to the sky, and he left the Dorobo with the elephants and went up to the sky. And to this day the Dorobo kill elephants with *kelee* poison, like that man of old*.

Besides *Asiata*, *Aruwa*, and *Ilat*, the other inhabitants of the Unseen World are the spirits, which are of two kinds, those of the dead, who are on the whole good, and other spirits, which have never been human and are evil. Both are called *ememba**, and this term includes the beings called *nik* by the Nandi, the spirits of the dead, and those called *mesumbwanik*, the evil spirits. Both these words are used by the Dorobo. One statement made about them was to the effect that *mesumbwanik kipisie nik*, always *kobeg* follow *ememba*, "the *mesumbwanik* are not different from the *nik*, we call them both *ememba*", because though the *mesumbwanik* are always bad, the *nik* can at times be bad too. Nevertheless, the Dorobo drew a distinction between the two kinds, and refer to them as *nik* (the good) and *mesumbwanik** (the bad).

The spirits of the dead live in the *kwet ap ememba* which is under ground. "We haven't been there", said Arap Cepaaker, "so we don't know anything about it". But the spirits are there, and they come thence from time to time to visit the living, not only in dreams to pregnant women, but actually into people's huts, to which they travel inside the bodies of snakes. When a snake comes into a hut at night, it is not killed, but some honey is offered to it with the words: *Eli, Asaan, i ainabi*, "Go away, In-and-on, for

* *Acocanthera Schimperi*.

* It will be noticed that there is a similarity between this and the Nandi myth given by Hobley, Nandi, p. 111, and that the myths printed in JRAI 57, 1927, p. 444 and Hobley, Masai, p. 264 are of a similar pattern. In the latter, the man is a Dorobo.

* The full form of this word is *ememba* (*ememba*), pl. *emembai* (*emembai*). It seems to be the same word as the *emoit* which Masters gives as the Kaya word for both good and evil spirits (*Old Dwellers of Kenya*, 1943).

* This word, which the Dorobo have borrowed from the Nandi, has in turn been borrowed by the tribes from the Basin Kavirondo *emoomboo*, "spirit".

5(3)huntingford E-5 (0938-1939) 1954 *FLÁ Dorobo FLÁ*

you are a spirit". A man who kills a snake at night in his hut need not necessarily become ill as a result (as the Nandi believe he will), but the ancestor whose spirit was in the snake will show his anger by never going to see the man again and transferring his attentions to some other member of the family. This would no doubt result in bad luck, for the offender would be continually conscious of what he had done. Another account, however, which I think more nearly represents the common belief, is that after offering a snake honey-and-water or milk, the owner of the hut says to it: *Ut si oyon tun ingori lakwat*, "Go and return when (my wife) bears a child", so that the name of the spirit may be given to the child. According to this account, if a man should kill a snake at night in his hut, he will probably be ill the next day unless he pours some honey-wine on the floor where the snake had been in the night. This should free him from the danger of illness. Snakes seen in the daytime may be killed without fear.

The spirits also appear in daylight as shadows (*wrut*) and they may make their presence known by slight noises, like the sound of a stick being broken. When a man sees an unaccountable shadow, or hears a noise for which he can see no cause, he concludes that it was a spirit which has come to see him, or perhaps just come up to take a walk on earth. But he need do nothing, nor need he be afraid, for at such times the spirits do no harm.

Before setting out to hunt, a man asks the spirits to help him:

Cemeliik, okkwe tiony ne kipare,
Spirits, give-us animal which we-may-kill;
okkwe kwenik ni kitipiye.
Give-us honey enough-to-satisfy-us.

Offerings of honey-and-water, *kokwenk*, are sometimes poured on the ground from gourds with a request to the spirits to provide food in times of scarcity. Such offerings are made by people at their own homes when their affairs are going badly:

Cemeliei, epiiyat emdit,
Spirits, fill-us-with food,
ni kitipiye aapat.
That we-may-be-filled-with health.

When a man is very ill, he sometimes sees what he takes to be another man lying beside him for a short time, who is invisible to other people. When he has recovered, he realises that this other man was a spirit who had come to help him to get well, and to take into himself the sickness: *Kweyon ni kotipe, kwo ne kwese chi ne mimi, ni kwaap*, "He came to guard him, and lay where the sick man lay, to make him well".

Evil spirits sometimes attack people when asleep and make them ill. They also play tricks on people and do spiteful and irritating things to them. A man is walking, for example, and suddenly catches his foot, as he thinks, in a liana drawn tight across the path, and falls. But he finds nothing there, and realises that it was done by an evil spirit. In 1927 I was one night encamped on the edge of the forest between Kipkoreon and Timoyo, with

5:Huntingford E-5 (1938-1939) 1954 FLÁ Dorobo FLÁ

a clear, windless sky. About 10 o'clock a curious whistling noise began to come from a certain part of the forest, and continued, on the same note, and without a break, for several hours. It was certainly no human or machine-made noise, and the Dorobo professed complete ignorance of it. A Nandi who had lived there before the Nandi War told me afterwards that it was an evil spirit whistling in the forest, "for we used to hear them whistling to each other like that in the forest when I was a child".

Between people and the things on which they depend for their existence both spiritual and material there is a connexion which is best expressed in terms of a ritual relationship. Things have a ritual value for people, and people themselves have a ritual status which is a relationship with their surroundings that can be altered for better or for worse according to the way in which they respect the ritual value of the things around them. Religion and magic form the procedure which protects these ritual values and status, while political organization is, in a sense, no more than an effort to maintain the ritual status of the horde in spite of the tendency of its members to injure their own ritual status and in consequence that of the horde also.

Certain things that a person does, whether voluntarily or involuntarily, cause deterioration of ritual status; but the original status may be recovered by the performance of certain ritual actions which may involve some personal effort or sacrifice. Examples of acts which cause loss of ritual status, and the means taken to restore it, are: (1) A girl who bears a child before marriage must have the undigested grass (*siyat*) from the stomach of a goat rubbed over her face, neck, and breasts, and must then wash it off. (2) After a woman has given birth, she is in a condition of much reduced ritual status, and her husband must rub goat's fat and *siyat* over her face, breasts, and belly. (3) A man who has killed a Dorobo must have goat's fat rubbed all over him. (4) One who has killed an enemy must have stripes of white earth painted on his face. In all these cases the people have done something which causes loss of ritual status, making them ritually unclean (*ssaa* or *somis*) and so a source of danger to others till they have been purified. The potential danger is removed by means of something which has a ritual value. Moreover, an essential element in the cleansing process is sacrifice, that is, the use of the material must either involve giving up something which is valued, or it must require some effort or even risk to get hold of. The *siyat* or fat must be from a domestic animal: if the person concerned has one, he must use it; if he has none, then he must get one, and without delay, which for a Dorobo usually meant that he had to steal it, and thus risk getting killed while doing so. Therefore there is an act of faith in these magico-religious performances, and people believe so firmly in the efficacy of what they do that they are prepared to risk danger in order to get the necessary materials. The use of white earth may entail no more than a journey to get it, but that still means a personal effort on somebody's part. Materials which are used for the restoration of ritual status, and in consequence have a special ritual value, include: the flesh of goats, which is eaten when twins are born, and in cases of incest; *siyat*, the undigested grass from the stomach of a ruminant (a sheep

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

Sometimes people are made ill by evil spirits, which are capricious beings and take dislikes to people without any particular reason. They are said to come to a man when he is asleep and give him a sharp pull, which wakes him with a start. He looks round, and seeing nobody, knows that an evil spirit has attacked him. In a short time he becomes ill, and to cure him, the head of his family, (his father, father's brother or other old man) must sprinkle honey-wine over his head, saying as he does so: *Ui, ui*, "Go, go", ordering the spirit to leave him; and then he will have a chance of recovery.

When a man is about to die, he is allowed to lie undisturbed in his hut, and during the evening of the day on which he dies his body is taken out by his sons, or if he has none, by other men of his family or clan, and laid on its right side (men and women alike) with the legs straight and hands crossed over the breast, on the edge of the forest about three hundred yards away from the hut. If the hyaenas do not come and eat it, nothing is done, the body is just left to rot, and the bones are left lying there. (This, of course, very seldom happens.) The relatives lament on the day the person dies. Those who carry out the body are unclean for three days and remain in their huts, while their people make honey-wine. The old men of the clan are then called together and some of them go up to the carriers, one of them bearing a gourd full of honey-wine, from which he takes a little in his mouth and spits it over each of the men in turn; the other old men then oil their faces with the fat of a sheep or goat, saying: *Omanda anyun, otuiyo ok lakok*, "Go forth now, and mix with the children", meaning that you are now free to meet even children, since you are clean. The old men then drink the honey-wine.

Before a body is laid out for the hyaenas, all the ornaments are removed from a man's body by his sons, and from a woman's by her daughters, who then divide them among themselves. Before the ornaments are worn, however, they are laid aside for three months, after which some of the old men of the clan come and grease them with sheep's fat; and in preparation for the greasing the children make honey-wine for the old men who, after greasing the ornaments, spit some of it over the children and then drink what is left. Very old men and women are buried in narrow holes about 5 feet deep, in which they are laid wearing their clothes. A year after an old man has been buried, his children plant a branch of *mukupcot* (dracaena sp.) on the grave and let it grow. Babies are buried in the dung-heap if there is one, otherwise they are laid out for the hyaenas like other people. The hut in which a person has died is not dismantled, but remains occupied till, on account of normal deterioration it is abandoned.

The dead person's soul enters the body of a hyaena when the body is eaten, and leaves the hyaena when the animal goes to ground, whence it goes under the earth to spirit-land, from which it returns periodically to visit the living.

Closely linked with religion, so closely indeed that sometimes it is not easy to see where the one ends and the other begins, is magic. By this term I mean the belief that by doing or not doing certain things, man can control

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

A comet is a sign of coming famine, not merely for the person who sees it, but for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general trend of knowledge of the Dorobo that the important parts of their life are helped and controlled by magic. The recovery of ritual status after child-birth and after the birth of twins is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with those powerful and capricious beings; the whole idea of circumcision (even if it is borrowed) is that of the transition by means of a magico-religious performance from the state of boyhood to that of manhood; these and other observances and avoidances are all magic, and are done because people believe that by doing them they will be enabled to go on existing.

b) Analysis of Beliefs

Ritual Values. Things which have ritual value fall into three categories: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status:

(1) Honey is sacred, like milk to the Nandi; and in addition to the taboo on eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the provision of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is burned. The last notion means that unlike the pastoral tribes, the Dorobo do not burn grass near forest.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that their use is directed to both the dead and the living.

(3) Things used for the recovery of damaged ritual status include goats and sheep, and certain of their products, i. e. *oiyat*, and fat, as well as 'butter' or *musit ap tangina* from cows. All these come from sources which formerly were hardly possessed at all by most Dorobo, and even to-day only on a small scale. Honey-wine is used a good deal, as well as white earth.

Each period of life has what might be called a standard ritual status, which is changed to a different standard on circumcision, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults is altered under certain conditions: (1) a man setting out to hunt is not in the same ritual state as when he is staying quietly at home, and he must not have sexual intercourse at such a time, i. e. just before he starts or, should he have an opportunity, while away; (2) a person sick of an illness has a status different from that of other people; (3) touching a corpse causes deterioration of ritual status; (4) the breaking of a taboo affects ritual status; (5) women suffer deterioration of ritual status through the birth of a child before marriage, the birth of twins, and even, to a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

Maintenance of ritual relations with the spirits is effected by the recognised offerings made to them; and with 'nature', on which the food supply depends, by other means (see below).

The World Order. In the myths related at the beginning of § 5, the thunder plays an important part, and is even portrayed as a man. One might almost assume from this that he was believed to be an earth-dweller who began a second life in the sky as the thunder-god who controls the rain, for the notions of rain, mist, and thunder are all interwoven, and the rainbow is "the arm of *Ilet* that draws water for him". These myths reflect the Dorobo attitude of the people to their surroundings. One of the chief features of the forest is heavy rain and frequent mist, and it would be surprising if we did not find among them the conception of some sort of rain-being who brought mist. Again, since rain is plentiful and droughts rare, the rainmaker is not needed, and although the lowest known rainfall, 28 inches in 1933 at a place two miles from the edge of the forest (and probably a little higher in the forest), would indeed constitute a drought year elsewhere, in the absence of both crops and cattle an occasional low rainfall does not matter so long as there is enough to make the plants flower. Even a heavy rainfall of 70 inches or over does no more than cause temporary inconvenience where there are no crops to be damaged and the slopes prevent flooding. The Tindiret forest is, in fact, an ideal place for hunters to live in. However prolonged the dry season, the conditions for wild life are better there than in the open plains below, and low rainfall has never yet prevented a supply of game to hunt or trap. Whether the people are able to kill enough game to ensure a supply of food is another matter, and the inter-relation is not so much that between man and nature in general, but between man and the animals. Man's wrong-doing is thought to produce either a failure of the supply of animals, or his inability to kill or catch what is there in abundance.

Social Values. Things which are important to man because they are indispensable to him have what is called a social value as well as a ritual value, because between man and them there is created a relationship which man must maintain if he is not to suffer. The food supply of a hunting people is got from day to day and depends on the skill of the hunter. It is uncertain, because on any given day the hunter may not find game, or having found it may not kill. But precarious as such a life might seem, there is no evidence that in the past there was often any great scarcity from either of these two causes. The old men say, in fact, that whereas food is scarce under present-day conditions, in the old days when hunting was not restricted it was, if not always abundant, at least enough. Such a statement is not, I think, merely an exaggerated memory of better days, the outcome of a longing to get back to the forest, but it explains in part the otherwise remarkable scarcity of hunting magic and ritual procedure. Some hunting magic there certainly was, and fear and ignorance prevent free talk about it; but it is clear that when the food supply throughout the centuries is found adequate,

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

different, for they also are intelligent. Every animal of the forest is alike [10]; we eat some, others we do not; but we like them all. We are of the forest, and they also are of the forest.)

Wild animals for the Dorobo have personality, not the kind that is expressed in the folk-tales of pastoral and agricultural Africans in which animals speak and behave like humans, but a real kind of personality that human beings like the Dorobo can respond to.

Bees, though not themselves sacred, are analogous to cattle among the Nandi, and their product has great social value and hence strong ritual value. Besides giving honey with its many uses, bees provide an occupation which is less strenuous than hunting and can thus be continued by older men who are still reasonably active but not active enough to stand all the rigours of a hunter's life.

Edible plants have social value, but since under existing conditions there is no scarcity of them, there is no ritual relationship between them and men.

The clan has a social value not found among the Nandi, for the Dorobo are not a tribe in the same sense that the Nandi are, and although the expression *ki Okiek*, "we are Dorobo", means a good deal, it has not the same significance that the similar expression *ki Nandi*, "we are Nandi", gives when said by a Nandi. The real unit of the Dorobo is the clan, the significance and solidarity of which we have already tried to explain; and the effect of all that the clan means to the Dorobo is that it has an immense groupvalue, being the element that ensures horde solidarity.

Personification and well-being. Rain and its inevitable concomitant the thunder are perhaps more striking in a forest than the sun, and it is reasonable that they should be personified in one figure: "*Ilet* was a man". This is probably an original Dorobo belief, for to the Nandi *Ilet* has the form of a bird. This personification expresses and fulfills the Dorobo need of personal contact with a dangerous element, and explains the actions of the Dorobo whom SIR CLAUD HOLLIS saw defying the "rain-god" [11]. The notion of *Asis* is much less concrete and definite, and in spite of occasional prayers to him, the conception of his functions is even less clear. Yet while *Ilet* may be regarded as the power which controls the weather, *Asis* seems to be the moving spirit behind everything, with the spirits of the dead as intermediaries between man and 'nature'. It is plain, however, that the well-being of the horde is maintained by keeping on the right side of these powers, and that the avoidance of public delicts is necessary to prevent disaster to the horde. Public delicts thus in one sense come under the head of religion, for their commission entails the breaking of the ritual relationship between man and

[10] That is, although some animals (the human kind or Dorobo) are more intelligent than others, and although the human kind eat some of the others but not all, nevertheless they are all alike, human and non-human, in that they all live side by side in the forest.

[11] Man 1909. 101.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

the other world, and atonement is effected by ritual methods. The primary sanctions against such acts are upheld by the force of public opinion which is based on the fear of loss of well-being through offending the spirits, behind whom are the ultimate powers of nature expressed in the concept of *Asis*.

But these ultimate powers cannot be reached by man, who can neither see nor understand them, and people like the Dorobo (and indeed many African peoples) must therefore have some kind of intermediary. First come the *cesowiloi*, the spirits of the dead, to whom each man addresses his own prayers, and with whom there is a private relationship based on the fact that the spirits were once human beings themselves. Then protection is looked for through the use of tangible material objects in the form of amulets, such as the *lepuyuwet* against the evil eye, *revendet* against rheumatism, and perhaps the double spiral ear-rings occasionally worn, although the significance of the last among the Dorobo is not known. These are material intermediaries in that they act between man and the unseen as protectors.

Formalized religion. The notion of a spiritual being which dwells in the Kiet or 'universe' is crystallized in the word *Asis(ta)*, borrowed from the Nandi with perhaps some of the Nandi notions of its nature. He is identified with the sun, and prayers are made to him for success, and sometimes to his mother (or sister, for the accounts vary) *Arasa* the moon as well. This is the extent of the formal part *Asis* plays in Dorobo religious life, but he none the less performs the necessary function of being a recognized object to which men can turn, especially in thought, for restoration of confidence, which is no doubt one of the primary functions of the formalized concept of a major spiritual being, who provides people with an entity that they may look to for help and protection.

The belief in the existence of spirits is much more concrete, and more practical, for one section of the spirits were once men themselves and are therefore much nearer to men than *Asis* and well fitted to stand between men and the unseen world as mediators. The evil spirits are merely harmful or irritating according as the whim takes them, but they seem to play a relatively unimportant part in the religious life of the Dorobo, however much trouble and discomfort they may cause. They are just things that must be endured. A statement made by a Dorobo that the *musambuanik*, the evil spirits, are the same as the *oiik* or good spirits, is to be explained by the belief that even the good spirits can be malevolent at times, for malevolence is more noticed than benevolence, and it is necessary to maintain proper ritual relations with them to prevent malevolence. But unlike the evil spirits the *oiik* have a definite home somewhere under the earth, whence they return to visit and take care of the living, in whom they take an interest, and the part taken by the *oiik* in Dorobo life may in fact be summarized thus: (a) they can provide or withhold food; (b) they can cause illness if angered; (c) they can desert a man and so spoil his luck and neutralize his skill; (d) they are at the back of the legal sanctions as intermediaries between man and the ultimate spiritual power that controls the universe.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

A general statement made by one elder was that evil spirits cause illness, and good spirits cure it, which in the light of the total of what we know of Dorobo beliefs is more or less a reasonable summary, even though the good spirits can also bring illness. But the fact is that the good spirits are believed to be able to do both good and evil, and that the commission of public delicts reacts on them, so that, in the words of a Dorobo elder, "such things are not done, because they are bad, for the spirits do not like them".

It will be noticed that there is a good deal of similarity between Dorobo and Nandi religion [18], and there can be little doubt that much, though not all of it, has been borrowed from the Nandi along with other culture elements. It is, I think, necessary to mention this, in case anyone should be tempted to find 'parallels' which in reality do not exist. Dorobo religious beliefs are mainly not a parallel growth, but directly borrowed, and the resemblance to those of the Nandi will therefore be very strong both in general and in detail.

[18] As described e. g. in my booklet "The Nandi". (Peoples of Kenya Series.) Nairobi 1944.

7: Wayland N-5 (ca. 1926) 1931 FL6 Dorobo FL6
Jiye FK8

776 *Religion and Magic.*—God, the creative being, who long ago made all things, but who is now mostly asleep, is called *Nakwitt*. He was not the first man—indeed, nobody knows who the first man was—nor has he a female counterpart. Otiose as he is, he can on occasion [782] be persuaded by means of sacrificing a goat to intervene in human affairs, as when, for instance, the crops are bad and rain is needed.

791 The wizard is known as *Ngimaroni*. His functions are the same as those of the *Ajolu* of Labwor, and like that functionary he is a rain-maker, who though more efficient in this respect than an ordinary person is not prepared always to guarantee results. Perhaps not more than 20 years ago there was among the Wanderobo a great rain-maker whose name, Longalesi, is still well known to all the surrounding tribes. His powers were widely admitted, and he was consulted, not only by the Wanderobo themselves, but also by the Dodotho, the Jie, the Karamojong and the Turkana peoples, but not, however, by the Dodinga of the Sudan.

789 When the rains were late and the country was suffering more than usual from drought, representatives of the tribes would come in with generous presents of livestock and food. These would be gathered and heaped together near Longalesi, who would sit quietly smoking, so it is related, till he considered the offerings sufficient, when he would bestir himself in the matter of making rain. He, and the various representatives of the suffering tribes, would then partake themselves to a spot called Kalopeto, in a ravine that runs down into the Rift valley, where grows a giant fig-tree near a water-hole that, it is said, never dries up. A black goat would then be brought and be ducked in the water, but not allowed to drown. After this it would be speared in such a way that the contents of the stomach could be extracted without destroying the receptacle, which would then be filled with water. The procedure then was to hang the goat to the top of the fig-tree, while Longalesi called upon Nakwitt to send rain. At the conclusion of the rain-maker's beseechings, the goat would be cut down, and as it fell with a thud to the ground, those taking part in the ceremony would rush in, drain out all the water that remained within the body after its fall, and bear it away to a fire already prepared and cook it. The meat would be eaten by those who took part in the ceremony, and in due course the rain would fall.

791 Longalesi enjoyed a great reputation, and it is admitted, on all hands, that he was a king among rain-makers. He is much regretted by the Wanderobo, who say that since his death (he died in the Turkana country) the rains have been poor and uncertain, and "things are not what they used to be" in his day. His son is, or was, a chief in Turkana. It is to be noted that Longalesi was not a chief, but first and last a rain-maker, and the last of a long line of such specialists. I could gather nothing reliable as to the mode of burial of such folk.

[123] I secretly contracted with the present Wanderobo chief, with whom I was on very good terms, to visit the rain-maker's shrine by the giant tree. We were to start before dawn, but alas! the chief's courage failed at the last moment, at least I suppose so, for he disappeared and I and my search party failed to find him. I never saw him again.

D J 197 A few measurements and a very short sample vocabulary follow. These seem to indicate differences between the Wanderobo and their neighbours. The most marked difference is, perhaps, in their speech, for although the Wanderobo speak "Karamojong," the tongue which,

Succession is patrilineal and marriage patrilocal. Polygyny is practised. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again. 591 595 613 769 [775]

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Dorobo imitated or joined in the ituika of the Kikuyu and the eunoto of the Masai. The word they use for the handing-over ceremony is eunotwet. Alternating ages or generations are distinguished as onet ap-tai (the right hand) and onet ap-katap (the left hand). When the Kikuyu system is referred to Mwangi is the former and Maina the latter, but the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups. 881 561 [777]

There are no indigenous chiefs, the judiciary and legislature being a council of elders. Such an elder is called kiruogindet (pl. kiruogik). A kiruogindet has much the same function as a Kikuyu muthamaki. There is no laibon but formerly the Dorobo owed allegiance to the laibon of the Masai. 622 623 [171] 648

They recognize one Supreme Being, called Tururit (compare the Suk Tororut). There appears to be no cult of so-called Sun Worship. The sacred trees, used for prayers to Tururit, are, for rain the bamboo (a solitary clump), for honey the mukeu, and, in connection with circumcision ceremonies, the muthai and the mutamaiyu. 776 771 778 [887]

78. Little or nothing is known of the relationship of the Dorobo of Southern Kikuyu with other Dorobo sections. The "Dorobo Committee" called them the Kikuyu Escarpment group, and remarked that they were first found in the Aberdares but left there and went to the Masai Reserve, whence they were ejected. At the time the Committee sat this group was living as forest squatters in the 101 [628] [166]

Some Dorobo Buttons. *By A. C. Hollis.*

I recently went for a trip through the little known country lying between Naivasha and the Anglo-German frontier, and was fortunate enough to obtain a snapshot of a Dorobo, who was a member of the caravan, spitting towards the rising sun before saying his morning prayer (Pl. M, Fig. 1). Whilst performing this ceremony he had to lay aside his sword.

196

The rains were overdue at the time, and I took photographs of the same Dorobo making medicine to prevent the rain from falling. Fig. 2 shows him whistling at and defying the rain-god. In Fig. 3 he has laid aside his bow, and whilst holding his sword upright is rubbing the handle rapidly between his two hands. This is done when the rain-god takes no notice of his defiant remarks, and insists on turning on the celestial water-tap. It is doubtless only a remarkable coincidence, but although the rain offered threatened we had very little till we returned to the Uganda Railway, when it came down in torrents. All the natives of the caravan—Kikuyu, Kavirondo, and other East African tribes—believed that the Dorobo had kept off the rain, and I was told more than once that if it had not been for him we should have been washed away.

197

It is worthy of note that I met some Masai-Dorobo in the Rift Valley who did not speak Nandi like most of the Dorobo in both British and German East Africa. Whether their ancestors had never known this language or had forgotten it owing to long intercourse with the Masai, or whether they had been simply poor Masai, who, owing to the loss of their cattle, had become outcasts and taken to hunting, I was unable to ascertain.

A. C. HOLLIS.

[P. 177]

important aspect is, I fear, irrecoverable. I have been in the forest in both wet and dry seasons, and while trapping is still carried on, I could see no sign of hunting (i.e. shooting), and the description of a hunt is from narration.[1] Fear of a government which forbids hunting, and has of late itself hunted the Dorobo, has, I think, effectually sealed the lips of one or two who would normally have spoken on the subject. My informants, however, did say that sexual intercourse was forbidden before setting out on a hunt, though not before or during the process of trapping. In hunting there is an element of personal danger and of uncertainty as to success; magic helps to give confidence, and abstinence to avert ill-luck. In trapping the process is mechanical, largely a matter of technological skill, and with little danger to the trapper, who is sure to catch something sooner or later.

On the other hand, it is believed that both *Asis* (god) and the *chesowiloi* (both the good ancestral and the bad elemental) can influence a man's hunting, and before starting out to set a trap, he will say:

Asis, ipiiyech panyek,
God, give-us-enough meat,

or,

Chesowilök, okönech tiony ne kipare.
The-spirits, give-us a-beast which we-may-kill.

Honey (*kumiat*) is an important article of Dorobo diet, and provides both food and intoxicant: it is to them what milk is to a pastoral people. It is not stuff that can be picked up anywhere, but requires a certain technique, and, above all, the presence of bees in a suitable place. As, therefore, it has an actual social value, so it has acquired a ritual value, and certain observances are necessary if the supply of honey is not to fail. First, you must have your bees, and a man who has put up a new honey-barrel must take steps to ensure that it is inhabited. This he does by calling out, in an unnatural high-pitched voice, "Bees, bees, all you who are in this country, Come now and make honey here."

[1] Leopards, as already mentioned, are killed occasionally when they become aggressive and threaten livestock; but there are no organized leopard hunts, and in any case leopards are vermin.

/258 cont./

805 192 Today is called legîl or legîlla, tomorrow lâpe or lâbe, yesterday aresch; like the Masai, they have but one word for the day before yesterday and the day after tomorrow, namely, mîlek; the next day is called to samag, the one then following to hag; for the days after that the Masai words are used.

XIV.

000 Religion. -- Prayer. -- Supplication feasts. -- Amulets. -- Sorcery. -- Evil eye.

771 171 796 [821] The religious views of the Wandorobo are identical with those that we have become acquainted with among the Masai,[1] except that they do not call God 'Ng ai, but Uēd. In songs God is also frequently called the black God, Uēd kabiassa; on the other hand designations analogous to the Masai expressions for clouds and the redness of the sky are not found here; the former are called adja kabaka, the latter adja kahoma. Of the constellations they know the ones that the Masai also know, and designate them with the same names. They have no pictorial representations of Uēd, for the same reasons as 782 the Masai. Everyone prays, married people and children at home, the dobonog along the way, if they are afflicted by trouble or illness; in everyday life the dobonog do not pray. The woman prays every morning while making the fire; when her husband and the children see this, they often place themselves beside her and also say a prayer. This always contains only a supplication, never any thanks. A supplication /259/ for protection runs: Uēd sigima gemischin; for children, Uēd nge hawa; for wives, Uēd nge mai; for meat, Uēd nge aga; for honey, Uēd nge agung; for food, Uēd nge e haiug; for health if 775 [171] one is sick, Uēd adudere an. They think about the fate of the soul -- in contrast to the Masai -- only very rarely, even the old people. The author met only a few aged Wandorobo who were able to make statements about this. These coincided with the reports of the Masai.

1, [For information on the religion of the Masai, see FL12 Masai, 18: Merker, category 116, pp. 268-279--Analyst]

/242 cont./

843 pendants, beads, chains, or even a head of small livestock.

During the last two months before her confinement the woman is given only a meager diet, so that the birth will be easier. Here, [301] too, as among the Masai, the pregnant woman wears no ornaments. [171] On the day of the confinement the husband may not leave the camp. 844 His mother or mother-in-law acts as midwife. Besides the obstetric [171] methods of the Masai, there also exists here the custom that the husband, to increase the labor-pain activity, perhaps moistens with his saliva the chest, abdomen, and back of the woman giving birth and then massages them gently with circular movements. While doing so, he several times calls out the words: "Mighty God, let the child come out!" The umbilical cord (os sotua) is severed with a razor-knife (herera) and then, together with the placenta, buried in the hut. It is not the object of superstitious customs. It is regarded • [777] as unlucky if the child's upper incisors come through before the lower [856] ones; it is believed that this will cause illness or death in the family. 846 The young mother may not leave the hut until five days after her confinement, out of consideration for her health, not for superstitious 853 reasons. The suckling period lasts one and a half to two years. Besides mother's milk, the little one is stuffed with a great deal of the fat of game, of which that of the large pachyderms is particularly valued as infant food.

845 Deformed newborn children are killed by strangulation by the 847 midwife immediately after birth. The highest figure known to me 163 /243/ of confinements of one woman was 11. From 27 aged Asá women questioned, 154 children were born, which gives an average of 5.7 per woman. Of these, 81, therefore 52.6 per cent, were 165 girls, and 73, therefore 47.4 per cent, were boys. Before their circumcision 70 = 45.5 per cent had died, in which the stillbirths 591 are included. Until their circumcision the children live in the hut of the mother.

/251 cont./

224 262 they particularly value the entrails and also do not scorn the meat of fallen or stricken animals; indeed, even the skin of elephant, rhinoceros, and hippopotamus is eaten roasted. As huntable, i.e., here [223] [439] edible, the Wandorobo regard elephant, rhinoceros, hippopotamus, pigs, zebras, all cloven-footed animals from the giraffe to the tiny dwarf antelope, hares, rock rabbits, and, of the birds, the ostrich, which, however, they shoot only on account of its feathers, which the Masai like to buy for the manufacture of the war head-ornaments. They do not hunt monkeys and lower animals, because they do not relish their meat.

224 On the day before the new moon, and in places also on the seventeenth day, the ol onjugi, no one goes hunting because, according to popular belief, one would not kill anything on the former day, whereas on the latter the bow would break. The red-headed Anaplectes [825] melanotis is regarded as unlucky for the hunter. If the hunter sees it [777] along the way he returns to camp immediately and does not leave it again until several hours later, in order to try his luck anew.

561 264 171 [778] Like the warriors of the Masai, the dobonog of the Wandorobo also hold their meat meals in the forest. Whereas among the former, however, these are a result of the food rules, according to which the warrior may not eat meat in the kraal, among the latter it is only a matter of observing an ancient custom for which there is no longer any reason today, since the unmarried man usually eats his meat food in the hut. On the other hand, there is greater justification for retaining the en dorde, where they strengthen themselves by a plentiful [262] [225] eating of meat for a larger hunting expedition for more distant and at the same time dangerous game, such as elephants and buffalo. The [263] [276] many spices and stimulants that we became acquainted with among the Masai are also used by the Wandorobo, but to a far lesser extent. They do not divide up into fellowships for the meals in the bush, but 561 224 only for the hunting expeditions. Each company, as a rule, consists of four men and is called e sirdg, in which one recognizes the present Masai word es sirit. The booty is divided among the participants in equal parts. If an individual hunter or an e sirdet spends the night in [574] a strange camp, the host is given a foreleg and a hind leg of the hunting booty.

Schoolmaster B-3 (1930-1931) 1934 FIA Dundee FIA

A comet is a sign of coming famine, not merely for the person who sees it, but for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general trend of knowledge of the Dundee that the important parts of their life are helped and controlled by magic. The recovery of ritual status after child-birth and after the birth of twins is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with these powerful and capricious beings; the whole idea of circumcision (even if it is borrowed) is that of the transition by means of a magico-religious performance from the state of boyhood to that of manhood; these and other observances and ordinances are all magic, and are done because people believe that by doing them they will be enabled to go on existing.

(c) Analysis of Beliefs

Ritual Values. Things which have ritual value fall into three categories: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status.

(1) Honey is sacred, like milk to the Nandi; and in addition to the taboos on eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the provision of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is burned. The last notion means that within the pastoral tribes, the Dundee do not burn grass near forest.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that their use is directed to both the dead and the living.

(3) Things used for the recovery of damaged ritual status include goats and sheep, and certain of their products, i. e. eyes, and fat, as well as 'butter' or wood ash (ought from cows. All these come from sources which formerly were hardly possessed at all by most Dundee, and even to-day only on a small scale. Honey-wine is used a good deal, as well as white earth.

Each period of life has what might be called a standard ritual status, which is changed to a different standard on circumcision, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults is altered under certain conditions: (1) a man setting out to hunt is not in the same ritual state as when he is staying quietly at home, and he must not have sexual intercourse at such a time, i. e. just before he starts or, should he have an opportunity, while away; (2) a person sick of an illness has a status different from that of other people; (3) touching a corpse causes deterioration of ritual status; (4) the breaking of a taboo affects ritual status; (5) women suffer deterioration of ritual status through the birth of a child before marriage, the birth of twins, and even, to a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.

Schwerdtfeger B-5 (1938-1939) 1954 FLA Dembo FLA

[illegible] Maintenance of ritual relations with the spirits is effected by the recognized offerings made to them; and with 'nature', on which the food supply depends, by other means (see below).

The World Order. In the myths related at the beginning of § 5, the thunder plays an important part, and is even portrayed as a man. One might almost assume from this that he was believed to be an earth-dweller who began a second life in the sky as the thunder-god who controls the rain, for the notions of rain, mist, and thunder are all interwoven, and the rainbow is "the arm of the man who draws water for him". These myths reflect the Dorobo attitude of the people to their surroundings. One of the chief features of the forest is heavy rain and frequent mist, and it would be surprising if we did not find among them the conception of some sort of rain-being who brought mist. Again, since rain is plentiful and drought rare, the rainmaker is not needed, and although the lowest known rainfall, 30 inches in 1933 at a place two miles from the edge of the forest (and probably a little higher in the forest), would indeed constitute a drought year elsewhere, in the absence of [illegible] crops and cattle an occasional low rainfall does not matter so long as there is enough to make the plants flower. Even a heavy rainfall of 70 inches or over does no more than cause temporary inconvenience where there are no crops to be damaged and the slopes prevent flooding. The Tinderet forest is, in fact, an ideal place for hunters to live in. However prolonged the dry season, the conditions for wild life are better there than in the open plains below, and low rainfall has never yet prevented a supply of game to hunt or trap. Whether the people are able to kill enough game to ensure a supply of food is another matter, and the inter-relations in not so much that between man and nature in general, but between man and the animals. Man's wrong-doing is thought to produce either a failure of the supply of animals, or his inability to kill or catch what is there in abundance.

Social Values. Things which are important to man because they are indispensable to him have what is called a social value as well as a ritual value, because between man and them there is created a relationship which man must maintain if he is not to suffer. The food supply of a hunting people is got from day to day and depends on the skill of the hunter. It is uncertain, because on any given day the hunter may not find game, or having found it may not kill. But precarious as such a life might seem, there is no evidence that in the past there was often any great scarcity from either of these two causes. The old men say, in fact, that whereas food is scarce under present-day conditions, in the old days when hunting was not restricted it was, if not always abundant, at least enough. Such a statement is not, I think, merely an exaggerated memory of better days, the outcome of a longing to get back to the forest, but it explains in part the otherwise remarkable paucity of hunting magic and ritual procedure. Some hunting magic there certainly was, and fear and ignorance prevent few talk about it; but it is clear that where the food supply throughout the centuries is found adequate,

433 the absence of pastoral and agricultural industries and knowledge, by their myths, and in fact by everything about them. To-day it is true that they are becoming agriculturalists, as the following analysis of their economic activities will show:

			Part :	—	Part : — Total :
[462] [594]	Family	Men :	Trapping game in the forest Making weapons, honey-barrels, etc. Some : working for wages		Cultivation of shambas
		Women :	Preparing the results of trapping Making baskets, skin clothes, etc. Housework and food collecting		Cultivation of shambas
[857]		Children :	Minding Hunting Housework		
[845]		Man living Alone :	Trapping Making clothes Preparing the results of trapping Cooking, housework		Cultivation of shambas

[856] Dundas like Cranham converges on cultivation, with a hunting background, and stock in view as the ultimate achievement. For though the hunting instinct is still very much alive, and though a great deal of time is now spent on cultivation, there is no doubt that the Dundas (in 1939 at least) had a fundamental economy in their minds as the ultimate goal.

5. Economic Activities

a) Beekeeping

462 Honey is to the Dundas what milk is to the Kamâ. It is much-sought
[594] food has a high ritual value, in consequence of which certain rules must be
observed lest the supply fail. A person must not eat fruit or blood on the same
[291] day that he has eaten honey, though he or she may eat meat. After eating
[464] honey, bits of the comb must not be left lying on the ground, but must be
hidden in the undergrowth. Army Mbiti said, somewhat unsatisfactorily, that
the reason for this was "that other people shall not see them and so be led to
your honey-barrel". But this is probably not the true reason, which may be
[791] either simply respect to the honey, from a fear that if treated disrespectfully
the supply will fail; or else fear of a witch putting a spell on the bees or honey

succ cont'd

Succession is patrilineal and marriage patrilocal. Polygyny is practised. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Dorobo imitated or joined in the moiety of the Kikuyu and the moiety of the Masai. The word they use for the handing-over ceremony is *muomati*. Alternating ages or generations are distinguished as *ruoi ej-tai* (the right hand) and *ruoi ej-kerop* (the left hand). When the Kikuyu system is referred to *Mwongi* is the former and *Mwiru* the latter, but the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups.

There are no indigenous chiefs, the judiciary and legislature being a council of elders. Each an elder is called *kiranguinde* (pl. *kirungit*). A *kiranguinde* has much the same function as a Kikuyu *muthamaki*. There is no *kiboro* but formerly the Dorobo owed allegiance to the *kiboro* of the Masai.

They recognise one Supreme Being, called *Tororit* (compare the Suk *Tororut*). There appears to be no cult of so-called Sun Worship. The sacred trees, used for prayers to Tororit, are, for rain the bamboo (a solitary clump), for honey the *mukoo*, and, in connection with circumcision ceremonies, the *mutiligi* and the *mumetuiyo*.

79. Little or nothing is known of the relationship of the Dorobo of Southern Kikuyu with other Dorobo sections. The "Dorobo Committee" called them the Kikuyu Development group, and remarked that they were first found in the Aberdares but left there and went to the Masai Reserve, whence they were ejected. At the time the Committee sat this group was living at forest squatters in the

1: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

side, adultery, and assault. In the first category, incest is punished under the authority of the clan council: the man is beaten, his hut burnt, his honey-barrels destroyed; the woman also is beaten. Witches might be killed under authority of the forest council. In cases of persistent disobedience to the council, the elders could call upon two or three men to have the offender, by moral and physical persuasion, to mend his ways. Of offences in the second category, trespass has already been mentioned (p. 56). Theft, when not dealt with summarily, can be brought to the forest council, which can order payment of compensation. A man accused of stealing food may say, "If I am a thief, may this grass eat me," and place a blade of grass between his teeth. Adultery might be punished by the injured husband, who, if he killed the offender, had to pay blood-cattle. If a man incapacitates another by assaulting him, he must feed him till he recovers. Homicide of a Dorobo or another clan, though not involving primary sanctions, was a serious offence because it meant that the murderer had to get cattle in order to pay compensation. The usual number was nine head of cattle, though when the murderer was a very poor man living above the number might be reduced. The kind of cattle (male or female) did not matter. The murderer had to provide as many as he could, from his own herd if he had one, or by exchange from the Nandi, or by any other means, including theft. The deficiency had to be made up by his fellow-Dorobo.

Summary

The Dorobo horde consists of a loosely integrated group of districts held together partly by the feeling that they are all Dorobo, but much more by the clan ties which run across the district boundaries. The clan is therefore one of the chief institutions in the life of the Dorobo.

MAIN CULTURAL FEATURES

Crafts

Housing

(a) Forest type: the *kororgwet*, in use as late as 1927, was a framework of sticks bent over to form an oblong, dome-shaped structure, covered on the outside with banana leaves and leaves of trees; height, 6 ft.; length, 11 ft.; width, 7 ft. (b) New type: the *kotet* has a circular wall about 3 ft. high plastered with mud, and an almost flat thatched roof supported by a centre post; the *kot* is a hut of ordinary Nandi type, the walls of which are occasionally left unplastered.

Settlements in the forest, consisting of three or four *kororgwet* huts, were situated to discharge just big enough to hold the huts, and were approached by concealed paths which branched in a bewildering manner that made it impossible to find them without a guide. Settlements outside the forest are arranged in small groups usually close to the cultivated land.

Dress and Ornaments

Clothing is made largely from the skins of wild animals, and the bows are mainly copied from those of the Nandi, as are most of the ornaments, which include, among other things, iron wire anklets and bangles, necklaces, and assorted women's ear-rings (*kwik*). The ear-lobes are pierced and elongated (sometimes getting torn in the forest), and a small hole is burnt in the top of the ear. Some but not all remove the two lower middle incisors. Hair is allowed to grow to a length of about 2 ins., when it is sometimes covered with a leather cap, and sometimes dressed with red earth and fat. Occasionally a man has his hair done in pigtails like the Nandi.

Tools and Weapons

Axes and knives are obtained from Nandi smiths, the Dorobo making the wooden handles. Needles are made from old nails and bits of wire which the Dorobo re-

3:Huntingford E-5 (1921-1928)1929 F16 Dorobo F16

623 [587] that continual disobedience is punished by expulsion from the tribe. They described their office in the following terms:—

Ke'rsoch lgalak ai kosich che mlysch ak che
We-take-counsel the-matters that we-may-get which-are good and which-are

[539] ysch, ai ko-kas piik tukul. Ingoosio chilt'
bad that they-may-understand (-obey) the-people all. If-he-refuses the-man

ake tukul, ke-con, ai kwa emet ake.
other say, we-expel (-him) that he-may-go the-country other.

["We take counsel that we may find what is good, and leave what is bad, that all men may obey. If any refuse, he is driven out of our country."]

IV.—Religious Beliefs, Magic, and Medicine.

Religion.

771 The religious beliefs of the Dorôbo are even vaguer than those of the Nandi.

776 They believe in a god Asista (N.), who is the sun and masculine, and who has a sister Arawa* (N.), the moon.[1] No offerings are made to either, but the men pray

● [582] to both before going on a hunt. The prayers seem to have one form:—

Asis,* ipiy'-ech emilit.
God, fill-us-with the-food.

[539] or,

Arawa,* ipiy'-ech emilit.
Moon, fill-us-with the-food.

[583] They believe also in ghosts and spirits (*oiinde*, pl. *oiik*, N.) which are good and

[582] bad. Prayers are addressed to the good oiik (*oiik ake ndyuek*) to obtain food and health, e.g.:—

Oiik, ipiy'-ech emilit.
The-spirits, fill-us-with the-food.

[539] Oiik, ipiy'-ech aapot.
The-spirits, fill-us-with the-health.

[582] *Libations* of honey and water (*kapsuki*?) and of honey-wine (*kipchiuli*, N.) are offered to the good oiik, in order to obtain food and health. These libations are made from gourds (*kondo*), and while they are poured out, the formula,

[539] Ipiy'-ech emilit ai kipiiye aapot.
Fill-us-with the-food that we-be-filled-with health,

is pronounced.

[171] [1] I have not come across this particular relationship before in the Nilo-Hamitic group: though other tribes of this group hold that the sun and moon are related, or are husband and wife (the latter Masai and Nandi). (*See* Sun, *The Sun*, for the ideas of the Sun, Enjemut, Turkana, etc.)

* The Nandi *other* oiik.

3:Huntingford E-5 (1921-1928)1929 FL6 Dorobo FL6

When a man is ill and dies, it is said that bad oiik (*oiik che yach*, N.) have killed him; if he recovers, a good oiindet has saved him. No offerings are made to the bad oiik.

There is also a vague belief in a future life. A man's spirit is said to go at death to the *koret ap oiik* (N.), or land of the spirits, which is under the earth, and is a bad place.

Magic.

There are magicians (*pondindet*, pl. *ponik*, N.) who are bad, and who prevent people from getting food by means of their spells. There are also diviners (*orkoiyot*, pl. *orkoiik*, N.).[1] There is no equivalent of the modern Nandi system of "orkoinotet" or rule by a medicine-man.

Medicines and Charms.

(a) *Medicines.*—For snake-bite, the gum of the tiinet tree is used, mixed with the honey of a species of bee, called "kosomyot" (N.), and ram's fat. This concoction is rubbed on the affected part, and a little is also eaten. For coughs, a plant called "opeito" is chewed; this is used for all chest complaints.

(b) *Charms.*—Children wear a charm to ward off the evil-eye (*sakut*, N.), which is similar to that worn by Nandi children. It consists of a necklace of seeds of the lepuyuwet tree (N. *lapuonik*) strung on a cord, the seeds being separated by short pieces of bamboo (Text-fig. 20). Old men wear a charm to keep away rheumatism (*kimakunyet*, or *koroiito* (*koroita*), N.); it is made of two small pieces of the rĕrendet tree,[2] about 1 in. long, which are tied to the belt (Text-fig. 19).

V.—Social Institutions.

Social Divisions.

The male sex is divided into boys (*ñgetik*, N.), warriors (*murenik*, N.), and old men (*poiisiek*, or *apaiisiek*, N.); the female sex, into girls (*ilpik*, N.) and women (*korusiek*, or *chepiosôk*, N.). At circumcision, a boy becomes a warrior and a girl a woman.

Married and unmarried people sleep separately. Married people and small children may sleep in the same hut, while unmarried men sleep elsewhere, often in the sigiroinet (N.), or "warriors' hut," where they cohabit with the unmarried girls. Though free-love is practised, it is not carried to such an extent as among the Nandi, and although girls sleep with warriors, they like to preserve their virginity till circumcision. Warriors frequently marry their sweethearts (*mureriat*; N. *mureret*), whereas in Nandi they usually marry someone else.

The position of women is the same as it is among the Nandi, that is, they wait on the men, do all the menial work, and are their husband's property.

[1] This word is not used with the same sense in Nandi; originally it seems to have meant simply "medicine-man" (Swahili, *mganga*).

[2] *Euphorbia candelabrum.*

3:Huntingford E-5 (1921-1928)1929 FL6 Dorobo FL6

Names.

Before a child is born, the spirit of an ancestor is called upon, and the child receives the name of that ancestor, which he retains throughout his life.[1] At circumcision, a man becomes Arap (anum), "Son of (So-and-so)," *e.g.* a boy named Kipoo, whose father's name is Kimiñiñg, becomes Kipoo arap (Ki)miniñg, and is known as Arap (Ki)miniñg. Both the masculine and femine names are mostly Nandi.

Circumcision. (Tum,* N.)

The customs connected with circumcision seem to be very similar to those of the Nandi. Boys are circumcised at intervals of about ten years; the ceremony takes place after harvest, about October, when extra food is bought from the Nandi; the actual operation is performed in the early morning. In the case of girls, a circumcision is held when there are sufficient girls in a district of an age to be circumcised; only the clitoris is removed. Circumcision, as among the Nandi, and in ancient Egypt, is a form of initiation into manhood or womanhood, and is preparatory to marriage.

Marriage.

It is usual for Dorôbo to have only one wife, as they are unable to support more. The price of a wife is paid chiefly in honey-wine. Before marriage the suitor gives to the girl's father as much honey-wine "as four women can carry." He also gives the parents honey-wine year by year after marriage, and he must give the father caps (*sambut*, pl. *simbuisiek*) made of the skin of the tiniet monkey (*Cercopithecus albigularis*). Nowadays, if a Dorôbo has any cattle, he sometimes takes a second wife.

Death.

When a Dorôbo dies, his body is taken out into the forest, about 200 to 300 yards from his hut, and left for the hyænas (*kimaroket*) to devour.

Miscellaneous.

When a Dorôbo thanks a person, he spits in the direction of the person, with or without saying "*Kongoi*," N. ("Thanks").

The Dorôbo call each other in the forest by blowing horns of water-buck (*ikondit*, N.).

Salutations:—

(*a*) Of greeting:—To men, "*Sopai*"; answer, "*Cham-ke*" (health). To girls and women, "*Tâkwenya*"; answer, "*Igô*."

(*b*) Of farewell:—"*Saisere*" (good-bye); answer, "*Saisere ok inye*" (good-bye to thee), or, "*Saisere ok okwek*" (good-bye to you).

Except "*Cham-ke*" as the answer to "*Sopai*," these are the same as in Nandi.

[1] The Nandi also give children "spirit-names" (*kuiset ap oiik*), which, however, are seldom used.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

The thunder, *Ilet*, is he who produces rain, and the rainbow, *cemsisiriat*, is his arm, *ne naiyo pûk*, which draws up water for "him". Long ago, according to a Dorobo myth, *Ilet* was a man, and one day a Dorobo met him standing on a rock on Tindiret Hill. And because the Dorobo thought him bad, for he brought mist which hid the sun and spoiled the hunting, he shot *Ilet* with a poisoned arrow, and so *Ilet* fled thundering to the sky, where he has been ever since.

Another Dorobo myth tells that once there lived on the earth some elephants and a Dorobo, and *Ilet* lived with them. One day the Dorobo was hungry and made poison from the *keliot* bush [6]. In the night he stuck a poisoned arrow into one of the elephants, and in the morning it was dead. When *Ilet* saw it, he said: "Who has been killing my donkeys?" The Dorobo cut up the dead elephant and dried the meat, and thus had food for many months. When it was finished he killed another elephant in the same way, and again *Ilet* said: "Who is killing my donkeys?" Then the Dorobo said to him: "I killed them, because I was hungry". Then *Ilet* said to himself: "I am afraid. If I stay here, the Dorobo will kill me too". So he called out to *Asista* to take him up to the sky, and he left the Dorobo with the elephants and went up to the sky. And to this day the Dorobo kill elephants with *keliot* poison, like that man of old [7].

Besides *Asista*, *Arasa*, and *Ilet*, the other inhabitants of the Unseen World are the spirits, which are of two kinds, those of the dead, who are on the whole good, and other spirits, which have never been human and are evil. Both are called *cesowiloi* [8], and this term includes the beings called *oiik* by the Nandi, the spirits of the dead, and those called *musambuanik*, the evil spirits. Both these words are used by the Dorobo. One statement made about them was to the effect that *musambuanik kopotoh oiik, ahenge tukul, kikure cesowiloi*, "the *musambuanik* are not different from the *oiik*, we call them both *cesowiloi*", because though the *musambuanik* are always bad, the *oiik* can at times be bad too. Nevertheless, the Dorobo draw a distinction between the two kinds, and refer to them as *oiik* (the good) and *musambuanik* [9] (the bad).

The spirits of the dead live in the *koret ap cesowiloi* which is underground. "We haven't been there", said Arap Cepsuku, "so we don't know anything about it". But the spirits are there, and they come thence from time to time to visit the living, not only in dreams to pregnant women, but actually into people's huts, to which they travel inside the bodies of snakes. When a snake comes into a hut at night, it is not killed, but some honey is offered to it with the words: *Ui, Anum, i oiindet*, "Go away, So-and-so, for

[6] Acocanthera Schimperi.

[7] It will be noticed that there is a similarity between this and the Nandi myth given by HOLLIS, Nandi, p. 111, and that the myths printed in JRAI 57. 1927. p. 448 and HOLLIS, Masai, p. 266 are of a similar pattern. In the latter, the man is a Dorobo.

[8] The full form of this word is *cesowilo* (*cesowilot*), pl. *cesowiloi* (*cesowillôk*). It seems to be the same word as the *esoloi* which MASSAM gives as the Keyo word for both good and evil spirits (Cliff Dwellers of Kenya, 1927).

[9] This word, which the Dorobo have borrowed from the Nandi, has in turn been borrowed by the latter from the Bantu Kavirondo *musambwa*, "spirit".

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

[175] [782] [825] you are a spirit". A man who kills a snake at night in his hut need not necessarily become ill as a result (as the Nandi believe he will), but the ancestor whose spirit was in the snake will show his anger by never going to see the man again and transferring his attentions to some other member of the family. This would no doubt result in bad luck, for the offender would be continually conscious of what he had done. Another account, however, which I think more nearly represents the common belief, is that after offering a snake honey-and-water or milk, the owner of the hut says to it: *Ui si nyon tun ingoii laknet*, "Go and return when (my wife) bears a child", so that the name [553] of the spirit may be given to the child. According to this account, if a man should kill a snake at night in his hut, he will probably be ill the next day [782] unless he pours some honey-wine on the floor where the snake had been in the night. This should free him from the danger of illness. Snakes seen in the daytime may be killed without fear. [753]

The spirits also appear in daylight as shadows (*urust*) and they may make their presence known by slight noises, like the sound of a stick being broken. When a man sees an unaccountable shadow, or hears a noise for which he can see no cause, he concludes that it was a spirit which has come to see him, or perhaps just come up to take a walk on earth. But he need do nothing, nor need he be afraid, for at such times the spirits do no harm.

[204] [782] Before setting out to hunt, a man asks the spirits to help him:

Cesowilōk, okónec tiony ne kipare,
Spirits, give-us animal which we-may-kill;
okónec kumik si kiipiiye.
Give-us honey enough-to-satisfy-us.

Offerings of honey-and-water, *lokomek*, are sometimes poured on the ground from gourds with a request to the spirits to provide food in times of scarcity. Such offerings are made by people at their own homes when their affairs are going badly:

Cesowiloi, opiiyec omdit,
Spirits, fill-us-with food,
si kiipiiye sapot.
That we-may-be-filled-with health.

[787] [755] When a man is very ill, he sometimes sees what he takes to be another man lying beside him for a short time, who is invisible to other people. When he has recovered, he realizes that this other man was a spirit who had come to help him to get well, and to take into himself the sickness: *Konyon si korlpe, korn ne korne cito ne mioni, si kosop*, "He came to guard him, and lay where the sick man lay, to make him well".

776 Evil spirits sometimes attack people when asleep and make them ill. They also play tricks on people and do spiteful and irritating things to them. A man is walking, for example, and suddenly catches his foot, as he thinks, in a liana drawn tight across the path, and falls. But he finds nothing there, and realizes that it was done by an evil spirit. In 1927 I was one night encamped on the edge of the forest between Kipkorom and Timopo, with

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

a clear, windless sky. About 10 o'clock a curious whistling noise began to come from a certain part of the forest, and continued, on the same note, and without a break, for several hours. It was certainly no human or machine-made noise, and the Dorobo professed complete ignorance of it. A Nandi who had lived there before the Nandi War told me afterwards that it was an evil spirit whistling in the forest, "for we used to hear them whistling to each other like that in the forest when I was a child".

Between people and the things on which they depend for their existence both spiritual and material there is a connexion which is best expressed in terms of a ritual relationship. Things have a ritual value for people, and people themselves have a ritual status which is a relationship with their surroundings that can be altered for better or for worse according to the way in which they respect the ritual value of the things around them. Religion and magic form the procedure which protects these ritual values and status, while political organization is, in a sense, no more than an effort to maintain the ritual status of the horde in spite of the tendency of its members to injure their own ritual status and in consequence that of the horde also.

Certain things that a person does, whether voluntarily or involuntarily, cause deterioration of ritual status; but the original status may be recovered by the *performance of certain ritual actions which may involve* some personal effort or sacrifice. Examples of acts which cause loss of ritual status, and the means taken to restore it, are: (1) A girl who bears a child before marriage must have the undigested grass (*siyat*) from the stomach of a goat rubbed over her face, neck, and breasts, and must then wash it off. (2) After a woman has given birth, she is in a condition of much reduced ritual status, and her husband must rub goat's fat and *siyat* over her face, breasts, and belly. (3) A man who has killed a Dorobo must have goat's fat rubbed all over him. (4) One who has killed an enemy must have stripes of white earth painted on his face. In all these cases the people have done something which causes loss of ritual status, making them ritually unclean (*unan* or *somís*) and so a source of danger to others till they have been purified. The potential danger is removed by means of something which has a ritual value. Moreover, an essential element in the cleansing process is sacrifice, that is, the use of the material must either involve giving up something which is valued, or it must require some effort or even risk to get hold of. The *siyat* or fat must be from a domestic animal: if the person concerned has one, he must use it; if he has none, then he must get one, and without delay, which for a Dorobo usually meant that he had to steal it, and thus risk getting killed while doing so. Therefore there is an act of faith in these magico-religious performances, and people believe so firmly in the efficacy of what they do that they are prepared to risk danger in order to get the necessary materials. The use of white earth may entail no more than a journey to get it, but that still means a personal effort on somebody's part. Materials which are used for the restoration of ritual status, and in consequence have a special ritual value, include: the flesh of goats, which is eaten when twins are born, and in cases of incest; *siyat*, the undigested grass from the stomach of a ruminant (a sheep

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

A comet is a sign of coming famine, not merely for the person who sees it, but for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general trend of knowledge of the Dorobo that the important parts of their life are helped and controlled by magic. The recovery of ritual status after child-birth and after the birth of twins is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with those powerful and capricious beings; the whole idea of circumcision (even if it is borrowed) is that of the transition by means of a magico-religious performance from the state of boyhood to that of manhood; these and other observances and avoidances are all magic, and are done because people believe that by doing them they will be enabled to go on existing.

b) Analysis of Beliefs

Ritual Values. Things which have ritual value fall into three categories: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status:

(1) Money is sacred, like milk to the Nandi; and in addition to the taboo on eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the provision of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is burned. The last notion means that unlike the pastoral tribes, the Dorobo do not burn grass near forest.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that their use is directed to both the dead and the living.

(3) Things used for the recovery of damaged ritual status include goats and sheep, and certain of their products, i. e. *eiyat*, and fat, as well as 'butter' or *muait ap tangina* from cows. All these come from sources which formerly were hardly possessed at all by most Dorobo, and even to-day only on a small scale. Honey-wine is used a good deal, as well as white earth.

Each period of life has what might be called a standard ritual status, which is changed to a different standard on circumcision, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults is altered under certain conditions: (1) a man setting out to hunt is not in the same ritual state as when he is staying quietly at home, and he must not have sexual intercourse at such a time, i. e. just before he starts or, should he have an opportunity, while away; (2) a person sick of an illness has a status different from that of other people; (3) touching a corpse causes deterioration of ritual status; (4) the breaking of a taboo affects ritual status; (5) women suffer deterioration of ritual status through the birth of a child before marriage, the birth of twins, and even, to a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

the other world, and atonement is effected by ritual methods. The primary sanctions against such acts are upheld by the force of public opinion which is based on the fear of loss of well-being through offending the spirits, behind whom are the ultimate powers of nature expressed in the concept of *Asis*.

But these ultimate powers cannot be reached by man, who can neither see nor understand them, and people like the Dorobo (and indeed many African peoples) must therefore have some kind of intermediary. First come the *cesowiloi*, the spirits of the dead, to whom each man addresses his own prayers, and with whom there is a private relationship based on the fact that the spirits were once human beings themselves. Then protection is looked for through the use of tangible material objects in the form of amulets, such as the *lepuyuwet* against the evil eye, *rerendet* against rheumatism, and perhaps the double spiral ear-rings occasionally worn, although the significance of the last among the Dorobo is not known. These are material intermediaries in that they act between man and the unseen as protectors.

Formalized religion. The notion of a spiritual being which dwells in the Kiet or 'universe' is crystallized in the word *Asis(ta)*, borrowed from the Nandi with perhaps some of the Nandi notions of its nature. He is identified with the sun, and prayers are made to him for success, and sometimes to his mother (or sister, for the accounts vary) *Arana* the moon as well. This is the extent of the formal part *Asis* plays in Dorobo religious life, but he none the less performs the necessary function of being a recognized object to which men can turn, especially in thought, for restoration of confidence, which is no doubt one of the primary functions of the formalized concept of a major spiritual being, who provides people with an entity that they may look to for help and protection.

The belief in the existence of spirits is much more concrete, and more practical, for one section of the spirits were once men themselves and are therefore much nearer to men than *Asis* and well fitted to stand between men and the unseen world as mediators. The evil spirits are merely harmful or irritating according as the whim takes them, but they seem to play a relatively unimportant part in the religious life of the Dorobo, however much trouble and discomfort they may cause. They are just things that must be endured. A statement made by a Dorobo that the *musambuanik*, the evil spirits, are the same as the *oiik* or good spirits, is to be explained by the belief that even the good spirits can be malevolent at times, for malevolence is more noticed than benevolence, and it is necessary to maintain proper ritual relations with them to prevent malevolence. But unlike the evil spirits the *oiik* have a definite home somewhere under the earth, whence they return to visit and take care of the living, in whom they take an interest, and the part taken by the *oiik* in Dorobo life may in fact be summarized thus: (a) they can provide or withhold food; (b) they can cause illness if angered; (c) they can desert a man and so spoil his luck and neutralize his skill; (d) they are at the back of the legal sanctions as intermediaries between man and the ultimate spiritual power that controls the universe.

7: Wayland N-5 (ca. 1926) 1931 FL6 Dorobo FL6
Jiye FK8

776 *Religion and Magic.*—God, the creative being, who long ago made all things, but who is now mostly asleep, is called *Nakwitt*. He was not the first man—indeed, nobody knows who the first man was—nor has he a female counterpart. Otiose as he is, he can on occasion [782] be persuaded by means of sacrificing a goat to intervene in human affairs, as when, for instance, the crops are bad and rain is needed.

791 The wizard is known as *Ngamarosi*. His functions are the same as those of the *Ajobo* of Labwor, and like that functionary he is a rain-maker, who though more efficient in this respect than an ordinary person is not prepared always to guarantee results. Perhaps not more than 20 years ago there was among the Wanderobo a great rain-maker whose name, Longalesi, is still well known to all the surrounding tribes. His powers were widely admitted, and he was consulted, not only by the Wanderobo themselves, but also by the Dodotho, the Jie, the Karamojong and the Turkana peoples, but not, however, by the Dodinga of the Sudan.

789 When the rains were late and the country was suffering more than usual from drought, representatives of the tribes would come in with generous presents of livestock and food. These would be gathered and heaped together near Longalesi, who would sit quietly smoking, so it is related, till he considered the offerings sufficient, when he would bestir himself in the matter of making rain. He, and the various representatives of the suffering tribes, would then partake themselves to a spot called Kalopeto, in a ravine that runs down into the Rift valley, where grows a giant fig-tree near a water-hole that, it is said, never dries up. A black goat would then be brought and be ducked in the water, but not allowed to drown. After this it would be speared in such a way that the contents of the stomach could be extracted without destroying the receptacle, which would then be filled with water. The procedure then was to hang the goat to the top of the fig-tree, while Longalesi called upon Nakwitt to send rain. At the conclusion of the rain-maker's beseechings, the goat would be cut down, and as it fell with a thud to the ground, those taking part in the ceremony would rush in, drain out all the water that remained within the body after its fall, and bear it away to a fire already prepared and cook it. The meat would be eaten by those who took part in the ceremony, and in due course the rain would fall.

791 Longalesi enjoyed a great reputation, and it is admitted, on all hands, that he was a king among rain-makers. He is much regretted by the Wanderobo, who say that since his death (he died in the Turkana country) the rains have been poor and uncertain, and "things are not what they used to be" in his day. His son is, or was, a chief in Turkana. It is to be noted that Longalesi was not a chief, but first and last a rain-maker, and the last of a long line of such specialists. I could gather nothing reliable as to the mode of burial of such folk.

[123] I secretly contracted with the present Wanderobo chief, with whom I was on very good terms, to visit the rain-maker's shrine by the giant tree. We were to start before dawn, but alas! the chief's courage failed at the last moment, at least I suppose so, for he disappeared and I and my search party failed to find him. I never saw him again.

D J 197 A few measurements and a very short sample vocabulary follow. These seem to indicate differences between the Wanderobo and their neighbours. The most marked difference is, perhaps, in their speech, for although the Wanderobo speak "Karamojong," the tongue which,

Some Dorobo Beliefs. *By A. C. Hollis.*

I recently went for a trip through the little known country lying between Naivasha and the Anglo-German frontier, and was fortunate enough to obtain a snapshot of a Dorobo, who was a member of the caravan, spitting towards the rising sun before saying his morning prayer (Pl. M, Fig. 1). Whilst performing this ceremony he had to lay aside his sword.

The rains were overdue at the time, and I took photographs of the same Dorobo making medicine to prevent the rain from falling. Fig. 2 shows him whistling at and defying the rain-god. In Fig. 3 he has laid aside his bow, and whilst holding his sword upright is rubbing the handle rapidly between his two hands. This is done when the rain-god takes no notice of his defiant remarks, and insists on turning on the celestial water-tap. It is doubtless only a remarkable coincidence, but although the rain oftened threatened we had very little till we returned to the Uganda Railway, when it came down in torrents. All the natives of the caravan—Kikuyu, Kavirondo, and other East African tribes—believed that the Dorobo had kept off the rain, and I was told more than once that if it had not been for him we should have been washed away.

It is worthy of note that I met some Masai-Dorobo in the Rift Valley who did not speak Nandi like most of the Dorobo in both British and German East Africa. Whether their ancestors had never known this language or had forgotten it owing to long intercourse with the Masai, or whether they had been simply poor Masai, who, owing to the loss of their cattle, had become outcasts and taken to hunting, I was unable to ascertain.

A. C. HOLLIS.

[P.196, B]

important aspect is, I fear, irrecoverable. I have 224
been in the forest in both wet and dry seasons,
and while trapping is still carried on, I could see
no sign of hunting (i.e. shooting), and the [124]
description of a hunt is from narration.[1] Fear of
a government which forbids hunting, and has of [248]
late itself hunted the Dorobo, has, I think, effect-
ually sealed the lips of one or two who would
normally have spoken on the subject. My infor-
mants, however, did say that sexual intercourse
was forbidden before setting out on a hunt, though [834]
not before or during the process of trapping. In
hunting there is an element of personal danger
and of uncertainty as to success; magic helps to
give confidence, and abstinence to avert ill-luck.
In trapping the process is mechanical, largely a
matter of technological skill, and with little danger
to the trapper, who is sure to catch something
sooner or later.

On the other hand, it is believed that both *Ásis* [776]
(god) and the chesumiik' (both the good ancestral [782]
and the bad elemental) can influence a man's
hunting, and before starting out to set a trap, he
will say:

Ásis, ɓiiyech payyak,
God, give-us-enough meat,

or,

Chesumiik, chhaach tiiny ne hiiyare.
The-spirits, give-us a-beast which we-may-kill.

Honey (*hamiat*) is an important article of Do- 222
robo diet, and provides both food and intoxicant: [262]
it is to them what milk is to a pastoral people. [273]
It is not stuff that can be picked up anywhere, but
requires a certain technique, and, above all, the
presence of bees in a suitable place. As, there-
fore, it has an actual social value, so it has
acquired a ritual value, and certain observances [988]
are necessary if the supply of honey is not to fail.
First, you must have your bees, and a man who
has put up a new honey-barrel must take steps to
ensure that it is inhabited. This he does by
calling out, in an unnatural high-pitched voice,
"Bees, bees, all you who are in this country,
come now and make honey here."

[illegible] [825]

XI.

Interment of the corpse. -- Hereditary succession.

764 [177] [511] [556] The interment of the corpse differs from the practice customary among the Masai only insofar as the poverty of the Asá affects it. They neither hold a funeral feast nor do they anoint the corpse with fat. Wealthy people, i.e., here such with numerous progeny, are here buried by some, and, to be sure, in the kraal near the hut, so that after death they may hear the conversations of their children and enjoy the fragrance of their meals. All other corpses are simply dragged out of the kraal and put down approximately 100 paces from it. If the corpse has not already been devoured by hyenas the first night, which, moreover, is said not to happen only rarely, since in reality these carrion-eaters roam about the usually foul-smelling camps every night, /255/ then one burns as an offering the residue of the honey beer, consisting of wax particles, beside the corpse. A burial of corpses outside the camp is not customary anywhere.

[1182] The prayer beside the corpse of a family father runs here: Ûât, nge gurguta, nge haga = God, father, give advice, give meat. What was said above about the Masai holds for the mourning.[1]

765 [171]

---

428 [171] In the right of succession the same principles hold as among the Masai. The insignificance of the goods left behind, however, often makes a division among those qualified to inherit impossible, and one can therefore very often observe in practice that the eldest son (of the principal wife) receives the entire inheritance consisting of bows, arrows, and beehives. The latter form the principal part of the estate and, after the death of a man, are distributed among the sons in the same way as the cattle among the Masai. Just as the latter gives each of his wives a number of cattle to care for and enjoy the use of, the ol dawidani leaves each of his wives a part of his beehives, which the sons of the wife in question then inherit. Widows as a rule join a man of their age class and live with him. Surviving daughters pass into the possession of the eldest son insofar as the bride price is to be paid to him upon their marriage.

805 192 Today is called ígíti or ígítia, tomorrow íípe or ííbe, yesterday aremch; like the Masai, they have but one word for the day before yesterday and the day after tomorrow, namely, míliek; the next day is called to samag, the one then following to hag; for the days after that the Masai words are used.

XIV.

000 Religion. -- Prayer. -- Supplication feasts. -- Amulets. -- Sorcery. -- Evil eye.

771 191 776 [821] The religious views of the Wandoróbo are identical with those that we have become acquainted with among the Masai, except that they do not call God 'Ng ai, but Uíd. In songs God is also frequently called the black God. Uíd kabtama; on the other hand designations analogous to the Masai expressions for clouds and the redness of the sky are not found here; the former are called adja kabeka, the latter adja kaboma. Of the constellations they know the ones that the Masai also know, and designate them with the same names. They have no pictorial representations of Uíd, for the same reasons as 782 the Masai. Everyone prays, married people and children at home, the dobonog along the way. If they are afflicted by trouble or illness in everyday life the dobonog do not pray. The woman prays every morning while making the fire; when her husband and the children see this, they often place themselves beside her and also say a prayer. This always contains only a supplication, never any thanks. A supplication /259/ for protection runs Uíd sigima gemiechin; for children, Uíd nge hawa; for wives, Uíd nge mai; for meat, Uíd nge ngai for honey, Uíd nge agulgi; for food, Uíd nge e haingi; for health if 795 [971] one is sick, Uíd adudere an. They think about the fate of the soul -- in contrast to the Masai -- only very rarely, even the old people. The author met only a few aged Wandoróbo who were able to make statements about this. These coincided with the reports of the Masai.

• 782 796 842 From time to time the people celebrate a supplication feast for ilk. which they call kuroŋg or koroŋg. For a koroŋg a kave, a feast to ask God for children, the married women station themselves in a circle around a small fire into which, just as for every other supplication feast, they strew the residue of the honey beer, consisting chiefly of wax particles, so that its fragrance will rise up to God. While an aged, respected man goes around the circle and sprinkles those present with honey beer, they sing: Ilk ngo kawa! After this has gone on for a quarter of an hour, they start to dance, continuing to sing the same words. The dance is followed by a meal at which cattle and honey beer are consumed. At a koroŋg e ngo they ask God for meat. Beside a small fire they place upright a straight branch with several forks at the top, the twigs of which are cut off short. The empty stick is supposed to show God that they do not have any meat. All the companions station themselves around the fire and sing: Ilk ngai nagai (nagai = game). The next morning the hunters set out, and as soon as they bring home meat, a small piece is placed on each twig of the forks of the branch. Again all surround the newly kindled fire and now sing: Ilk ang kaiŋ ang which is to say: God, give us still more food. The men celebrate another supplication feast before a larger hunting expedition. In the middle of the camp a small fire is made, around which the men stand in a circle. Each one has the bow in the left hand, a twig of the olti tree (Acacia mellifera) in the right one. Then, going around to the left, they walk around the fire four times, during which they sing: Ilk ngai nagai. They maintain that they have never yet prayed in this way in vain, but that after a koroŋg e ngo they always returned from hunting with rich booty. The Wandorobo do not have a feast corresponding to the ol ngoi ! ol gawuti. Rather, without special ceremonies, they cut a strip out of the hide of an animal just slain and wear it as an amulet around the right middle finger. As soon as they meet something along the way that makes them afraid, be it a predatory animal or an enemy, they blow on the hide strip, which is the equivalent of a prayer for protection. Other amulets are seen extremely rarely. The Kalosi use only one, which they called tarara and which consisted of a small piece of root. It was worn on the neck ring and was supposed to protect one from predatory animals. If individual persons spoil the right

783 them under his head or night; the next morning he throws the cowrie again, this time five times, whereupon he knows that the guilty one took this and so and lives in such and such a camp, etc. If the tusks of a dead elephant are stolen (the hunter does not recover them immediately, but waits until they have been loosened by the decaying of the gums), the one who killed the animal casts magic against the thief by shooting at the head of the elephant several times, using as an arrow the fire-swirling stick. Then he breaks the latter and lays it beside the head. According to the assertions of the Wandobélbo, this magic is so effective that the thief must inevitably die after a few days if he does not deliver the tusks to the owner in all haste -- which is supposed to happen almost always.

785 786 787 [Only in colonized areas are there legal proceedings, which also take place in the same manner as among the blacks. Every male individual is entitled to take part in them. The one seeking grace the one granting, who is already waiting with a few friends in the shade of a tree near his camp, with the customary greeting and handshake, whereupon the latter opens the meeting with a few of the above-mentioned supplicative prayers. Ubí ngo kawa, Ubí ngo wat, Ubí ngo' ngo' and closes it at the end of the deliberation in the same manner.

788 A swearing of the truth is made with the same gestures and the same words as among the blacks. Besides the latter, the formula, Ubí kwiba = may God kill me, is also customary.

789 To extort confessions one uses the torture customary among the blacks, wrapping a bow string around the upper arm. The Wandobélbo call it ambogo ramg. In their court sessions the Ané are not acquainted with any ordeals (ramag) other than the ones discussed for the blacks. Of these they use the following three: The ordeal of the bow, here gwi wambiá, the ordeal of the dry wood, here kambingo ungurú, and that of the mud cools of earth, which they designate the same as the blacks. The culprit must submit to the ordeal upon the demand of the plaintiff and may not put up a substitute. According to the statements of the Wandobélbo, one who is really guilty always confesses before he submits to the ol ramag, as it is also called here, besides ramag, because the belief that otherwise he would die the very next day is undoubtedly established in the minds of the people. For example,

[illegible] other occupants. Elsewhere, all hunting activities are carried on illegally with the risk of being punished if caught by the police.

Weapons are the bow and poisoned arrows carried in a quiver. Knives are used to skin game and to make spillages. Spears have never been used. The Dorsden used to have hunting dogs, but in the Early Dorsden Period the local canines became shy and, through a mutation in 1967, they have now blunt of fang. (1) The gut bag, spears, hunting and fur trades, consisting of a gut 2.5 long, 1.5 wide, and 0.5 deep, with wooden spikes set in the bottom. (2) The spillage of many animals, which contains, briefly, of a spillage with bird nest, with a knife attached to it, connected with a platform; the entanglement is such that when an animal treads on the platform its hind comes the snare, and the pressure on the platform releases the spillage stick, which flies up, tightening the snare, and holding the animal suspended. Such traps can be made in less than ten minutes. They work well, chiefly by catching hares, but leopards have been caught in them. (3) Bow trap with a drop-spear often used by the Kipkorosek Dorsden.

The only hunting taboo recorded is that the night before he goes out hunting a man must avoid contact with certain menstruants. This does not apply to the setting of traps.

As regards land rights, the forest was divided into districts, [illegible] of Arrowsmith, and in the district each man had an hereditary block of land in which he hunted, set traps, kept his honey hives, and collected wild food. Occupation rights were recognized by public opinion, and trespass on a man's hunting area, i.e., [illegible] except in order to shoot hunting without permission or the possible of a piece of meat, might result in the trespasser's death at the hands of the owner, who would then have to pay compensation to [illegible]. Theft of game from a trap is held worse in Dorsden Arrowsmith, and only because the thief might be killed, but because the lady would result in a great deal of trouble from a trap.

Bees

Honey is to the Dorsden what milk is to the Dorsden, i.e. "sweet," and he usually takes his pleasure by the afternoons of [illegible]. Fruit and bread meat are by taken on the same day as honey (though meat may be eaten) when a meal is completed. A meal is carefully [illegible] to the ambrosiacs, and after eating honey a Dorsden shows his hands in water, and then the Dorsden by wiping them with herbs.

The Dorsden recognizes four varieties of bee: [illegible], the honey-producing bees; [illegible], which [illegible] live in trees; [illegible], which live in the ground; and [illegible], which live in [illegible] made of earth and particles of dung cemented together by their own saliva. The Dorsden divide the honey bee, [illegible], into three kinds: the queen, [illegible] of [illegible]. The workers of the bee, the workers, called simply [illegible], cooperate in the swarm, which under honey by using the "[illegible]" [illegible] of flowers and then regurgitating it into the empty honey cells; and the drones, [illegible], considered by the [illegible] Dorsden [illegible] the [illegible] cells.

Hives or honey-bowls (Dorsden) are made either of [illegible] of wood and together, with circular wooden end-pieces, or of the two halves of a piece of log split lengthwise and then together. They are set in trees, and when a new hive is put up the owner calls the town, or a neighborhood feast, to come and occupy it. [illegible] feast, from all the country, come into town, and prior to having [illegible] to honey. Bees are said to recognize their owners by their daily work, and do not sting them when taking honey. Certainly taking honey does not appear to be a painful or dangerous process to the Dorsden owner. Theft of honey from a hive is considered very low, and a man might kill a thief, though he would have to pay compensation for [illegible].

Honey is an important article in Dorsden economy. It is eaten as food, made into an intoxicant, used for ritual purifications, and is known as [illegible] of consuming

4. Birth

Intercourse stops at the fourth or fifth month of pregnancy, and normally is not resumed till about six months after the birth of the child. When the woman's time has come, she cuts in, "enters the hut", and the husband must then lodge elsewhere, either building himself a rough shelter or living with one of his neighbours in the settlement. During the act of birth the woman is helped by a midwife, *ngaibenyoni*, and her mother is present if possible. She stays for six or seven days in the hut after giving birth, and may then see her husband for the first time since she "entered the hut". The child's body must be kept covered for several weeks after its birth, and only its face may be seen, even by the father. At this stage the mother must be purified by her husband, who kills a goat (which he must buy or steal if he has none of his own), and rubs the fat and undigested grass from its stomach (*siyat*) over her face, breasts, and belly. After about three months the husband may come back to live in his own hut.

The birth of twins is not liked, for they are abnormal, and the old men say, *yaaree aawo waanit kamet* ("they are bad because they make the mother unclean"). If the father should have set a trap at the time when twins are born to him, it is believed that trap will never catch an animal. The ritual uncleanness caused by the birth of twins is removed by the killing of a goat (which the husband must get by any means if he cannot steal) to be eaten by the mother and her female friends.

A girl who has a child before marriage is called, as among the Nandi, *cwenpuut*, and becomes unclean ritually as a result. She may be purified, however, by the man responsible or one of his male relatives who must kill a he-goat. The meat is eaten by the men and women of the settlement, but not by the girl; and the *siyat* or undigested grass from the stomach is rubbed by one of the women over her face, neck, and breasts, and then washed off. By this means she becomes clean again, unlike such people among the Nandi, who remain unclean all their lives.

A baby is suckled as a rule until the mother is well advanced into her next pregnancy: the standard period was given as "twelve months". If the mother has no milk, or not enough, she goes about begging for milk, *nomoi cake*; but as often as not in such cases the baby dies of starvation. It is weaned by being slapped when it tries to suck, and by the application to the nipples of something bitter, generally a concoction made from the root of a bush called *kenkeni* (Nandi, *kotmoot*). At this time it is fed with milk from a small gourd, and if no milk can be got, it is given honey instead. It is also given bits of meat cut up small and fed from a spoon made of a piece of gourd; and gruel made from maize or eleusine meal mixed with honey.

If the mother dies in child-birth, her husband's mother or some other female relative takes charge of the baby and feeds it with milk from a small horn: if milk cannot be got, honey and gruel are tried; but very small babies fed in this way seldom live. Sometimes the child may be adopted by a married couple.

the relatives it would be very much less. The murderer had to provide as many of the murder-debited spirits as he could, either from his own kind if he had one, or by getting them from the Dumb to exchange for hers, which meant, of course, that the unlucky would be either more or more and still wrong, and that he would not be able to provide many himself. It therefore fell to his relatives and dependants to make up the number, which needed a clan council to apportion the balances among them, and often involved to a good deal of feeling against the murderer for a time. Until the account had been agreed upon for both clan and kind accounts, the murderer was liable for misery of himself to be killed by his victim's relatives, as he had to be too till the negotiations were completed, though again it is doubtful if they would actually have gone so far as killing him, for then they themselves would merely have had to ensure the same as compensation for their own act. In dividing cattle between the murdered man's relatives, the order of priority was brothers, wife, father, mother, father's brother, father's brother's son, father's sister's son.

Killing a witch. Though in 1936 I could hear of no Dumbs who were reputed to be witches (*pwoli*), such people certainly existed in the past. Apart from killing people by spells, their principal activities were to have been eventual on hunting — putting spells on game traps and on men who were going to hunt. If a witch was shown by a division to be guilty of a person's death, he or she might be killed, and no compensation was payable (*pwapwa*).

Killing an enemy. This means killing any person who is not a Dumbs and is believed or known to have performed any unfriendly act against the Dumbs. The Dumbs have an sort of war organization, and their enemies were generally shot at from the cover of undergrowth. Though not a crime, killing an enemy were the law makes the killer morally unclean and therefore dangerous to others because he has shed human blood. This action is then brought into the same category as homicide of a Dumbs, and though there is naturally no compensation, purification is required. The law of a man who has killed an enemy is *pwapwa* (human killed) with stripes of white earth painted on the forehead, down each cheek, and down both sides of the nose. The paint is allowed to remain till it fades off, and the man does not have to stay in the hut, but goes about as usual, though if he had killed a Dumb he would take care to go to some other part of the forest till he thought it safe to return. In actual fact, Dumb were seldom killed, but one who acquired this the forest might get shot by accident. His body would be taken to a lonely place for the lyaweng to eat, and at any sign of Dumb activity the Dumbs would vanish into the depth of the forest where the Dumb would have little chance of finding them even if they had the inclination to search.

Theft. Stealing honey is the most kind of theft, and is almost unknown with intra-tribal cattle-theft among the Dumb. A man who steals honey from someone else's hornets is considered very low indeed, and if found

Oxford Scholarship Online: Africa (1938-1939) 1954 - Fortes and Evans-Pritchard

a clear, windless day. About 10 o'clock a curious whistling noise began to come from a certain part of the forest, and continued, on the same note, and without a break, for several hours. It was certainly no human or machine-made noise, and the Ewondo professed complete ignorance of it. A Fang who had lived there before the Great War told me afterwards that it was an evil spirit whistling in the forest. "So we used to hear them whistling in each other like that in the forest when I was a child".

Between people and the things on which they depend for their existence both spiritual and material there is a connexion which is best expressed in terms of a ritual relationship. Things have a ritual value for people, and people themselves have a ritual status which is a relationship with their surroundings that can be altered for better or for worse according to the way in which they respect the ritual value of the things around them. Rubrics and magic form the procedure which protects these ritual values and duties, while political organization is, in a sense, no more than an effort to maintain the ritual status of the lineage in spite of the tendency of its members to injure their own ritual status and in consequence that of the lineage also.

Certain things that a person does, whether voluntarily or involuntarily, cause deterioration of ritual status; but the original status may be recovered by the performance of certain ritual actions which may involve some personal effort or sacrifice. Examples of acts which cause loss of ritual status, and the means taken to restore it, are: (1) A girl who bears a child before marriage must have the undigested grass (nvus) from the stomach of a goat rubbed over her face, neck, and breasts, and must then wash it off. (2) After a woman has given birth, she is in a condition of much reduced ritual status, and her husband must rub goat's fat and soot over her face, breasts, and belly. (3) A man who has killed a Ewondo must have goat's fat rubbed all over him. (4) One who has killed an enemy must have stripes of white earth painted on his face. In all these cases the people have done something which causes loss of ritual status, making them ritually unclean (mam or evem) and a source of danger to others till they have been purified. The potential danger is removed by means of something which has a ritual value. Moreover, an essential element in the cleansing process is sacrifice, that is, the use of the material must often involve giving up something which is valued, or it must require some effort or even risk to get hold of. The goat or fat must be from a domestic animal. If the person concerned has one, he must use it; if he has none, then he must get one, and without delay, which for a Ewondo usually means that he has to steal it, and then risk getting killed while doing so. Therefore there is an act of faith in these magico-religious performances, and people believe so firmly in the efficacy of what they do that they are prepared to risk danger in order to get the necessary materials. The use of white earth may entail no more than a journey to get it, but that still means a personal effort on somebody's part. Materials which are used for the restoration of ritual status, and in consequence have a special ritual value, include: the flesh of goats, which is eaten when rites are over, and in cases of incest only, the undigested grass from the stomach of a ruminant (a sheep

S.Shuttleghood R-1 (1934-1935) 1934 FLA Dembo FLA

or goat where the Dembo are concerned); *mwadi ufi tangitwa*, lit. the fat of cow's udder, or butter, i.e. solidified whole milk; honey-wine; and white earth.

Illness is generally believed to be due to the anger of an ancestral spirit, to the spite of an evil spirit, or to witchcraft. Sometimes, on the other hand, it is thought to have a natural cause. When a person is taken ill the relatives, unless they can be sure that the illness has a natural cause, go to a Nsadi diviner of the kind called *ushipuwi*. Diviners used to charge the Dembo a fee of 1/ — if the cause was witchcraft, and 1/ — if it was due to a spirit. But if a man went down to the lower country where there is malaria, and after his return was taken with ague and fever, they knew it was a natural illness, *kwaka pwi*, and did not consult a diviner.

If the cause was found by the diviner to be witchcraft, the witch was indicated according to the methods employed by Nsadi diviners, and the sick man's relatives went to the witch's hut, pulled him or her outside, spat in the face and said: "Come and sit by-and-by that he may recover". The sick person must then be oiled on the face, chest and belly with the fat of a she-goat or with *mwadi ufi tangitwa*. If the witch refused, the practice was, especially if it was a woman, to tie her to a tree by a thong the other end of which was drawn tightly round the forehead, and then flog her soundly till she promised to do what was necessary. When this had been done, the witch was driven out of the *kwat*.

A witch might be of either sex, but they were generally women; in fact it is said that there have been no male witches among the Dembo for many years: they say, too, that they have now no female witches either. Whether or not this is true, I certainly could hear of no case of witchcraft where a Dembo was believed to be responsible. This does not mean, however, that the Dembo are entirely free from this evil thing, for sometimes they are bewitched by Nsadi. When this has been shown, by divination, to have been done, the Dembo go to the Nsadi who live near the witch and ask for their help in dealing with him or her. This the Nsadi generally agree to, for they like witches no more than the Dembo, and the witch is then dealt with according to Nsadi procedure. One of the allegations made by the Dembo against the Nsadi in 1930 was that they did not want Dembo to live in the Nsadi Land Unit (Reserve), and that they were using Nsadi witches to get rid of them.

The reason that Dembo go to a Nsadi diviner (*ushipuwi*) for the detection of the cause of illness and witchcraft is that they have no diviners of their own, for the people among them known as *ushipuwi* are not, like the Nsadi *ushipuwi*, diviners, but simply people who have how to cure illness with *kwisuk ufi kalik*, medicines from trees and plants, forbidden where the Nsadi would not differ-with. These *ushipuwi* (*sing. ushipuwi*), besides being able to make herbal medicines, prepare charms to protect people from sickness and the evil eye. Children wear necklaces of *kpwanat* seeds (called *kpwanat* in Nsadi) to protect them against the evil eye, and old men wear small pieces of the *mwadat* tree, each about 1 cm. long, tied to their belts as a charm against rheumatism.

1:Huntingford B-5 (1938-1939) 1954 FLA Dorobo FLA

Sometimes people are made ill by evil spirits, which are capricious beings and take children to people without any particular reason. They are said to come to a man where he is asleep and give him a sharp pull, which makes him with a start. He looks round, and seeing nobody, knows that an evil spirit has attacked him. In a short time he becomes ill, and he sees him, the head of his family, (his father, father's brother or other old man) must sprinkle honey-wine over his head, saying as he does so: Ii, ai, "Go, go", ordering the spirit to leave him; and then he will have a chance of recovery.

Where a man is about to die, he is allowed to lie undisturbed in his hut, and during the evening of the day on which he dies his body is taken out by his sons, or if he has none, by other men of his family or clan, and laid on its right side (men and women alike) with the legs straight and hands crossed over the breast, on the edge of the forest about three hundred yards away from the hut. If the hyaenas do not come and eat it, nothing is done, the body is just left to rot, and the bones are left lying there. (This, of course, very seldom happens.) The relatives harvest on the day the person dies. Those who carry out the body are unclean for three days and remain in their huts, while their people make honey-wine. The old men of the clan are then called together and some of them go up to the carriers, one of them bearing a gourd full of honey-wine, from which he takes a little in his mouth and spits it over each of the men in turn; the other old men then rub their faces with the fat of a sheep or goat, saying: Omondo anyom, ekinye ak kokak, "Go forth now, and mix with the children", meaning that you are now free to meet even children, since you are clean. The old men then drink the honey-wine.

Before a body is laid out for the hyaenas, all the ornaments are removed from a man's body by his sons, and from a woman's by her daughters, who then divide them among themselves. Before the ornaments are worn, however, they are laid aside for three months, after which some of the old men of the clan come and grease them with sheep's fat; and in preparation for the greasing the children make honey-wine for the old men who, after greasing the ornaments, spit some of it over the children and then drink what is left. Very old men and women are buried in narrow holes about 5 feet deep, in which they are laid wearing their clothes. A year after an old man has been buried, his children plant a branch of *mukogoi* (*Brucea* sp.) on the grave and let it grow. Babies are buried in the dung-heap if there is one, otherwise they are laid out for the hyaenas like other people. The hut in which a person has died is not dismantled, but remains occupied till, on account of normal deterioration it is abandoned.

The dead person's soul enters the body of a hyaena when the body is eaten, and leaves the hyaena when the animal goes to ground, whence it goes under the earth to spirit-land, from which it returns periodically to visit the living.

Closely linked with religion, as closely indeed that sometimes it is not easy to see where the one ends and the other begins, is magic. By this term I mean the belief that by doing or not doing certain things, men can control

5:Huntingford E-5 (1938-1939) 1954 FLÓ Dorobo FLÓ

the forces of nature, a belief which (I am convinced) does have the effect of giving him confidence in his ability to deal with an imperfectly understood world. All those parts of human life in which there is an element of uncertainty or danger can be "controlled" by means of magic, not always completely, but with enough coincidental result to confirm the belief that what has been done is the right thing to do and to keep on doing.

The main occupation of the Dorobo was hunting. Unfortunately this is one of the things we know least about, because owing to external pressure the Dorobo have had to give up real hunting and now confine themselves to trapping. It was therefore impossible to get hold of anything more than a few allusions to the hunting magic of the old days. On the one hand, fear of the government has undoubtedly sealed the lips of some of the older Dorobo, for hunting is now forbidden, and they were afraid, quite mistakenly, that if they talked about it, they might get into trouble, as people might think they were still hunting; and on the other hand, ignorance prevents the younger men from talking about it, for most of them have never hunted in the real sense of the word. But there was hunting magic. There was, for example, not only a seasonal division of hunting activities, but a magical division as well. In the dry weather people used to hunt far afield with bow and arrow; in the wet weather they set traps close to home. Now from the magical point of view it is the bow and arrow work that needs help, for in it there is an element of danger to the hunter, and of uncertainty as to whether he will make a kill. In trapping, the process is mechanical, a mere matter of being able to make a trap. All that need be done is to set the trap and wait: sooner or later it will catch something without any danger to the trapper. So when a man was going out with bow and arrow he had to abstain from sexual intercourse immediately before setting out on an expedition, lest the act should put him into mystical danger. Prayers and the observation of omens before going out gave a man further confidence. But when setting traps this abstinence is not necessary.

We have already come across a good deal of magic. The forms of purification after killing people, for instance, are magical as much as religious; so is the cleansing of women after childbirth; and all sorts of things people do in daily life are nothing else but manifestations of the belief in the efficacy of magic. When a man puts a new honey-barrel into a tree and calls out to the bees to enter it, his call is as much a magical utterance as a mere invitation to enter his barrel.

Omens include the following:

If the birds called *kipténdi* and *kipénakee* or *kipénakee* (both species of woodpecker) are seen or heard on the right hand side when starting out to hunt or on a journey, a man will be successful; but if they are on the left, he will be unsuccessful.

If a snake crosses the path from right to left, having first been seen lying still on the side of the path, it is a bad sign, and a man should return home and wait till the next day. But a snake which is seen in the act of crossing a path is of no significance, "for it also is travelling".

5:Huntingford E-5 (1938-1939) 1954 F16 Dorobo F16

Maintenance of ritual relations with the spirits is effected by the recognised offerings made to them; and with 'nature', on which the food supply depends, by other means (see below).

The World Order. In the myths related at the beginning of § 5, the thunder plays an important part, and is even portrayed as a man. One might almost assume from this that he was believed to be an earth-dweller who began a second life in the sky as the thunder-god who controls the rain, for the notions of rain, mist, and thunder are all interwoven, and the rainbow is "the arm of *Ilet* that draws water for him". These myths reflect the Dorobo attitude of the people to their surroundings. One of the chief features of the forest is heavy rain and frequent mist, and it would be surprising if we did not find among them the conception of some sort of rain-being who brought mist. Again, since rain is plentiful and droughts rare, the rainmaker is not needed, and although the lowest known rainfall, 28 inches in 1933 at a place two miles from the edge of the forest (and probably a little higher in the forest), would indeed constitute a drought year elsewhere, in the absence of both crops and cattle an occasional low rainfall does not matter so long as there is enough to make the plants flower. Even a heavy rainfall of 70 inches or over does no more than cause temporary inconvenience where there are no crops to be damaged and the slopes prevent flooding. The Tindiret forest is, in fact, an ideal place for hunters to live in. However prolonged the dry season, the conditions for wild life are better there than in the open plains below, and low rainfall has never yet prevented a supply of game to hunt or trap. Whether the people are able to kill enough game to ensure a supply of food is another matter, and the inter-relation is not so much that between man and nature in general, but between man and the animals. Man's wrong-doing is thought to produce either a failure of the supply of animals, or his inability to kill or catch what is there in abundance.

Social Values. Things which are important to man because they are indispensable to him have what is called a social value as well as a ritual value, because between man and them there is created a relationship which man must maintain if he is not to suffer. The food supply of a hunting people is got from day to day and depends on the skill of the hunter. It is uncertain, because on any given day the hunter may not find game, or having found it may not kill. But precarious as such a life might seem, there is no evidence that in the past there was often any great scarcity from either of these two causes. The old men say, in fact, that whereas food is scarce under present-day conditions, in the old days when hunting was not restricted it was, if not always abundant, at least enough. Such a statement is not, I think, merely an exaggerated memory of better days, the outcome of a longing to get back to the forest, but it explains in part the otherwise remarkable scarcity of hunting magic and ritual procedure. Some hunting magic there certainly was, and fear and ignorance prevent few talk about it; but it is clear that when the food supply throughout the centuries is found adequate,

have lived in the country of the Kittŏ Masai, since they are stated to have been the precursors of the Masai in this part of the world.

I was unable to elicit any folk-tales from the *Aramanik*, who say that they know no stories or legends except those they have learned from the Masai. It is possible that further efforts in this direction might meet with better success. The *Aramanik* are not as friendly or as ready to discuss their own affairs as are the cheerful, happy-go-lucky *Mdoiyo*.

Many Masai superstitions and superstitious practices are to be found among the Dorobo. There are, however, certain customs and observances of a superstitious nature practised only by the Dorobo. Of the following three examples, the last two given are in this category.

The *Mdoiyo* will not kill a python. They say it is a hunter of meat, as are they themselves. Furthermore, if it be killed, the ground where it dies and where its blood is split is ever afterwards fatal to cattle grazing there.[1] No explanation is given of this, and it would seem worthy of note that the Dorobo are exceptionally quick and skilful killers of all other snakes.

When following a native path or a road, if a Dorobo comes to the place where the track of a snake crosses the path, he will never step over it without first kicking up the sand or earth in order to break the continuity of the snake's track. This is done in order to avert evil, and is stated to be the only efficacious way of ensuring that the snake in question will not eventually kill the man who has crossed its path.[2]

If a Dorobo has been robbed and if the thief cannot be found, the following procedure is sometimes resorted to. The man who has suffered the loss heats his sword in the fire until it is red and then, plunging it into the earth, he says: "The thief shall die to-morrow." This is regarded as a very bad practice and is seldom indulged in, so the injured party, no matter how much he may have lost, knows that he will become extremely unpopular as a result of his action.

It seems likely that in a few years' time there will be no *Balakpa* and no *Kisyalakpai* Dorobo. As I have said elsewhere, it is now almost impossible to find *Balakpa* or *Kisya-*

[1] See Hollis: *The Masai*, p. 80. [2] *Ibid.*, p. 79.

5:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

a clear, windless sky. About 10 o'clock a curious whistling noise began to come from a certain part of the forest, and continued, on the same note, and without a break, for several hours. It was certainly no human or machine-made noise, and the Dorobo professed complete ignorance of it. A Nandi who had lived there before the Nandi War told me afterwards that it was an evil spirit whistling in the forest, "for we used to hear them whistling to each other like that in the forest when I was a child".

Between people and the things on which they depend for their existence both spiritual and material there is a connexion which is best expressed in terms of a ritual relationship. Things have a ritual value for people, and people themselves have a ritual status which is a relationship with their surroundings that can be altered for better or for worse according to the way in which they respect the ritual value of the things around them. Religion and magic form the procedure which protects these ritual values and status, while political organization is, in a sense, no more than an effort to maintain the ritual status of the horde in spite of the tendency of its members to injure their own ritual status and in consequence that of the horde also.

Certain things that a person does, whether voluntarily or involuntarily, cause deterioration of ritual status; but the original status may be recovered by the performance of certain ritual actions which may involve some personal effort or sacrifice. Examples of acts which cause loss of ritual status, and the means taken to restore it, are: (1) A girl who bears a child before marriage must have the undigested grass (*sirjat*) from the stomach of a goat rubbed over her face, neck, and breasts, and must then wash it off. (2) After a woman has given birth, she is in a condition of much reduced ritual status, and her husband must rub goat's fat and *sirjat* over her face, breasts, and body. (3) A man who has killed a Dorobo must have goat's fat rubbed all over him. (4) One who has killed an enemy must have stripes of white earth painted on his face. In all these cases the people have done something which causes loss of ritual status, making them ritually unclean (*saare or sonik*) and so a source of danger to others till they have been purified. The potential danger is removed by means of something which has a ritual value. Moreover, an essential element in the cleansing process is sacrifice, that is, the use of the material must either involve giving up something which is valued, or it must require some effort or even risk to get hold of. The *sirjat* or fat must be from a domestic animal: if the person concerned has one, he must use it; if he has none, then he must get one, and without delay, which for a Dorobo usually meant that he had to steal it, and thus risk getting killed while doing so. Therefore there is an act of faith in these magico-religious performances, and people believe so firmly in the efficacy of what they do that they are prepared to risk danger in order to get the necessary materials. The use of white earth may entail no more than a journey to get it, but that still means a personal effort on somebody's part. Materials which are used for the restoration of ritual status, and in consequence have a special ritual value, include: the flesh of goats, which is eaten when twins are born, and in cases of incest; *sirjat*, the undigested grass from the stomach of a ruminant (a sheep

/340 cont./

583 are bought from th Masai for ivory, and finally half of the meat of
[439] a slain female lion of game approximately the size of a zebra. The
mother of the bride and each of her brothers receive from the bride-
groom a beehive apiece. Instead of the beehives the parents-in-law
in some regions, especially where the Wandorobo live in close contact
[40] with the Masai, receive iron wire. After receiving the gifts, the
bridegroom and father-in-law reciprocally call each other ba-gesed,
bridegroom and mother-in-law ba-ger, bridegroom and the brothers
of the bride ba-soba, according to ancient Masai custom.

583 For beauties a higher price is paid. For a childless widow
587 the usual price is pid, but only after the birth of the first child and
after her father has returned to the heirs of her deceased husband
the price received or her before her first marriage. For a widow
who gave birth to gis only, no bride price is paid; instead, however,
583 the heir of her deceased husband keeps her daughters. Likewise
nothing is paid for a woman driven out by her husband. If the
bridegroom dies before the marriage, his brother takes the bride.
[584] If the bride dies before the marriage or if the betrothed persons
dissolve the betrothl, the portion of the bride price already paid
is returned. A bridegroom who is too poor to be able to pay the
full price serves th father-in-law for a few months as hunter for
the remainder ewes.

584 If the father othe girl has stubbornly opposed the courtship,
he is finally forcede consent by means of a divine judgment.
The lover stealthil creeps into the hut of the old man and ties a
[584] rope of grass arou the wooden honey pot. The father is said /341/
[584] to give his consentegularly then, since otherwise the punishment
[584] of God would kill im. In place of this custom, it also happens
[571] that the lover secretly takes the girl away, or the latter -- as among
the Masai -- flees him without her parents' knowledge.

[584] With exchangeovers, but legal marriage does not arise from
it. The woman do not remain with the other man for longer than
a half to a whole ye. If she feels pregnant before this time, she
returns to her husband.

584 Among the Ardhe same marriage obstacles hold as among the
[571] Masai, but the gre distances between the individual tiny camps

000 /footnote 1 continued/ be a substantial therapeutic advance to be recorded here." From "Über Acocanthera Schimperi als Mittel bei Herzkrankheiten/On Acocanthera Schimperi as a Remedy for Heart Ailments." By L. Lewin and E. Gadelmann. From a report delivered to the Berliner medizinischen Gesellschaft /Berlin Medical Society/. Berlin, 1906).

276 324 Although the tree is not rare in the steppe around Kilimandscharo, its poisonous nature nevertheless generally seems to be known only to the Wandorobbo, since other tribes do not manufacture the poison themselves. Thus the former sell it, for example, to the Wadschagga, the Wakuafi of Aruscha (whilst east of Meyerberg /Mt. Meru/, the Wapare, etc. To brew the poison two Wandorobbo always go a few thousand meters away from the camp into the bush. After they have collected branches and roots of Acocanthera abyssinica, they split them into thumb-thick sticks and prepare for the cooking in separate places. The wood is boiled for several hours in an earthen pot that is half filled with river water. Then it is removed, and the liquid obtained is thickened by further cooking to a viscous porridge-like consistency. The finished poison is black and looks like pitch. During its preparation no woman may come either in the vicinity of the poison pot or in that of the man doing the cooking. The woman who brings food and firewood therefore places these objects within calling distance. They believe that the effect of the poison is weakened or entirely destroyed through the contact or even merely the presence of a woman, whose person they, in their naïve beliefs, are unable to separate from the idea of sexual intercourse -- since the latter, according to their view, is an element acting against the poison. The same would be the case if the wife had intercourse with another man during the time the husband is busy preparing the poison, or if the husband cooked the poison while his wife was pregnant. The finished poison is stored in a wooden pot (mafi) or in a leather bag /bat/ (ngoko), and, to be sure, like the quivers with the poisoned arrows, not in the hut, but hung on a tree not far from the camp.

Huntingford E-4, 3 (1938-1939) 1953 FLA Dorobo FLA

and lying about on the farms. The only weapon is the bow, kongoito, which the Dorobo make themselves from the hard bow (Dorobo ap.) (c. 5 ft. about) (c. long, and the hunting, rest, is made from part of the plant (sp.) Dorobo. Arrow-shafts are made from the hard-wooded and smooth trees, or from bamboo, sometimes arrow-heads are bought from the Nandi, and are of the Nandi pattern, arrows are rubbed in various kinds of fats. Arrow poison is made from the Lobel bush (pronunciation doubtful).

Pottery

Making pottery, kongoi, is a common occupation of Dorobo women. They are made from four of the following ordinary pots, moist, and even with hard seeds from a plant called ngaroriet. The technique is a spiral foundation with a fast then gradually ascending coil, of the straight even-work type and two-step variety, the sides being smoothed out and not rubbed together.

Miscellaneous

Salt used to be made from the ashes of the plant ndongoret (senelio kongoitoki). Red and white earth is found near Timboroa on the west of the Dorobo country, and men go in parties of four or five to dig it, carrying home the earth in large leather bags, usually in order to sell it to the Nandi who, in 1938, gave them (c. c long. Red earth, ormoret, is mixed with fat or ngaiton oil for rubbing on the hair; white earth, ormoret, has magico-religious uses. For carrying a number of small objects a carrying-net called kibukiet is used; it is made of a piece of cord about 3 ft. 6 ins. long with pieces of bone stretched across them, somewhat resembling a pair of handcuffs across wrists. These are sometimes used by the Nandi.

Beliefs and Customs

Religion

Ajiken, the sun, is recognized as a being that can supply or withhold the needs of people. Ask, ngiyan paiyoit, "Ask, fill us with rain," is a common prayer. Some say that Ajiken is the sister, others that she is the mother. Besides Ajiken, it is believed that there is a being called Ilat, the Creator, who produces rain, and "the rainbow is his arm which draws up water for him." The Dorobo also believe in spirits, good and bad, both of which are called oiwandet, a word which includes the evil (ormoret ngishte) and ancestrepath (evil spirits) of the Nandi. The ancestral spirits have the same significance and functions as those of the Nandi, and though they punish the living for doing evil, they are otherwise friendly and visit the living, travelling in the bodies of snakes, both to see their people and to get food in the form of blackbirds (honey and water); spirit-snakes should not be killed.

Divination

The Dorobo appear to have no diviners of their own, and when they have recourse to divination, as in cases of illness or witchcraft, they go to Nandi diviners of the type called oiberyet, by whom they are charged a small fee. The people called orkoyot (pl. orkoik) among the Dorobo are no more than healers or physicians who prepare healing medicines from trees and plants. Although the Dorobo have a reputation among other tribes as powerful rain-makers, they themselves say that they have no rain-makers, which is probably true.

Death and Burial

Very old men and women are buried in narrow holes about 5 ft. deep in which the bodies are laid full length, wearing their clothes, and your after an old man's death his children place a bowerik of undergrowth (Ehrenbergia sp.) on the grave and let it grow. Other people are laid out for the funeral, both sexes on the right side with

[illegible] 754

Witchcraft

Witches, dorobi (defined as among the Nandi, p. 89), may be of either sex; females are said to be more commonly thought to [illegible] 754 witches or all to the three districts of England, Ergenzeim, and Sweden, and certainly no cases of witchcraft was encountered. Formerly, in cases of witchcraft where the witch's identity was unknown, the Dorobo went to a Nandi diviner, witchpoet, and on her identity becoming known the witch was required to sit the victim on the face, breast, and belly with the fat of a sheep-goat. If the witchpoet, she was said to a [illegible] by a Dorobo tightly round her forehead and fingers till she agreed. [illegible]

Affinity with Wild Animals

Presuming a "hunting outlook," the attitude of the Dorobo to wild animals is quite that of the African to whom hunting is an event of secondary importance. They seem to be closer to the wild life round them, perhaps because they are wild [illegible] and themselves. The conversations of Dorobo going through the forest were quickly to the wild life there, for they knew what they and the forest and contain, " affinity with the beasts of the forest. This was described to a text, to which a Dorobo said: " The Dorobo know the speech of all the animals, and they like to see the animals. The animals are not bad, for we and they all dwell in the forest together. The bodily power of animals is not like that of people, but it is not very different, for animals also are intelligent. All animals of the forest are alike, though we are some and not others, because we the Dorobo and they the animals all live side by side in the forest."

Musical Instruments

The Dorobo have no musical instruments, and they seldom sing or dance. They [illegible] 53 used to have water-buck horns which were blown to call people together in the [illegible] forest.

7. Names

A Dorobo man has normally at least four names: (1) spirit-name, (2) [illegible] name, (3) nickname, (4) praise-name, though he does not use them all.

(1) Spirit-name. The choice of a spirit-name, [illegible] with, may be determined in one of three ways: (a) a pregnant woman may dream that an ancestor of her husband's visits her and tells her to call the child after him; (b) after the child is born, the father calls in his brother and his wife, and one or two other near relatives on the paternal side, and they recite a number of names borne by their ancestors, pausing after each name: when the child answers, the name last spoken is given to it, this being one of the ways in which the ancestors indicate their will in the matter of names; a little snuff is blown up the child's nostrils to make sure that it does sneeze; (c) by taking the name of a relative in the next generation but one, as in the case of Arap Mining's family. These spirit-names were chosen in this manner:

Father's father:	Kipsa	
Father:	Kimining	
Himself:	Kimnyo	Kipsa
His son:	Chesgei	Kimining
His son's son:	not yet [illegible] born	Kimnyo
		Chesgei

The second and third methods seem to be the commonest, and their use depends on family custom; the first method [illegible] described to me, but I believe is seldom used. The spirit-name once given is never spoken, and is known only to the bearer and those who were present when it was given; its purpose is to link the bearer with a specific ancestor, and to ensure remembrance of his name.

(2) Porridge-name. This term is borrowed [illegible] the Nandi, who call it porridge-name because it is given [illegible] when a child is first fed with porridge or gruel (boiled and ground). There are two methods of choosing this name. The father's parents, if alive, and other elderly paternal relatives, meet in the father's hut; they drink beer, which is not shared by the child's father and mother. The father's mother, or some female relative on the paternal side, then holds the child in her [illegible] and says, *Kiberis Kimnu*, "we call you back and such a name", [illegible] a name which the relatives have chosen from either (a) some circumstance connected with the child's birth, like the case of Say above if not born, or some recent action of the father's, or (b) the name of an ancestor of the next generation but one, as in the case of spirit-names; this second choice is made when [illegible] are not found on the ancestor genealogical system.

(3) Nicknames. This is not an essential name, for all do not have a nickname. When given, it is generally derived [illegible] some physical peculiarity or habitual action of the person concerned, like Kipkorum, "left-handed", Kimnyolion, "he eats", Parkitiyan, "hunter".

you are a spirit". A man who kills a snake at night in his hut need not necessarily become ill as a result (as the Nandi believe he will), but the ancestor whose spirit was in the snake will show his anger by never going to see the man again and transferring his attentions to some other member of the family. This would no doubt result in bad luck, for the offender would be continually conscious of what he had done. Another account, however, which I think more nearly represents the common belief, is that after offering a snake honey-and-water or milk, the owner of the hut says to it: (1) *si ayan kon ingoti labunet*, "Go and return when (my wife) bears a child", so that the name of the spirit may be given to the child. According to this account, if a man should kill a snake at night in his hut, he will probably be ill the next day unless he pours some honey-wine on the floor where the snake had been in the night. This should free him from the danger of illness. Snakes seen in the daytime may be killed without fear.

The spirits also appear in daylight as shadows (*arnet*) and they may make their presence known by slight noises, like the sound of a stick being broken. When a man sees an unaccountable shadow, or hears a noise for which he can see no cause, he concludes that it was a spirit which has come to see him, or perhaps just came up to take a walk on earth. But he need do nothing, nor need he be afraid, for at such times the spirits do no harm.

Before setting out to hunt, a man asks the spirits to help him:

Cowa-ilili, chilosi kony ne kiptet,
Spirits, give-us animal which we-may-kill,
chilosi kwanik si kiptirjo.
Give-us honey enough-to-satisfy-us.

Offerings of honey-and-water, *kiswani*, are sometimes poured on the ground from gourds with a request to the spirits to provide food in times of scarcity. Such offerings are made by people at their own homes when their affairs are going badly:

Cowa-ilili, apiijo emiik,
Spirits, fill-us-with food,
si kiptijo sajet.
That we-may-be-filled-with hunts.

When a man is very ill, he sometimes sees what he takes to be another man lying beside him for a short time, who is invisible to other people. When he has recovered, he realizes that this other man was a spirit who had come to help him to get well, and to take into himself the sickness. *Kimyon si kuriju, koro ne koros ole ne ariani, si dongi*, "He came to guard him, and lay where the sick man lay, to make him well".

Evil spirits sometimes attack people whom they envy and make them ill. They also play tricks on people and do spiteful and irritating things to them. A man is walking, for example, and suddenly catches his foot, as he thinks, in a long-drawn tight noose across the path, and falls. But he finds nothing there, and realizes that it was done by an evil spirit. In 1927 I was one night encamped on the edge of the forest between Kipkoreon and Timaya, with

or goat where the Dambo are concerned), wood ash (maphiri, Sh. the fat of cow's udder, or butter, i.e. solidified whole milk), honey-wine, and white earth.

Illness is generally believed to be due to the anger of an ancestral spirit, to the spite of an evil spirit, or to witchcraft. Sometimes, on the other hand, it is thought to have a natural cause. When a person is taken ill the relatives, unless they can be sure that the illness has a natural cause, go to a Nyadi diviner of the kind called sakuyani. Diviners want to charge the Dambo a fee of £[illegible] if the cause was witchcraft, and £[illegible] if it was due to a spirit. But if a man went down to the lower country where there is malaria, and after his return was taken with ague and fever, they knew it was a natural illness, hereto fee, and did not consult a diviner.

If the cause was found by the diviner to be witchcraft, the witch was indicated according to the methods employed by Nyadi diviners, and the sick man's relatives went to the witch's hut, pulled him or her outside, spat in the face and said: "Come and lift he-and-so that he may recover". The sick person must then be oiled on the face, chest and belly with the fat of a she-goat or with wood ash (maphiri). If the witch refused, the position was, especially if it was a woman, to tie her to a tree by a thong the other end of which was drawn tightly round the forehead, and then flog her soundly till she promised to do what was necessary. When this had been done, the witch was driven out of the kraal.

A witch might be of either sex, but they were generally women; in fact it is said that there have been no male witches among the Dambo for many years: they say, too, that they have now no female witches either. Whether or not this is true, I certainly could hear of no case of witchcraft where a Dambo was believed to be responsible. This does not mean, however, that the Dambo are entirely free from the evil thing, for sometimes they are bewitched by Nyadi. When this has been shown, by divination, to have been done, the Dambo go to the Nyadi who live near the witch and ask for their help in dealing with him or her. This the Nyadi generally agree to, for they like witches no more than the Dambo, and the witch is then dealt with according to Nyadi procedure. One of the allegations made by the Dambo against the Nyadi in 1939 was that they did not want Dambo to live in the Nyadi Land Unit (Reserve), and that they were using Nyadi witches to get rid of them.

The reason that Dambo go to a Nyadi diviner (sakuyani) for the detection of the cause of illness and witchcraft is that they have no diviners of their own, for the people among them known as sakuli are not, like the Nyadi sakuli, diviners, but simply people who know how to cure illness with herbal up lotch, medicines from trees and plants, herbalists whom the Nyadi would call sipherezwak. These sakuli (pleg. sakuyani), besides being able to make herbal medicines, prepare charms to protect people from sickness and the evil eye. Children wear necklaces of sphyrenet seeds (called lubwenti in Nyadi) to protect them against the evil eye, and old men wear small pieces of the versatile tree, each about 1 cm. long, tied to their belts as a charm against rheumatism.

the bones of sailors, a belief which, if not overcome, does have the effect of giving him confidence in his ability to deal with an hopelessly confused world. All those parts of human life in which there is an element of uncertainty or danger can be "controlled" by means of magic, not always completely, but with enough satisfactory result to confirm the belief that what has been done is the right thing to do and to keep on doing.

The main occupation of the Trobriand men (omitted) this is one of the things we have been told about. Because owing to ancestral prowess the Trobriand have had to give up coral fishing and now confine themselves to shipping. It was therefore impossible to get both of anything more than a few allusions to the fishing magic of the old days. On the one hand, few of the gossipmongers had undoubtedly sailed the lips of many of the other islands, for fishing is very forbidden, and they were afraid, quite rightly, that if they talked about it, they might get into trouble, as people might think they were still fishing; and on the other hand, ignorance prevents the younger men from talking about it, for most of them have never fished in the real sense of the word. But there was fishing magic. There was, for example, not only a seasonal division of fishing activities, but a magical division as well. In the dry weather people went to hunt for shell with bow and arrow; in the wet weather they set traps down in holes. Even from the magical point of view it is the bow and arrow work that counts badly, for in it there is an element of danger to the hunter, and of uncertainty as to whether he will make a kill. In snapping, the process is mechanical, a mere matter of being able to make a trap. All that need be done is to set the trap and wait - sooner or later it will catch something without any danger to the snapper. So often a man was going out with bow and arrow to hunt in shallow water around lagoonward immediately before setting out on his expedition, but he will should put into take mystical charges. Prayers and the observation of omens before going out gave a new further confidence. But often getting bigger fish shallowness is not necessary.

We have already come across a good deal of magic. The forms of protection when sailing people, for instance, are magical as well as religious; so is the charming of waters after childbirth, and all sorts of things people do in daily life are nothing else but manifestations of the belief in the efficacy of magic. When a man goes [illegible] into [illegible] his wife will to the bush to cook it, the wife is an much a magical ceremony as a mere institution to cook the food.

(Some include the following:)

If the body called Kipatili and Kipitoulou or Kipitoulou (both spoke of counterparts) are seen or heard on the right hand side when starting out to hunt or on a journey, a good will be successful; but if they are on the left, he will be unsuccessful.

If a snake crosses the path from right to left, having first been lying still on the side of the path, it is a bad sign, and a man should return home and wait till the next day. But a snake which is seen in the act of crossing a path is of no significance, "for it also is travelling".

A consent is a sign of existing fashion, and exactly for the purpose who were to, nor for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general mood of knowledge of the Dandas that the important parts of their life are helped and controlled by magic. The recovery of ritual status after childbirth and after the loss of status is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with those powerful and capricious beings; the whole idea of circumcision (cases 2 & 3 harmonize to that of the investiture by means of a magico-religious performance from the state of boyhood to that of manhood); illness and other disharmonies and misfortunes are all magic, and are there because people believe that by doing these they will be enabled to go on existing.

(c) Analysis of Beliefs

(1) Good Fortune. Things which have ritual value fall into three main groups: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status.

(1) Honey is sacred, like milk in the Punjab, and in addition to the value as eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the provision of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is burned. The last entries means that within the pastoral milieu, the Dandas do not have grass cure honey.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that their use is directed to both the dead and the living.

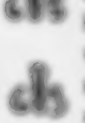
(3) Things used for the recovery of damaged ritual status include goats and sheep, and certain of their products, i.e. milk and fat, as well as barley or wheat as staple food. (4) Many cures from sickness which formerly were hardly practised at all by most Dandas, and even to-day only as a small scale. Happy wives to want a good look, as well as white teeth.

Each period of life has what might be called a standard ritual status, which is changed to a different standard on circumstances, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults is altered under certain conditions: (1) a man setting out to trade is not in the same ritual state as when he is staying quietly at home, and he must not have sexual intercourse at such a time, i.e. just before he starts on, should he have an opportunity, while away; (2) a person sick of an illness has a status different from that of other people; (3) involving a simple means deterioration of ritual status; (4) the breaking of a taboo affects ritual status; (5) means suffer deterioration of ritual status through the birth of a child before marriage, the birth of twins, and even, in a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.

(Def. cont.)
never have anything to do with taking their part. On the other hand, if an Ami is killed by a blacksmith, the blacksmith immediately place themselves on the side of the man injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wanindiku, to be sure, would themselves be in a position to execute the revenge, but the blacksmith do not permit this because they see in it an encroachment on their rights as masters of the land and in particular also of the ol bosom.

Bodily injury with a fatal outcome, if caused intentionally, is regarded as murder; if negligently, as negligent homicide. Minor bodily injuries are atoned for with the payment of a specific number of bushkiwe. For the destruction of a finger one bushkiwe is paid, for one hand eight; among some Wanindiku who live in close contact with the Ami the assessment for the destruction of a finger or the whole hand amounts to a far-called many. Bodily injury leading only to the loss of an index finger or an eye often remains unpunished, or does unknown unmish. Abortion is said to be unknown, and perversion are to occur. Kidnapping and rape are unknown.

A theft committed in the camp by an inhabitant or stranger is atoned for by the return of the stolen goods; that of a bushkiwe hanging outside the camp, with the payment of ten new ones. Anyone who steals honey from a bushkiwe pays five bushkiwe. Arson is said not to occur; one who is the cause of the illness of another through sorcery is not infrequently killed, after he has been persuaded to charm the sick one back to health. The shooting of poisoned arrows in the camp is strictly forbidden, because of the danger connected with it. Anyone who transgresses this law must expect to be killed immediately by his countrymen.



Unknown are aggravated kinds of death, the principle of repaying like with like, compensation in the culpable body part, mutilations, imprisonment, enslavement, public punishments, the right of pardon.

For the inquiry concerning an unknown culprit, the injured one runs -- [illegible] as has already been mentioned -- to a sorcerer, who is also called at general among the Wanindiku. Instead of the manipulations with the [illegible] he throws a pair of sandals on the ground in front of him: eight times, then picks them up and puts

[1] [illegible] is a Bunsi word also meaning [illegible]

/303 cont./

787 them under his head at night: the next morning he throws the medicine again, this time five times, whereupon he knows that the guilty one lives thus and so and lives in such and such a camp, etc. If the tusks 789 of a slain elephant are stolen (the hunter does not remove them 685 immediately, but waits until they have been loosened by the decaying 754 of the gums), the one who killed the animal raises magic against the thief by shooting at the head of the elephant several times, using as an arrow the fire-twirling stick. Then he breaks the latter and lays it beside the head. According to the assertions of the Wandorobo, this magic is so effective that the thief must involuntarily die after a few days if he does not deliver the tusks to the owner in all haste -- which is supposed to happen almost always.

695 Only in criminal cases are there legal proceedings, which take [171] place in the same manner as among the Masai. Every male individual is entitled to take part in them. The case arriving goes to the one [782] presiding, who is already waiting with a few friends in the shade of a tree near his camp, with the customary greeting and handshake, whereupon the latter opens the meeting with a few of the above-mentioned supplicative prayers. Ulé ngo kowa. Ulé ngo nai. Ulé ngai ngai and closes it at the end of the deliberations in the same manner.

[171] A swearing of the truth is made with the same gestures and the same words as among the Masai. Besides the latter, the formula, Ulé kiwita - may God kill me, is also customary.

[171] To extort confessions one uses the torture customary among the Masai, wrapping a bow string around the upper arm. The Wandorobo call it sodoga ranga. In their court sessions the Aak are not acquainted with any ordeals (moroga) other than the ones discussed by the Masai. Of these they use the following three: The ordeal of the bee, kaa gori waakaa, the ordeal of the dry wood, kaa kaakinga ongoroi, and that of the stool made of earth, which they designate the same as the Masai. The culprit must submit to the ordeal upon the demand of the plaintiff and may not put up a substitute. According to the statements of the Wandorobo, one who is really guilty always confesses before he submits to the ol moroi, as it is also called here, besides moroga, because the belief that otherwise he would die the very next

[illegible] ascribed to the minds of the people. One murder

[illegible]

[illegible] long alone on the forest. The only company is the two [illegible] called the Ulfhednaghund from the forest they dwelled in. [illegible] and the remaining half is made from part of the great [illegible] coats-of-arms worn by the Ulfhednaghund and adopted since. [illegible] coat-of-arms [illegible] on [illegible] [illegible] [illegible]

Schoettingford B-S (1936-1937) 1954 FLA Dresden FLA

a clear, windless day. About 10 o'clock a curious whistling noise began to come from a certain part of the forest, and continued, on the same note, and without a break, for several hours. It was evidently no human or machine-made noise, and the Dandu professed complete ignorance of it. A Dandu who had lived there before the Dandi War told me afterwards that it was an evil spirit whistling in the forest, "for we used to hear them whistling in such other like that in the forest where I was a child".

Between people and the things on which they depend for their existence both spiritual and material there is a connection which is best expressed in terms of a ritual relationship. Things have a ritual value for people, and people themselves have a ritual status which is a relationship with their surroundings that can be altered for better or for worse according to the way in which they respect the ritual value of the things around them. Rites and magic form the procedure which protects these ritual values and status, while political organization is, in a sense, no more than an effort to maintain the ritual status of the lands in spite of the tendency of its members to injure their own ritual status and in consequence that of the lands also.

Certain things that a person does, whether voluntarily or involuntarily, cause deterioration of ritual status; but the original status may be recovered by the performance of certain ritual actions which may involve some personal effort or sacrifice. Examples of acts which cause loss of ritual status, and the means taken to restore it, are: (1) A girl who bears a child before marriage must have the undigested grass (cud) from the stomach of a goat rubbed over her face, neck, and breasts, and must then wash it off. (2) After a woman has given birth, she is in a condition of much reduced ritual status, and her husband must rub goat's fat and cud over her face, breasts, and body. (3) A man who has killed a Dandu must have goat's fat rubbed all over him. (4) One who has killed an enemy must have stripes of white earth painted on his face. In all these cases the people have done something which causes loss of ritual status, making them ritually unclean (pawo or awo) and in a source of danger to others till they have been purified. The potential danger is removed by means of something which has a ritual value. Moreover, an essential element in the cleansing process is sacrifice, that is, the use of the material must often involve giving up something which is valued, or it must require some effort or even risk to get hold of. The cud or fat must be from a domestic animal. If the person concerned has one, he must use it; if he has none, then he must get one, and without delay, which for a Dandu usually means that he has to steal it, and thus risk getting killed while doing so. Therefore there is an act of faith in these magico-religious performances, and people believe so firmly in the efficacy of what they do that they are prepared to risk danger in order to get the necessary materials. The use of white earth may entail no more than a [illegible] but that will involve [illegible]

[illegible] the substitution of ritual status, and in consequence have a special ritual value, namely: the flesh of goats, which is eaten when taboo are lifted, and is made of cud, viz. the undigested grass from the stomach of a ruminant by doing

or goat where the Dundee are concerned); sweet oil; tongue, lit. the fat of cow's udder, or butter, i.e. solidified whole milk; honey-wine; and white earth.

Illness is generally believed to be due to the anger of an ancestral spirit, to the spite of an evil spirit, or to witchcraft. Sometimes, on the other hand, it is thought to have a natural cause. When a person is taken ill the relatives, unless they can be sure that the illness has a natural cause, go to a Yuudi diviner of the kind called *sakpanel*. Diviners used to charge the Dubulu a fee of 1/ — if the cause was witchcraft, and 1/ — if it was due to a spirit. But if a man went down to the lowery country where there is malaria, and after his return was taken with ague and fever, they knew it was a natural illness, *bwisia jan*, and did not consult a diviner.

If the cause was found by the diviner to be witchcraft, the witch was indicated according to the methods employed by Yuudi diviners, and the sick man's relatives went to the witch's hut, pulled him or her outside, spat in the face and said: "Come and eat human flesh for many seasons". The sick person must then be rubbed on the face, chest and belly with the fat of a she-goat or with sweet oil (*sogbwa*). If the witch refused, the practice was, especially if it was a woman, to tie her to a tree by a thong the other end of which was drawn tightly round the forehead, and then flog her soundly till she promised to do what was necessary. When this had been done, the witch was driven out of the town.

A witch might be of either sex, but they were generally women; in fact it is said that there have been no male witches among the Dundee for many years: they say, too, that they have now no female witches either. Whether or not this is true, I certainly could hear of no case of witchcraft where a Dundee was believed to be responsible. This does not mean, however, that the Dundee are entirely free from this evil thing, for sometimes they are bewitched by Yuudi. When this has been shown, by divination, to have been done, the Dundee go to the Yuudi who live near the witch and ask for their help in dealing with him or her. This the Yuudi generally agree to, for they like witches no more than the Dundee, and the witch is then dealt with according to Yuudi procedure. One of the allegations made by the Dundee against the Yuudi in 1938 was that they did not want Dundee to live in the Yuudi Local Unit (Reserve), and that they were using Yuudi witches to get rid of them.

The reason that Dundee go to a Yuudi diviner (*sakpanel*) for the detection of the cause of illness and witchcraft is that they have no diviners of their own, for the people among them known as *sakpanli* are not, like the Yuudi *sakpanli*, diviners, but simply people who have learnt to cure illness with herbal *sog* (*sogbwa*), medicines from trees and plants, herbalists whom the Yuudi would call *kpiberyuudi*. These *sakpanli* (*sing. sakpanel*), besides being able to make herbal medicines, prepare charms to protect people from sickness and the evil eye. Children wear necklaces of [illegible] which are believed by Yuudi to protect them against the evil eye, and all men wear small pieces of the wooden tree, each about 1 cm. long, tied to their belts as a charm against rheumatism.

Schlesinger B-3 (1936-1939) 1954 JFLA Dorobo JFLA

Sometimes people are made ill by evil spirits, which are supernatural beings and take shadows to people without any particular reason. They are said to come to a man when he is asleep and give him a sharp pull, which makes him with a start. He looks round, and seeing nobody, knows that an evil spirit has attacked him. In a short time he becomes ill, and he sees him, the head of his family, his father, father's brother or other old man, must sprinkle honey-wine over his head, saying as he does so: Ee, ai, "Go, go", ordering the spirit to leave him; and then he will have a chance of recovery.

When a man is about to die, he is allowed to be undisturbed in his hut, and during the evening of the day on which he dies his body is taken out by his sons, or if he has none, by other men of his family or clan, and laid on its right side (men and women alike) with the legs straight and hands crossed over the breast, on the edge of the forest about three hundred yards away from the hut. If the hyenas do not come and eat it, nothing is done, the body is just left to rot, and the bones are left lying there. (This, of course, very seldom happens.) The relatives lament on the day the person dies. Those who carry out the body are undone for three days and remain in their huts, while their people make honey-wine. The old men of the clan are then called together and some of them go up to the carcass, one of them bearing a gourd full of honey-wine, from which he takes a little in his mouth and spits it over each of the men in turn; the other old men then all dip their hands with the fat of a sheep or goat, saying: Omondo anyore, ekinye ak tabuk, "Go forth now, and mix with the children", meaning that you are now free to meet even children, since you are clean. The old men then drink the honey-wine.

Before a body is laid out for the hyaenas, all the ornaments are removed from a man's body by his sons, and from a woman's by her daughters, who then divide them among themselves. Before the ornaments are worn, however, they are laid aside for three months, after which some of the old men of the clan come and grease them with sheep's fat; and in preparation for the greasing the children make honey-wine for the old men who, after greasing the ornaments, spit some of it over the children and then drink what is left. Very old men and women are buried in narrow holes about 4 feet deep, in which they are laid wearing their clothes. A year after an old man has been buried, his children place a branch of euphorbial (*Euphorbia* sp.) on the grave and let it grow. Babies are buried in the living-living if there is one, otherwise they are laid out for the hyaenas like other people. The hut in which a person has died is not disinherited, but remains occupied till, on account of normal deterioration it is abandoned.

The dead person's soul enters the body of a hyaena when the body is eaten, and thereby [illegible] goes to ground, whether it goes under the earth to spirit-land, from which it returns periodically to visit the living.

Closely linked with religion, as clearly indeed that sometimes it is not easy to see where the one ends and the other begins, is magic. By this term I mean the belief that by doing or not doing certain things, men can control

the forces of nature, a belief which (I am convinced) does have the effect of giving him confidence in his ability to deal with an imperfectly understood world. All those parts of human life in which there is an element of uncertainty or danger can be "controlled" by means of magic, not always completely, but with enough consistency to confirm the belief that what has been done is the right thing to do and to keep on doing.

The main occupation of the Dundee was hunting. Unfortunately this is one of the things we know least about, because owing to constant pressure the Dundee have had to give up real hunting and now confine themselves to trapping. It was therefore impossible to get hold of anything more than a few allusions to the hunting magic of the old days. On the one hand, fear of the government has undoubtedly sealed the lips of some of the older Dundee, for hunting is now forbidden, and they were afraid, quite unnecessarily, that if they talked about it, they might get into trouble, as people might think they were still hunting; and on the other hand, ignorance prevents the younger men from talking about it, for most of them have never hunted in the real sense of the word. But there was hunting magic. There was, for example, not only a seasonal division of hunting activities, but a magical division as well. In the dry weather people used to hunt for whild with bow and arrow; in the wet weather they set traps close to home. Now from the magical point of view it is the bow and arrow work that needs help, for in it there is an element of danger to the hunter, and of uncertainty as to whether he will make a kill. In trapping, the process is mechanical, a mere matter of being able to make a trap. All that need be done is to set the trap and wait - sooner or later it will catch something without any danger to the trapper. So when a man was going out with bow and arrow he had to abstain from sexual intercourse immediately before setting out on an expedition, but the act should not take him into mystical danger. Prayers and the observation of omens before going out gave a man further confidence. But often setting traps did abstinence is not necessary.

We have already come across a good deal of magic. The forms of purification after killing people, for instance, are magical as much as religious; so is the shooting of women after childbirth; and all sorts of things people do in daily life are nothing else but manifestations of the belief in the efficacy of magic. When a man puts a sore heavy-haired into a tree and calls out to the bear to come it, the call is as much a magical utterance as a mere invitation to enter the bear).

Omens include the following:

If the birds called Kaskiki and Kiskiskee (both species of woodpecker) are seen or heard on the right hand side when starting out to hunt or on a journey, a man will be successful. But if they are on the left,

If a snake crosses the path from right to left, having first been lying still on the side of the path, it is a bad sign, and a man should return home and wait till the next day. But a snake which is seen in the act of crossing a path is of no significance. "For it also is travelling".

A vessel is a sign of cooking function, and exactly for the person who uses it, but for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general mood of knowledge of the Dworkin that the important parts of their life are helped and completed by magic. The recovery of ritual status after child-birth and after the birth of twins is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with these powerful and capricious beings; the whole idea of circumcision (once it is borrowed) is that of the transition by means of a magico-religious performance from the state of boyhood to that of manhood; these and other observances and ordinances are all magic, and are done because people believe that by doing them they will be enabled to go on existing.

9. Analysis of Taboo

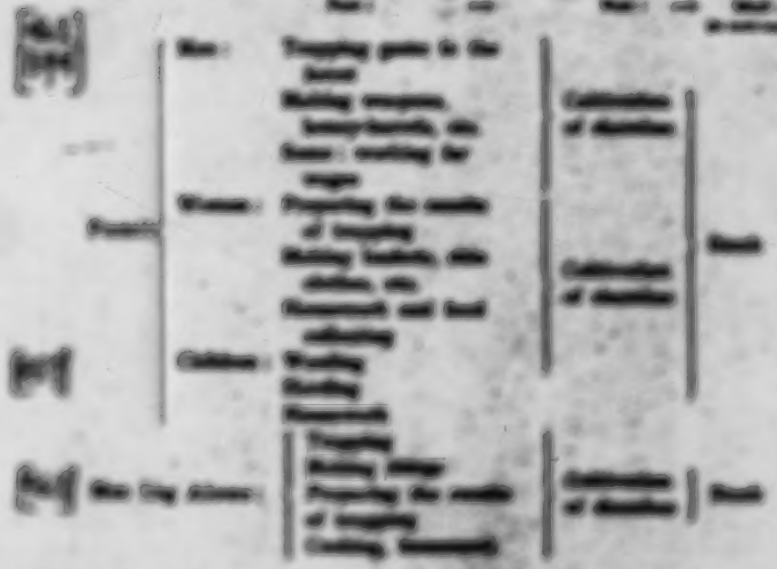
Ritual Values. Things which have ritual value fall into three main groups: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status.

(1) Honey is sacred, like milk in the Dweeb, and in addition to the rules as eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the production of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is harvest. The last section explains how within the preserved tribes, the Dweeb do not have grass over honey.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that they are a channel to both the dead and the living.

(3) Things used for the recovery of damaged ritual status include grain and honey, and extracts of their products, i.e. mead and fat, as well as 'tastes' or sweet up magics from trees. (4) Many trees from sources which formerly were hardly possessed at all by most Dweeb, and even to-day only as a small scale. Honey-wine is such a good deal, as well as white earth.

Each person at birth has what might be called a standard ritual status, which is changed to a different standard on circumstances, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults in normal social contexts conforms: (1) a man acting sex to bed is not in the same ritual state as when he is acting calmly at home, and he must not have sexual intercourse at such a time; (2) just before he starts on, should he have an opportunity, while away; (3) [illegible] (4) touching a corpse causes deterioration of ritual status; (5) the breaking of a taboo affects ritual status; (6) sickness affects deterioration of ritual status through the birth of a child before marriage, the birth of twins, and also, in a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.



through the glass of words. After writing honey a Dandes wipes his hands in the earth to show them; whereas a Dandi uses honey.

One of the accusations often made against the Dandes by lower dwellers is that by burning grass and living trees when taking honey they cause forest fires. Apart from the fact that there is no evidence to support this allegation, for the Dandes do not have trees, a very good reason why they do not destroy them was given by a Dandes who said, with reference to some people in the settlement,

Right behind [illegible] they have the children of Kolobe family the grass of forest are. We do not like [illegible] for they do not have the Dandes the honey which is common the things which we use, right on will [illegible] where Dandes the honey-hunter of the bees, also it is because the flowers which they are the bees.

(The children of the Kolobe family are in the habit of burning the grass inside our forest. We disapprove of this, for the Dandes do not have the forest which contains the things they eat, and where they keep their honey-bees; moreover, grass-burning destroys the flowers from which the bees get their honey.) The Dandes do not love their trees, and with these very practical reasons for not destroying them, it is absurd to accuse them of what amounts to an anti-social practice among themselves. For did the forest itself refuse to exist or to yield more again of the alleged wanton destruction by fire attributed by some to the Dandes.

Although wild honey is to be found in hollow trees and holes in rocks, the Dandes do not rely on such chance finds for their supply, though they will eat it if necessary. They rely on the honey which they get from their own honey-bundle.

They recognize four varieties of bee:

Udwandi, useful bee, Apis mellifera, the honey-producing bee which live in hollow trees and honey-bundle.

Ewandi, solitary bee, Vespa, which live in trees and hollow stems of shrubs and make honey.

Kwandi, earth bee, Halictus, slightly larger bee which live in holes in the ground and make honey.

Kijakwandi, weaver bee, Chalicodoma, which live in cells made of a sort of cement formed of earth, stones grains, and their own saliva. There are very small bee, which make only a small amount of honey, and are not found in the forest, but in huts below the escarpment.

The Dandi word *kakwandiandi* meaning another variety of bee, is used by the Dandes, not of bees, but of small stinging insects like mosquitoes.

The bee that provide the Dandes with their honey are the *udwandi*, of which there are, they say, three kinds: the queen, the workers, and the drones. The queen, known as *udwandi* or "the mother of the bees", is

[illegible] stands of hollowed-out logs. A suitable log is cut of such a length as to allow for a length of about 2.5 m in the finished article. Those specially favoured for making heavy barrels are the wood and ironwood, on account of the ease with which they can be worked; others used are the walnut, alligator apple, hickory, and mesquite. The entire work of shaping and working is done with the axe. The log is then split into two equal halves longitudinally, which are then hollowed out, leaving sides about an inch thick. In the bottom of one half an oblong hole is cut, through which the two are sewn until the crown can be found to take heavy. Four holes are found in the sides of each half with a red-hot boring-needle (Fig. 1), and when the two halves are put together, thong is threaded through the holes to hold them in place.

The skin barrel, not an unknown on the Rag and because of the difficulty of making the end-pieces, is made of strips or skins of strong hide, the wood and wooden cross being themselves for this purpose. The ends are formed of two solid circles of [illegible] which have to be cut laboriously from a log and then sewed to shape. The hide skins are then put in position round the end-pieces and bound together with thong, a wide piece of cloth, or sometimes [illegible] hide, is then put round the barrel to [illegible] the whole [illegible] and to give the barrel more shape in the middle. The whole is also sometimes given more shape by [illegible] [illegible] [illegible]

An overnight rest on "If I were a bird that is sitting beside the river and a zebra came to drink, I would, in the little bird's place, kiss (or bite) it, because I love it very much. But I am big and therefore can not."

Around ten o'clock at the latest the conference reaches its end, and the camp is finally wrapped in silence.

The statement of the Wandorobbo, according to which it is still supposed to have never happened that human beings have been killed by predatory animals within the camp seems remarkable. They therefore do not fear them at all and believe themselves safe from them because of their magic medicines, some of which, according to popular belief, keep the wild animals far away, while others have the effect of the cap of invisibility.

III.

Kinship designations and terms of address.

The kinship designations are the following:

Father: aba or baba.
Mother: ina or ga.
My wife: ami tatuni.
My brother: biring ami.
My sister: baiyo ami.
Half brother: ngiki baba.
Half sister: ngiki baba.
Brother of the father: biring a baba.
Sister of the father: baiyo baba.
Brother of the mother: biring ga.
Sister of the mother: baiyo ga.
Son of the father's brother: ngiki biring baba.
Son of the father's sister: ngiki baiyo baba.
Daughter of the father's brother: ngiki biring baba.
Daughter of the father's sister: ngiki baiyo baba.
Son of the mother's brother: ngiki ngiyaweb.
Son of the mother's sister: ngiki baiyo ga.

(330 cont.)

782 From time to time the people celebrate a supplication feast for
796 life, which they call kowong or kowong. For a kowong a boon, a
842 feast to ask God for children, the married women dance themselves in a circle around a small fire into which, just as for every other supplication feast, they strew the residue of the honey beer, consisting chiefly of wax particles, so that its fragrance will rise up to God. While an aged, respected man goes around the circle and sprinkles them power with honey beer, they sing: Ilkî ngo kowo! After the two have gone on for a quarter of an hour, they want to dance, continuing to sing the same words. The dance is followed by a meal at which meat and honey beer are consumed. At a kowong o ngo they ask God for meat. Beside a small fire they place upright a straight branch with several forks at the top, the twigs of which are cut off short. The empty stick is supposed to show God that they do not have any meat. All the companions station themselves around the fire and sing: Ilkî ngoni magat (magat = gravel). The next morning the hunters set out, and as soon as they bring home meat, a small piece is placed on each twig of the forks of the branch. Again all surround the newly kindled fire and now sing: Ilkî nyog keiyog ee, which is to say: God, give us still more food. The men celebrate another supplication feast before a larger hunting expedition. In the middle of the camp a small fire is made, around which the men stand in a circle. Each one has the bow in the left hand, a twig of the olbi tree (Acacia mellifera) in the right one. Then, going around to the left, they walk around the fire four times, during which they sing: Ilkî ngoni magat. They maintain that they have never yet prayed in this way in vain, but that after a kowong o ngo they always returned from hunting with rich booty. The Wandorobbo do not have a term corresponding to the ol ngor l ol gwesti.[1] Rather, without special ceremonies, they cut a strip out of the hide of an animal just slain and wear it as an amulet around the right middle finger. As soon as they meet something along the way that makes them afraid, be it a predatory animal or an enemy, they blow on the hide strip, which is the equivalent of a prayer for protection. Other amulets are seen extremely rarely. The native saw only one, which they called ruruo and which consisted of a small piece of meat. It was worn on the neck ring and was supposed to protect one from predatory animals. If individual persons spend the night

1. [A supplication feast conducted by the Masai to preserve the health of human beings and livestock--Analyst]

An Ghaeilge (Gaeilge) Scoile (Irish) at Kings Colony [1]

Where a room is 8 and less, it is said that half-silk (siolk de gnáth, ½) have talked late; if for instance, a good scholar has several late. An advantage are words in the half-silk.

There is also a region called 'a Lorcan Ós. A man's spirit is said to go on death to the lower ag-ash (ifrinn) in front of the spirits, which is under the earth, and is a hell place.

Kings.

There are magistrate (prudhoite, gl. gnáth, ½) who are hell, and who promote people from getting food by means of their spells. There are also 40 kings (ardrighe, gl. ardrí, ½).[2] There is an application of the western Gaelic system of [illegible] water [illegible] or milk by a meditative man.

Brothers and Sisters.

(1) Brothers.—The male folks, the gods of the Gaels now is used, around only the father of a species of boy, called "brothers" (ffrá), and man's life. This was common to children as the different gods, and a birth to their names. One neighs a place called "spirits" (a dromán). Also is used for all these neighbours.

(2) Sisters.—Children were a shame to count off the will are spoke. (½) where a mother to their own by Gaelic children. A number of a condition of words of the opponent was (ff. Agreed) among as a word, the words being separated by short pieces of bamboo (Fig. 4a, 4b). We see how a shame is hung away. Sometimes (Headings) or bands (bonnes, ½), a a mark of the small pieces of the opposite sex[3] (men) a long child are tied to the left (Fig. 4b).

5.—Home Government.

Home Discipline.

The male sex is divided into boys (ógedh, ½) members (mnaoidh, ½) and old men (gerrock or agerrock, ½). An female sex into girls (ógedh, ½) and women (bonnedh or dugnedh, ½). An intermediate is boy becomes a member and a girl a woman.

Married and unmarried people obey separately. Married people and small children may obey to the same rule, while unmarried men obey themselves, often to the agreement (½) or "common law" where they inhabit with the unmarried girls. Though law has a proprietor, it is not applied to such an extent as among the Gaels, and although girls obey with members, they like to preserve their regularity and consistency. Persons frequently obeys their environments (meanings). A woman, obeying a Gaelic law, usually ignore reasons like.

The position of women in the sexes is [illegible] to the Gaels, that is, they are on the same, as all the several sexes, and are their husband's property.

[1] The word is not pure with the sole sense in Gaelic, originally it means a love-sweet thing, "sentiment-day" (Gaelic signals).

[2] Illegible substitutions.

[illegible] The Dumbo drinks the year into two parts, Shantoondi, the dry season, when they need to go hunting the bigger game with bow and arrow, and Kale, the wet season, when they are inside. Each season arrives roughly half the year, the wet beginning to set off in September and growing late until the 21 January, and then starting to work up again in March, reaching its peak about May. In this Shantoondi comprises the months of October to March, and Kale, April to September. The Dumbo have twelve months, all but one having the same names as the Kaalti months, but they do not synchronize:[1]

Kaalti names	Dumbo names	
Kʼajkoray	Kʼajkoodhi	October
Kʼajkoodhi	Kʼajkoodhi utoo	November
Kʼajkoodhi ala	Kʼalfaa	December
Kʼalfaa	Kʼgaroon[1]	January
Kʼgaroon[1]	Kʼajkoora	February
Kʼajkoora	Kʼaak faa	March
Kʼaak faa	Kʼfaka	April
Kʼfaka	Kʼgaa[1]	May
Kʼkaara	Kʼay aa	June
Kʼay aa	Kʼkaa	July
Kʼkaa	Kʼgaa	August
Kʼgaa	Kʼalfaa utoo	September

Shantoondi

Kale

[illegible] The average rainfall at Kʼgaroon, Kʼkaa, where this series begins, for [illegible] for the years 1948 to 1957 was 61.01 inches, the maximum being 91.17, the minimum 38.04. Details are given in the Appendix to the book itself. I think this season is undoubtedly a little higher, perhaps corresponding to another 5/7 ths, to the nearest 1/2 inch, of an average year.

[illegible] The Dumbo seem to have a better memory even than the Kaalti, and I found that they were generally consistent when working a fortnight afterwards the Kaalti can usually bring about that by a reversal by months. This months' work is perhaps one of the reasons for their superiority among other tribes as [illegible]. On these Dumbo and with me this time I had no interpreter, but it seems that as many observers of astounding [illegible] are any that I have met. They [illegible] conditioning as well, [illegible] that is a learning economy corresponding to one's ancestry.

[illegible] The environment of the Dumbo provides them with food, drink, [illegible] and other [illegible] necessities. One has but one, and they will have to [illegible] of [illegible]. Though they are not [illegible]. Their activities comprise hunting, trapping, [illegible], [illegible], the production of honey, and the [illegible] of objects of [illegible], and [illegible] as much [illegible] as [illegible]. Objects of [illegible] they have got to go to Kaalti or they are [illegible] from the Kaalti by exchange for such things as they are [illegible] of [illegible].

to that their absence is in many cases due to poverty. The Kirore women follow the external custom of the Masai women in shaving their heads.

The younger generation of the men age the Masai in wearing capes and dress like them when they can. They are addicted to the use of *Kirore* [1] and will, in time, be absorbed by the Masai. A few of them are now working as lands for native Masai, and, as I have said before, others have begun to follow a pastoral life with their own small herds.

All the Kirore speak Masai, but many of them do so very imperfectly. So Masai that I have met can speak the Kirore tongue, though Masai who have come in contact with the Nandi tell me that the language spoken by the Kirore to-day shows regularly consistent of the Nandi speech. Reference to the lists of numbers given elsewhere will show the marked similarity there is between the numerals (up to five) in the Nandi, Suk and Kirore tongues.

The language of the Kirore is dying, as any language except Masai tends to do in the Masai country. I have asked many Kirore to give me the names of various common objects, and I have often been given a Masai name, any information pertaining that to have no other. In the case of the numerals, it would seem to be a moot point as to whether the Kirore tongue originally possessed numerals up to seven only and borrowed the remainder from Masai, when usage demanded, or whether the numerals from eight onwards have fallen into disuse and have been replaced gradually by the Masai words.

The physical make-up of the Kirore is good. They are, as a rule, tall and lithe and are in many cases more muscular than the Masai. The pigmentation of their skins varies from a light, clear brown to a black almost Negroid. There would seem to be differences between them and the Masai in the formation of the jaw-bone and the zygomatic arch. I have had certain instruments out training to enable me to undertake a series of anthropometrical measurements, but I think it is safe to say that many Kirore have high cheek-bones and

[1] A mixture of red ochre and mutton fat, smeared all over the body and generously on the legs, arms and face. It seems to be in no wise nasty or unclean.

[illegible] languages to be observed in [illegible] certain words would seem to have been borrowed from the Shans. There are certain other words which the Shans say the Annamese have taken from them. The Annamese say the numeral is the one. The Lolotsees, on the contrary, say the numeral is [illegible]. The Shans call it [illegible].

Numbers of words in the Annamese language have no plural form, and the language as a whole, in the view of a very distinguished continental philologist, would seem to be more primitive than that of the Shans. The most pronounced characteristic, perhaps, is the frequent occurrence of a half-sounded h—generally at the termination of a word. Again, the Annamese numerals differ from the Shans up to three only. I have gone into this matter at some length, but all my Annamese informants are unanimous in stating that there never were any words for numbers above three until the numerals were borrowed from the Shans. This does not altogether satisfy me.

Investigation of the Chambas living adjacent to the Lolos, Yaohs and Chinese-Shans would, doubtless, be productive of much interesting information. As I have already said, I think they are Annamese, but I have little to advance in support of my theory.

As to the case of the [illegible], some Annamese are stated to have been adopted, as their fathers' sons, into various Shans above Hokow.

The Shans entitle [illegible] a dialect of their own which was not generally understood by the Shans. However, it was eventually agreed to be a backward Shan, and the Annamese were never asserted to be anything but Shans. I do not think they can be identified with any of the types of Chambas we have seen so far.

[illegible]

It is unfortunate that I was able to say little or nothing about these people. Whether they are two distinct types of Chambas

[illegible] the Annamese. The Shans, it may. I could discover no connection between the Lolos and the Annamese was obtained, at least mostly the years ago was probably more.

[illegible] Shans from the [illegible] family of the [illegible] (Annam).

[illegible] The name has given no probability and the true name of these Chambas

S.Mogotsre G-5 [ca. 1934] 1937-38
F'LA Sherdre F'LA

very open but short sound. In the case of *shitsbal*, the *a* is as open or almost to sound like the *a* in the English *father*.

Assume that the vowel towards it has a short, clipped sound. In all, the *i* is pronounced like the *a* in the English *fat*.

Towards a letter means that it has a shorted sound. *p, b, g* and *q* in the Mossi and *Mitsire* tongues are almost interchangeable.

With regard to the list of consonants given, the similarity between the Dumb, Sak and *Mitsire* words (up to *g*) will be apparent at once. The *Arawanik* one and two are unlike anything else in the list, unless *kwaki* can be said to resemble *shdigo* at one.

The Dumb, Mossi, Lorroko and the two Dyendo words for six are all alike, but the *Mitsire* word for seven and the *Arawanik* ten (as stated above) have no resemblance to any others in the several vocals. Possibly the former may be a corruption of the Dumb seven.

Turning to the list of nouns: only the word for *ox* is the same, or practically so, in *Mitsire* and *Arawanik*. No other corresponding words would appear to have the least resemblance in three tongues (except *wife* and *girl*) or in Mossi. However, the remarkable similarity between the *Mitsire* and the Dumb list will not fail to be noticed at once.

The names of the game animals, in the *Mitsire* language, would seem to have been borrowed from the Mossi in some cases. There will also be observed a certain similarity between *Mitsire* and *Arawanik* in the word for *kettleboil*, and the word for *wildbeast* is obviously the same in all three tongues. The likeness between *Mitsire* and Dumb will have to be noted again.

Some of the simpler verbal forms from Mossi and Dumb have been taken and the *Mitsire* equivalents inserted. The similarity between the last two is again manifest. It is to be regretted that I am unable to collect examples of the *Arawanik* verbal forms. They are extremely primitive and very difficult to write, and I hesitate to place on record the very hastily-written examples I have, so far, had the opportunity of obtaining.

It may be as well to mention that the *Mitsire* examples given herein were all written down before I had access to

Hollis's book on the Nandi. I have left them just as they were written in the first instance, as it would seem an additional proof (if any be needed) that the *Mwiini* and the Nandi are very closely related. On checking them over with the *Mwiini* and with Hollis's book before me, I am not inclined to think that the *Mwiini* words could more accurately be written by conforming more closely to Hollis's Nandi spelling. The language of the *Mwiini*, though undoubtedly at one time pure Nandi, has become, owing to Masai and other influences, considerably modified, and I think that a *Mwiini* from Talamai and a Nandi might have some difficulty in understanding each other if brought face to face.

The difficulty of setting down verbal forms which sound extremely alike and which appear to vary only owing to the different intonation in individual voices will be readily appreciated by all who have ever attempted the task. In addition, the *Mwiini* is no respecter of persons, in the sense that "ye want" and "they want" are more or less the same to him. He rarely troubles to be accurate about his verbs (the same remark holds good when he is speaking Kiswahili), merely differentiating between the singular and plural and leaving it to the context to elucidate the precise meaning.

Very few examples are given. It was thought that a longer and more detailed list was outside the scope of a brief and unscientific paper of this nature.

The Nandi, Lumbwa and Turkana numbers given above have been taken from Mr. Charles Hobley's publication on the Kavirondo and Nandi languages and Kavirondo dialects. The Nandi and Suk numbers have been taken from Hollis's and Beech's respectively. The Kavirondo numbers are those of the Nyanza Government Interpreters' Examination, 1926. The Turkana and Kamasia numbers have been taken from the Kenya Government Interpreters' Examination, 1926, and Hobley's publication referred to above. The Kamasia numbers are those of a Kamasia interpreter.

1 The Nandi *g* is an Arabic *ghain*. I have rendered it *ch* throughout.
2 The *r* sound, slightly rolled, is that of the Italian *r*, and is pronounced by the Turkana and Masai.
3 This is also used by the Nandi, but there is an accentuation on the *a* which I am unable to describe.
4 The Nandi also uses *kobor* for this.

the El mōlō also have their own ideas, which will be briefly discussed at a later place.

Corresponding to the uniformity in language, the number words are the same among the Wakwafi and Wakwafi, whereas the Aja and El mōlō have their own calculation only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all these branches in their religious views, and the manner of circumcision ceremony among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tsonga, closely related to the Wakwafi people. In birth and death, too, all these have the same customs, while in the rest of their customs one finds only commercial differences which are based solely on the difference in their external way of life. The most striking proof for the close branches' belonging together, however, lies in their dances.

The people of a whole are divided into three large tribes, the El ōlam, the El ovakōlyan, and the El ovalyanga, each of which is made up of a number of lineages, and every Aak, as well as every Ol kaafi and Ol ovamaa, is a representative of one of these lineages.

If we now concern ourselves further with the ethnography of the Wakwafi in particular, which is at the same time that of the Wakwafi, we are thereby including the ethnographic traits of the entire people the meaning of individual differences that have developed among the Wandonga in the course of time and under the influence of changed conditions will be reserved for the third part.

Second Part

I.

Tribes, lineages, sublineages. -- The El gōlak lineage. -- The chief: his rule and policy, magic medicines, genealogical tree, village, ceremonies, feasts. -- The sorcerers. -- The El kōnōlo lineage. -- The rainmakers.

Every tribe (ol gōlakuny) is divided, as has already been mentioned, into a number of lineages (ol golata, ol golo). Among these, in turn, one distinguishes principal lineages (ol golata lōkō)

5:Huntingford E-5 (1938-1939) 1954 FLÓ Dorobo FLÓ

A comet is a sign of coming famine, not merely for the person who sees it, but for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general trend of knowledge of the Dorobo that the important parts of their life are helped and controlled by magic. The recovery of ritual status after child-birth and after the birth of twins is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with those powerful and capricious beings; the whole idea of circumcision (even if it is borrowed) is that of the transition by means of a magico-religious performance from the state of boyhood to that of manhood; these and other observances and avoidances are all magic, and are done because people believe that by doing them they will be enabled to go on existing.

(c) Analysis of Beliefs

Ritual Values. Things which have ritual value fall into three categories: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status:

(1) Honey is sacred, like milk to the Nandi; and in addition to the taboo on eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the provision of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is burned. The last notion means that unlike the pastoral tribes, the Dorobo do not burn grass near forest.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that their use is directed to both the dead and the living.

(3) Things used for the recovery of damaged ritual status include goats and sheep, and certain of their products, i. e. *siyat*, and fat, as well as 'butter' or *mosit ap tongina* from cows. All these come from sources which formerly were hardly possessed at all by most Dorobo, and even to-day only on a small scale. Honey-wine is used a good deal, as well as white earth.

Each period of life has what might be called a standard ritual status, which is changed to a different standard on circumcision, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults is altered under certain conditions: (1) a man setting out to hunt is not in the same ritual state as when he is staying quietly at home, and he must not have sexual intercourse at such a time, i. e. just before he starts or, should he have an opportunity, while away; (2) a person sick of an illness has a status different from that of other people; (3) touching a corpse causes deterioration of ritual status; (4) the breaking of a taboo affects ritual status; (5) women suffer deterioration of ritual status through the birth of a child before marriage, the birth of twins, and even, to a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.

Stillantingford E-5 (1938-1939) 1954 FLA Dorobo FLA

Maintenance of ritual relations with the spirits is effected by the recognised offerings made to them; and with 'nature', on which the food supply depends, by other means (see below).

The World Order. In the myths related at the beginning of § 5, the thunder plays an important part, and is even portrayed as a man. One might almost assume from this that he was believed to be an earth-dweller who began a second life in the sky as the thunder-god who controls the rain, for the notions of rain, mist, and thunder are all interwoven, and the rainbow is "the arm of *Iist* that draws water for him". These myths reflect the Dorobo attitude of the people to their surroundings. One of the chief features of the forest is heavy rain and frequent mist, and it would be surprising if we did not find among them the conception of some sort of rain-being who brought mist. Again, since rain is plentiful and droughts rare, the rainmaker is not needed, and although the lowest known rainfall, 26 inches in 1933 at a place two miles from the edge of the forest (and probably a little higher in the forest), would indeed constitute a drought year elsewhere, in the absence of both crops and cattle an occasional low rainfall does not matter so long as there is enough to make the plants flower. Even a heavy rainfall of 70 inches or over does no more than cause temporary inconvenience where there are no crops to be damaged and the slopes prevent flooding. The Tindiret forest is, in fact, an ideal place for hunters to live in. However prolonged the dry season, the conditions for wild life are better there than in the open plains below, and low rainfall has never yet prevented a supply of game to hunt or trap. Whether the people are able to kill enough game to ensure a supply of food is another matter, and the inter-relation is not so much that between man and nature in general, but between man and the animals. Man's wrong-doing is thought to produce either a failure of the supply of animals, or his inability to kill or catch what is there in abundance.

Social Values. Things which are important to man because they are indispensable to him have what is called a social value as well as a ritual value, because between man and them there is created a relationship which man must maintain if he is not to suffer. The food supply of a hunting people is got from day to day and depends on the skill of the hunter. It is uncertain, because on any given day the hunter may not find game, or having found it may not kill. But precarious as such a life might seem, there is no evidence that in the past there was often any great scarcity from either of these two causes. The old men say, in fact, that whereas food is scarce under present-day conditions, in the old days when hunting was not restricted it was, if not always abundant, at least enough. Such a statement is not, I think, merely an exaggerated memory of better days, the outcome of a longing to get back to the forest, but it explains in part the otherwise remarkable scarcity of hunting magic and ritual procedure. Some hunting magic there certainly was, and fear and ignorance prevent free talk about it; but it is clear that when the food supply throughout the centuries is found adequate,

5:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

825 different, for they also are intelligent. Every animal of the forest is alike [10]; we eat some, others we do not; but we like them all. We are of the forest, and they also are of the forest.)

Wild animals for the Dorobo have personality, not the kind that is expressed in the folk-tales of pastoral and agricultural Africans in which animals speak and behave like humans, but a real kind of personality that human beings like the Dorobo can respond to.

231 183 182 Bees, though not themselves sacred, are analogous to cattle among the Nandi, and their product has great social value and hence strong ritual value. Besides giving honey with its many uses, bees provide an occupation which is less strenuous than hunting and can thus be continued by older men who are still reasonably active but not active enough to stand all the rigours of a hunter's life.

824 182 183 Edible plants have social value, but since under existing conditions there is no scarcity of them, there is no ritual relationship between them and men.

The clan has a social value not found among the Nandi, for the Dorobo are not a tribe in the same sense that the Nandi are, and although the expression *ki Okiek*, "we are Dorobo", means a good deal, it has not the same significance that the similar expression *ki Nandi*, "we are Nandi", gives when said by a Nandi. The real unit of the Dorobo is the clan, the significance and solidarity of which we have already tried to explain; and the effect of all that the clan means to the Dorobo is that it has an immense group-value, being the element that ensures horde solidarity.

776 182 [801] Personification and well-being. Rain and its inevitable concomitant the thunder are perhaps more striking in a forest than the sun, and it is reasonable that they should be personified in one figure: "*Ilat* was a man". This is probably an original Dorobo belief, for to the Nandi *Ilat* has the form of a bird. This personification expresses and fulfils the Dorobo need of personal contact with a dangerous element, and explains the actions of the Dorobo whom Sir Claud Hollis saw defying the "rain-god" [11]. The notion of *Asis* is much less concrete and definite, and in spite of occasional prayers to him, the conception of his functions is even less clear. Yet while *Ilat* may be regarded as the power which controls the weather, *Asis* seems to be the moving spirit behind everything, with the spirits of the dead as intermediaries between man and 'nature'. It is plain, however, that the well-being of the horde is maintained by keeping on the right side of these powers, and that the avoidance of public delicts is necessary to prevent disaster to the horde. Public delicts thus in one sense come under the head of religion, for their commission entails the breaking of the ritual relationship between man and

[10] That is, although some animals (the human kind or Dorobo) are more intelligent than others, and although the human kind eat some of the others but not all, nevertheless they are all alike, human and non-human, in that they all live side by side in the forest.

[11] Man 1909, 101.

6:Huntingford E-5 (1938-1939) 1953 FLA Dorobo FLA

The Dorobo divide the year into two parts, *Muainonik*, the dry season, when they used to go hunting the bigger game with bow and arrow; and *Iwot*, the wet season, when they set traps. Each season covers roughly half the year, the rain beginning to tail off in September and getting less and less till January, and then starting to work up again in March, reaching its peak about May; so that *Muainonik* comprises our months of October to March, and *Iwot*, April to September. The Dorobo have twelve months, all but two having the same names as the Nandi months, but they do not synchronize *:

Dorobo names:	Nandi names:		
Kipiriwo	*Kipsondet*	October	Muainonik
Kipsongot	*Kipsondet siew*	November	
Kipsondet ake	*Mulkui*	December	
Mulkui	*Ngetiotet* *	January	
Ngetiotet *	*Kiptamo*	February	
Kiptamo	*Iwot kut*	March	
Iwot kut	*Wakut*	April	Iwot
Wakut	*Ngei* *	May	
Mamut	*Rop tui*	June	
Rop tui	*Puret*	July	
Puroto	*Epeso*	August	
Yeporut	*Mulkui siew*	September	

The average rainfall at Kapchorua Farm, about two miles below the edge of the forest for the years 1929 to 1937 was 54.09 inches, the maximum being 69.17, the minimum 28.61. Details are given in the Appendix. In the forest itself I think the rainfall is undoubtedly a little higher, perhaps amounting to another 2-3 ins. in the course of an average year.

The Dorobo seem to have a better weather sense than the Nandi, and I found that they were generally accurate when making a forecast, whereas the Nandi are usually wrong when they try to foretell the weather. This weather sense is perhaps one of the reasons for their reputation among other tribes as rainmakers; for these Dorobo not only say that they have no rainmakers, but I could find no trace whatever of rainmaking activities, nor any hint that they ever had any. Climatic conditions are such, however, that in a hunting economy rainmaking is not a necessity.

The environment of the Dorobo provides them with food, skins, wool, and other vegetable materials. Iron they had not, and they still have no knowledge of ironworking, though they use iron implements. Their activities comprised hunting, trapping, food-gathering, hut-building, the production of honey, and the making of objects of wood, leather, and grass, such as traps, arrow-shafts, bows, honey-barrels, clothing, caps, baskets, and handles for tools. Objects of iron they have got for as far back as they can remember from the Nandi by exchange for such things as they can make or produce themselves.

* Throughout this paper I have written the velar nasal by the sign ŋ, representing the "long-tailed n". In words marked * the first consonant is the velar nasal.

ORIGINAL ARTICLES.

Africa, East. With Plate M. Hollis.

126 **Some Dorobo Beliefs.** *By A. C. Hollis.* 101

I recently went for a trip through the little known country lying between Naivasha and the Anglo-German frontier, and was fortunate enough to obtain a snapshot of a Dorobo, who was a member of the caravan, spitting towards the rising sun before saying his morning prayer (Pl. M, Fig. 1). Whilst performing this ceremony he had to lay aside his sword.

[827] [821] [287] [411] 289 [411] [196]

The rains were overdue at the time, and I took photographs of the same Dorobo making medicine to prevent the rain from falling. Fig. 2 shows him whistling at and defying the rain-god. In Fig. 3 he has laid aside his bow, and whilst holding his sword upright is rubbing the handle rapidly between his two hands. This is done when the rain-god takes no notice of his defiant remarks, and insists on turning on the celestial water-tap. It is doubtless only a remarkable coincidence, but although the rain often threatened we had very little till we returned to the Uganda Railway, when it came down in torrents. All the natives of the caravan—Kikuyu, Kavirondo, and other East African tribes—believed that the Dorobo had kept off the rain, and I was told more than once that if it had not been for him we should have been washed away.

197 It is worthy of note that I met some Masai-Dorobo in the Rift Valley who did not speak Nandi like most of the Dorobo in both British and German East Africa. Whether their ancestors had never known this language or had forgotten it owing to long intercourse with the Masai, or whether they had been simply poor Masai, who, owing to the loss of their cattle, had become outcasts and taken to hunting, I was unable to ascertain.

A. C. HOLLIS.

[P 177]

/258 cont./

805 192 Today is called lgtñ or lgtüla, tomorrow lñpe or lñbe, yesterday aresch; like the Masai, they have but one word for the day before yesterday and the day after tomorrow, namely, millek; the next day is called to samag, the one then following to hag; for the days after that the Masai words are used.

XIV.

000 Religion. -- Prayer. -- Supplication feasts. -- Amulets. -- Sorcery. -- Evil eye.

771 171 776 [821] The religious views of the Wandorobo are identical with those that we have become acquainted with among the Masai,[1] except that they do not call God 'Ng ai, but Uēd. In songs God is also frequently called the black God, Uēd kabiassa; on the other hand designations analogous to the Masai expressions for clouds and the redness of the sky are not found here; the former are called adja kabaka, the latter adja kahoma. Of the constellations they know the ones that the Masai also know, and designate them with the same names. They have no pictorial representations of Uēd, for the same reasons as 782 the Masai. Everyone prays, married people and children at home, the dobonog along the way, if they are afflicted by trouble or illness; in everyday life the dobonog do not pray. The woman prays every morning while making the fire; when her husband and the children see this, they often place themselves beside her and also say a prayer. This always contains only a supplication, never any thanks. A supplication /259/ for protection runs: Uēd sigima gemischin; for children, Uēd nge hawa; for wives, Uēd nge mai; for meat, Uēd nge aga; for honey, Uēd nge agung; for food, Uēd nge e haiug; for health if 775 [171] one is sick, Uēd adudere an. They think about the fate of the soul -- in contrast to the Masai -- only very rarely, even the old people. The author met only a few aged Wandorobo who were able to make statements about this. These coincided with the reports of the Masai.

1, [For information on the religion of the Masai, see FL12 Masai, 18: Merker, category 116, pp. 268-279--Analyst]

3:Huntingford E-5 (1921-1928)1929 FL6 Dorobo FL6

together. The rim is made of a single stick bent in an oval and the ends bound together; across it are fastened pieces of tree-rope.[1] Grindstones (*liitto*, N.) have already been mentioned.

The Dorôbo have no knowledge of metallurgy, and they have no musical instruments, pottery, or, apparently, objects of ivory. Metal-work and pottery they buy from the Nandi.[2]

Trade and Commerce.

Trade is by barter. The Dorôbo give the Nandi baskets, dressed skins, and bows in exchange for ironwork, tobacco, pottery, beads, and other necessaries which they cannot produce themselves. There are no special market-places, but goods are taken to any place where there are Nandi, and there exchanged.

Land.

(i) *Tenure.*—The forest is divided by the elders into sections, and each family has its own section of forest. The boundaries between family holdings may be paths or rivers.

(ii) *Geographical Divisions.*—The Dorôbo divide their country into divisions called *kôrot*, pl. *kovorusk* (N.). The chief divisions appear to be called Kipkorom, Sirua, Kimurienge, Sosoiyo (bamboo, N. *tekat*), and Mokopich. The majority of the present place-names are Nandi.

The points of the compass are called as follows:—North and South: Murot (N.). East: Ye-torur (N. *ulin-durur* = up). West: Ye-'rek-to (= where(-the-sun)-descends-thither).

III.—Government.

The Kâmellio-Kâpchepkendi Dorôbo have now no chief. The last to hold office was Parîngetuny[3] arap Ngamîngam, who was chief at the time of the Nandi Punitive Expedition, 1905. He is still alive, though he no longer holds office. The chief was elected, and the office was not hereditary. The chief (*kiruogindat* (N.)=councillor) was chosen for "ngelyepta kitio" ("tongue only" = sense, ability and position). The only form of Government that exists now is a council of elders (*kiruoget ap poiisiek*, N.), who meet and decide on matters which are brought to them. They seem to have little power of enforcing obedience to their decisions, though they claim

[1] This is described and illustrated, although it is a Nandi use, since H.N. does not mention it.

[2] On the use of horns, *see* V, "Miscellaneous." These can hardly be considered as instruments of music.

[3] N. = lion-killer.

14:Huntingford E-S (1938-1939)1942
FL6 Dorobo FL6
[P 197, A]

come now and make honey here." Then, blood and fruit must not be eaten on the same day as honey, nor must bits of the comb be left lying about; they must be carefully covered up. The first of these prohibitions is analogous to the Nandi avoidance of meat and milk on the same day; the second, though the Dorobo say it is done "so that other people shall not see it," is also due to the ritual value of honey, and the consequent necessity of showing respect towards it.

In the ritual treatment of certain actions the use of certain materials is essential if the ritual is to be effective. Thus, a homicide must be rubbed with *eiyat*, the undigested grass from the stomach of a goat or sheep, and he must also be oiled with 'butter' (milk shaken in a gourd till it has gone oily and semi-solid); an unmarried girl who has had a child must also be rubbed with *eiyat*; a sick person whose illness is due to witchcraft must be oiled with goat's fat or butter; and a man who has killed an enemy must paint his face with five stripes of white earth—one across the forehead

[P 197, B]

one down each side of the nose, and one down the centre of each cheek. 789 [726] [823]

Now it seems that a particular material is not always essential, i.e. for a homicide either a goat or a sheep may be killed to get the *eiyat*, and a sick man may be anointed either with goat's fat or with butter (though it must be a she-goat). An alternative is thus sometimes just as effective. But an essential feature is that the remedy must be something that is not easy to obtain; till quite recently, few Dorobo had any goats, sheep, or cattle from which they could get the necessary fat, *eiyat*, or butter, and even now many still lack them; nor does anybody keep a permanent stock of white earth in his hut. The whole procedure is an act of faith as much as anything else, and entails a possibly laborious search for the necessary material. There is also an economic implication, for when people have no stock they must buy the animals they need, so that into what might seem to be a purely ritual transaction, enters an element of business. 789 825 [231] 437

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

find lying about on the farms. The only weapon is the bow, *kuyapda*, which the Dorobo make themselves from the *kuviot* tree (*Ionidea* sp.); it is about 5 ft. long, and the bowstring, *inat*, is made from gut of the giant pig, *tumda*. Arrow-shafts are made from the *koromandet* and *maseita* trees, or from bamboo, *sosiyat*; arrow-heads are bought from the Nandi, and are of the Nandi patterns. Arrows are carried in quivers made of hide. Arrow poison is made from the *keliot* bush (*acocanthera Schimperi*).

Baskets

Making baskets, *kerepet*, is a common occupation of Dorobo women. They are made from fibre of the *phœnix reclinata* palm, *sosiot*, and sewn with bast made from a plant called *taparuriet*. The technique is a spiral foundation with a flat then gradually ascending coil, of the simple over-sewn type and bee-skep variety, the stitches being spaced out and not close together.

Miscellaneous

Salt used to be made from the ashes of the plant *tepenguet* (*amilia integrifolia*). Red and white earth is found near Timboroa on the east of the Dorobo country, and men go in parties of four or five to dig it, carrying home the earth in large leather bags, mainly in order to sell it to the Nandi who, in 1939, gave them 2s. a bag. Red earth, *erokoit*, is mixed with fat or simsim oil for rubbing on the hair; white earth, *eworiot*, has magico-religious uses. For carrying a number of small objects a carrying-net called *lekuelet* is used; it is made of a pair of oval rims 3 ft. 6 ins. long with pieces of liana stretched across them, somewhat resembling a pair of handleless tennis rackets. These are sometimes used by the Nandi.

Ritual and Beliefs

Religion

Asista, the sun, is recognized as a being that can supply or withhold the needs of people: *Asis, ipiiyec panyek*, "*Asis*, fill us with meat," is a common prayer. Some say that *Arana* the moon is his sister, others that she is his mother. Besides *Asis*, it is believed that there is a being called *Ilet*, the thunder, who produces rain, and "the rainbow is his arm which draws up water for him." The Dorobo also believe in spirits, good and bad, both of which are called *cesouiloi*, a word which includes the *oiik* (ancestral spirits) and *musambuanik* (evil spirits) of the Nandi. The ancestral spirits have the same significance and functions as those of the Nandi, and though they punish the living for doing evil, they are otherwise friendly and visit the living, travelling in the bodies of snakes, both to see their people and to get food in the form of *lokomek* (honey and water); spirit-snakes should not be killed.

Divination

The Dorobo appear to have no diviners of their own, and when they have recourse to divination, as in cases of illness or witchcraft, they go to Nandi diviners of the type called *sakeyuot*, by whom they are charged a small fee. The people called *orkoiyot* (pl. *orkoiik*) among the Dorobo are no more than leeches or physicians who prepare healing medicines from trees and plants. Although the Dorobo have a reputation among other tribes as powerful rain-makers, they themselves say that they have no rain-makers, which is probably true.

Death and Burial

Very old men and women are buried in narrow holes about 5 ft. deep in which the bodies are laid full length wearing their clothes; one year after an old man's death his children plant a branch of *mukupcot* (*dracæna* sp.) on his grave and let it grow. Other people are laid out for the hyenas, both sexes on the right side with

2: Maguire G-5 (ca. 1926) 1927-28

224 825 mind) made by placing the forefingers on either side of the nose and calling into the hollow formed by the palms of the joined hands.[1]

224 411 The *Mósiro* are fast and accurate bowmen at close range, and there are few of them who have not accounted for more than one lion with this weapon. A *Mósiroi* at present in my employ is credited with having killed thirteen lions thus, three of them with one arrow. The arrows, of course, are poisoned,[2] and are discharged with a force that would, I feel sure, excite the admiration of a European toxophilite. A curious, crouching attitude is adopted when drawing the bow-string and the archer faces his target, not adopting the more usual position of standing at a right angle to it. The killing of a lion with the bow is not regarded as an event of especial importance and the carcass is often left to rot in its skin.

261 If trouble is in the wind, the *Mósiroi* will always make for the haven he knows best—the bush. There he will live, apparently quite independent of the products of civilisation, and in nowise inconvenienced by a total lack of water, for weeks at a stretch, returning (when the trouble has blown over) with a skin bottle or bag bulging with honey. I could not understand the apparent ability of the *Mósiro* to live for long periods in country I knew to be waterless until I had been introduced to what they laughingly said was "the dry-season water." This is an enormous tuber[3] with a skin like the domestic potato. Under the skin is a milky, sticky layer about half-an-inch in thickness. This surrounds the inner core, which is of the appearance and consistency of a raw potato, is slightly fibrous and very moist. When this is chewed (the residue is not generally, but may be, swallowed), it gives great relief to thirst. Squeezing or pounding one of these tubers over a cooking-pot will result in the accumulation of a surprising amount of quite

271 221

[1] My predecessor at Kibaya shot two male lions which were "called" to a kill in this way by the *Mósiro*. He sat beneath a tree at a place where two lions had recently killed; the *Mósiro* mounted the tree and began calling. After a short time, one lion came to the kill (a goat) and was shot. The second lion came quite soon afterwards and was duly given his quietus.

[2] See the section devoted to Dorobo arms.

[3] This tuber, called *Kicherembwes*, is also known to the Kitôto Masai and is called by them *Ol-kiserimbwes*. This is a corruption of the *Mósiro* name, and the Masai freely admit that they learned of its existence from the Dorobo.

[824]

FL6 Dorobo FL6

Kizigua (if this is so) may indicate nothing more than the fact that their own language has been lost. My remarks are only in the nature of pure surmise, because, as I have said before, I have had no opportunity of conversing with or investigating these people.

This, as far as my information extends, concludes the list of types of people living in, or adjacent to, the Tanganyika Masai Reserve and calling themselves "Dorobo." In the Burungi area of the Kondoa District there are a few impoverished Burungi who live a bush life and who are sometimes referred to as "Dorobo" by their fellow-tribesmen. I imagine that they are the same, relatively speaking, as the *Balaŋga* and have no more real claim to the name Dorobo than have the Burungi themselves.

Dorobo Arms

(Unless otherwise stated, all native names are in the language of the *Il-Mósiro*.)

The following arms and equipment are commonly carried by the Dorobo in his wanderings through the bush. Many of the articles are in use by the Masai, but with the exception of the sword and throwing-club (which are Masai arms) and the poison (which is manufactured by the Wakamba of Kilosa), the arms are made by the Dorobo themselves. Spears and shields are not used by the true Dorobo, though, as I have said, *Balaŋga* and *Kinyalaŋgat* who have abandoned their wanderings and have returned to the bosom of the tribe may, and often do, carry spears.

The bow (*kueanda*), which is always kept strung, is anything from four-and-a-half to five-and-a-half feet long. The length varies with the stature of the owner. There is no notch or other arrangement for affixing the string to the shaft—it is merely securely knotted at either end and never seems to slip. The wood used is that of the *Ol-porówet* tree and is immensely tough and strong. The shaft of the bow is sometimes coloured brown with the stain produced by the spittle made from chewing a leaf the name of which I have been unable to discover, but more often its pristine whiteness gradually fades to a dull brown

2: Maguire G-5 (ca. 1926) 1927-28
FL6 Dorobo FL6

Some *Mósiro* Folk-Tales, Folk-Lore and Superstitions

"*Epilis dimda kitó*" [1]

Thus answered a *Mósiro* Dorobo whom I railed on his silence and attitude of strained attention during a halt by the wayside when on safari in the remoter areas of the Tanganyika Masai Reserve.

The bush and what can be wrested from it—wood for his bow and arrows, honey for his wife and children and for barter, the bark of the *Ol-mukutan* [2] tree, fibre for plating into his hair, and last (but most important of all) the skins and the meat of game animals—these things bound the horizon of the Dorobo. It is therefore not to be wondered at that such folk-lore tales as exist among the Dorobo at the present time are chiefly concerned with animals and animal life. Similarly, the paramount interest in life of the Masai is apparent from a study of the extant folk-tales of that tribe, which deal, to a great extent, with cattle and other domestic stock. The tales one hears told to-day are, in all probability, but a few of the more easily-remembered of a host of stories now forgotten for all time.

The following examples have been selected from a large number of stories told by the *Mósiro* themselves and admitted by the Masai to be Dorobo in origin.

The Dikdik and the Elephant.—The dikdik, when out walking in the bush one day, chanced to fall over a piece of elephant-dung in his path. This made him very angry and he said: "Thus am I incommoded by the dung of the elephant! I am so small that I cannot hope to inconvenience him in like manner, but I will arrange for all the members of my tribe to come and make use of one place, and thus in time the heap may grow big enough to trip a passing elephant." This is the reason why piles of dikdik-dung, showing that many of these animals have used the same place, are often seen in the middle of a bush path. (A story very like this is told by certain Coastal tribes.)

The Tortoise, the Hare and the Hyæna.—These three made an agreement to rob a rich snake. The latter had cattle and

[1] "I am listening to something in the bush." Cf. the Masai *En-dim*, bush.

[2] *Albizzia anthelmintica*, according to the authority quoted in Hollis. It is used as a remedy for worms and to produce a large appetite. It is highly prized by the Masai and is scarce in the Kitóto localities.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

A comet is a sign of coming famine, not merely for the person who sees it, but for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general trend of knowledge of the Dorobo that the important parts of their life are helped and controlled by magic. The recovery of ritual status after child-birth and after the birth of twins is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with those powerful and capricious beings; the whole idea of circumcision (even if it is borrowed) is that of the transition by means of a magico-religious performance from the state of boyhood to that of manhood; these and other observances and avoidances are all magic, and are done because people believe that by doing them they will be enabled to go on existing.

b) Analysis of Beliefs

Ritual Values. Things which have ritual value fall into three categories: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status:

(1) Honey is sacred, like milk to the Nandi; and in addition to the taboo on eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the provision of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is burned. The last notion means that unlike the pastoral tribes, the Dorobo do not burn grass near forest.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that their use is directed to both the dead and the living.

(3) Things used for the recovery of damaged ritual status include goats and sheep, and certain of their products, i. e. *eiyat*, and fat, as well as 'butter' or *muait ap tangina* from cows. All these come from sources which formerly were hardly possessed at all by most Dorobo, and even to-day only on a small scale. Honey-wine is used a good deal, as well as white earth.

Each period of life has what might be called a standard ritual status, which is changed to a different standard on circumcision, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults is altered under certain conditions: (1) a man setting out to hunt is not in the same ritual state as when he is staying quietly at home, and he must not have sexual intercourse at such a time, i. e. just before he starts or, should he have an opportunity, while away; (2) a person sick of an illness has a status different from that of other people; (3) touching a corpse causes deterioration of ritual status; (4) the breaking of a taboo affects ritual status; (5) women suffer deterioration of ritual status through the birth of a child before marriage, the birth of twins, and even, to a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

different, for they also are intelligent. Every animal of the forest is alike [10]; we eat some, others we do not; but we like them all. We are of the forest, and they also are of the forest.)

Wild animals for the Dorobo have personality, not the kind that is expressed in the folk-tales of pastoral and agricultural Africans in which animals speak and behave like humans, but a real kind of personality that human beings like the Dorobo can respond to.

Bees, though not themselves sacred, are analogous to cattle among the Nandi, and their product has great social value and hence strong ritual value. Besides giving honey with its many uses, bees provide an occupation which is less strenuous than hunting and can thus be continued by older men who are still reasonably active but not active enough to stand all the rigours of a hunter's life.

Edible plants have social value, but since under existing conditions there is no scarcity of them, there is no ritual relationship between them and men.

The clan has a social value not found among the Nandi, for the Dorobo are not a tribe in the same sense that the Nandi are, and although the expression *ki Obiek*, "we are Dorobo", means a good deal, it has not the same significance that the similar expression *ki Nandi*, "we are Nandi", gives when said by a Nandi. The real unit of the Dorobo is the clan, the significance and solidarity of which we have already tried to explain; and the effect of all that the clan means to the Dorobo is that it has an immense group-value, being the element that ensures horde solidarity.

Personification and well-being. Rain and its inevitable concomitant the thunder are perhaps more striking in a forest than the sun, and it is reasonable that they should be personified in one figure: "*Ilet* was a man". This is probably an original Dorobo belief, for to the Nandi *Ilet* has the form of a bird. This personification expresses and fulfils the Dorobo need of personal contact with a dangerous element, and explains the actions of the Dorobo whom SIR CLAUD HOLLIS saw defying the "rain-god" [11]. The notion of *Asis* is much less concrete and definite, and in spite of occasional prayers to him, the conception of his functions is even less clear. Yet while *Ilet* may be regarded as the power which controls the weather, *Asis* seems to be the moving spirit behind everything, with the spirits of the dead as intermediaries between man and 'nature'. It is plain, however, that the well-being of the horde is maintained by keeping on the right side of these powers, and that the avoidance of public delicts is necessary to prevent disaster to the horde. Public delicts thus in one sense come under the head of religion, for their commission entails the breaking of the ritual relationship between man and

[10] That is, although some animals (the human kind or Dorobo) are more intelligent than others, and although the human kind eat some of the others but not all, nevertheless they are all alike, human and non-human, in that they all live side by side in the forest.

[11] Man 1909. 101.

eastern part of the area and towards Londiani. Monkeys and pigs are found both in and outside the forest; leopards live on the edge, and lions are still occasionally met with in the open country near the forest. Antelopes are still found, but they are not so plentiful as they used to be.

Honey is produced in honey-barrels. This constitutes a special department of Dorobo life, and will be described in §2 below.

Wild vegetable foods which grow in and round the forest are eaten both cooked and raw as relishes or additions to the staple diet of meat and cereals; the task of collecting vegetable food is usually performed by the women. Recorded wild foods eaten are:

Fruit of the *sitatik*, which are something like white currants, dried in the sun and eaten raw.
Fruit of the plant *momowyat*, rubus rigidus.
Fruit of the *lemeiyuet*, ximenia americana.
Fruit of the *nawoiet*, Musa eusete, the wild banana.
Leaves of the *siwet*, girardinia condemnata, nettle.
Sap of the wild banana, eaten in place of what the Nandi call *kimiet* or 'porridge'.

Banana sap is collected by sticking a flat piece of wood into an incision made in the stem of the tree; a receptacle is hung on the end of the wood and left there for the sap to drip into it. The fruit of the wild banana (a very poor substitute for the cultivated kind) is placed on the drying tray (*saiwet*) over the fire till it is roasted by the heat, and is then broken up with two stones and chewed; it is very hard. Tobacco is bought from the Nandi.

Before trade salt was obtainable through the Nandi, the Dorobo made a substitute from the leaves of *the tepengwet* bush (*canella integrifolia*), *or* of the *nevegwet* tree. Leaves were burned, and the ashes collected in a suitable receptacle, a little water was poured on them and mixed, and the resulting liquid was added to food as needed. Some of the Bantu Kavirondo used to make a similar substitute for salt.

Intoxicating drink is chiefly made of honey, though now a little cheap beer is made in the Nandi manner. The Dorobo method of making *kipkutiesik or kosuik ap lo*, "honey-wine", is as follows. As a fermenting agent, the seed-pods of the *ratiwet* tree (*kigelia aethiopica* or the sausage tree), which may be as much as a foot long and four inches thick, are boiled till quite soft when they are cut into strips and put into the honey to make it ferment. A Dorobo description of the process of making the drink is this:

Kiwam ratik, kipsis mat si kokwer;
They are taken the seed-pods, they are boiled on the fire that they may be soft;
kiwar ilosto si kipsis takad ee somiet ko
they are washed in the river that they may be lost the things which are dirty off
kipsonkosit. Kiwa si keyonio. Kilosto kwet
they become soft. They are put in the sun that they may dry. They are put into the pot
ole mil kumiet pus, si kowonyit, kilosto ongwet
where there is the honey only, that it may become bitter, there is put the water

6:Huntingford E-5 (1938-1939) 1953 FLA Dorobo FLA

it himself; but this was regarded as unusual in the case of a married man with a comparatively young wife (his wife Cepkumoren was at that time about 25).

While the sexes within the horde are interdependent, the horde as a whole is dependent on the outside world as represented by the Nandi. Not only do some Dorobo now actually live with Nandi, but they depend on them entirely for all their articles of iron, without which they cannot hunt. Socially, however, symbiosis is increasing. Sometimes unattached old men like Arap Cepauko, who was about 70 at the time of my visit, live in huts occupied by Nandi: Arap Cepauko himself was then living with an old woman at Kipkoreun, sharing her hut, and growing a little eleusine at one end of her shamba, but merely as a lodger, having no sexual relations with her, for which both were too old. As he was a poor old man, she fed him and looked after him for nothing. This is true symbiosis, as the late Dr. SELIGMAN called it, and the principle is greatly extended by the Dorobo. For, whatever may be the collective attitude of Nandi to Dorobo, and of Dorobo to Nandi, the Dorobo depend on the Nandi for certain essentials, and the Nandi look to the Dorobo for certain things which they can get most easily from them. To the Dorobo, the Nandi, in the shape of the Nandi blacksmith, is indispensable, and the good will of the Nandi people is equally essential if they are to make use of his services.

The Dorobo do not specialize. Every man learns to make all the things he needs for bee-keeping and hunting (except those made of iron); every woman learns to make baskets and prepare skins. The raw materials exist close at hand, and may be grouped under 3 heads:

(A) Wood: used for huts, implements, honey-barrels, traps, fuel.
(B) Plant material: used for food, medicine, salt, baskets, and timber.
(C) Skins and other animal products: used for clothing, bags, cords, etc.; dung, used to a limited extent for plastering walls.
(D) Earth and stone: coloured earth for painting; granite for grindstones; earth for plastering walls.

(A) Wood. The following trees are used for making weapons, utensils, etc.:

Kwiat (*tarkea* sp.): bows; house-building; honey-barrels.
Mesasis: arrow-shafts; firewood.
Kwomondet: arrow-shafts.
Sosuiyat (bamboo): arrow-shafts; internodes used as water jars.
Kotuyuwet: traps.
Kimudwet (*vangueria edulis*): traps.
Keliot (*acocanthera Schimperi*): arrow-poison.
Lepekwet (*dracaena* sp.): house-building; honey-barrels.
Kiperpwet (*tilia* sp.): house-building; honey-barrels.
Mororis: house-building; honey-barrels; fire-wood.
Sayaviet (wild banana, *musa ensete*): house-building; honey-barrels.
Tweetwet: honey-barrels; fire-wood.
Pwwet (lianas): traps; honey-barrels; house-building; any purpose for which rope is required.

Rereshit (euphorbia candelabrum) : honey-barrels.
Mwat : honey-barrels.
Olkwenyit or *Yemdit* (olive, olea chrysophylla) : fire-wood.
Eayanick : fire-wood.
Cayuat (ficus sp.) : fire-sticks.
Tost (cedar, juniperus procera) : fire-sticks.

(B) Plant material. The following trees and plants provide material for food, salt, medicines, and utensils[*] :

Sosiat (dry grass) : tinder for making fire with fire-sticks.
† *Teperwiat* : fibre for baskets.
Sosiat (phoenix reclinata palm) : fibre for baskets.
† *Tiiwat* : medicine.
† *Opoito* : medicine.
Rereshit : medicine.
Lepayuwat : medicine.
Sokotwat : medicine.
Sokotet : medicine.
C'owat (urtica sp.) : medicine.
Teperopwat (urtica integrifolia) : salt.
Serengwat : salt.
Rutiwat or *Rutiet* (kigelia aethiopica) : making honey-wine.

(C) Skins and animal products. These include :

† Monkey : food ; clothing.
† Antelope : food ; clothing ; bags ; quivers.
Pig-gut : bow-strings.
Feathers : arrows.
† Honey : food ; wine ; ritual purposes.
Ram's fat : ritual purposes.
Goats : bride-payment ; ritual purposes.
Cattle : bride-payment ; milk ; dung ; hides.
Bush-buck : tails for brooms.

The basket most commonly made by the Dorobo is the small *kewpet*, about 6 inches deep and 6 ½ inches wide at the top. This kind of basket is used a good deal by the Dorobo themselves, and is also a frequent article of sale or exchange to the Nandi : *Aiwpei kewpenik Nandi*, "we make baskets for the Nandi", as an old woman said. Dorobo women make baskets when they have nothing particular to do, just as European women knit. The materials used are fibre from the midrib of the *sosiat* palm, which is split into thin strips, and bast from a plant called *teperwiat* which is used for sewing the coils of fibre with the aid of a small needle (Fig. 1). The basket maker starts by splitting the *sosiat* fibre, preparing a certain length and biting it off as she

[*] Things marked with a dagger † are used in the preparation of objects given to the Nandi in exchange for their products.

[i.e. see cafeguide 116 & 697 - Analyst.]

6:Huntingford E-5 (1938-1939) 1953 FLA Dorobo FLA

that made of hollowed-out logs. A suitable log is cut of such a length as to allow for a length of about 3 ft. 6 ins. in the finished article. Trees specially favoured for making honey-barrels are the *mosot* and *revendet*, on account of the ease with which they can be worked; others used are the *kwatuet*, *silipet*, *kipakuet*, *kiparpuet*, and *maroeto*. The entire work of shaping and cutting is done with the axe. The log is first split into two equal halves longitudinally, which are then hollowed out, leaving sides about an inch thick. In the bottom of one half an oblong hole is cut, through which the bees can enter and the owner put his hand to take honey. Four holes are bored in the sides of each half with a red-hot boring-needle (Fig. 1), and when the two halves are put together, liana is threaded through the holes to hold them in place.

The slat barrel, not so common as the dug-out because of the difficulty of making the end-pieces, is made of strips or slats of strong bark, the *mosot* and *revendet* trees being favourites for this purpose. The ends are formed of two solid circles of wood which have to be cut laboriously from a log and trimmed to shape. The bark slats are then put in position round the endpieces and bound together with liana, a tricky piece of work, as anyone who has had to do a similar job will realise; and to get the barrel into place in the tree also requires great care, since it easily collapses if roughly handled. A hand-hole is made in the under side, as in the dug-out type (Fig. 1, 2).

Fig. 1. Dug-out Honey-barrel.

When a man puts up a new honey-barrel, he calls out to the bees to come and settle in it [16]. The invocation to bees has a set form, and is uttered in a rather unnatural, high-pitched tone:

Sekem, asken, er mii ra rendimeera tukul, ra ɓani [17] *anyun, arakiton,*
Bees, bees, who are in countries-there all, come here now, pour in-(honey),
arakiton [18].
pour-in-(honey).

Bees do not get ill, they say, but are liable to be killed by heavy rain if they are caught in a storm while getting honey. They have also a number

[16] New swarms take off from a bee colony when it becomes congested. Young queens are allowed to develop, and the old queen leads off a swarm to find a new home.

[17] This obscure expression is said to be equivalent to *Ongyon yo*, "come here".

[18] The Nandi have borrowed this formula, and adapted it to *Ogoa arakiton nwaraet lot ne laiboi*, "come ye, pour wax into the warm hut".

6:Huntingford E-S (1938-1939) 1953 FLA Dorobo FLA

the bow. Quivers are made of ox-hide. Arrow-poison is made from the bush called *sinin* (acocanthera Schimperi), the use of which the Nandi say was discovered by the Dorobo[28]. It is made in this way: leaves and branches are broken off and boiled in a pot for several hours. The resulting liquid is strained and boiled again till it becomes thick and tar-like. When cool it is placed on a sheet of bark, covered with another piece of bark and put in a tree out of the reach of children, together with the pot in which it was boiled. After making poison a man must purify himself by bathing in a river. *Kolist* poison acts very quickly, but does not make the whole of the animal killed by it unfit to eat. The flesh round the site of entry is cut away and destroyed, and the rest is eaten with safety.

The Dorobo used to have hunting dogs (*mokte*, pl. *mokik*) which at one time were the only animals they kept. They still have dogs, but the hunting breed which I saw in the Kolpsi-Kipkoreon area in 1927, seems to have died out, for though I saw a few dogs there in 1939, they were nothing more than the ordinary native type, the thin-nosed cur so common in Native Reserves and on farms wherever Africans are found. The original breed, as I saw it in 1927, had, it is true, a tightly curled tail, but was a much better looking animal, of a different shape, and much fiercer, resembling the so-called '*basenji*' dog of the Belgian Congo[29] more than anything else, especially in its prick ears, tail, and carriage, though it could bark. When in the forest, the Dorobo put leather collars on their dogs, with a small bell under the throat so that they could tell where the animals were when they put up game. It was noticeable both in 1927 and 1939 that the Dorobo treated their dogs better than Africans usually do — they paid more attention to them, played with them, and fondled them.

The traps used by the Kipkoreek are of two kinds: the pit-trap, and the springe. The pit-trap, *ngwet*, is simply an oblong pit about 6 to 8 ft. long, 3 ft. wide, and 6 ft. deep, dug with digging-sticks, and the earth removed in bags or baskets. Wooden spikes, *kipsaiyinat*, were often set in the bottom, and the whole was covered with thin sticks concealed by a layer of grass and leaves. The trap was dug across a path known to be used by buffalo, the animal it was chiefly intended to catch. This type is no longer used. The springe is the only trap used to-day. It is called *parsat*, and can be made in a very short time by almost any Dorobo. It is used chiefly to catch smaller game like antelope. The materials required to make a springe are wood-lions, and grass, and the only tool used is an axe or *pangs* (the long-bladed knife or cutlass common in Africa, and now often used by Dorobo). The trap about to be described was made for me on the edge of the forest at Kipkoreon by Coimin arap Kotzin on 9 July 1939. It took him about 12 minutes from start to finish, and did all that was claimed for it; it should be noted that he was somewhat out of practice, and probably took a little longer than a man who was constantly making traps.

[28] Cf. Hollis, The Nandi. Oxford 1909. p. 108.
[29] Cf. Capt. G. Dellenbach in Journ. Roy. African Soc. 36. 1937. 114.

They are said to be very prolific, having families of eight to ten children, but the infant mortality is so extremely heavy that their numbers increase very slowly; this mortality is probably due to the cold, damp climate of the Mau Forests, which are at an altitude ranging from 7,000 to 9,000 feet.

Their peace ceremony consists of cutting off a dog's ears, and the contracting parties then spatter one another with the blood.

They live principally on Colobus and other monkeys, which they shoot in the forest. At certain seasons, however, they go and hunt big game on the plains, known as the Ranguis Nyuki; they wait till the grass is dry, and then burn it to facilitate their hunting. They use poisoned arrows for big game, and unpoisoned ones for monkeys, &c. They train dogs to assist in their hunting, and are very keen to get young dogs for the purpose. They told me that they first gave the dog certain medicine, and the animal could then track game.

They are very clever elephant hunters, and informed me that when they came across an elephant they went off and bathed and scrubbed themselves very carefully to remove all trace of the human scent, and that they were then able to approach a sleeping elephant and spear it with a poisoned dart.

They are most expert in the use of a firestick. The fire is produced in the ordinary way by the friction of one stick spun round vertically in a depression in another piece of wood, which is held firm between the bare feet of the operator; the lower piece of wood appeared to be the juniper of Mau.

A small vocabulary of their language is appended on the opposite page. They use the Nandi numerals.

The prefix "ki," and the suffixes "et," "it," and "ek," are, I think, brought in from the Nandi language, but most of the roots will be found to be quite distinct. Many of the tribe can only speak Nandi, and when collecting this vocabulary in many cases they appeared to have forgotten the Ogglek or Omotik word but gave the Nandi word, and had to consult among themselves and, as it were, hunt up the proper word. The language is thus evidently dropping into such disuse that it will probably become quite extinct in the near future.

C. W. HOBLEY.

[34]

/235 cont./

411 322 [283] [237] with fat several times, it is bent over the fire. The string is plaited together, turning and braidlike, out of short animal tendons and is extended by further interweaving up to the required length. The projecting starting-ends of the individual pieces of tendon are neatly cut off, whereupon one then rubs the now finished bowstring with some fat.

The arrow shaft (Fig. 84) is carved out of a dry wooden stick, first rounded, then smoothed by scraping. The upper end is wound [237] [824] [412] with tendons that have been coated with the varnishlike juice of a not yet described species of gladiolus known as dirigé, whereupon, on top, one drills in the one- /236/ /Figs. 83 and 84 appear here/ 411 centimeter-long hole for the tang of the arrow by a twirling motion [237] with a thin wooden chisel. At the lower end the three-part feather- [136] ing -- out of the feathers of the carrion vulture (Neophron percnopterus) -- is first fastened on by being wrapped with a very fine [283] bast thread and then glued fast with the gladiolus juice just mentioned. [824] Another wrapping of animal tendons is found between the feathering and the rear notch for the bowstring, in order to prevent a splitting of the shaft.

[325] The people buy the iron points; only if a point breaks off /237/ [322] do they as a rule forge a new one for themselves. Clubs are carved [171] from a piece of wood, as among the Masai. They buy the spears, [439] of which there are one or more in almost every camp, from the blacksmiths of the Masai. The spears serve as weapons only in the camp, where shooting with arrows is not permitted, on account of the danger connected with that, since they are always poisoned.

415 The Asá for the most part buy wooden bowls and gourd bottles from [439] sedentary tribes. On the other hand, in some places they plait [285] shallow baskets, which they use for storing food.

524 The fact that the Wandorobo do not play the board game so 829 popular among the Masai was explained to me by them with the 171 words: "During the game we would forget to hunt and then, with our families, would have to starve."

512 With the coming of darkness complete stillness as a rule comes 517 over the camps, quiet even during the day; the day's work is done and everyone goes to his hut. Only on moonlit evenings do the old [273] people often still sit in the open for a few hours, talking, with a [535] gourd bottle of honey beer, while the young men and girls dance [533] and let their falsetto song ring out through the still night, from

000 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Care and treatment of the pregnant woman, the woman in labor, and the woman in childbed. -- Killing newborn children. -- Fertility. -- Child mortality.

843 [842] [824] The opinion that the author heard expressed a number of times by Asá-Wandorobo, that pregnancy is more or less bound up with a definite time of year, and, to be sure, in such a way that either conception takes place at blossom time or birth takes place at the time of the fruitage of the poisonous tree Acocanthera abyssinica, appears surprising.

[224] /242/ During his wife's pregnancy the husband does not pursue a game animal shot at in hunting, because it is believed that the latter, at his approach, will resist the poison and escape. Therefore, after he has shot an animal, he returns to the camp and from there sends another man out to look for the animal. The pregnant woman [825] may not be beaten. Neither he nor the pregnant wife may step over a procession of migrating ants. She is forbidden to eat meat from a wild animal that died or was killed by a predatory animal, likewise soup, and furthermore honey in which dead bee larvae are found. She must avoid coming near a chameleon or a snake, or exposing herself to the heat of the sun for any length of time. All this, in the opinion of the Asá, would harm the fetus.

[302] [202] If the woman visits another camp, she smears her forehead with white clay beforehand in order to announce her condition to its occupants. On the way there she is accompanied by a little girl, [858] whom she leads by the hand. As the reason for this, the people [825] say that a miscarriage would take place if the woman went without a girl and on the way saw the previously mentioned weaver bird or heard its dil-dil-dil calls. A woman pregnant for the first time is 843 given gifts by all the people (men, women, boys, girls) of the camp 431 and her friends in the neighboring camps at about the middle of her pregnancy. She is presented with a leather apron, a pair of ear pendants, beads, chains, or even a head of small livestock.

/245 cont./

422 districts. Besides such marks one also finds /246/ others that belong to individual large families and are then used in place of the former, 411 not together with them. The point and tang of the arrows and throw- 278 ing spears are always smeared along their entire length with a plant [824] poison, which the Wandorobo themselves brew out of the wood and roots of the Acocanthera abyssinica, which they call adug, i.e., poison (1).

000

1. Prof. Dr. L. Lewin, Berlin, produced a glycoside, amorphous ouabain, from Acocanthera wood that the author sent to him, which shows the following characteristics: it tastes bitter and is copiously soluble in cold water; Drehung /rotation/ $[\alpha]_D = -32^\circ$ for a 2 per cent cold dilute solution; it expands at 180°C; it has the per cent composition $C_{30} H_{48} O_{13}$; it is precipitated by means of tannin; dissolved in concentrated sulphuric acid, it gives a quickly arising and strong fluorescence in green. -- Prof. Dr. E. Stadelmann, Berlin, clinically tested ouabain for serious heart ailments and expressed himself, among other things, about the results as follows: "Ouabain is easily soluble and I took advantage of this circumstance to inject it subcutaneously or intramuscularly. Injected subcutaneously or intramuscularly in a concentration of 0.3-0.4 mg. of ouabain three times daily in the above concentration, I have so far obtained for the most part among my heart patients a very prompt, excellent result in the direction of digitalis, without unpleasant side effects. If the experiences up to now continue to be equally favorable -- and I have no reason to doubt it -- there would

/246 cont./

000 /footnote 1 continued/ be a substantial therapeutic advance to be recorded here." From "Uber Acocanthera Schimperi als Mittel bei Herzkrankheiten/On Acocanthera Schimperi as a Remedy for Heart Ailments/." By L. Lewin and E. Stadelmann. From a report delivered to the Berliner medizinischen Gesellschaft /Berlin Medical Society/. Berlin, 1906).

278 • 824 Although the tree is not rare in the steppe around Kilimandscharo, its poisonous nature nevertheless generally seems to be known only to the Wandorobo, since other tribes do not manufacture the poison themselves. Thus the former sell it, for example, to the Wadschagga, the [439] Wakahe, the Wakuafi of Aruscha tschini and of Meruberg /Mt. Meru/, the Wapare, etc. To brew the poison two Wandorobo always go a few thousand meters away from the camp into the bush. After they have collected branches and roots of Acocanthera abyssinica, they split them into thumb-thick sticks and prepare for the cooking in separate places. The wood is boiled for several hours in an earthen pot that is half filled with river water. Then it is removed, and the liquid obtained is thickened by further cooking to a viscous porridge-like consistency. The finished poison is black and looks like pitch. 278 562 834 During its preparation no woman may come either in the vicinity of the poison pot or in that of the man doing the cooking. The woman who brings food and firewood therefore places these objects within [784] calling distance. They believe that the effect of the poison is weakened or entirely destroyed through the contact or even merely the presence of a woman, whose person they, in their naïve beliefs, are unable to separate from the idea of sexual intercourse -- since the latter, according to their view, is an element acting against the poison. The same would be the case if the wife had intercourse with another man during the time the husband is busy preparing the poison, or if the husband cooked the poison while his wife was pregnant. The [415] finished poison is stored in a wooden pot (madjé) or in a leather bag /247/ (améta), and, to be sure, like the quivers with the poisoned arrows, not in the hut, but hung on a tree not far from the camp.

/259 cont./

782 796 842 From time to time the people celebrate a supplication feast for Uɛ̄d, which they call korodjeg or koroseg. For a koroseg a hawa, a feast to ask God for children, the married women station themselves in a circle around a small fire into which, just as for every other supplication feast, they strew the residue of the honey beer, consisting chiefly of wax particles, so that its fragrance will rise up to God. While an aged, respected man goes around the circle and sprinkles those present with honey beer, they sing: Uɛ̄d nge hawa! After this has gone on for a quarter of an hour, they start to dance, continuing to sing the same words. [504] [273] The dance is followed by a meal at which meat and honey beer are consumed. At a koroseg e aga they ask God for meat. Beside a small fire they place upright a straight branch with several forks at the top, the twigs of which are cut off short. The empty stick is supposed to show God that they do not have any meat. All the campmates station themselves around the fire and sing: Uɛ̄d ngeri' magat (magat = game). The next morning the hunters set out, and as soon as they bring home meat, a small piece is placed on each twig of the forks of the branch. Again all surround the newly kindled fire and now sing: Uɛ̄d urag haiug ara, which is to say: God, give us still more food. The men celebrate another supplication feast before a larger hunting expedition. In the middle of the camp a small fire is made, around which the men stand [824] in a circle. Each one has the bow in the left hand, a twig of the oñti tree (Acacia mellifera) in the right one. Then, going around to the left, they walk around the fire four times, during which they sing: Uɛ̄d ngeri' magat. They maintain that they have never yet prayed in this way in vain, but that after a koroseg e aga they always returned from hunting with rich booty. The Wandorobo do not have a feast corresponding to 789 the ol ogor 1 ol geretti.[1] Rather, without special ceremonies, they cut [796] a strip out of the hide of an animal just slain and wear it as an amulet around the right middle finger. As soon as they meet something along [782] the way that makes them afraid, be it a predatory animal or an enemy, they blow on the hide strip, which is the equivalent of a prayer for protection. Other amulets are seen extremely rarely. The author saw only one, which they called tuturo and which consisted of a small piece of root. It was worn on the neck ring and was supposed to protect one from predatory animals. If individual persons spend the night

209. eṅ gilŏgĭrgĭr (Sonchus asper Vill.). The milky juice of the plant is dripped into the patient's eye for eye inflammation.

M [751] 210. eṅ gilolĭŏ (Pterolobium lacerans R. Br.). Secret medicine of the ol oiboni. He makes an amulet out of the powder of various parts of the plant, which is supposed to protect one against all kinds of illnesses.

211. eṅ giloṅo. If the noses of small children, especially of babies, have been made sore at the nostrils by flies, the mother chews the herb and smears the sore places with the chewed-out juice.

212. ol gilŏrĭtĭ (Acacia abyssinica Hochst.). At the meat meals the warriors cook two handfuls of the bark in approximately 15 to 20 liters of water and drink the nerve-stimulating decoction as desired.

/364/ 213. ol gĭnĕ (Scilla spec.). An extract of the pounded bulb is given to calves to drink for fever.

214. ol gĭnjĕ (Euclea fructuosa). Edible fruits. A root decoction is drunk for spleen pain. The handle of the bow is made from the wood.

215. eṅ gĭnjŏṅjŏrĕt. The El kuafi give the small livestock, for diarrhea, a mash made of the pounded leaves and water, with the addition of steppe salt.

M 824 /366 cont./

strigosis; floribus argenteis in apice caulis in capitulas parvas sphaericas densiusculas dispositis; inflorescentiis partialibus 3-floris, floribus partim hermaphroditis, partim masculis, partim sterilibus; tepalis 5 lanceolatis, rigidis; staminibus 5 semper cum pseudostaminodiis 5 ovato-triangularibus teneris alternantibus; ovario ovato, stylo longissimo.

Plant 20-25 cm. tall. Leaves 1.5 cm. long, 8-10 cm. wide. Leaf stalk 3 mm. long. Capitulum approximately 1 cm. in diameter. Perianth leaves 7-8 mm. long, 2-3 mm. wide.

A secret medicine of the ol oiboni and ol goiatiki. A root decoction is taken as a diaphoretic agent for fever.

253. ol gŭlăngŭĭ (Caesalpinia Bonducello Roxb.). From the powdered leaves the ol oiboni makes an amulet against fever. The hard, ball-shaped fruits are used as stones in the board game (en dodoi).

254. en gŭlélŏ (Harrisonia abyssinica Oliv.). A small piece of bark is cooked with beef broth as spice for it.

255. en gŭlŏílŏ. Fodder for small livestock.

256. ol gŭm. Edible fruits. A leaf extract is used to wash out inflamed eyes.

257. ol gŭmi (Vangueria edulis Vahl.).

258. ol gurmajek (Barleria spec.). Fodder for small livestock. D [824] The twigs are popularly used as bed padding in the hut. The El dorobo value it as a good honey plant.

259. ol gurschaschi (Barleria mucronata Lindau). Small-livestock fodder. Numerous punctures with the very sharp thorns of the plant are made around a snake bite, in order to facilitate pressing out an abundant quantity of infected blood. A decoction of stalks and roots is used as an emetic.

D
/370 cont./
• 824 825 789 334. e' mundẽja (Phyllanthus spec.). The ol dorobo places a twig of it close beside the slain game as protective magic to prevent birds from circling above the animal and thus attracting other people.

335. ol mundẽja (Veronica cinerascens). This plant serves the el dorobo as protective magic against lions.

M 824 336. ol murgẽa (Phyllanthus). Shield hoops are made from the branches.

337. e' murua. Milk fodder for cows.

338. ol ŋanboli (Ficus sycomorus L.). A decoction of two hand-sized pieces of bark is drunk for diarrhea.

339. ol ŋẽãndus (Euphorbia spec.). Goats are said to die after eating this plant.

340. ol ŋeriandus l en doje (Plumbago zeylanica L.). The ornamental scars on the faces of women are produced by cauterizing with the caustic root juice.

341. ol ŋeriandus l on jahuri (Thumbergia alata Boj.). The sword scabbard is dyed with the red root juice.

342. ol ŋjaligwa.

343. ol ŋonomi (Cyperus spec.). Fodder grass for small livestock. The onionlike roots are eaten with special liking by guinea fowl.

344. ol ŋonomi l el sirgon (Kyllingia alba Nees.) is a good fodder grass that is especially valued for donkeys.

/371/ 345. ol ŋonomi l os sobugo = en ɣoilin.

346. ol obe kidoŋoi (Sporobolus indicus R. Br.). Good fodder grass.

347. ol ɣbereti = ol ebereti (Phyllanthus).

348. ol obereti kete.

349. ol obereti kitok.

350. ol ɣbito (1)

1. The Masai also called Stephania abyssinica A. Rich. ol obito.

(Glycine javanica L.). Good fodder for small livestock.

/373 cont./

M 824

394. ol oja basɛ̀j = ol oija basɛ̀j.

395. ol ojeŋgalàni (Sesbania aegyptiaca Poir.). The decoction of a piece of bark approximately ten inches square in size is given the cow to hasten the expulsion of the afterbirth, if this is protracted for an abnormally long time.

396. ol okitèni. The decoction of an approximately fist-sized piece of bark is regarded as loosening for catarrh.

D [824]

397. ol omej. Masai sometimes, El dorobo often, stick a branch of this on either side of the hut door as protective magic against predatory animals.

D M [825] [789]

398. ol ɔ̀mɔ̀. Valued by the El dorobo as a good honey plant.

399. ol oñorua (Maesa lanceolata Forsk.). A nerve-stimulating agent of the warriors. They drink the decoction of approximately seven finger-sized pieces of the pungent-tasting root at the ol bul meals, as desired.

400. ol oñoroñ. The berries are edible.

401. ol ɔ̀ñɔ̀ (Andropogon Schoenanthus). The livestock do not like the grass, because of its lemon smell. In places the grass is used to make a diaphoretic tea that is given for fever.

402. ol oñuñoi = ol gitende (Haemanthus nov. spec.).

403. ol ɔ̀rɔ̀k olele (Justicia matamensis). Good fodder for small livestock.

M [825]

404. ol ɔ̀rɔ̀ndɔ́ (Cissus Paraguensis Gilg). Warriors en route and especially during the forest meals like to put the vines into the bed padding, because they are said to keep away insects.

M 824 301

405. ol orowil kete (Justicia calcarata Hochst.). Fragrant neckbands are twisted out of the bark bast, smelling like vanilla.

406. ol orowil kitok (Justicia Fischeri Lindm.). Use like that of the preceding.

407. ol orowil l el aijok (Ageratum conyzoides L.). Use like that of the preceding.

D 824 301

408. ol orowil l el dorɔ̀bo (Neuracanthus sacani Kl.). The El dorobo make fragrant neckbands out of the scraped bark.

409. eŋg osida kitok. Good fodder for goats.

M 824

410. eŋg osida gutok (Barleria ventricosa Nees.). El dorobo make arrow shafts from the branches.

D 824

other scavengers. Nowadays, all hunting activities are carried on illegally with the risk of being punished if caught by the police.

Weapons are the bow and poisoned arrows carried in a quiver. Knives are used to skin game and to make springes. Spears have never been used. The Dorobo used to have hunting dogs, but in the North Tindiret Forest the breed seems to have died out, though it existed in 1927. They have two kinds of trap: (i) The pit trap, *ngurot*, formerly used for buffalo, consisting of a pit 8 ft. long, 3 ft. wide, and 6 ft. deep, with wooden spikes set in the bottom. (ii) The springe or snare, *porosot*, which consists, briefly, of a springy stick bent over, with a noose attached to it connected with a platform: the arrangement is such that when an animal treads on the platform its head enters the noose, and the pressure on the platform releases the springy stick, which flies up, tightening the noose, and holding the animal suspended. Such traps can be made in less than ten minutes. This type is used chiefly to catch antelopes, but leopards have been caught in them. Cross-bar traps with a drop-spear were not used by the Kipkurerek Dorobo.

The only hunting taboo recorded is that the night before he goes out hunting a man must abstain from sexual intercourse. This does not apply to the setting of traps.

As regards land rights, the forest was divided into districts, *koret*, pl. *korosuek*, and in his district each man had an hereditary block of land in which he hunted, set traps, kept his honey-barrels, and collected wild food. Occupation rights were recognized by public opinion, and trespass on a man's forest area, i.e., deliberate entry in order to start hunting without permission or the promise of a piece of meat, might result in the trespasser's death at the hands of the owner, who would then have to pay compensation for homicide. Theft of game from a trap is said never to have occurred, not only because the thief might be killed, but because his belly would swell to a great size and he would die after eating meat stolen from a trap.

Bees

Honey is to the Dorobo what milk is to the Nandi: it is "sacred," and its supply must be protected by the observance of taboos. Fruit and blood must not be eaten on the same day as honey (though meat may be eaten); when a comb is emptied, it must be carefully hidden in the undergrowth; and after eating honey a Dorobo cleans his hands in earth, not (like the Nandi) by wiping them with leaves.

The Dorobo recognize four varieties of bee: *sekemik*, the honey-producing kind; *imeiik*, solitary bees which live in trees; *kosomek*, earth bees, which live in the ground; and *kiptulonik*, mason bees, which live in cells made of earth and particles of stone cemented together by their own saliva. The Dorobo divide the honey-bees, *sekemik*, into three kinds: the queen, *kamet ap sekemik*, "the mother of the bees": the workers, called simply *sekemik*, considered to be males, which make honey by eating the "sap" (*pek*) of flowers and then vomiting it into the empty honey-combs; and the drones, *kapurenik*, considered to be idle females which do nothing useful.

Hives or honey-barrels (*pasanet*) are made either of slats of wood tied together, with circular wooden end-pieces; or of the two halves of a piece of log split longitudinally and tied together. They are set in trees, and when a new hive is put up, the owner calls the bees, in a high-pitched tone, to come and occupy it: "Bees, bees, from all the country, come here now, and pour in honey, pour in honey." Bees are said to recognize their owners by their body-smell, and do not sting them when taking honey. Certainly taking honey does not appear to be a painful or dangerous process to the Dorobo owner. Theft of honey from a barrel is considered very low, and a man might kill a thief, though he would have to pay compensation for homicide.

Honey is an important article in Dorobo economy: it is eaten as food, made into an intoxicant, used for ritual purification, and it forms an article of commerce.

1: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

legs straight and hands crossed on the breast. Babies are also laid out for the hyenas, though if there is a dung-heap, they are buried there.

Witchcraft

Witches, *ponik* (defined as among the Nandi, p. 30), may be of either sex; females are said to be more common, though in 1939 the Dorobo said there were no witches at all in the three districts of Kelpui, Kipkorom, and Sosoiyo, and certainly no trace of witchcraft was encountered. Formerly, in cases of witchcraft where the witch's identity was unknown, the Dorobo went to a Nandi diviner, *saheyuot*, and on her identity becoming known the witch was required to oil the victim on the face, breast, and belly with the fat of a she-goat. If she refused, she was tied to a tree by a thong drawn tightly round her forehead and flogged till she agreed.

Affinity with Wild Animals

Possessing a " hunting outlook," the attitude of the Dorobo to wild animals is unlike that of the African to whom hunting is at most of secondary importance. They seem to be closer to the wild life round them, perhaps because they are wild men themselves. The conversation of Dorobo going through the forest turns quickly to the wild life there, for they have what they and the Nandi call *comiet*, " affinity," with the beasts of the forest. This was described in a text, in which a Dorobo said: " The Dorobo know the spoor of all the animals, and they like to see the animals. The animals are not bad, for we and they all dwell in the forest together. The intelligence of animals is not like that of people, but it is not very different, for animals also are intelligent. All animals of the forest are alike, though we eat some and not others, because we the Dorobo and they the animals all live side by side in the forest."

Musical Instruments

The Dorobo have no musical instruments, and they seldom sing or dance. They used to have water-buck horns which were blown to call people together in the forest.

2: Maguire G-5 (ca. 1926) 1927-28
FLÁ Dorobo FLÁ

knowledge of roots, leaves, berries and tubers of all kinds, on many of which he is capable of supporting life.

Various kinds of honey are obtained in large quantities and they command a ready sale among the Masai, who are, for the most part, too indolent to look for honey themselves. The *Mósiro* are greatly assisted by the honey-bird [1] in their search and do not appear to suffer much inconvenience when stung. The honey is generally removed by hand, the despoiler working placidly in a cloud of angry, stinging bees. Occasionally a tree has to be felled, and in some cases the honey may be so inaccessible that fire has to be resorted to for the purpose of driving the bees away. Thick clouds of smoke are readily produced by the use of the *Endules* [2] which every *Mósiroi* carries in his quiver.

With regard to the dress of the men, the *Mósiro* are seldom to be found wearing skins. I have seen *Mósiro* wearing a single garment of rough bark-cloth, knotted at the shoulder in the manner of the Masai blanket, but as a general rule their dress consists of a ragged strip of "Amerikani" or blanket, weather-worn in the extreme, tied over one shoulder and confined at the waist by the sword-belt. They say that they no longer wear skins because the latter make too much noise in the bush and lessen their chances of approaching close to game. The women wear a skin garment [3] of the same kind as that worn by the Masai women. They also wear anklets and armlets of wire, but the heavy iron necklaces and *'surutya* earrings of the Masai women are seldom, if ever, seen. It may

[1] *Cuculus Indicator*: a small drab bird about the size of the thrush. It has a short, but very sharp, bill, a white underside and black-striped wings. Its distinctive twittering is often heard in the bush, particularly in the vicinity of bush paths and other places it knows are likely to be frequented by humans. It flies from tree to tree, keeping up its twittering all the time, and is obviously anxious to be followed. I have followed this bird several times, and although honey was not always found at the end of the trail, it invariably led us to places where bees were or had been some time before. The *Mósiro* always answer the cries of this bird, even when they have no opportunity of following it. There are many legends about the honey-bird, which, I think, is to be met with throughout East Africa. The Swahili call this bird *Sayo*; the Masai call it *En-jokóroi*; the *Mósiro* name it *Chekeandes*; the Nandi, *Chepkecha*.

2: Maguire G-5 (ca. 1926) 1927-28
FLÓ Dorobo FLÓ

enormously developed maxillary muscles. Individual physical peculiarities are not readily apparent when pigtails are almost universally grown and bodies are smeared with red ochre. The Nilotic peculiarity of standing on one leg has been observed in the *Mésiro*, but it is not seen so often as in the case of the Masai. I have been unable to discover any examples of pronounced steatopygia in the women, who are, usually, more prolific than the Masai women, and who are prized by the Masai for this reason. The *Mésiro* are a hardy race, and even at a comparatively advanced age the men retain great powers of activity and endurance.

The older generation (in common with the Masai elders) pays little attention to its personal appearance. *Mésiro* of a certain age would seem to be less under Masai influence than are the young men and are readily distinguishable from the Masai at first sight. (It might, perhaps, be as well to modify this by saying that an eye unaccustomed to looking on Masai will often fail to detect any difference between them and Dorobo of any type. Recently, I made the experiment of asking two Europeans from the coast to separate the Masai from the Dorobo in a mixed gathering. Each of them made a different selection and each of them was wrong in the majority of cases.)

In hunting, tracking, bush-lore and forest-craft the *Mésiroi* is, in my opinion, without equal when in familiar country. He seems to know instinctively what an animal will do under given circumstances, and inability to follow its track will seldom result in the pursuit being abandoned. If the ground is stony or if the passage of other animals has obliterated the trail, the *Mésiroi* will go quietly forward and will eventually, by a combination of luck, instinct and knowledge of the country and the habits of the quarry, pick up the spoor again. I have seen this happen many times. The *Mésiroi* knows when extreme caution must be observed and when noise does not matter; he is never at a loss for a vantage-point and, on the whole, is tenacious and plucky in the pursuit of dangerous game. He can summon lion to a kill by producing a weird, muffled, nasal cry (it is supposed to represent the bleating of a goat, though it has little resemblance to that noise, to my

J. Linguistics 0-5 (c.a. 1926) 1927-28
FLA Dorobo FLA

224 835 mind) made by placing the forefingers on either side of the nose and calling into the hollow formed by the palms of the joined hands.[1]

224 411 The *Móiro* are fast and accurate bowmen at close range, and there are few of them who have not accounted for more than one lion with this weapon. A *Móiroi* at present in my employ is credited with having killed thirteen lions thus, three of them with one arrow. The arrows, of course, are poisoned,[2] and are discharged with a force that would, I feel sure, excite the admiration of a European toxophilite. A curious, crouching attitude is adopted when drawing the bow-string and the archer faces his target, not adopting the more usual position of standing at a right angle to it. The killing of a lion with the bow is not regarded as an event of especial importance and the carcass is often left to rot in its skin.

261 If trouble is in the wind, the *Móiroi* will always make for the haven he knows best—the bush. There he will live, apparently quite independent of the products of civilization, and in nowise inconvenienced by a total lack of water, for weeks at a stretch, returning (when the trouble has blown over) with a skin bottle or bag bulging with honey. I could not understand the apparent ability of the *Móiro* to live for long periods in country I knew to be waterless until I had been introduced to what they laughingly said was "the dry-season water." This is an enormous tuber[3] with a skin like the domestic potato. Under the skin is a milky, sticky layer about half-an-inch in thickness. This surrounds the inner core, which is of the appearance and consistency of a raw potato, is slightly fibrous and very moist. When this is chewed (the residue is not generally, but may be, swallowed), it gives great relief to thirst. Squeezing or pounding one of these tubers over a cooking-pot will result in the accumulation of a surprising amount of quite

[1] My predecessor at Kibaya shot two male lions which were "called" to a kill in this way by the *Móiro*. He sat beneath a tree at a place where two lions had recently killed; the *Móiro* mounted the tree and began calling. After a short time, one lion came to the kill (a goat) and was shot. The second lion came quite soon afterwards and was duly given his quietus.

[2] See the section devoted to Dorobo arms.

[3] This tuber, called *Kichwembwe*, is also known to the Kitóy Masai and is called by them *O-kiombekwe*. This is a corruption of the *Móiro* name, and the Masai freely admit that they learned of its existence from the Dorobo.

Tanganyika G-3 (Jan. 1926) 1927-28
FLA Dorobo FLA

Some *Mŏiŏni* Folk-Tales, Folk-Lore and Superstitions

"*Epito ilondo kitŏ*" [1]

Thus answered a *Mŏiŏni* Dorobo whom I rallied on his silence and attitude of strained attention during a halt by the wayside when on safari in the remoter areas of the Tanganyika Masai Reserve.

The bush and what can be wrested from it—wood for his bow and arrows, honey for his wife and children and for barter, the bark of the *Ol-mahuiŏ* [2] tree, fibre for plaiting into his hair, and last (but most important of all) the skins and the meat of game animals—these things bound the horizon of the Dorobo. It is therefore not to be wondered at that such folk-lore tales as exist among the Dorobo at the present time are chiefly concerned with animals and animal life. Similarly, the paramount interest in life of the Masai is apparent from a study of the extant folk-tales of that tribe, which deal, to a great extent, with cattle and other domestic stock. The tales one hears told to-day are, in all probability, but a few of the more easily-remembered of a host of stories now forgotten for all time.

The following examples have been selected from a large number of stories told by the *Mŏiŏni* themselves and admitted by the Masai to be Dorobo in origin.

The Dikdik and the Elephant.—The dikdik, when out walking in the bush one day, chanced to fall over a piece of elephant-dung in his path. This made him very angry and he said: "Thus am I inconvenienced by the dung of the elephant! I am so small that I cannot hope to inconvenience him in like manner, but I will arrange for all the members of my tribe to come and make use of one place, and thus in time the heap may grow big enough to trip a passing elephant." This is the reason why piles of dikdik-dung, showing that many of these animals have used the same place, are often seen in the middle of a bush path. (A story very like this is told by certain Coastal tribes.)

The Tortoise, the Hare and the Hyæna.—These three made an agreement to rob a rich snake. The latter had cattle and

[1] "I am listening to something in the bush." Cf. the Masai *Ee-dim*, bush.

[2] *Albizzia anthelmintica*, according to the authority quoted in Hollis. It is used as a remedy for worms and to produce a large appetite. It is highly prized by the Masai and is scarce in the Kiteto locations.

2:Maguire G-5 (ca. 1926) 1927-28
FLÁ Dorobo FLÁ

This makes the latter feel jealous. He hates the eland on account of his superiority in size and strength, and to show that he is every bit as good as the eland, he has grown a long tuft of hair on his forehead, just the same as an eland bull. The eland has a habit of rubbing his forehead in his urine.[1] This causes the tuft on his forehead to grow strong and thick. The dikdik follows this custom also, partly to increase the growth of his frontal tuft and partly in order to prove that anything an eland can do, he can do as well.

The Wart-Hog and the Lion.[2]—(About four miles south-east of Kibaya there is a curious cave in a bank beside the river bed. The floods of years have washed away the earth from beneath a flat, granite-like rock outcrop which forms the bank in one place, and the cavity thus made (at no point more than three or three-and-a-half feet from floor to ceiling) has often been used in the past as an *Ol-pul*[3] by the Masai. While taking shelter in this cave one day during a downpour of rain, a Dorobo told me the following tale.)

"A wart-hog once came here to rest. Finding the place warm and comfortable, he lay down and was speedily fast asleep. He awoke to find that a lion had entered the cave and was advancing on him with the intent to kill him, for wart-hogs and lions are deadly enemies. The wart-hog brought all his wits to bear on the matter of making his escape, for he greatly feared the lion, who was very big and strong. Suddenly an idea came to his mind, and standing on his hind-legs, he pretended to support the roof of the cave with his tusks, calling out meantime in a frightened voice: 'Lion, lion, come and help me to hold up the roof, as it is falling and we shall both be killed!' The lion, deceived, hastened to the spot and

[1] This fact has, I understand, been authenticated. I have never seen eland performing the act, but an examination of the frontal tuft of a mature bull eland will lead one to believe in the assertion. *Cf. The Journal of a Disappointed Man* (W. N. P. Barbellion), p. 191: "*The common Eland is known to micturate on the tuft of hair on the crown of its head, and it does this habitually, when lying down, by bending its head around and down—apparently because of the aroma, perhaps of sexual importance during mating time, as it is a habit of the male alone.*"

FLÁ Dorobo FLÁ

have lived in the country of the Kittito Masai, since they are stated to have been the precursors of the Masai in this part of the world.

I was unable to elicit any folk-tales from the *Aramanik*, who say that they know no stories or legends except those they have learned from the Masai. It is possible that further efforts in this direction might meet with better success. The *Aramanik* are not as friendly or as ready to discuss their own affairs as are the cheerful, happy-go-lucky *Mósiro*.

Many Masai superstitions and superstitious practices are to be found among the Dorobo. There are, however, certain customs and observances of a superstitious nature practised only by the Dorobo. Of the following three examples, the last two given are in this category.

The *Mósiro* will not kill a python. They say it is a hunter of meat, as are they themselves. Furthermore, if it be killed, the ground where it dies and where its blood is split is ever afterwards fatal to cattle grazing there.[1] No explanation is given of this, and it would seem worthy of note that the Dorobo are exceptionally quick and skilful killers of all other snakes.

When following a native path or a road, if a Dorobo comes to the place where the track of a snake crosses the path, he will never step over it without first kicking up the sand or earth in order to break the continuity of the snake's track. This is done in order to avert evil, and is stated to be the only efficacious way of ensuring that the snake in question will not eventually kill the man who has crossed its path.[2]

If a Dorobo has been robbed and if the thief cannot be found, the following procedure is sometimes resorted to. The man who has suffered the loss heats his sword in the fire until it is red and then, plunging it into the earth, he says: "The thief shall die to-morrow." This is regarded as a very bad practice and is seldom indulged in, as the injured party, no matter how much he may have lost, knows that he will become extremely unpopular as a result of his action.

It seems likely that in a few years' time there will be no *Balaága* and no *Kinyalaágat* Dorobo. As I have said elsewhere, it is now almost impossible to find *Balaága* or *Kinya-*

[1] See Hollis: *The Masai*, p. 80.

[2] *Ibid.*, p. 79.

5:Huntingford E-5 (1938-1939) 1954 FLÓ Dorobo FLÓ

The thunder, *Ilat*, is he who produces rain, and the rainbow, *comsisiriet*, is his arm, *no neiyo pôk*, which draws up water for "him". Long ago, according to a Dorobo myth, *Ilat* was a man, and one day a Dorobo met him standing on a rock on Tindiret Hill. And because the Dorobo thought him bad, for he brought mist which hid the sun and spoiled the hunting, he shot *Ilat* with a poisoned arrow, and so *Ilat* fled thundering to the sky, where he has been ever since.

Another Dorobo myth tells that once there lived on the earth some elephants and a Dorobo, and *Ilat* lived with them. One day the Dorobo was hungry and made poison from the *keliot* bush [6]. In the night he stuck a poisoned arrow into one of the elephants, and in the morning it was dead. When *Ilat* saw it, he said: "Who has been killing my donkeys?" The Dorobo cut up the dead elephant and dried the meat, and thus had food for many months. When it was finished he killed another elephant in the same way, and again *Ilat* said: "Who is killing my donkeys?" Then the Dorobo said to him: "I killed them, because I was hungry". Then *Ilat* said to himself: "I am afraid. If I stay here, the Dorobo will kill me too". So he called out to *Asista* to take him up to the sky, and he left the Dorobo with the elephants and went up to the sky. And to this day the Dorobo kill elephants with *keliot* poison, like that man of old [7].

Besides *Asista*, *Arawa*, and *Ilat*, the other inhabitants of the Unseen World are the spirits, which are of two kinds, those of the dead, who are on the whole good, and other spirits, which have never been human and are evil. Both are called *cesowiloi* [8], and this term includes the beings called *oiik* by the Nandi, the spirits of the dead, and those called *musambuanik*, the evil spirits. Both these words are used by the Dorobo. One statement made about them was to the effect that *musambuanik kopotok oiik, akenge tukul, kikure cesowiloi*, "the *musambuanik* are not different from the *oiik*, we call them both *cesowiloi*", because though the *musambuanik* are always bad, the *oiik* can at times be bad too. Nevertheless, the Dorobo draw a distinction between the two kinds, and refer to them as *oiik* (the good) and *musambuanik* [9] (the bad).

The spirits of the dead live in the *koret ap cesowiloi* which is underground. "We haven't been there", said Arap Cepsuku, "so we don't know anything about it". But the spirits are there, and they come thence from time to time to visit the living, not only in dreams to pregnant women, but actually into people's huts, to which they travel inside the bodies of snakes. When a snake comes into a hut at night, it is not killed, but some honey is offered to it with the words: *Ui, Anam, i oiindet*, "Go away, So-and-so, for

[6] Acokanthera Schimperi.

[7] It will be noticed that there is a similarity between this and the Nandi myth given by Hollis, Nandi, p. 111, and that the myths printed in JRAI 57. 1927. p. 448 and Hollis, Masai, p. 346 are of a similar pattern. In the latter, the man is a Dorobo.

[8] The full form of this word is *cesowilo* (*cesowilot*), pl. *cesowiloi* (*cesowilôk*). It seems to be the same word as the *asuloi* which Maasam gives as the Keyo word for both good and evil spirits (Cliff Dwellers of Kenya, 1927).

[9] This word, which the Dorobo have borrowed from the Nandi, has in turn been borrowed by the latter from the Bantu Kavirondo *mwazambwa*, "spirit".

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

[775] [782] [825] you are a spirit". A man who kills a snake at night in his hut need not necessarily become ill as a result (as the Nandi believe he will), but the ancestor whose spirit was in the snake will show his anger by never going to see the man again and transferring his attentions to some other member of the family. This would no doubt result in bad luck, for the offender would be continually conscious of what he had done. Another account, however, which I think more nearly represents the common belief, is that after offering a snake honey-and-water or milk, the owner of the hut says to it: *Ui si nyon tun ingoii lakuet*, "Go and return when (my wife) bears a child", so that the name [553] of the spirit may be given to the child. According to this account, if a man should kill a snake at night in his hut, he will probably be ill the next day [782] unless he pours some honey-wine on the floor where the snake had been in [753] the night. This should free him from the danger of illness. Snakes seen in the daytime may be killed without fear.

The spirits also appear in daylight as shadows (*uruet*) and they may make their presence known by slight noises, like the sound of a stick being broken. When a man sees an unaccountable shadow, or hears a noise for which he can see no cause, he concludes that it was a spirit which has come to see him, or perhaps just come up to take a walk on earth. But he need do nothing, nor need he be afraid, for at such times the spirits do no harm.

[204] [782] Before setting out to hunt, a man asks the spirits to help him:

Cesowilōk, ohōnec tiony ne kipare,
Spirits, give-us animal which we-may-kill;
ohōnec kumik si kiipiiye.
Give-us honey enough-to-satisfy-us.

Offerings of honey-and-water, *lokomek*, are sometimes poured on the ground from gourds with a request to the spirits to provide food in times of scarcity. Such offerings are made by people at their own homes when their affairs are going badly:

Cesowiloi, opiiyec omdit,
Spirits, fill-us-with food,
si kiipiiye sapot.
That we-may-be-filled-with health.

[787] [755] When a man is very ill, he sometimes sees what he takes to be another man lying beside him for a short time, who is invisible to other people. When he has recovered, he realizes that this other man was a spirit who had come to help him to get well, and to take into himself the sickness: *Konyon si korlpe, korn ne korne cito ne mioni, si kosop*, "He came to guard him, and lay where the sick man lay, to make him well".

776 Evil spirits sometimes attack people when asleep and make them ill. They also play tricks on people and do spiteful and irritating things to them. A man is walking, for example, and suddenly catches his foot, as he thinks, in a liana drawn tight across the path, and falls. But he finds nothing there, and realizes that it was done by an evil spirit. In 1927 I was one night encamped on the edge of the forest between Kipkorom and Timopo, with

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

789 the forces of nature, a belief which (I am convinced) does have the effect of giving him confidence in his ability to deal with an imperfectly understood world. All those parts of human life in which there is an element of uncertainty or danger can be "controlled" by means of magic, not always completely, but with enough coincidental result to confirm the belief that what has been done is the right thing to do and to keep on doing.

224 178 The main occupation of the Dorobo was hunting. Unfortunately this is one of the things we know least about, because owing to external pressure the Dorobo have had to give up real hunting and now confine themselves to trapping. It was therefore impossible to get hold of anything more than a few allusions to the hunting magic of the old days. On the one hand, fear [648] of the government has undoubtedly sealed the lips of some of the older Dorobo, for hunting is now forbidden, and they were afraid, quite mistakenly, that if they talked about it, they might get into trouble, as people might think they were still hunting; and on the other hand, ignorance prevents the younger men from talking about it, for most of them have never hunted 224 in the real sense of the word. But there was hunting magic. There was, for 789 example, not only a seasonal division of hunting activities, but a magical division as well. In the dry weather people used to hunt far afield with bow and arrow; in the wet weather they set traps close to home. Now from the magical point of view it is the bow and arrow work that needs help, for in it there is an element of danger to the hunter, and of uncertainty as to whether he will make a kill. In trapping, the process is mechanical, a mere matter of being able to make a trap. All that need be done is to set the trap and wait: sooner or later it will catch something without any danger to the trapper. So when a man was going out with bow and arrow he had to abstain from sexual intercourse immediately before setting out on an expedition, lest the act should put him into mystical danger. Prayers and the observation of omens before going out gave a man further confidence. But when setting traps this abstinence is not necessary.

783 We have already come across a good deal of magic. The forms of 789 purification after killing people, for instance, are magical as much as religious; so is the cleansing of women after childbirth; and all sorts of things people do in daily life are nothing else but manifestations of the belief in the efficacy 231 of magic. When a man puts a new honey-barrel into a tree and calls out 789 to the bees to enter it, his call is as much a magical utterance as a mere invitation to enter his barrel.

Omens include the following:

787 If the birds called *kiptiltil* and *kiphunkun* or *kiphonkon* (both species ● 825 of woodpecker) are seen or heard on the right hand side when starting out [224] to hunt or on a journey, a man will be successful; but if they are on the left, he will be unsuccessful.

If a snake crosses the path from right to left, having first been seen lying still on the side of the path, it is a bad sign, and a man should return home and wait till the next day. But a snake which is seen in the act of crossing a path is of no significance, "for it also is travelling".

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

an elaborate ritual will not be built up to increase or protect it. What is expected, and what one does indeed find, is that the hunters will take what steps they can to keep on the right side of those beings which can hinder them or destroy their technical skill.

Wild animals which supply both food and the raw material for technical and domestic processes have social value, and by 1939 cattle and goats were beginning to acquire it, though they were so recently introduced as Dorobo possessions that very little in the way of ritual practices concerning them had developed. Wild animals of almost every kind are of some use to the Dorobo, and while it cannot be asserted that there is actual ritual expression towards many of them, there is nevertheless a not very clearly defined or indeed definable feeling of nearness, almost of kinship with them. This was revealed by listening to conversations between Dorobo as they went through the forest, and demonstrated the intensity of their interest in the animal life of the place, as well as their immediate appreciation of almost invisible signs which the Nandi (and of course myself) passed without even noticing. Although the animals of the forest are wild, and the property of no man, in the sense that cattle are property, the Dorobo feel a proprietary interest in them, especially when they are in a man's own section of the forest. It is clear that they have a feeling for the animals which may be described as "fondness", the nearest (though not very adequate) English rendering of the untranslateable word *comiet*; and that they regard them as intelligent beings, not on the human level, but none the less worthy of respect and friendliness. They are spoken of without loathing, disgust or contempt; and whereas the reaction of the average Nandi to the sight of a buck or its spoor is merely a gleam of greed and lust for meat, the reaction of the Dorobo is much more than that. He no doubt thinks it would be nice to eat, but at the same time he wants to know all about it, where it came from, where it was going, and so forth, and even if he has no intention of hunting it, he will examine the ground to find out all he can, for although only an animal it is one of the living things which share the forest with him. One Dorobo did in fact try to describe his attitude to wild life in the following words:

Sue keliek cepo tukul. Come Okiek si kosuwen tiouik. Ma yaacen tiouik, amu kimenye tukul kuahenge samakta.
They-know the-feet which-are-of all. They-like the-Dorobo that they-may-see the-animals. Not bad the-animals, for we-dwell-in all together the-forest.
Ngomnot ap tiouik ma uu nepo pic, ako ma loo, amu women ok icek tiouik. Kerke tukul tiond ap samak. Kiome alak, makiome alak; ako kicome tukul. Ki po samak, ok icek ce po samak.
Intelligence of the-animals not like that-which-is-of men, but not far, for intelligent also they the-animals. Alike every animal of forest. We-eat some, we-eat-not others; but we-like all. We-are of forest, and they which(-are) of forest.

(The Dorobo know the spoor of all the animals, and they like also to see the animals. The animals are not bad, for we all dwell in the forest together. The intelligence of the animals is not like that of people, but it is not very

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

825 different, for they also are intelligent. Every animal of the forest is alike [10]; we eat some, others we do not; but we like them all. We are of the forest, and they also are of the forest.)

Wild animals for the Dorobo have personality, not the kind that is expressed in the folk-tales of pastoral and agricultural Africans in which animals speak and behave like humans, but a real kind of personality that human beings like the Dorobo can respond to.

231 183 182 Bees, though not themselves sacred, are analogous to cattle among the Nandi, and their product has great social value and hence strong ritual value. Besides giving honey with its many uses, bees provide an occupation which is less strenuous than hunting and can thus be continued by older men who are still reasonably active but not active enough to stand all the rigours of a hunter's life.

824 182 183 Edible plants have social value, but since under existing conditions there is no scarcity of them, there is no ritual relationship between them and men.

614 [186] 182 183 The clan has a social value not found among the Nandi, for the Dorobo are not a tribe in the same sense that the Nandi are, and although the expression *ki Okiek*, "we are Dorobo", means a good deal, it has not the same significance that the similar expression *ki Nandi*, "we are Nandi", gives when said by a Nandi. The real unit of the Dorobo is the clan, the significance and solidarity of which we have already tried to explain; and the effect of all that the clan means to the Dorobo is that it has an immense groupvalue, being the element that ensures horde solidarity.

776 182 [801] **Personification and well-being.** Rain and its inevitable concomitant the thunder are perhaps more striking in a forest than the sun, and it is reasonable that they should be personified in one figure: "*Ilet* was a man". This is probably an original Dorobo belief, for to the Nandi *Ilet* has the form of a bird. This personification expresses and fulfills the Dorobo need of personal contact with a dangerous element, and explains the actions of the Dorobo whom SIR CLAUD HOLLIS saw defying the "rain-god" [11]. The notion of *Asis* is much less concrete and definite, and in spite of occasional prayers to him, the conception of his functions is even less clear. Yet while *Ilet* may be regarded as the power which controls the weather, *Asis* seems to be the moving spirit behind everything, with the spirits of the dead as intermediaries between man and 'nature'. It is plain, however, that the well-being of the horde is maintained by keeping on the right side of these powers, and that the avoidance of public delicts is necessary to prevent disaster to the horde. Public delicts thus in one sense come under the head of religion, for their commission entails the breaking of the ritual relationship between man and

[10] That is, although some animals (the human kind or Dorobo) are more intelligent than others, and although the human kind eat some of the others but not all, nevertheless they are all alike, human and non-human, in that they all live side by side in the forest.

[11] Man 1909. 101.

6:Huntingford E-5 (1938-1939) 1953 FL6 Dorobo FL6

313 *Rerendet* (euphorbia candelabrum) : honey-barrels.
824 *Mocet:* honey-barrels.
Oltamiyoit or *Yemdit* (olive, olea chrysophylla) : fire-wood.
Enyasiek: fire-wood.
Coruet (ficus sp.) : fire-sticks.
Teet (cedar, juniperus procera) : fire-sticks.

824 (B) Plant material. The following trees and plants provide material for food, salt, medicines, and utensils[*] :

[372] *Sasiat* (dry grass) : tinder for making fire with fire-sticks.
[285] † *Tapariet:* fibre for baskets.
Sosiot (phoenix reclinata palm) : fibre for baskets.
[278] † *Tiinet:* medicine.
† *Opeito:* medicine.
Rerendet: medicine.
Lepuyuwet: medicine.
Sitotuet: medicine.
Seketet: medicine.
Usuet (ardisia sp.) : medicine.
[263] *Tepenguet* (acmilia integrifolia) : salt.
Serenguet: salt.
[273] *Rotinuet* or *Rotiot* (kigelia aethiopica) : making honey-wine.

825 (C) Skins and animal products. These include :

237 † Monkey : food ; clothing.
[291] † Antelope : food ; clothing ; bags ; quivers.
[411] Pig-gut : bow-strings.
Feathers : arrows.
† Honey : food ; wine ; ritual purposes.
Ram's fat : ritual purposes.
[583] Goats : bride-payment ; ritual purposes.
Cattle : bride-payment ; milk ; dung ; hides.
[412] Bush-buck : tails for brooms.

285 The basket most commonly made by the Dorobo is the small *kerepet*, about 6 inches deep and 6 ½ inches wide at the top. This kind of basket is used a good deal by the Dorobo themselves, and is also a frequent article [439] of sale or exchange to the Nandi : *kinapci kereponik Nandi*, "we make baskets [461] for the Nandi", as an old woman said. Dorobo women make baskets when they have nothing particular to do, just as European women knit. The materials used are fibre from the midrib of the *sosiot* palm, which is split into thin strips, and bast from a plant called *tapariet* which is used for sewing the coils of fibre with the aid of a small needle (Fig. 1).[1] The basket maker starts by splitting the *sosiot* fibre, preparing a certain length and biting it off as she

[439] [*] Things marked with a dagger † are used in the preparation of objects given to the Nandi in exchange for their products.

[1] [i.e. see category 116 & 617 - ANALYST.]

6:Huntingford E-5 (1938-1939) 1953 F16 Dorobo F16

wants it, i. e. as the loose end gets thin, a new end is shoved under the binding; the bast is kept handy in a bundle. The technique is a spiral foundation with a flat, then gradually ascending coil, of the simple over-sewn type, and bee-skep variety, the stitches being spaced out and not close together. The base of the basket is formed of six fibre coils, sewn together with bast. A hole is made with the needle, and the bast is pushed through it. At frequent intervals the fibre and the bast are moistened with the lips. After the first six coils, a slight rise is made: as each coil makes a complete circle it is slightly raised in order to make the bend between the base and the sides. When a new piece of bast is needed it is shoved right through the hole, leaving about ½ to 1 inch on the other side, and is sewn through as before. The basket maker works with lengths of bast of 6 to 12 inches. The fibre coil is of about the thickness of a pencil, and this must be maintained. When the length of fibre is reduced to about 2 ft. it begins to get thin, and some new strips must be added by chewing off a further length. The structure of the basket is thus, in effect, a continuous coil of compressed fibre, each line of coil tied to the next by stitches of bast. Sometimes the base is made of a circular piece of leather, to which the first coil is sewn, the rest of the procedure being the same as for the all-fibre basket. 285

The dressing of skins, including those used for exchange, is a simple process, for no chemical agent is applied. The newly flayed skin is tightly pegged out on the ground while it is still wet and left to dry in the sun. When dry, it becomes stiff, and in this state it is rubbed with an axe-blade held at an angle of about 20°, the blade being rubbed backwards and forwards till the skin is soft and supple. If it is to be used for a woman's garment or other object in which fur is not needed, both sides are rubbed. Skins are dressed by women. Apart from clothing, the chief objects made of skin are bags, quivers, and parts of tobacco-boxes. The material used for sewing is generally pig-gut. The needle of course has no eye, and the method of sewing is therefore to make a hole with the needle and then push the gut through it. Bags, *moloket*, are used for many purposes, including the carrying of honey and coloured earth. They are generally made of antelope skin (*e. g.* blue duiker), and unless intended for honey the fur is left on the outside. They are provided with a flap, a strap for fastening and a sling for carrying them from the shoulder. A common size is 7 ins. by 6 ½ ins., but I have seen them as big as 18 ins. by 16 ins. Tobacco-boxes are made from internodes of bamboo, but they have leather covers at each end, and a thin leather strap is sewn to the covers so that the owner can sling the box round his neck. 281 [462] [415] [283] [412] 415 [825] [276]

The nature of Dorobo life demands exchange of products with the Nandi. The most important of the products they get by exchange is ironwork; other things are pottery, beads, tobacco, cereal seeds, and cattle, and a fairly definite, though possibly fluctuating, scale of exchange values has come into existence. In 1939 some of these values were: 434 435

1 axe for 1 bagful of honey.
1 arrowhead for a gourd full of honey.
2 knives for 1 day's weeding in the blacksmith's shamba.

6:Huntingford E-5 (1938-1939) 1953 FL6 Dorobo FL6

through the piece of comb. After eating honey a Dorobo wipes his hands in the earth to clean them; whereas a Nandi uses leaves.

One of the accusations often made against the Dorobo as forest dwellers is that by burning grass and firing trees when taking honey they cause forest fires. Apart from the fact that there is no evidence to support this allegation, for the Dorobo do not burn trees, a very good reason why they do not destroy them was given by a Dorobo who said, with reference to some people in his settlement,

Kopel lahok ap Kaplolelac susuek ap timdannyon. Makicome
They-burn the-children of Kololac-family the-grass of forest-our. We-do-not-like (it)
amu mepelo Okiek timdo ne tinye tukuk ee kiome,
for they-do-not-burn the-Dorobo the-forest which it-contains the-things which we-eat,
ngut ne mii pasanet ap sehemik:ngut kololio taptet ne
also where there-is the-honey-barrel of the-bees; also it-is-burned the-flower which
ome sehemik.
they-eat the-bees.

(The children of the Kolelac family are in the habit of burning the grass beside our forest. We disapprove of this, for the Dorobo do not burn the forest which contains the things they eat, and where they keep their honey-barrels; moreover, grass-burning destroys the flowers from which the bees get their honey.) The Dorobo in fact love their trees, and with these very practical reasons for not destroying them, it is absurd to accuse them of what amounts to an anti-social practice among themselves. Nor did the forest itself either in 1927 or in 1939 show signs of the alleged wanton destruction by fire attributed by some to the Dorobo.

Although wild honey is to be found in hollow trees and holes in rocks, the Dorobo do not rely on such chance finds for their supply, though they will eat it if necessary. They rely on the honey which they get from their own honey-barrels.

They recognize four varieties of bee:

Sehemik, social bees, Apis mellifera, the honey-producing bees which live in hollow trees and honey-barrels.

Imeiik, solitary bees, Osmia, which live in trees and hollow stems of shrubs and make honey.

Kosomek, earth bees, Halictus, slightly larger bees which live in holes in the ground and make honey.

Kiptulonik, mason bees, Chalicodoma, which live in cells made of a sort of cement formed of earth, minute stones, and their own saliva. These are very small bees, which make only a small amount of honey, and are not found in the forest, but in Soiin below the escarpment.

The Nandi word *kulumbenik* meaning another variety of bee, is used by the Dorobo, not of bees, but of small stinging insects like mosquitoes.

The bees that provide the Dorobo with their honey are the *sehemik*, of which there are, they say, three kinds: the queen, the workers, and the drones. The queen, *kamet ap sehemik* or "the mother of the bees", is

described as *cemnennenswet*, i. e. narrow-waisted; she is bigger than the others, with a large head and body and no sting. The workers, called simply *sekemik*, "bees", are considered to be males [8], and the Dorobo say that all the male bees in a swarm fertilize the queen. The queen lives inside the swarm surrounded by the bees, and never goes outside it, being fed by the workers with the honey they make, and she lays her eggs in the fresh combs before any honey has been deposited in them. The workers make honey, according to the Dorobo, by eating the 'water' (*pek*) of the flowers, which they vomit into the empty combs when they return to the swarm [9]. A comb is made (or built, *tec mpokiet* = build the comb) by the mouths of the bees with the help of another substance which they get also from flowers; and from the same source they get wax (*temeniet*) which they bring in on their feet, and use to close up openings in the hive [10]. This is what the Dorobo say. The drone, on the other hand is considered to be a female which does no work and has no sting. The drones just fly about "playing", and as far as the Dorobo can see perform no useful work. They just eat up the honey and after a time the workers kill them, *kotil kätit*, "they cut their necks", so that they shall not eat the whole supply of honey [11]. Terms used to describe bees are:

Kamet = queen (lit. mother).
Sekemik = workers (sing. *sekemiat*).
Kapurenik = drones (sing. *kapuriot*).
Uarek = young bees, grubs (sing. *uarwet*).
Ololoiyet = swarm.
Mpokiet, *Wanasiet* = Empty comb, either new and unused, or old.
Kipiririitiet = comb full of honey.

The Dorobo seem to have no idea of the length of a bee's life, which in Europe may amount to some seven months in the case of bees born in the autumn.

Honey-barrels or hives, *pasanet*, are made of slats or of hollowed-out logs and placed in trees for the bees to swarm in. Once a swarm has entered it is considered to belong to the owner to the barrel. If it stays for a long time (the Dorobo say) it may be inherited by the owner's son; but if it should go from one man's barrel into another's, nothing is done, for though the Dorobo say that their bees get to know them, they do not claim to be able to control their movements. And if a swarm deserts a barrel, the owner just waits till another swarm comes to it. The commoner type of honey-barrel is

[8] The workers are really females whose ovaries have become modified so that they do not normally produce eggs.

[9] This is not very far short of the truth, for bees take into their crops a substance called nectar from the flowers and deposit it in the comb. By the action of their saliva, which produces a chemical change, the nectar becomes honey, and is regurgitated into the cells for storage or for feeding the grubs. (Cf. article Bee in the Encyclopaedia Britannica, ed. 11, by Prof. G. H. CARPENTER.)

[10] Wax is really secreted by special cells in the abdomen of the worker bees.

[11] Drones are in reality the males which mate with the queen. When the mating season is over and food is getting scarce, they are killed and thrown out by the workers.

9:Hobley G-S (ca. 1900) 1903 FL6 Dorobo FL6

They are said to be very prolific, having families of eight to ten children, but the infant mortality is so extremely heavy that their numbers increase very slowly: this mortality is probably due to the cold, damp climate of the Mau Forests, which are at an altitude ranging from 7,000 to 9,000 feet. 163 165 [132] [133]

Their peace ceremony consists of cutting off a dog's ears, and the contracting parties then spatter one another with the blood. 128 [231]

They live principally on Colobus and other monkeys, which they shoot in the forest: At certain seasons, however, they go and hunt big game on the plains, known as the Rangata Nyuki; they wait till the grass is dry, and then burn it to facilitate their hunting. They use poisoned arrows for big game, and unpoisoned ones for monkeys, &c. They train dogs to assist in their hunting, and are very keen to get young dogs for the purpose. They told me that they first gave the dog certain medicine, and the animal could then track game. 224 [262] [411] [231]

They are very clever elephant hunters, and informed me that when they came across an elephant they went off and bathed and scrubbed themselves very carefully to remove all trace of the human scent, and that they were then able to approach a sleeping elephant and spear it with a poisoned dart. [515] [825]

They are most expert in the use of a firestick. The fire is produced in the ordinary way by the friction of one stick spun round vertically in a depression in another piece of wood, which is held firm between the bare feet of the operator; the lower piece of wood appeared to be the juniper of Mau. 372 [824]

A small vocabulary of their language is appended on the opposite page. They use the Nandi numerals. 197 199

The prefix "ki," and the suffixes "ei," "it," and "ek," are, I think, brought in from the Nandi language, but most of the roots will be found to be quite distinct. Many of the tribe can only speak Nandi, and when collecting this vocabulary in many cases they appeared to have forgotten the Oggiek or Omotik word but gave the Nandi word, and had to consult among themselves and, as it were, hunt up the proper word. The language is thus evidently dropping into such disuse that it will probably become quite extinct in the near future. [193] [182]

C. W. HOBLEY.

[34]

12:Dundas G-5 (ca. 1900) 1908 FL6 Dorobo FL6
Kikuyu FL10
Masai FL12

Supi is said to have instructed the Dorobo to bring him a pair of sandals made of leather having hair on both sides, the Masai to bring him a bull, the dung of which was pure white, and the Kikuyu an animal called Huko (a burrowing rat or mole).

The Dorobo cut off the ears of a donkey, and produced these as the required sandals before Supi; the Masai brought a bull fed on milk only; and the Kikuyu the animal called Huko.

Supi then told each tribe to take its respective charm and to attack the enemy separately and at different points.

The Masai, marching into Kikuyu from Naivasha, fell upon the strangers first, and taking all their stock drove them on to the Kikuyu, who in their turn drove them on to the Dorobo, by whom they were finally routed.

The Somali or Galla were thus disposed of, and only by the name Iregi, which was given to the generation that fought with and expelled them, and by a few women of their tribe, taken prisoners by the Dorobo, are we reminded of their settlements in Kikuyu. Amongst these prisoners may be mentioned an old woman called Barabio, who is still alive and resides in one of Burgo's villages. She was formerly Chief Karuri's nurse.

Needless to say the Masai kept all the cattle which they captured, and this caused a rupture between them and the Dorobo and Kikuyu, who joined forces and waged war on them. After a truce had been made the Dorobo and Kikuyu fought amongst themselves.

If the Kikuyu were to live and increase they had to cultivate the ground, and to do so they were obliged to destroy the forests. The very existence, however, of the Dorobo depended on the preservation of the forests, and hence arose a struggle for survival, which allowed of no compromise and could have but one end.*

In an incredibly short time the great primæval forests, the home of the Dorobo, were destroyed, and with them this interesting people ceased to exist as a tribe. Deprived of the means of living, many died, some took to cultivation, whilst the majority migrated to other regions, where they formed small colonies, such as are to be found at Baringo, Naivasha, Ravine, Kijabe, on Laikipia and Mau, at Taveta, in German East Africa, and even, it is said, in places as remote as Kismayu—(the clan that went to this last place was the Agumba). This scattering of the tribe accounts for the peculiar fact that Dorobo living in widely different localities speak the same language.† The Baringo, Naivasha, Kijabe, and Ravine Dorobo, and those of similar colonies will, if questioned as to where they come from, usually mention Kururuma and Kairau‡ as the birthplace of their fathers.

As regards the origin of this interesting tribe, we know little or nothing. There appear to have been two branches, the Agumba and the Okiek: the former hunted the game on the plains, the latter in the forests. They lived in pits dug in the ground and covered over with leaves of the wild banana; these pits may to this day be seen anywhere in the Kikuyu country, though of course they become more numerous the nearer one approaches the forest. They are also said to have buried their

* The first Kikuyu to come into the country appear to have been almost without exception pastoral, and they accordingly did not interfere at all with the Dorobo. The later arrivals, who seem to have possessed less stock, purchased from individual Dorobo the right to certain pieces of land or forest. For some reason or other just about the time the Somali or Galla were driven out, a sudden very pressing demand for grain appears to have arisen amongst the Kikuyu; this may have been due to one of two causes—the Kikuyu may have lost through sickness a large amount of stock, or there may have been just at this time a sudden influx of agricultural natives.

† Nandi. (In colonies not in touch with Nandi-speaking tribes, the younger generation is rapidly forgetting this language.)

‡ The country lying between the Rivers Boyo and Mathyoya in Kikuyu

important aspect is, I fear, irrecoverable. I have been in the forest in both wet and dry seasons, and while trapping is still carried on, I could see no sign of hunting (i.e. shooting), and the description of a hunt is from narration.[1] Fear of a government which forbids hunting, and has of late itself hunted the Dorobo, has, I think, effectually sealed the lips of one or two who would normally have spoken on the subject. My informants, however, did say that sexual intercourse was forbidden before setting out on a hunt, though not before or during the process of trapping. In hunting there is an element of personal danger and of uncertainty as to success; magic helps to give confidence, and abstinence to avert ill-luck. In trapping the process is mechanical, largely a matter of technological skill, and with little danger to the trapper, who is sure to catch something sooner or later.

On the other hand, it is believed that both *Asis* (god) and the *chesowiloi* (both the good ancestral and the bad elemental) can influence a man's hunting, and before starting out to set a trap, he will say:

Asis, ipïïyech panyek,
God, give-us-enough meat,

or,

Chesowilōk, okónech tiony ne kipare.
The-spirits, give-us a-beast which we-may-kill.

Honey (*kumiat*) is an important article of Dorobo diet, and provides both food and intoxicant: it is to them what milk is to a pastoral people. It is not stuff that can be picked up anywhere, but requires a certain technique, and, above all, the presence of bees in a suitable place. As, therefore, it has an actual social value, so it has acquired a ritual value, and certain observances are necessary if the supply of honey is not to fail. First, you must have your bees, and a man who has put up a new honey-barrel must take steps to ensure that it is inhabited. This he does by calling out, in an unnatural high-pitched voice, "Bees, bees, all you who are in this country, Come now and make honey here."

[1] Leopards, as already mentioned, are killed occasionally when they become aggressive and threaten livestock; but there are no organized leopard hunts, and in any case leopards are vermin.

come now and make honey here." Then, blood and fruit must not be eaten on the same day as honey, nor must bits of the comb be left lying about; they must be carefully covered up. The first of these prohibitions is analogous to the Nandi avoidance of meat and milk on the same day; the second, though the Dorobo say it is done "so that other people shall not see it," is also due to the ritual value of honey, and the consequent necessity of showing respect towards it. 000 262

In the ritual treatment of certain actions the use of certain materials is essential if the ritual is to be effective. Thus, a homicide must be rubbed with *eiyat*, the undigested grass from the stomach of a goat or sheep, and he must also be oiled with 'butter' (milk shaken in a gourd till it has gone oily and semi-solid); an unmarried girl who has had a child must also be rubbed with *eiyat*; a sick person whose illness is due to witchcraft must be oiled with goat's fat or butter; and a man who has killed an enemy must paint his face with five stripes of white earth—one across the forehead. 789 825 [682] [848] [754] 789 [726] [823]

[P.197, B]

one down each side of the nose, and one down the centre of each cheek. 789 [726] [823]

Now it seems that a particular material is not always essential, i.e. for a homicide either a goat or a sheep may be killed to get the *eiyat*, and a sick man may be anointed either with goat's fat or with butter (though it must be a she-goat). An alternative is thus sometimes just as effective. But an essential feature is that the remedy must be something that is not easy to obtain; till quite recently, few Dorobo had any goats, sheep, or cattle from which they could get the necessary fat, *eiyat*, or butter, and even now many still lack them; nor does anybody keep a permanent stock of white earth in his hut. The whole procedure is an act of faith as much as anything else, and entails a possibly laborious search for the necessary material. There is also an economic implication, for when people have no stock they must buy the animals they need, so that into what might seem to be a purely ritual transaction, enters an element of business. 789 825 [231] 437

/231 cont./

621 [192] [171] to dobonog, i.e., huts of the unmarried men, in contrast to the aija to daĩma, the camp of the married. Therefore here, too, we find, even in the name, a separation into kraal of the married and kraal of the warriors, similar to the one mentioned for the Masai.

171 353 415 237 283 352 412 The arrangement of the interior of the hut, like the form itself, resembles that of the Masai; its furnishings, however, are even sparser. A honey pot (madjé, madjeog), a gourd bottle (mget) for drinking water and honey beer, a leather bag (lebenu, lebenua) for collecting honey, a larger one (ndaro, ndareraũg) for water, a few earthen pots, larger ones (idug, idia) and smaller ones (ruguba, ruguba) for cooking, a couple of wooden bowls (tagi), a rope cut out of an animal skin (scharu, scháruga) to tie up the slain meat, a cord twisted out of the bark fibers of the baobab (Adansonia digitata) for the drawing up and letting down of the beehives hung in trees (merihgo), along with a few dehaired skins (fulót) that serve as beds, as well as ax (haũo, hauereg) and knife (pandyug), constitute the 492 principal household equipment. In a few huts one also finds the en 412 dereta /pack-holders/ of the Masai, here called lalaho (leleweg), 413 as well as a hammer (giribét) for forging and a chisel for designing 177 the arrow points (mad, mara), and finally that sharpened small piece of sheet iron serving as razor-knife (herá, hereré). The entire family, 592 namely, husband, wife or wives, and the uncircumcised children, live in one /232/ hut. Men and boys, however, are usually out.

512 [224] [264] [825] The day begins even before daybreak for the hunting men. They set out with a snack consisting of a little piece of boiled or roasted meat, so that the first light of day already finds them in the hunting grounds. The game now behaves best; as they say, it then feeds more eagerly and carelessly than a few hours later, when the sun already becomes annoying to it. At daybreak women and children leave the huts; firewood and water are carried up in order to cook the meat fetched from a larder located in a nearby tree. The meat

[251] is kept there and not in the camp, so that it hangs in the air and 512 thus remains fresh longer. After that the morning meal is eaten. 264 Actually the Wandorobo do not have definite mealtimes: as long as there is something edible they simply eat as long as they can.

/238 cont./

539 533 An overheard text is: "If I were a bird that is sitting beside the river and a zebra came to drink, I would, in the little bird's place, kiss (or bite) it, because I love it very much. But I am big and therefore can not."

512 Around ten o'clock at the latest the merriment reaches its end, and the camp is finally wrapped in silence.

• 825 The statement of the Wandorobo, according to which it is still supposed to have never happened that human beings have been killed by predatory animals within the camp seems remarkable. They [189] therefore do not fear them at all and believe themselves safe from them because of their magic medicines, some of which, according to popular belief, keep the wild animals far away, while others have the effect of the cap of invisibility.

III.

601 Kinship designations and terms of address.

The kinship designations are the following:

Father: aba or baba.
Mother: jējo or ea.
My wife: mai totuan.
My brother: bidjog uan.
My sister: bidjot uan.
Half brother: weku baba.
Half sister: wetu baba.
Brother of the father: bidjog e baba.
Sister of the father: bidjot baba.
Brother of the mother: bidjog ea.
Sister of the mother: bidjot ea.
Son of the father's brother: weku bidjog baba.
Son of the father's sister: weku bidjot baba.
Daughter of the father's brother: wetu bidjog baba.
Daughter of the father's sister: wetu bidjot baba.
Son of the mother's brother: weku agogeach.
Son of the mother's sister: weku bidjot ea.

/241 cont./

V.

000 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Care and treatment of the pregnant woman, the woman in labor, and the woman in childbed. -- Killing newborn children. -- Fertility. -- Child mortality.

843 [842] [824] The opinion that the author heard expressed a number of times by Aá-Wandorobo, that pregnancy is more or less bound up with a definite time of year, and, to be sure, in such a way that either conception takes place at blossom time or birth takes place at the time of the fruitage of the poisonous tree Acocanthera abyssinica, appears surprising.

[224] /242/ During his wife's pregnancy the husband does not pursue a game animal shot at in hunting, because it is believed that the latter, at his approach, will resist the poison and escape. Therefore, after he has shot an animal, he returns to the camp and from there sends another man out to look for the animal. The pregnant woman
• [825] may not be beaten. Neither he nor the pregnant wife may step over a procession of migrating ants. She is forbidden to eat meat from a wild animal that died or was killed by a predatory animal, likewise soup, and furthermore honey in which dead bee larvae are found. She must avoid coming near a chameleon or a snake, or exposing herself to the heat of the sun for any length of time. All this, in the opinion of the Aá, would harm the fetus.

[302] [302] If the woman visits another camp, she smears her forehead with white clay beforehand in order to announce her condition to its occupants. On the way there she is accompanied by a little girl,
[858] [825] whom she leads by the hand. As the reason for this, the people say that a miscarriage would take place if the woman went without a girl and on the way saw the previously mentioned weaver bird or heard its dil-dil-dil calls. A woman pregnant for the first time is
843 431 given gifts by all the people (men, women, boys, girls) of the camp and her friends in the neighboring camps at about the middle of her pregnancy. She is presented with a leather apron, a pair of ear pendants, beads, chains, or even a head of small livestock.

/311 cont./

284 They particularly value the entrails and also do not scorn the meat of
282 fallen or sick lion animals; indeed, even the skin of elephant, rhinoceros, and hippopotamus is eaten roasted. As bushbabies, i.e., love
[123] edible, the Wandorobo regard elephant, rhinoceros, hippopotamus,
[439] pigs, zebras, all cloven-footed animals from the giraffe to the tiny dwarf antelope, hares, rock rabbits, and, of the birds, the ostrich, which, however, they shoot only on account of its feathers, which the Masai like to buy for the manufacture of the war head-ornaments. They do not hunt monkeys and lower animals, because they do not relish their meat.

284 On the day before the new moon, and in places also on the seventeenth day, the ol oriogi, no one goes hunting because, according to popular belief, one would not kill anything on the former day, whereas on the latter the bow would break. The red-headed Amplerus melanocrix is regarded as unlucky for the hunter. If the hunter sees it along the way he returns to camp immediately and does not leave it again until several hours later, in order to try his luck anew.

[65] [271]

56 284 171 [78] Like the warriors of the Masai, the elders of the Wandorobo also hold their meat meals in the forest. Whereas among the former, however, these are a result of the food rules, according to which the warrior may not eat meat in the kraal, among the latter it is only a matter of observing an ancient custom for which there is no longer any reason today, since the unmarried man usually eats his meat food in the hut. On the other hand, there is greater justification for consuming the ox daily, where they strengthen themselves by a plentiful eating of meat for a larger hunting expedition for more distant and at the same time dangerous game, such as elephants and buffalo. The many spices and stimulants that we become acquainted with among the Masai are also used by the Wandorobo, but to a far lesser extent. They do not divide up into fellowships for the meals in the bush, but only for the hunting expeditions. Each company, as a rule, consists of four men and is called a oreg, in which one recognizes the pronominal word ore with. The booty is divided among the participants in equal parts. If an individual hunter or an e dinet spends the night in a strange camp, the host is given a fleeing and a hind leg of the hunting booty.

[264] [274] [263] [274] 56 284

[374]

/??? cont./

334. ɔ̀ mwɔ́ndʒà (Phyllanthus spec.). The ol ɔ́ɔ́ŋ́ places a twig of it close beside the skin game as protective magic to prevent birds from circling above the animal and thus attracting other people.

335. ol mwɔ́ndʒà (Vernonia cinerascens). This plant serves the ol ɔ́ɔ́ŋ́ as protective magic against lions.

336. ol mwɔ́ŋgà (Phyllanthus). Shield hoops are made from the branches.

337. ɔ̀ ndʒíkà. Milk fodder for cows.

338. ol ɔ́ɔ́ŋ́ (Ficus sycomorus L.). A decoction of two hand-sized pieces of bark is drunk for diarrhoea.

339. ol ɔ́ɔ́ŋ́ɔ́ŋ́ (Euphorbia spec.). Cows are said to die after eating this plant.

340. ol ɔ́ɔ́ŋ́ɔ́ndʒɔ́ | ɔ́ɔ́ŋ́ ɔ́ɔ́ŋ́ (Plumbago zeylanica L.). The ornamental scars on the faces of women are produced by cauterizing with the caustic root juice.

341. ol ɔ́ɔ́ŋ́ɔ́ndʒɔ́ | ɔ́ɔ́ŋ́ ɔ́ɔ́ŋ́ (Thunbergia alata Bojer). The sweet scabbard is dyed with the red root juice.

342. ol ɔ́ɔ́ŋ́ɔ́ŋ́.

343. ol ɔ́ɔ́ŋ́ɔ́ŋ́ (Cyperus spec.). Fodder grass for small livestock. The calcicolic roots are eaten with special liking by guinea fowl.

344. ol ɔ́ɔ́ŋ́ɔ́ŋ́ | ol ɔ́ɔ́ŋ́ɔ́ŋ́ (Hyllingia alba Nees.) is a good fodder grass that is especially valued for donkeys.

/???/ 345. ol ɔ́ɔ́ŋ́ɔ́ŋ́ | ɔ́ɔ́ŋ́ ɔ́ɔ́ŋ́ɔ́ŋ́ = ɔ́ɔ́ŋ́ ɔ́ɔ́ŋ́ɔ́ŋ́.

346. ol ɔ́ɔ́ŋ́ɔ́ŋ́ (Spermacoce radicata R. Br.). Good fodder grass.

347. ol ɔ́ɔ́ŋ́ɔ́ŋ́ = ol ɔ́ɔ́ŋ́ɔ́ŋ́ (Phyllanthus).

348. ol ɔ́ɔ́ŋ́ɔ́ŋ́ kere.

349. ol ɔ́ɔ́ŋ́ɔ́ŋ́ ɔ́ɔ́ŋ́ɔ́ŋ́.

350. ol ɔ́ɔ́ŋ́ɔ́ŋ́ (1)

1. The blood also called Hephasia chymicira
A. Kich. ol ɔ́ɔ́ŋ́ɔ́ŋ́

(Glycine javanica L.). Good fodder for small livestock.

/373 cont./

M 824 394. ol oja bark - ol oja bark.

395. ol ojedgallai (Sesbania aegyptiaca Poir.). The decoction of a piece of bark approximately ten inches square in size is given the cow to hasten the expulsion of the afterbirth, if this is protracted for an abnormally long time.

396. ol okirikai. The decoction of an approximately fist-sized piece of bark is regarded as loosening for catarrh.

D [824] 397. ol omoj. Masai sometimes. El dorobo often. stick a branch of this on either side of the hut door as protective magic against predatory animals.

D M • [825] [789] 398. ol tarik. Valued by the El dorobo as a good honey plant.

399. ol oborua (Maesa lanceolata Forsk.). A nerve-stimulating agent of the warriors. They drink the decoction of approximately seven finger-sized pieces of the pungent-tasting root at the ol bul meals, as desired.

400. ol oborok. The berries are edible.

401. ol tiki (Andropogon Schoenanthus). The livestock do not like the grass, because of its lemon smell. To please the cows is

402. ol olukai - ol giroule (Haemanthus nov. spec.).

403. ol keke oiele (Justicia matammensis). Good fodder for small livestock.

M [825] 404. ol lelluok (Cissus Paraguensis Gilg). Warriors en route and especially during the finest meals like to put the vines into the bed padding, because they are said to keep away insects.

M 824 301 405. ol orowil kate (Justicia calcarata Harbet.). Fragrant neckbands are twined out of the bark bast, smelling like vanilla.

406. ol orowil kitok (Justicia Fischeri Lindau.). Use like that of the preceding.

407. ol orowil l ol olick (Ageratum conyzoides L.). Use like that of the preceding.

D 824 301 408. ol orowil l ol dorobo (Newtoniantha masaii Kl.). The El dorobo make fragrant neckbands out of the scraped bark.

409. olig oaida kitok. Good fodder for goats.

M 824 D 824 410. olig oaida gutuk (Barleria ventricosa Nees.). El dorobo make arrow shafts from the branches.

Appendix II.

Names of the principal animal-species.

DMD 128

In the following I am giving a series of animal names: many only in the Masai language: others, for which the El dorobo have still further designations, also in their particular idiom. Moreover, I was able to discover a number of obsolete words now generally or locally, permanently or temporarily, out of use (1).

1. An added asterisk in the following indicates that I owe the statement concerned to the research of Herr Jaks. Dwrg.

DMD 825

Grey carrion-vulture (Neophron percnopterus (L.)):
El oiwanit ol ɔɔlɔlɛŋ' ɛlɔɔ or for short ol ɛlɔɔ = the grey one.
ol ɔɔlɔlɛŋ' = the large predatory bird.
elmolelwa 'ɔlɔrɔkɔɔlɔ.
El dorobo ɔɔ ɛlɔɔlɔ.

El oiwanit ol ɔɔlɔlɛŋ' kɔtɔ,
ol ɛlɔŋɔkɔ ɔɔlɔlɔ.
elmolelwa ɔɔ ɛlɔŋ'ɔ',
ol ɔɔlɔ' ɛlɔŋ'ɔlɔŋ' = black body.
ol ɛlɔŋ'ɔlɔŋ'.
El dorobo ɔɔ ɛlɔŋ'ɔlɔŋ'.

Monkeys: see long-tailed monkey, right monkey /ɛsɔɔsɛ/, baboon, colobus.

Ant: the small reddish brown ant (stock of the Wasukuma):
El oiwanit ɔɔ ɛl-ɛŋɔŋ'.
elmolelwa ɔ' ɛlɔl,
ɔ ɔɔlɔ'.
El dorobo 'ɔ ɛlɛŋ'ɛŋ'ɛlɔl.

The large black ant:
El oiwanit ol ɔɔlɔlɔl.

Further see Termite.

M /978/
825 Antelopes: see Eland, Hartebeest /not listed below/, Kudu, Black-heeled antelope /impala: not listed below/, Oryx, Waterbuck /not listed below/.

Zoril (Zetonyx /Ictonyx/ zorilla):
El masai: ol bŏlŏ ge.

Bee: the common wild honeybee
El masai: ol odendi.
obscurer: ol gairoi.

A stingless bee:
El masai: ol salibei (pl. es salibo).
obscurer: ol gĭdĭai (pl. el gĭdĭi).

Buffalo (Bufelus caffer (Sparrm.)):
El masai: ol dŏlgwŏn.
obscurer: ol ĝuk.
• [D29] El dorobo: 'l aŋi.

Badger: see Honey badger.

Squirrel-like animals:
[illegible] the udders of the goats.
obscurer: gĭ-ŏlŏbŏi.

Lizards: small:
El masai: ol oirir.
obscurer: ol gŏlŏlŏ (pl. el gŏlŏlŏi).

Medium-sized:
El masai: ol ŋgolosen.
obscurer: 'l ŏlŏbŏi (pl. 'l ŏlŏi).

Larger:
El masai: ol mŏŋĝi.
obscurer: ol mŏlŏi.

Elephant (Elephas africanus Blum.):
El masai: ol gĭlĭlĭ ŏlŏŋ (ol gĭlĭlĭ probably originally meant the animal; ŏlŏŋ = fat).
ol ŏlŏmŏi.
ol lŏlŏsi.
ol ŋgoroi (ol goiye = the hand: the elephant uses its trunk like a hand, therefore ol ŋgoroi means, say, the "Handerich" /handy one/ in German).
D [825] obscurer: ol ŋgĭrĭlĭ.

DM

• 825 El dorobo: djăñjk (1).

1. Abyss. nage*.

Eland (Oreas oreas [Pall.]):
/379/
El masai: os ărŭ̆,
ol dŏbčălt = the bluish gray one,
El dorobo: ol gitĕrĕr.

M
825 Aardvark (Orycteropus):
El masai: en aischĭr băr,
obsolete: năgĕtĕ.

Donkey: cf. also the names given in the 2nd Part, Ch. XVIII:
El masai: ol bĕlĕndŏg, which word is said to mean "the carrier,"
ol ăndĭjă,
obsolete: ol ăndol,

Owl: general:
El masai: ol mŏtŏnj on gĭă = the ear bird of prey. This designation has been transferred from the great horned owl to all owls.
obsolete: gĭrtlingĭach.

Partridge (Pternistes and Francolinus):
El masai: eñ gĭrĭ̆ or el gĭrĭ̆ (1).

1. Cf. Hebr. Koreh.

Flea: general, without distinction as to species
El masai: es ălngĭrĭ.

Bee: general, without distinction as to species
El masai: en ĭgĭtgĭo,
obsolete: ĭbĭ(j)ŏ.

Fly: common fly and carrion fly:
El masai: 'l ĭdjŭăñi (pl. 'l ĭdjĭŭĭ).

Horsefly:
El masai: ol ĭlmbĭ̆ or ol gĭmbĭ̆,
further: see Tsetse.

DM /379 cont./

• 825 Flea (Pulex):
El masai: ol oisúsŭ,
obsolete: ol bĕdĕlal (pl. el bĕdĕlă),
El dorobo: ol jaňit l ol diain = the animal of the dogs.

M Frog:
825 El masai: en dŭă,
obsolete: eň ňăschăr.

Gazelle: Gazella Granti:
El masai: en dllŏ.
Gazella Thomsoni:
El masai: 'n ănănjăt.

Indian leopard /cheetah/ (Cynaelurus guttatus):
/380/
El masai: eň gĕrăsĭ = the one who tears,
ol genja l ascho = the calf-eater,
obsolete: ol mŭndălĭŏl.

Genet (Genetta pardina):
El masai: ol dŏlŭgŏ.

Giraffe (Camelopardis giraffa L.):
El masai: ol maiit = the spotted one.
ol ĭdo gĕrăgătă = the one long in lying,
obsolete: o' rŏbŭt.

DM Gnu (Connochaetes taurinus Burch. and C. albojubatus Thos.):
825 El masai: eň gŭt,
obsolete: ol bărăńgăt,
schăbălĭlĭĕ,
ol lĭĕ,
El dorobo: o' rimbol (1).

1. Cf. Hebr. re' ĕm and Assyr. rîmu = wild ox.

Hare (Lepus victoriae Thos.):
El masai: eň gitodjo,
El dorobo: ol ĭdo gĭa = long ear.

Grasshopper (migratory locust) (Schistocerca):
El masai: ol măti,
obsolete: ol mŭnjălŏlŏ,
M El dorobo: ol mŭnjălŏlŏ.
825 Honey badger (Mellivora ratel):
El masai: ol bĕlĕă.

D
M
/380 cont./
• 825 Dog (house dog) (Canis):
El masai: ol dĭă,
obsolete: 'lĕbă (2).

2. Cf. Hebr. keleb and Assyr. kal-bu = dog.

El dorobo: os sĭrătăn.
Centipede:
El masai: eń gŏlŏră os sĭrgŏn.
Hyena, spotted (Hyaena crocuta Erxl.):
El masai: ol nŏdjĭnĕ,
ol ĕlĕmbĕsch,
obsolete: ol gŏnŏl,
sĕrnăńgŭsch,
El dorobo: en jălŏs.
M
825 Striped (Hyaena striata and H. Schillingsi):
El masai: en gŭńgărŭ ĕmĭlĭń,
obsolete: rŭmŭrŭm.
/381/
Hyena dog (Lycaon pictus Temm.):
El masai: ol oibor gidoño = white tail,
os sĭjăn.
Hedgehog (Erinaceus albiventris Wagn.):
El masai: en jŏlĭs,
obsolete: băńgĕbăń.
Polecat: see Zoril.
Camel:
El masai: en dŏmĕs,
en dămĕs.
Crocodile (Crocodilus vulgaris Cuv.):
El masai: ol ginjań,
obsolete: ol ŏgŏlŏrĭŏń.
Louse (Pediculus capitis de Geer):
El masai: 'l ăhĕ,
obsolete: ńgŏmĕă.

M 825 /382 cont./

Night monkey, long-eared maki (Galago):
El masai: ol gĭnjăñ ngĭrĭ = the meat eater, because it likes to go to the hung meat,
e 'bŭrĭschŏ ol bul = the ol bul thief, because it likes to steal some of the pieces of meat at the ol bul.

Rhinoceros (Rhinoceros bicornis L.):
El masai: e 'mŭnj,
e 'rĕr,
eñ gŏmbĭlŏ,
ol jăñĭtŏ ñĭro,
obsolete: es sĕrŭñŭă,
gŏmbĭrĕ,
D [825] El dorobo: es sĭgĭndĭrĕ.

Rhinoceros beetle:
El masai: ol ĕmŭnjŭ.

Hippopotamus (Hippopotamus amphibius L.):
El masai: ol mĭkăŭ (1),

1. Cf. Assyr. ma-ak-ka-nu-ú, literally, animal of southern Egypt.

bărkĭlĕmbĕ,
obsolete: dĭrgĭlĕmbĕ.

Baboon (Papio Cercopithecus):
El masai: ol dŏĭĭl,
obsolete: ol gŏwăsĭŏ,
D [825] El dorobo: 'l ŏtĭm.

Pelican (Pelecanus rufescens Gm.):
El masai: en dĕăñĭ.

Guinea hen (Numida):
El masai: ol gĭlĕsŭrĕ,
ol gĕrĕsŭrĕ.

M
825 /382 cont./
Horse (Equus):
El masai: em bártă or em pártă (2),

2. Cf. the ancient Semitic root par = to run.*

Illnesses.

757 For illnesses the Wandoróbo use the same medicines as the Masai
171 and also prepare them in corresponding fashion. Those medicaments
that the latter take mixed with milk or blood, the former mix only
276 with water or game bouillon. The Wandorobo are also familiar with
171 the nerve-stimulating agents taken so much by the Masai warriors,
but they do not use them in such extensive measure and never in such
quantities that fits of rage appear among them. Their designations
164 for the principal illnesses are the following: Headache = sogog agēma =
192 sick head; toothache = ligá agema = sick tooth; cough, ohotu or ahotu;
chest pain, liba agema = sick chest; stomach-ache = waia agema =
sick stomach; diarrhea, waia katidji, constipation, waia gischuńgurgue;
dysentery allegedly is not supposed to occur. Smallpox, ol maschuggu
or ajŏg; chickenpox, simireg. Gonorrheas, damŏg; lues, en ebitiro.
Elephantiasis, as well as E. scroti, is said not to occur. Fever,
kaĕsegomo; bilious fever, ol odoa. Taeniae, pinibĕg; ascarids,
752 menána. Injured blood vessels are ligated, bone fractures splinted.
On burns one puts the soft, plushlike covering of the roots of the ol
[826] dungui bush. Excess fingers and toes are not amputated; they are not
[732] regarded as particularly unsightly.

755 If the well-known medicaments do not help, the patient turns to
the ol goiatiki, from whose magic medicine he expects a cure. The
759 surgeon is called asik-asa among the Wandoróbo, the midwife gascha-
hatta-hawa-kerint.

Some Dorobo Beliefs. *By A. C. Hollis.*

I recently went for a trip through the little known country lying between Naivasha and the Anglo-German frontier, and was fortunate enough to obtain a snapshot of a Dorobo, who was a member of the caravan, spitting towards the rising sun before saying his morning prayer (Pl. M, Fig. 1). Whilst performing this ceremony he had to lay aside his sword.

[827] [821] [287] [411]

The rains were overdue at the time, and I took photographs of the same Dorobo making medicine to prevent the rain from falling. Fig. 2 shows him whistling at and defying the rain-god. In Fig. 3 he has laid aside his bow, and whilst holding his sword upright is rubbing the handle rapidly between his two hands. This is done when the rain-god takes no notice of his defiant remarks, and insists on turning on the celestial water-tap. It is doubtless only a remarkable coincidence, but although the rain oftened threatened we had very little till we returned to the Uganda Railway, when it came down in torrents. All the natives of the caravan—Kikuyu, Kavirondo, and other East African tribes—believed that the Dorobo had kept off the rain, and I was told more than once that if it had not been for him we should have been washed away.

289 [4] [176]

197

It is worthy of note that I met some Masai-Dorobo in the Rift Valley who did not speak Nandi like most of the Dorobo in both British and German East Africa. Whether their ancestors had never known this language or had forgotten it owing to long intercourse with the Masai, or whether they had been simply poor Masai, who, owing to the loss of their cattle, had become outcasts and taken to hunting, I was unable to ascertain.

A. C. HOLLIS.

[P 177]

[P. 192, A]

Both the social and the economic ranges of the Dorobo are very narrow. The family is a self-supporting unit, and a group of families forms a social unit; but the group is isolated, and the groups cohere through their strong clan solidarity and strict exogamy. There is no "tribe" as e.g. the Nandi, but a collection of family or clan groups forming a *koret* or district, and a collection of such groups within a given area having a common organization, customs, and dialect, and the innate idea that "we are the Dorobo of such-and-such a place." Thus the Kapchepkendi Dorobo (with whom this paper deals) distinguish themselves from the Dorobo living on Tindiret hill, though that hill is only some seven miles from Sosoiyo. (See map of the Dorobo country.) Before the Government dispersed them, the Dorobo possessed, more or less undisturbed, the whole of the forest. Now they have no land at all. But they maintain their solidarity in spite of disruption, by means of their isolation, strong clan-system, and the fact that outsiders, e.g. the Nandi, are half afraid of them (so long as they do not go into Nandi), as being rainmakers and magicians of no mean ability, a people who are, in fact, somewhat uncanny. Their external relations may be described under three heads as (1) acquisitional: exchange of goods and services with the Nandi, and, till about 80 years ago, with the Vasin Gishu Masae; (2) restrictive: the Government raids them for taxes, and takes away their land, which leads to (3) an attitude of deep suspicion towards all Europeans, though they are driven by economic pressure to work for them.

Productive activities are concerned with the following:

A. *Food*: meat (by hunting and trapping), honey, wild plants, eleusine and maize (grown or obtained), milk, maize meal, salt and beer.

B. *Non-edible*: houses, weapons, implements, utensils, clothing and ornaments (except of iron), firewood, traps, honey-barrels, coloured earth (which is dug in the eastern part of the forest and sold to the Nandi for cash.)

C. *Raw Materials*: wood, plants, and skins.

The exchange of their own products for things they do not make is governed by natural resources,

/235 cont./

411 322 283 237 with fat several times. It is bent over the fire. The string is plaited together, turning and braidlike, out of short animal tendons and is extended by further interweaving up to the required length. The projecting starting-ends of the individual pieces of tendon are neatly cut off, whereupon one then rubs the new finished bowstring with some fat.

237 324 412 The arrow shaft (Fig. 84) is carved out of a dry wooden stick, first rounded, then smoothed by scraping. The upper end is wound with tendons that have been coated with the varnishlike juice of a not yet described species of gladiolus known as dirib, whereupon, on top, one drills in the one- /236/ /Figs. 83 and 84 appear here/ centimeter-long hole for the tang of the arrow by a twisting motion with a thin wooden chisel. At the lower end the three-part feathering -- out of the feathers of the carrion vulture (Neophron percnopterus) -- is first fastened on by being wrapped with a very fine bast thread and then glued fast with the gladiolus juice just mentioned. Another wrapping of animal tendons is found between the feathering and the rear notch for the bowstring, in order to prevent a splitting of the shaft.

411 237 136 283 824

325 322 171 439 The people buy the iron points only if a point breaks off /237/ do they as a rule forge a new one for themselves. Clubs are carved from a piece of wood, as among the Masai. They buy the spears, of which there are one or more in almost every camp, from the blacksmiths of the Masai. The spears serve as weapons only in the camp, where shooting with arrows is not permitted, on account of the danger connected with that, since they are always poisoned.

415 439 285 The Asa for the most part buy wooden bowls and gourd bottles from sedentary tribes. On the other hand, in some places they plait shallow baskets, which they use for storing food.

524 822 171 The fact that the Wandorobo do not play the board game so popular among the Masai was explained to me by them with the words: "During the game we would forget to hunt and then, with our families, would have to starve."

512 517 With the coming of darkness complete stillness as a rule comes over the camps, quiet even during the day; the day's work is done and everyone goes to his hut. Only on moonlit evenings do the old

273 535 533 people often still sit in the open for a few hours, talking, with a gourd bottle of honey beer, while the young men and girls dance and let their falsetto song ring out through the still night, from

XII.

Character of the Aná, compared with that of the Masai.

In character the Aná in general greatly resemble the Masai, except that the tribal arrogance seems to be considerably lessened as a result of their poverty, though it still also always appears in their contempt of the ol ngáá, whom they call mundo. It is not possible to give a general opinion about their attitude toward Europeans, since they have actually come into contact with them personally only in exceptional cases and otherwise are acquainted with them only from the accounts of the Masai. On the whole, the Aná living independently stand out favorably from those who have joined the Masai, in that the former seem to be more modest and less crafty, whereas the latter are a match for the Masai in audaciousness. The relationship of the two tribes to each other rests on the complete subjugation of the Wandorobbo, who see in the Masai their masters and, in major legal disputes, also their judges.

Exceptions to this are the Masai blacksmiths, who stand as low in the estimation of the Wandorobbo as in that of the Masai. The ol lenguai is also completely without rights before the ol donyoni. The Wandorobbo appear peaceable toward passing caravans and missionary Negroes. When they once shot at the former with poisoned arrows, without having been attacked themselves, they seem /256/ to have acted in presumed self-defense; in any case one cannot accuse them of a lust either for war or for murder. With these reservations, what has been said above about the Masai holds concerning their character traits, their militancy against the members of all foreign tribes, the position of their women, etc. Something new to be mentioned here is the custom that I found several times according to which a woman, just because of her inferior position, may not walk through a group of men.

In greeting, the Wandorobbo use the usual words and formulas of the Masai and accompany them with the same gestures.

The farewell of the one going runs oijo nanisia. The answer to it, ai, is said to mean "go!" To the objection that this is not very courteous, an aged Aná replied: "We are poor people, when the visitor has gone we no longer need give him any of our food!"

000 Clothing and adornment. -- Cloth materials. -- The individual articles of clothing and adornment, compared with those of the Somali. -- Head and body hair. -- Nails. -- Painting. -- Tattooing.

Cloth materials, such as are the trades of the caravan people in the barter trade, have been adopted only to an extremely slight extent among the Ass. The principal reason for this is that they only rarely come into direct contact with the caravans; rather, under pressure from the Somali, [illegible] they are forced to deliver to them their yield in elephant tusks, hippopotamus teeth, and horns of rhinoceros bicornis for a small compensation. There is no question of a legal barter trade; the Somali buy [illegible] with force, as the coastal peoples so aptly designate this type of trade.

One therefore sees the Ass almost solely in their original leather clothing (hide worked into leather, [illegible], which, in cut and manner of wear, is identical with that of the Somali, but looks poorer and often ragged. This poverty is particularly noticeable for the boys' and many capes, called [illegible] and [illegible] by the Somali, which the Wandorobbo name the same, and which here are also worn by older men because in hunting the [illegible] is too inconvenient because of its length. The [illegible] otherwise do not generally wear the [illegible], rather many often an [illegible] made of calf hides, which they buy from the Somali; older men often have it made out of the hide of the female black-backed antelope. The caracara of the women is here called [illegible] (pl. [illegible]), as is the upper part of it (at [illegible] of the Somali) by itself, while the lower one is named after the Somali designation of [illegible] (pl. [illegible]). The [illegible] of [illegible] of [illegible] is here called [illegible] and is considerably shorter than the former, only a little longer than the [illegible]. Sandals ([illegible]) serve them as footwear, which, however, in general are not used. In adornment the poverty of the Ass is shown particularly among the [illegible], though one must also consider that their desire for favor in the eyes of the fair sex is, as a result of circumstances, very considerably less than

/252 cont./

301 that which fills the ol mórua. Whereas the latter vie with one another
[56] for the favor of so many girls, the former, in their small camps, scarcely
• [332] have to fear any competition. Lavish and conspicuous ornamentation,
however, would also be burdensome and hindering for the hunter in
[171] hunting. Hence for the most part one finds among them, as well as
among the married men, only in the ear lobes the tube-shaped ol
gimoi of the Masai, which designate the same, and around the neck a
smaller number of simpler rings. On the other hand, the Wandorobo
women, concerning the quantity and types of ornaments, are quite
on a par with those of the Masai. To be sure, one fewer finds among
the former such, decked-out fashionable beauties as among the latter;
rather, the individual woman has only a few articles of adornment.
Besides the ones mentioned, the author also found the following kinds
of ornaments, which, for the sake of brevity, are to be listed only with
the names of the Masai and Wandorobo. (From the five designations
301 then is to be seen, according to Section II, what is concerned) ol
192 ongwil, here ilíimit ol elmotua, here called the names ol gimoia,
here likewise o rab, here olgumu ol kíbala, here likewise ol ilíi,
here called the name: ol kenik, here likewise olalei, here ol kuiñi;
further, the heavy brass-wire ear pendants of the women (orwiji),
here tamachiñi, tamañi, and the large ornament of iron wire ol
ngeláni o murt, here ol ngeláni enáng to imoi ol ngeláni ol
barabarch. /252/ here ol ngeláni to inkoyi ol ngeláni ol tiapik,
here ol ngeláni to a daping, and the ol ngeláni ol ewetan, here
ol ngeláni to ol.

301 Finger rings (here ol gimoi lo ndigeneki) are worn only by women,
and, to be sure, especially on the middle finger of the right hand.
Men do not wear any, because allegedly the bowstring easily catches
on it in shooting.

302 Men, women, and children shave their heads as a rule and let
the hair grow at most two inches long between two shavings. One
seldom meets a dobonyo with the head entirely shorn.

[171] Head and body hair are removed to the same extent and in the same
A 1. [For a description of these ornaments, see Masai
FLII2, 18:Merker, category 301--Analyst]

other messages. Elsewhere, all hunting activities are carried on illegally with the risk of being punished if caught by the police.

Weapons are the bow and poisoned arrows carried in a quiver. Knives are used to skin game and to make spillages. Spears have never been used. The Dorobo used to have hunting dogs, but in the Kenya Dorobo Forest the local natives to have died out, through a disease in 1932. They have two kinds of trap: (i) The pit trap, against, normally used for buffalo, consisting of a pit 6 ft. long, 3 ft. wide, and 6 ft. deep, with wooden spikes set in the bottom. (ii) The spillage of many pronged, which consists, briefly, of a springy stick bent over, with a noose attached to it connected with a platform. The arrangement is such that when an animal treads on the platform its head enters the noose, and the pressure on the platform releases the springy stick, which flies up, tightening the noose, and holding the animal suspended. Such traps are to be made in less than ten minutes. The type is used chiefly to catch colobus, but leopards have been caught in them. Other traps with a drop-spear were also used by the Kikuyu and Dorobo.

The only hunting taboo recorded is that the night before he goes out hunting a man must abstain from sexual intercourse. This does not apply to the setting of traps.

As regards land rights, the forest was divided into districts, forest of Aremenik, and in the district each man had an hereditary block of land in which he hunted, set traps, kept his honey-barrels, and collected wild food. Occupation rights were recognized by public opinion, and trespass on a man's forest area, i.e., deliberate entry in order to start hunting without permission or the provision of a piece of meat, might result in the trespasser's death at the hands of the owner, who would then have to pay compensation for homicide. Theft of game from a trap is said never to have occurred, not only because the thief might be killed, but because his body would mark to a great one and he would die after eating meat stolen from a trap.

Bees

Honey is to the Dorobo what milk is to the Masai; it is "sacred," and its supply must be protected by the observance of taboos. Fruit and blood must not be taken on the same day as honey (though meat may be eaten), when a man is engaged, a man be carefully careful to the undergrowth, and after eating honey a Dorobo shows his hands in such, and (like the Masai) by wiping them with leaves.

The Dorobo recognize four varieties of bee: *ol-kondi*, the honey-producing bush, *ol-kondi*, ordinary bees which live in trees; *kimondi*, earth bees, which live in the ground and *ol-kondi*, stones bees, which live in cells made of earth and particles of stone cemented together by their own saliva. The Dorobo divide the honey-bees, *ol-kondi*, into three kinds: the queen, *kokwet ol-kondi*, "[illegible] of the bees"; the workers, called simply *ol-kondi*, considered to be males; and the male honey-bee *ol-kondi*, "male" (*pl.*) *ol-kondi* and they consider it unlucky to kill the queen honey-bee, *kokwet ol-kondi*, considered to be the female, which do nothing useful.

Hives or honey-barrels (*kimondi*) are made either of bark of wood and together, with circular wooden end-pieces, or of the two halves of a piece of log split lengthwise and tied together. They are set in trees, and when a new hive is put up the owner calls the bees, in a high-pitched tone, to come and occupy it: "Bees, bees, from all the country, come here now, and give to honey, give to honey." Bees are said to recognize their owners by their body-smell, and do not sting them when taking honey. Certainly taking honey does not appear to be a painful or dangerous process to the Dorobo owner. Theft of honey from a hive is considered very low, and a man might kill a thief, though he would have to pay compensation for homicide.

Honey is an important article in Dorobo economy. It is eaten as food, made into an intoxicant, used for ritual purifications, and it forms an article of commerce.

Silkestingsford K-4, 5 (1938-1939) 1953 FLA Dorobo FLA

that one thing be used for both the female and homicide, and if there are no cattle in the bridegroom's settlement it must be procured from somewhere else. Marriage is prohibited.

Marriage with Kamâ

Eighteen marriages were recorded in genealogies between Dorobo and Kamâ or members of the Kamâ group:

Dorobo and Kamâ women: 8	Dorobo and Kamâ men: 7
Dorobo and Kipsi women: 1	Dorobo and Kipsi men: 2
Dorobo and Pokot women: 1	

Marriage of Dorobo women to outsiders seems to be due to the poverty of the Dorobo, which in these cases would have meant that the women would have remained unmarried; such marriages also mean the accession of stock to the Dorobo.

Polygyny

Although there is no objection to polygyny, Dorobo seldom have the means of acquiring more than one wife at a time, though several cases occurred of re-marriage after a wife's death or desertion. In one genealogy a woman had no less than four successive husbands, none of them her husband's brother, and her only issue was one daughter.

Re-marriage of Widows

Unlike the Kamâ, the Dorobo recognize the re-marriage of widows in the normal manner on payment of bridewealth to their fathers, brothers, or other representatives; it is, however, unusual. Widows normally live with their husband's brothers, return to their parents, or else live alone.

Divorce

Divorce is rare, and is of one kind only—permanent. The husband can claim the return of the bridewealth. But a wife who has borne a child cannot be divorced for any cause whatsoever.

Birth

Intercourse between husband and wife stops at the fourth or fifth month of pregnancy, and is not resumed till the child is about six months old. Birth takes place in the husband's hut, the husband going to live elsewhere meanly. The wife is attended by a midwife, sometimes, and her mother is present if possible. She stays in the hut for six or seven days after the birth, and the child's body must be kept covered for several weeks, even the father being allowed to see only its face. The mother must be purified by her husband, who kills a goat (which he must provide somehow if he has none of his own) and rubs the fat and undigested grass (chief from the stomach on her face, breasts, and body. Children are weaned at the age of about a year. Twins are not liked, and the mother's chief performance caused by their birth must be removed by the killing of a goat which is eaten by the mother and her women friends. The Dorobo say that if a man has set a trap at the time when his wife bears twins, the trap will never again catch an animal.

Children receive their first names, the ajith-name, from other family, as among the Kamâ, the name is not used, but links the child with a preceding spirit. The second or principal name is given before the child can walk, at the time when it is first given solid food, and is called "porridge name" in imitation of the Kamâ custom. Children may also be given nicknames which often refer to some physical peculiarity. After circumcision, boys become *dorgh*, see ch. above were taking their

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

Between a man and the members of his own generation considerable latitude is allowed. As the Dorobo put it, *Kirwpakai, kimerenciakai, kilieciakai, 'Kumio kon, ogut kom komut', anee ki lakak.* ("We use bad language to one another, we play together, we say to each other, 'May your father lie with you, or may you lie with your mother', because we are children", i. e. we are all of the same age.) These rude phrases, however, must never be used to elders, and to do so is very shameful; but spoken to members of one's own age-set or generation they are quite harmless and have no sinister implications. Between the sexes of the same generation there may be a perfectly innocuous intimacy, between brother and sister, between *mamber*, *mama*, and *kwanda*, which allows any kind of joking and language but stops short of actual sexual intercourse; and in spite of this license, such evidence as there was indicated that incest was not common. Between members of the same generation, especially in youth and early middle age, there is also a strong bond in the shape of mutual help and support among those who live near each other, extending to all departments of home life. The effect of propinquity must not be overlooked, and the claims of even a close relative who lives a long way off and is seldom seen may be reduced to insignificance.

The general attitude of a man's own children to the children of his *mamber*, his *mama*, and his *kwanda*, is the same, in that they are all like his own children, who may be played with or reproved when necessary, but without the use of any bad language or abuse. To these children to whom he is 'father's brother' there is of course the special attitude that I have already described. But between members of this generation there is a marked terminological difference:

so that by classification all the children on the father's side are *mamber*, while those on the mother's side are both *mama* and *kwanda*; and a man's own children are *ajaa*, while those of his sister are *mama*. When the children are small these differences are merely nominal and not apparent; but as they grow older a distinction tends to arise between those on the father's side and those on the mother's side, especially between *mamber* and *mama*; and this is emphasized by the possibility that a man might marry his *mamber* (father's sister's daughter's daughter), even if he seldom or never does so in fact.

Between a man and the second descending generation there is a relationship of respect, for terminologically his grandchildren are equated with his grandfather. In practice, however, this generation counts as far as he

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

4. Birth

Intercourse stops at the fourth or fifth month of pregnancy, and normally is not resumed till about six months after the birth of the child. When the woman's time has come, she *cuti ha*, "enters the hut", and the husband must then lodge elsewhere, either building himself a rough shelter or living with one of his neighbours in the settlement. During the act of birth the woman is helped by a midwife, *ngaitoyonit*, and her mother is present if possible. She stays for six or seven days in the hut after giving birth, and may then see her husband for the first time since she "entered the hut". The child's body must be kept covered for several weeks after its birth, and only its face may be seen, even by the father. At this stage the mother must be purified by her husband, who kills a goat (which he must buy or steal if he has none of his own), and rubs the fat and undigested grass from its stomach (*siyat*) over her face, breasts, and belly. After about three months the husband may come back to live in his own hut.

The birth of twins is not liked, for they are abnormal, and the old men say, *yaacen amu uuanit hamet* ("they are bad because they make the mother unclean"). If the father should have set a trap at the time when twins are born to him, it is believed that that trap will never catch an animal. The ritual uncleanness caused by the birth of twins is removed by the killing of a goat (which the husband must get by any means if he owns none) to be eaten by the mother and her female friends.

A girl who has a child before marriage is called, as among the Nandi, *ramparwet*, and becomes unclean ritually as a result. She may be purified, however, by the man responsible or one of his male relatives who must kill a he-goat. The meat is eaten by the men and women of the settlement, but not by the girl; and the *siyat* or undigested grass from the stomach is rubbed by one of the women over her face, neck, and breasts, and then washed off. By this means she becomes clean again, unlike such people among the Nandi, who remain unclean all their lives.

A baby is suckled as a rule until the mother is well advanced into her next pregnancy: the standard period was given as "twelve months". If the mother has no milk, or not enough, she goes about begging for milk, *ndi cako*; but as often as not in such cases the baby dies of starvation. It is weaned by being slapped when it tries to suck, and by the application to the nipples of something bitter, generally a concoction made from the roots of a bush called *koshoit* (Nandi, *kotowet*). At this time it is fed with milk from a small gourd, and if no milk can be got, it is given honey instead. It is also given bits of meat cut up small and fed from a spoon made of a piece of gourd; and gruel made from maize or eleusine meal mixed with honey.

If the mother dies in child-birth, her husband's mother or some other female relative takes charge of the baby and feeds it with milk from a small horn: if milk cannot be got, honey and gruel are tried; but very small babies fed in this way seldom live. Sometimes the child may be adopted by a married couple.

51Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

A comet is a sign of coming famine, not merely for the person who sees it, but for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general trend of knowledge of the Dorobo that the important parts of their life are helped and controlled by magic. The recovery of ritual status after child-birth and after the birth of twins is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with those powerful and capricious beings; the whole idea of circumcision (even if it is borrowed) is that of the transition by means of a magico-religious performance from the state of boyhood to that of manhood; these and other observances and avoidances are all magic, and are done because people believe that by doing them they will be enabled to go on existing.

b) Analysis of Beliefs

Ritual Values. Things which have ritual value fall into three categories: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status:

(1) Honey is sacred, like milk to the Nandi; and in addition to the taboo on eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the provision of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is burned. The last notion means that unlike the pastoral tribes, the Dorobo do not burn grass near forest.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that their use is directed to both the dead and the living.

(3) Things used for the recovery of damaged ritual status include goats and sheep, and certain of their products, i. e. *siyat*, and fat, as well as 'butter' or *wusit ap tawpisa* from cows. All these come from sources which formerly were hardly possessed at all by most Dorobo, and even to-day only on a small scale. Honey-wine is used a good deal, as well as white earth.

Each period of life has what might be called a standard ritual status, which is changed to a different standard on circumcision, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults is altered under certain conditions: (1) a man setting out to hunt is not in the same ritual state as when he is staying quietly at home, and he must not have sexual intercourse at such a time, i. e. just before he starts or, should he have an opportunity, while away; (2) a person sick of an illness has a status different from that of other people; (3) touching a corpse causes deterioration of ritual status; (4) the breaking of a taboo affects ritual status; (5) women suffer deterioration of ritual status through the birth of a child before marriage, the birth of twins, and even, to a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.

important aspect is, I fear, irrecoverable. I have been in the forest in both wet and dry seasons, and while trapping is still carried on, I could see no sign of hunting (i.e. shooting), and the description of a hunt is from narration.[1] Fear of a government which forbids hunting, and has of late itself hunted the Dorobo, has, I think, effectually sealed the lips of one or two who would normally have spoken on the subject. My informants, however, did say that sexual intercourse was forbidden before setting out on a hunt, though not before or during the process of trapping. In hunting there is an element of personal danger and of uncertainty as to success; magic helps to give confidence, and abstinence to avert ill-luck. In trapping the process is mechanical, largely a matter of technological skill, and with little danger to the trapper, who is sure to catch something sooner or later.

On the other hand, it is believed that both *Asis* (god) and the *chesowiloi* (both the good ancestral and the bad elemental) can influence a man's hunting, and before starting out to set a trap, he will say:

Asis, ipūyech pauyek,
God, give-us-enough meat,

or,

Chesowilōk, ohdnech tiony ne hipave.
The-spirits, give-us a-beast which we-may-kill.

Honey (*kumiat*) is an important article of Dorobo diet, and provides both food and intoxicant: it is to them what milk is to a pastoral people. It is not stuff that can be picked up anywhere, but requires a certain technique, and, above all, the presence of bees in a suitable place. As, therefore, it has an actual social value, so it has acquired a ritual value, and certain observances are necessary if the supply of honey is not to fail. First, you must have your bees, and a man who has put up a new honey-barrel must take steps to ensure that it is inhabited. This he does by calling out, in an unnatural high-pitched voice, "Bees, bees, all you who are in this country, come now and make honey here."

[1] Leopards, as already mentioned, are killed occasionally when they become aggressive and threaten livestock; but there are no organized leopard hunts, and in any case leopards are vermin.

/246 cont./

000 /footnote 1 continued/ be a substantial therapeutic advance to be recorded here." From "Uber Acocanthera Schimperi als Mittel bei Herzkrankheiten/On Acocanthera Schimperi as a Remedy for Heart Ailments/." By L. Lewin and E. Stadelmann. From a report delivered to the Berliner medizinischen Gesellschaft /Berlin Medical Society/. Berlin, 1906).

278 824 [439] Although the tree is not rare in the steppe around Kilimandscharo, its poisonous nature nevertheless generally seems to be known only to the Wandorobo, since other tribes do not manufacture the poison themselves. Thus the former sell it, for example, to the Wadschagga, the Wakahe, the Wakuafi of Aruscha tschini and of Meruberg /Mt. Meru/, the Wapare, etc. To brew the poison two Wandorobo always go a few thousand meters away from the camp into the bush. After they have collected branches and roots of Acocanthera abyssinica, they split them into thumb-thick sticks and prepare for the cooking in separate places. The wood is boiled for several hours in an earthen pot that is half filled with river water. Then it is removed, and the liquid obtained is thickened by further cooking to a viscous porridge-like consistency. The finished poison is black and looks like pitch. 278 562 834 [784] During its preparation no woman may come either in the vicinity of the poison pot or in that of the man doing the cooking. The woman who brings food and firewood therefore places these objects within calling distance. They believe that the effect of the poison is weakened or entirely destroyed through the contact or even merely the presence of a woman, whose person they, in their naïve beliefs, are unable to separate from the idea of sexual intercourse -- since the latter, according to their view, is an element acting against the poison. The same would be the case if the wife had intercourse with another man during the time the husband is busy preparing the poison, or if the husband cooked the poison while his wife was pregnant. The [415] finished poison is stored in a wooden pot (madjé) or in a leather bag /247/ (améta), and, to be sure, like the quivers with the poisoned arrows, not in the hut, but hung on a tree not far from the camp.

278 562 834 [888]

/247 cont./

arrows, not in the hut, but hung on a tree not far from the camp. Only in rainy weather do they bring the things into the kraal and keep them there in the hut of an old woman who herself, in their view, can no longer come into consideration in the above respect. They even make themselves responsible, relative to the intensity of the sexual intercourse, for the slow dying of the animal struck by the poisoned arrow. The poison is smeared on the arrow point with a wooden spatula, and, in order to protect the dried substance from crumbling or from dissolving in damp weather (since it is very hygroscopic), it is wrapped with a strip of thin antelope skin that is dehaired and made soft by being rubbed with fat. The poison acts very quickly, and, to be sure, by suddenly stopping the heart activity. In the case of a genet shot in the abdomen, breathing difficulty set in after five minutes, along with rapid movements of the nostrils and violent, cramplike muscle twitchings of the body and limbs. With brief interruptions of a quarter to a third of a minute the symptoms were repeated and increased in intensity. The pupils dilated to a circle. Nine minutes and 18 seconds after the shot the pupils, up to then blue-black, suddenly became sea-green, and, with violent twitching, death came. With quite fresh poison death is supposed to come in even a shorter time. In the steppe the poison is tested by shooting an antelope with an arrow newly poisoned. If on the trail of the fleeing animal one finds fresh urine and excrement, the poison is regarded as acting too weakly. Good poison put in the foot of a live turtle must lead to its death before it has crawled five or six steps away. Neither the Asa nor the Wandorobo are acquainted with a physiological antidote. For smaller, simple, and penetrating flesh wounds immediate washing with fresh urine is supposed to help. Aged Wandorobo often showed me scars on their own bodies, especially on arms and legs, which are supposed to have been caused by shots with poisoned arrows two to four centimeters deep. Both the appearance of the scars and the corresponding statements of people, which were separated in time and place from the former, corroborate this information.

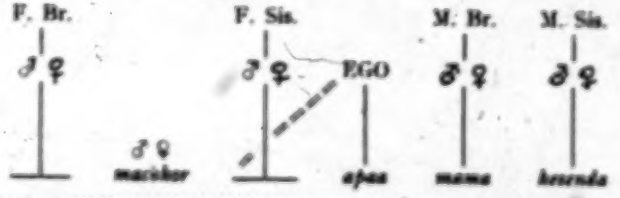
4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

Between a man and the members of his own generation considerable latitude is allowed. As the Dorobo put it, *Kicupakei, kiwerencinkei, kiilencinkei, 'Kumin kon, ngui kum kamet', amu ki lakok.* ("We use bad language to one another, we play together, we say to each other, 'May your father lie with you, or may you lie with your mother', because we are children", i.e. we are all of the same age.) These rude phrases, however, must never be used to elders, and to do so is very shameful; but spoken to members of one's own age-set or generation they are quite harmless and have no sinister implications. Between the sexes of the same generation there may be a perfectly innocuous intimacy, between brother and sister, between *macokor, mama,* and *kesenda,* which allows any kind of joking and language but stops short of actual sexual intercourse; and in spite of this license, such evidence as there was indicated that incest was not common. Between members of the same generation, especially in youth and early middle age, there is also a strong bond in the shape of mutual help and support among those who live near each other, extending to all departments of home life. The effect of propinquity must not be overlooked, and the claims of even a close relative who lives a long way off and is seldom seen may be reduced to insignificance.

The general attitude of a man's own children to the children of his *macokor,* his *mama,* and his *kesenda,* is the same, in that they are all like his own children, who may be played with or reproved when necessary, but without the use of any bad language or abuse. To those children to whom he is 'father's brother' there is of course the special attitude that I have already described. But between members of this generation there is a marked terminological difference:



so that by classification all the children on the father's side are *macokor,* while those on the mother's side are both *mama* and *kesenda*; and a man's own children are *apaa,* while those of his sister are *mama.* When the children are small these differences are merely nominal and not apparent; but as they grow older a distinction tends to arise between those on the father's side and those on the mother's side, especially between *macokor* and *mama*; and this is emphasized by the possibility that a man might marry his *macokor* (father's sister's daughter's daughter), even if he seldom or never does so in fact.

Between a man and the second descending generation there is a relationship of respect, for terminologically his grandchildren are equated with his grandfather. In practice, however, this generation counts as far as he

I: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

A striking difference between the Dorobo and Nandi systems is that whereas Nandi may not marry any person in the *iliet*, the Dorobo were insistent that a man might marry his father's sister's daughter, the girl whom he calls *marokov*, a person definitely in the *iliet*. This type of marriage does not seem to occur now, but did in the past. Marriage with a wife's sister is considered objectionable.

Behaviour patterns may be summed up in a statement made by a Dorobo that "a man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we are all on terms of friendliness and 'clean fun.'" Generally speaking, seniority is a matter of age, except with respect to the father's brother. Between a man and members of his own generation considerable latitude is allowed; but elders must always be shown respect. Where the claims of relatives are concerned, the amount of contact is important, for even a close relative who lives a long way off and is seldom seen cannot expect and will not receive so much respect as one who lives nearby and is well known. On a husband's part, there should be complete avoidance of his wife's mother, though this may be relaxed by degrees as he gets older; conversation with the wife's father should be limited to greetings.

Pre-marital Sex-life

Owing to the small number of Dorobo and the consequent shortage of women for wives, men have little in the way of pre-marital sex-life; and if a man does manage to acquire a lover, he often marries her.

Bridewealth

This varies according to circumstances, and Dorobo statements about it are conflicting. In 1927 it was said to consist of large quantities of honey-wine and of monkey-skin caps; but in 1930 the standard was one cow (with calf if still suckling), one ox, and four goats. The number of goats varied in the recorded cases from two to six, and in one case the cattle amounted to four oxen. A man also gives his father-in-law presents of honey-wine and a fur cap or two; thus marriage is more of a drain on a man's resources than formerly.

Betrothal

A man chooses his wife himself, and arranges the preliminaries with the girl's father during two visits at which he gives him presents of honey. After the second visit the father calls the clan council together and publicly gives his consent to the marriage.

Marriage

The marriage ceremonies are conducted by an elder known for the time as *patoon*, who brings the bride to her future husband's house, where the guests are already assembled feasting. The girl enters the hut in which the ceremony is to take place, and in the presence of witnesses the *patoon* gives her to the man, saying, *Kaipaanin ciondo*, "you now belong to this man." He then binds some ochalaid grass on the man's right wrist, and an old woman binds some of the same on the girl's right wrist. They are now married. The *patoon* then sets up an erection of ochalaid grass called *tumdo* which is smeared over with cow-dung; this the wife has to knock down and tread upon. After this, the pair are left alone, and the marriage is consummated. Next day the *tumdo* is trodden into the floor and plastered over with cow-dung, for it must not be seen. The pair are then shaved, he by the *patoon*, she by the old woman, and the hair is buried in cow-dung under an erection of sticks called *kowaiet*, which is set up in great secrecy by the *patoon*. It is essential

3:Huntingford E-5 (1921-1928)1929 FL6 Dorobo FL6

When a man is ill and dies, it is said that bad silk (*siik che gook*, N.) have killed him; if he recovers, a good oliniet has saved him. No offerings are made to the bad silk.

There is also a vague belief in a future life. A man's spirit is said to go at death to the *kwet ap siik* (N.), or land of the spirits, which is under the earth, and is a bad place.

Magic.

There are magicians (*pendindet*, pl. *pendi*, N.) who are bad, and who prevent people from getting food by means of their spells. There are also diviners (*arbeigat*, pl. *arbeiik*, N.).[1] There is no equivalent of the modern Nandi system of "arbeinotet" or rule by a medicine-man.

Medicines and Charms.

(a) *Medicines.*—For snake-bite, the gum of the tinet tree is used, mixed with the honey of a species of bee, called "kosomyet" (N.), and cow's fat. This concoction is rubbed on the affected part, and a little is also eaten. For coughs, a plant called "epeito" is chewed; this is used for all chest complaints.

(b) *Charms.*—Children wear a charm to ward off the evil-eye (*sakut*, N.), which is similar to that worn by Nandi children. It consists of a necklace of seeds of the kepuywet tree (N. *kepuswik*) strung on a cord, the seeds being separated by short pieces of bamboo (Text-fig. 20). Old men wear a charm to keep away circumcision (*kimokwopet*, or *kowoito* (*kowoio*), N.); it is made of two small pieces of the elemulet tree,[2] about 1 in. long, which are tied to the belt (Text-fig. 19).

V.—Social Institutions.

Social Divisions.

The male sex is divided into boys (*kipsiik*, N.), warriors (*moruasiik*, N.), and old men (*poiyiniik*, or *apoiyiniik*, N.); the female sex, into girls (*chipsiik*, N.) and women (*korosiik*, or *chepiyiniik*, N.). At circumcision, a boy becomes a warrior and a girl a woman.

Married and unmarried people sleep separately. Married people and small children may sleep in the same hut, while unmarried men sleep elsewhere, often in the *sigiriniet* (N.), or "warriors' hut," where they cohabit with the unmarried girls. Though free-love is practised, it is not carried to such an extent as among the Nandi, and although girls sleep with warriors, they like to preserve their virginity till circumcision. Warriors frequently marry their sweethearts (*moroniat*; N. *moronet*), whereas in Nandi they usually marry someone else.

The position of women in the scale as it is among the Nandi, that is, they wait on the men, do all the menial work, and are their husband's property.

[1] This word is not used with the same sense in Nandi; originally it seems to have meant simply "medicine-man" (Swahili, *mganga*).

[2] *Euphorbia candelabrum.*

4:Huntingford E-5 (1938-1939) 195: FL6 Dorobo FL6

881 them complete adult members of the horde, and no male could get a wife if he was uncircumcised; but it is possible for an uninitiated girl to get married, though few in fact are married without being circumcised.

2. Pre-marital sex-life

834 Having attained manhood through circumcision, the Dorobo is free,
835 subject to the restrictions inevitably imposed by a small population, to enter into legitimate sex-life. But unmarried men often have to go without a great deal of sexual experience before they marry, and some in fact never 884 marry at all because of the shortage of women. Even in the old days few girls were available, and there were only married women with whom they could not consort unless prepared to be shot by injured husbands if found out. This state of affairs has led to some men living alone and unmarried, 889 helped in their household tasks by women of the settlement. Some even did everything for themselves. The shortage of women, and the shyness of the Dorobo has resulted in a definite habit sufficiently in evidence to justify the application of a special term, for which I suggest the word moralists. And it is to be noted that the Dorobo have accepted the condition of moralists as something quite natural, whereas by many other peoples the unmarried state in a grown man is considered unnatural.

836 Young Dorobo to whom life without love does not appeal therefore wander about a good deal, going to places where they know there are girls, or women with whom they can have surreptitious affairs, such women often 837 being the wives of age-mates, for although this is not openly allowed, a woman will sometimes, when her husband is away, oblige one of his age-mates and say nothing about it. In favourable circumstances, however, where there are girls available, unmarried circumcised men build small huts called *ekirorori* close to their fathers' huts, where they may sleep with uncircumcised girls, each man choosing a girl to associate with her till she is married. A Dorobo, unlike the Nandi, often marries his premarital 824 lover. Uncircumcised boys caught by the men playing with girls who are sexually mature are beaten, for love affairs are the privilege of manhood.

3. Marriage

838 Dorobo generally marry women of an age fairly near their own, and do not by preference marry women very much younger than themselves.
884 A man chooses his wife for himself, and himself makes the preliminary arrangements. After making his choice, he takes the first step, by "going the journey" (*amak ilole*), to the hut of the girl's parents, or if they are dead, of a responsible relative, and hands over a large bag of honey, saying, "I want your daughter", to which the father answers, "Very well, take her presently". This ready acquiescence is due to the fact that the father already knows what is going on, for the suitor has been making enquiries about the girl, and such things always reach the ears of those concerned. Later

[P 191, A]

Apart from the rule of exogamy, there are certain other marriage regulations:

1. A person may not marry anyone who comes into the *siket* or *isiinwonkip* (except F. Sis. D. D.), that is, anyone addressed by a relationship term, or *as anyone.*
2. A man may not marry his wife's sister because such unions are thought to be sterile.
3. A person may marry into the clan of his or her M., M.M., Br.W., or Sis.H.

Pre-marital intercourse with anyone in the *siket* is forbidden; but with a clansfellow condoned, though not approved of.

The shortage of women and the lack of wealth have resulted in the Dorobo being largely monogamous, though if a man has the wealth, he may have more than one wife. The *kukuo* (bride-price)[1] is said to have been formerly 4 cows for slaughtering; today it is 1 cow, 1 ox and 4 goats, which go to the bride's father and become his personal property. This *kukuo* is high for people who own little or no stock; but by means of gift exchange cattle can be obtained from the Nandi (See below, p. 192.) Rarity of divorce is another result of this shortage, and since a wife is something comparatively hard to come by, she is more cherished than is usual among other peoples where women are plentiful. The inability to get wives has produced a tendency to what may be called *monkhi*, that is, unmarried men (some of whom never marry) live entirely alone, and do all their domestic work, as well as hunting and cultivation, without assistance.

III

ECONOMIC LIFE.

A. Environment.

The home of the Kapchepkendi Dorobo is the western end of the high ground which occupies the country between Eldama Ravine and the Nandi escarpment. The greater part of it is covered with dense forest, and is crossed on the S. W. corner by two parallel paths from Kipkoreon in the north to Ndarotua in the south. The forest begins about the 8,000 ft. contour, and to reach it from any side entails a steep climb of

[1] On this term, see "Bride-price in antiquity," *M.AN.*, 1935, 187.

000 Marital relations. -- Polygyny. -- Betrothal. -- State of being betrothed. -- Conversion of the young man to the state of the married. -- Bride price. -- Forcing the consent of the father of the bride. -- Exchange of wives. -- Obstacles to marriage. -- Entering into marriage. -- Dissolution of the marriage.

595 The marital relations also offer little that is new. Polygyny exists only to a limited extent; most of the people are too poor to acquire and support more than one wife; only a few have two wives, and if a man has three of them it is a rarity. Betrothal in earliest childhood seems to be more frequent here than among the Ideal, but no more binding and without legal consequences. As a rule after circumcision the youth is betrothed to a girl eight to ten years old, after his father has proposed for him to her parents. As among the Ideal, the /[illegible]/ betrothed persons live apart and may not cross one another. The bridegroom lives with a girl in the one camp, and in the other, the bride with another youth. If the bride becomes pregnant before the wedding, dissolution of the betrothal does not always take place, as among the Ideal, but rather the one who made her pregnant must reimburse the bridegroom by the payment of a head of cattle.

Here, just as among the Ideal, the young men of an age class together decide upon their entering the standing of the married, and their fellow companions confirm this intention by a feast corresponding to the ol gorok i ol ik, to which friends and neighbors participate. They are served game and honey beer, the latter of which, however, the marriage candidates may not yet drink. They like to eat the game for the day after a successful elephant hunt, so that the guests can feast heartily on meat.

583 Before marriage can be entered into, the bride price is to be paid. The bridegroom usually gives the father of the bride, even before her circumcision, five pots of honey and five bedcovers, and, soon after her circumcision, half of a male female elephant with the calf that belongs to it; furthermore, two head of cattle, which

payment and a man has but few (no study) have believed a real affection of husband for wife, and a rarity of divorce. This is reflected in the husband's behaviour to his wife, and in the absence of the custom found among the Ganda of letting a wife sleep with a visiting age-mate. A wife being a scarce commodity even she has been got, a man tends to do all he can to keep her, and he treats her well, with such kindness and consideration as one is accustomed to see in a lover, giving her all the endearments to a concubine the that are within his power. Although a man may be somewhat aloof when he is at home, his general attitude and behaviour to his wife form a good example for his sons to copy.

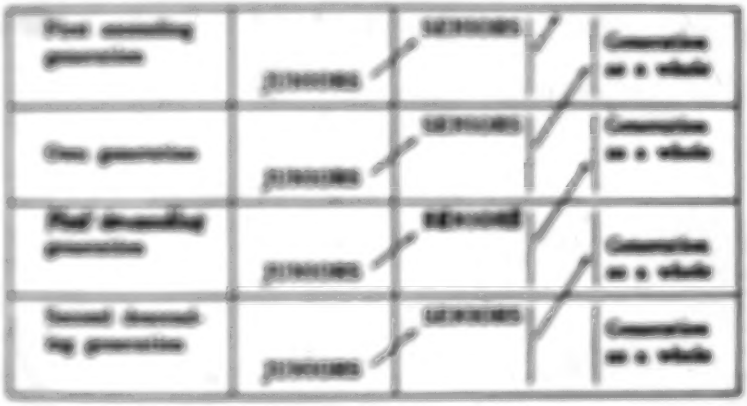
Children then grow up under the authority of two people who are more important to them than anyone else in the world, their father and mother. The father has authority over his wife because he provides food for her and her children by his own skill, and a primitive woman cannot exist without the support of a man. In the old days a frail wife had nowhere to go if her husband brought himself to the pitch of divorcing her, except back to her parents, who would not welcome an extra mouth to feed. Over his children a man has that authority which is based on the respect felt for a person whom they have most to respect. Incidents of the kind that I saw one day at the home of a man named Lwasaliti are not uncommon. A child was yelling outside the hut. Tigonasibe the mother told it to be quiet: it merely yelled louder. Lwasaliti then said quietly but firmly, Ow lukwanze (be quiet, child), and it was silent immediately.

As Crawford-Fenn has pointed out, the behaviour of father to mother must influence the attitude of a son to his mother[1]. It is the mother and other women who look after a child till nearly the age of puberty, and to-day as in the past, though the father is no longer wholly occupied in hunting and therefore spends more at home, the traditional pattern still holds good. I have seen there were even a man left in charge of his small children while his mother was away and treating them in the funny sort of way that one would expect of a man not very sure of his ground — sure of his authority, which was not being called in question, but not at all sure of his ability to deal with children problems which his mother on her return was quite at ease. It is the mother who gives the children basic comfort and protection; she it is who applies them the elementary rules of conduct and decency, who impresses upon them that they must obey father, because he is father, and who sees that as they grow older they help her with such small tasks as they can manage. It is to their mother that children run when hurt or frightened, and it is by her that they are rewarded when ill. She then has a large share in their affection, but this would be reduced if they saw her disrespectfully treated by their father. In the which, the claim is established among the Ganda by the way men treat their wives. Just as old age a mother is taken care of by her sons and whereas she brought them up in her infancy, so now in her old age she

[1] Man, 1929, 110

are known to each other and equals, being of the same generation. So too are the sons of the father's brother, also Kipkoiben and Kimnyigilo, who are member to Ego. But Ego will be circumcised at the same time as his brother A and his member C, whom his other brother B and member D are too young to be circumcised; B and D will therefore belong to junior age-sets, and when Ego, A, and C have been circumcised and are allowed to marry and indulge in other male pursuits, B and D will still have the inferior status of uniti or boys and be subordinate to their brothers as regards behaviour and social position.

Each generation in Dorobo fable is to be stratified in two layers comprising two age-sets which cut across the relationship system; and where the kinship behaviour patterns conflict with those of the age-set, the latter will prevail. Both sets in Ego's generation, for instance, will behave in the same way to father, father's brother, and father's father; but D and B cannot behave to Ego as C behaves to Ego, because they are merely boys who do not count for much, while Ego and C are men. Similarly, in the first descending generation all will behave in the same way to Ego's generation, but E and G must give to H, I, and F the respect that H, G, and F do not give to each other or to E and G. And the principle is the same with the second descending generation.



The effect of the age-set on behaviour is to strengthen the traditional rule of behaviour by emphasizing the disparity between seniors and juniors.

Age-sets also affect hospitality, for while an Dorobo would normally refuse to deliver one of his own wives, the degree of hospitality and of the intimacy to which he is admitted vary according to whether the visitor is an age-mate or not. If he is of the same age-set as his host (no matter what their respective ascendant may be), he will sleep along with the host and his wife, though he will not be given the host's wife to sleep with as among the Kanuli. But if he belongs to a different age-set, the wife will

4:Huntingford E.-5 (1928-1939) 1951 FLA Dorobo FLA

881 them complete adult members of the tribe, and no male could get a wife if he was uncircumcised; but it is possible for an uninitiated girl to get married, though few in fact are married without being circumcised.

2. Pre-marital sex-life

834 [885] Having attained manhood through circumcision, the Dorobo is free, subject to the restrictions inevitably imposed by a small population, to enter into legitimate sex-life. But unmarried men often have to go without a great deal of sexual experience before they marry, and some in fact never [589] marry at all because of the shortage of women. Even in the old days few girls were available, and there were only married women with whom they could not consort unless prepared to be shot by injured husbands if found 589 out. This state of affairs has led to some men living alone and unmarried, helped in their household tasks by women of the settlement. Some even did everything for themselves. The shortage of women, and the shyness of the Dorobo has resulted in a definite habit sufficiently to evidence to justify the application of a special term, for which I suggest the word *monkein*. And it is to be noted that the Dorobo have accepted the condition of *monkein* as something quite natural, whereas by many other peoples the unmarried state in a grown man is considered unnatural.

836 Young Dorobo to whom life without love does not appeal therefore wander about a good deal, going to places where they know there are girls, or women with whom they can have surreptitious affairs, such women often being the wives of age-mates, for although this is not openly allowed, a [837] woman will sometimes, when her husband is away, oblige one of his age-mates and say nothing about it. In favourable circumstances, however, where there are girls available, unmarried circumcised men build small huts called *ndimisiet* close to their fathers' huts, where they may sleep with uncircumcised girls, each man choosing a girl and associating with her till she is married. A Dorobo, unlike the Nandi, often marries his premarital lover. Uncircumcised boys caught by the men playing with girls who are sexually mature are beaten, for love affairs are the privilege of manhood.

3. Marriage

580 Dorobo generally marry women of an age fairly near their own, and do not by preference marry women very much younger than themselves.

584 A man chooses his wife for himself, and himself makes the preliminary arrangements. After making his choice, he takes the first step, by "going the journey" (*nendi kwisi*), to the hut of the girl's parents, or if they are dead, of a responsible relative, and hands over a large bag of honey, saying "I [illegible] presently". This ready acquiescence is due to the fact that the father already knows what is going on, for the suitor has been making enquiries about the girl, and such things always reach the ears of those concerned. Later

(See over.)

are bought from the latter for money, and finally half of the sum of a state female head of goats approximately the size of a calf. The mother of the bride and each of her brothers receive from the bridegroom a bedstraw system. Instead of the bedstraw the parents-in-law in some regions, especially where the Wandonobo live in close contact with the Ideal, receive iron wire. After receiving the gifts, the bridegroom and father-in-law reciprocally call each other by gamak, bridegroom and mother-in-law by ge-ge, bridegroom and the brothers of the bride by sulang, according to ancient Ideal custom.

For beauties an higher price is paid. For a childless widow the usual price is paid, but only after the birth of the first child and after her father has returned to the heirs of her deceased husband the price received for her before her first marriage. For a widow who gave birth to girls only, no bride price is paid (usual). However, the heir of her deceased husband keeps her daughters. Likewise nothing is paid for a woman driven out by her husband. If the bridegroom dies before the marriage, his brother takes the bride. If the bride dies before the marriage or if the betrothal ceases dissolve the betrothal, the portion of the bride price already paid is returned. A bridegroom who is too poor to be able to pay the full price serves the father-in-law for a few months as herder for the remainder owed.

If the father of the girl has arbitrarily opposed the courtship, he is finally forced to consent by means of a divine judgment. The lover excitedly creeps into the hut of the old man and ties a rope of grass around the wooden heavy pot. The father is not [yet] to give his consent regularly then, since otherwise the punishment of God would kill him. In place of his consent, it also happens that the lover secretly takes the girl away, or the latter — or among the Ideal — flees to him without her parents' knowledge.

Wife exchange occurs, but legal marriage does not arise from it. The woman does not cohabit with the other man for longer than a half or a whole year. If she feels pregnant before this time, she returns to her husband.

[illegible]

[illegible]
never have anything to do with taking their part. On the other hand, if an Ami is killed by a blacksmith, the Ideal immediately place themselves on the side of the near injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wandaliffes, as he sure, would themselves be in a position to exercise the revenge, but the Ideal do not permit this because they see in it an encroachment on their rights as owners of the land and to particular sites of the ol' heroes.

Bodily injury with a fatal outcome. If caused intentionally, is regarded as murder; if negligently, as negligent homicide. Other bodily injuries are atoned for with the payment of a specific number of heddrons. For the destruction of a finger one heddron is paid, for one hand eight; among some Wandaliffes who live in close contact with the Ideal the assessment for the destruction of a finger or the whole hand amounts to a far richer dowry. Bodily injury leading only to the loss of an index finger or an eye often remains unpunished, or does indeed absolve. Abortion is said to be unknown, and perhaps not to occur. Kidnapping and rape are unknown.

A theft committed in the camp by an inhabitant or stranger is atoned for by the return of the stolen goods; that of a heddron keeping outside the camp, with the payment of ten sow ones. Anyone who steals honey from a heddron pays five heddrons. Arson is said not to occur; one who is the owner of the blaze of another through accident is not subsequently killed, when he has been prevented in chase the evil one hard to health. The dooming of poisoned arrows to the camp is strictly forbidden, because of the danger connected with it. Anyone who transgresses this law must expect to be killed immediately by his companions.

Unknown and approved kind of death, the principle of repaying like with like, compensation to the culpable body part, prohibition, imprisonment, enslavement, public punishment, the right of pardon.

For the hardly interesting as unknown subject, the injured one runs — [illegible] — or has already been murdered — to a decision, who is the victim of [illegible] among the Wandaliffes. Instead of the [illegible] ground to hunt of the eight clans, one picks them up and puts [illegible] on a Bodel's record when meeting [illegible]

4Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

is dressed and oiled during the morning at her own home by the old women of her family and settlement. When she is ready the bridegroom's mother and the *Pa-kwe* come for her, accompanied by a small boy or girl known as the *mimut* or "herdsman", who acts as page or bridesmaid. It does not matter whether the *mimut* is a boy or girl: the choice depends entirely upon who is available. The function of the *mimut* is chaperon; he or she merely walks with the bridal party, doing no specific duty. The bride is led to the bridegroom's place, where the guests are assembled drinking the beer and eating the food which has previously been prepared by the bridegroom's family. By now it is evening, and the bride on her arrival is called, together with the groom, by the *Pa-kwe* to the hut where the ceremony is to take place. In this hut, in the presence of some old men, the *Pa-kwe* says to the bride, *Kaipaasia ninto, matiomak* ("you belong to this man, do not go from him"). The old men then leave, and when they are alone the *Pa-kwe* binds a bracelet of sabatut grass (*Spermadoxa*) on the bridegroom's right wrist, while an old woman of the girl's clan binds a similar bracelet on the girl's right wrist. This act and the words *kaipaasia*, etc. constitute the essential part of the ceremony, for they bind the woman to her husband. After this, an erection of grass called *kondo* is set up in the middle of the hut by the *Pa-kwe*. It consists of a bundle of sabatut grass tied together and set up in a hole in the floor, having been made in secrecy beforehand by the *Pa-kwe* and the old woman who assists him. The *Pa-kwe* makes a hole in the floor with a pointed stick and lines the hole with dung. The bundle of grass is then stood upright in it and the hole is plastered over with a small mound of dung, and dung is also smeared all over it so that the grasses stick together; the dung must be cow-dung. When it is ready, the husband says to his wife, *Kiyon kin*, "come and tread on it". She does so, whereupon the *Pa-kwe* sets it up again, and the action is then repeated three more times, after which it is left lying on the ground and remains there all night, while the newly married couple consummate the marriage beside it. The *kondo* seems to be a fertility symbol, erectile phallic, and is perhaps left on the floor during the first marriage act to ensure a fertile union. In the morning it is trodden well into floor and dung is plastered over so that it cannot be seen. It is particularly important that children should not see it. Next day the pair are shaved, by the *Pa-kwe*, also by the old woman, and the hair is buried under an erection called *kwonisi*, which is made by the *Pa-kwe* of two or six sticks about 1 foot long cut from *chemyondi* (olive), *sigiriyet*, or *mamita* trees, and tied together at the bottom with bass and set upright in a hole in the ground somewhere in the forest or in thick bush. The hair is placed against the bass binding, and a small mound of cow-dung is made over it. The *kwonisi* is then left surrounded still in hole-down. No children or unmarried people may see it, and it is made with the utmost secrecy by the *Pa-kwe*, some hair for knowing where it has been set up, in order to prevent the hair from getting into the hands of a witch. The use of cow-dung is essential for both *kondo* and *kwonisi*, and if there are no cattle in the bridegroom's settlement, somebody must go beforehand and bring some in.

FLE Dandoo FLE
[P 191, A]

Apart from the rule of exogamy, there are certain other marriage regulations:

1. A person may not marry anyone who enters into the *ilkat* or relationship (except F. Sis. D. D.), that is, anyone addressed by a relationship term, or as *anyun*.
2. A man may not marry his wife's sister because such unions are thought to be sterile.
3. A person may marry into the clan of his or her M., M.M., Br.W., or Sis.H.

Pre-marital intercourse with anyone in the *ilkat* is forbidden; but with a classificatory outsider, though not approved of.

The shortage of women and the lack of wealth have resulted in the Dorobo being largely monogamous, though if a man has the wealth, he may have more than one wife. The *kobo* (bride-price)? is said to have been formerly 4 cows for slaughtering; today it is 1 cow, 1 ox and 4 goats, which go to the bride's father and become his personal property. This *kobo* is high for people who own little or no stock; but by means of gift exchange cattle can be obtained from the Nandi (See below, p. 191.) Rarity of divorce is another result of this shortage, and since a wife is something comparatively hard to come by, she is more cherished than in most among other peoples where women are plentiful. The inability to get wives has produced a tendency to what may be called *manhi*, that is, unmarried men (some of whom never marry) live entirely alone, and do all their domestic work, as well as hunting and cultivation, without assistance.

III

ECONOMIC LIFE.

A. Environment.

The home of the Kapchepkendi Dorobo is the western end of the high ground which occupies the country between Elgeyo Escarpment and the Nandi escarpment. The greater part of it is covered with dense forest, and is crossed on the S. W. corner by two parallel paths from Kipkoreon in the north to Nakuruon in the south. The forest begins about the 8,000 ft. contour, and to south it runs very wide, forming a steep climb of

C00 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Care and treatment of the pregnant woman, the woman in labor, and the woman in childbed. -- Killing newborn children. -- Fertility. -- Child mortality.

[341] The opinion that the author heard expressed a number of times by Ani-Wandorobo, that pregnancy is more or less bound up with a definite time of year, and, to be sure, in such a way that either conception takes place at blossom time or birth takes place at the time of the fruitage of the poisonous tree Acocanthera abyssinica, appears surprising.

[324] /342/ During his wife's pregnancy the husband does not pursue a game animal that is hunting, because it is believed that the latter, at his approach, will resist the poison and escape. Therefore, after he has shot an animal, he returns to the camp and from there sends another man out to look for the animal. The pregnant woman [325] may not be beaten. Neither he nor the pregnant wife may step over a powerful of migrating ants. She is forbidden to eat meat from a wild animal that died or was killed by a predatory animal, likewise wasp, and furthermore honey in which dead bee larvae are found. She must avoid coming near a chameleon or a snake, or exposing herself to the heat of the sun for any length of time. All this, in the opinion of the Ani, would harm the fetus.

[327] If the woman visits another camp, she smears her forehead with white clay beforehand in order to announce her condition to the occupants. On the way there she is accompanied by a little girl, [328] whom she leads by the hand. As the reason for this, the people say that a miscarriage would take place if the woman went without a girl and on the way saw the previously mentioned unborn bird or heard its dii-dii-dii calls. A woman pregnant for the first time is [329] given gifts by all the people (men, women, boys, girls) of the camp and her friends in the neighboring camps at about the middle of her pregnancy. She is presented with a leather apron, a pair of ear pendants, beads, chains, or even a head of small livestock.

/730 cont./

From time to time the people celebrate a supplication feast for ULÁ, which they call kuneng or kenneg. For a kenneg a kaya, a feast to ask God for children, the married women station themselves in a circle around a small fire into which, just as for every other supplication feast, they strew the residue of the honey beer, consisting chiefly of wax particles, so that its fragrance will rise up to God. While an aged, respected man goes around the circle and sprinkles those present with honey beer, they sing: Ulá nga kaya! After this has gone on for a quarter of an hour, they start to dance, continuing to sing the same words. The dance is followed by a meal at which meat and honey beer are consumed. At a kenneg a nga they ask God for meat. Beside a small fire they place upright a straight branch with several forks at the top, the twigs of which are cut off short. The empty stick is supposed to show God that they do not have any meat. All the companies station themselves around the fire and sing: Ulá ngori ngai (ngai = giraffe). The next morning the hunters set out, and as soon as they bring home meat, a small piece is placed on each twig of the forks of the branch. Again all surround the newly kindled fire and each sings: Ulá nyu keiyo ero, which is to say: God, give us still more food. The men celebrate another supplication feast before a large hunting expedition. In the middle of the camp a small fire is made, around which the men stand in a circle. Each one has the bow in the left hand, a twig of the olti tree (Acacia mellifera) in the right one. Then, going around to the left, they walk around the fire four times, during which they sing: Ulá ngori ngai. They maintain that they have never yet prayed in this way in vain, but that after a kenneg a nga they always returned from hunting with rich booty. The Wandorobbo do not have a term corresponding to the el ngai i el ngaroti.[1] Rather, without special ceremonies, they cut a strip out of the hide of an animal just slain and wear it as an ornament around the right middle finger. As soon as they scent something along the way that makes them afraid, be it a predatory animal or an enemy, they bite on the hide strip, which is the equivalent of a prayer for protection. Other amulets are seen extremely rarely. The native has only one, which they called tarore and which consisted of a small piece of iron. It was worn on the neck ring and was supposed to protect one from predatory animals. If individual persons spoil the right

1. [A supplication feast instituted by the Masai to preserve the health of human beings and livestock--dual pot.]

...one cow-thing he can for both the female and homicide, and if there are no cattle in the homicide's settlement it must be procured from somewhere else. Marriage is prohibited.

Marriage with Kindi

Eighteen marriages were recorded in genealogies between Dorobo and Kindi or members of the Kindi group:

Dorobo and Lumbi women: 6	Dorobo and Kindi men: 10
Dorobo and Kore women: 1	Dorobo and Kipsi men: 1
Dorobo and Nyik women: 1	

Marriage of Dorobo women to outsiders seems to be due to the poverty of the Dorobo, which in most cases would have meant that the women would have remained unmarried; such marriages also mean the accession of stock to the Dorobo.

Polygyny

Although there is no objection to polygyny, Dorobo seldom have the means of supporting more than one wife at a time, though several cases occurred of re-marriage after a wife's death or desertion. In one genealogy a woman had no less than four successive husbands, none of them her husband's brother, and her only issue was one daughter.

Re-marriage of Widow

587 Unlike the Kindi the Dorobo recognize the re-marriage of widows in the normal manner on payment of bridewealth to their fathers, brothers, or other representatives, or to [illegible] herself. Widows normally live with their husband's brothers, return to their parents, or are free alone.

Divorce

592 Divorce is rare, and is of one kind only—permanent. The husband can claim the return of the bridewealth. But a wife who has borne a child cannot be divorced for any reason whatsoever.

Birth

● 941 Intercourse between husband and wife stops at the fourth or fifth month of pregnancy, and it is assumed till the child is about six months old. Birth takes place in the husband's hut, the husband going to live elsewhere meanly. The wife is attended by a midwife, sometimes, and her mother is present if possible. She stays in the hut for six or seven days after the birth, and the child's body must be kept covered for several weeks, even the father being allowed to see only its face. 946 The mother must be purified by her husband, who kills a goat (which he must acquire somehow if it has none of its own) and rubs the fat and undigested grass (which have the contents on her face, breasts, and belly. Children are weaned at the age of about a year. Twins are not liked, and the mother's chief confinement 951 worry is their birth must be removed by the killing of a goat which is eaten by the mother and her closest friends. The Dorobo say that if a man has an ox or cow who has twin calves, the ox will never again catch an eland.

952 Children receive their first names, the child-name, soon after birth, on naming the fourth. One name is not used, but links the child with a protecting spirit. The 953 second or principal name is given before the child can walk, at the time when it is first given solid food; and is called "porridge name." In imitation of the Kindi custom. Children may also be given nicknames which often refer to some physical peculiarity. Other circumstances, large become strange, may at times cause young men

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

4. Birth

Intercourse stops at the fourth or fifth month of pregnancy, and normally is not resumed till about six months after the birth of the child. When the woman's time has come, she *enti ke*, "enters the hut", and the husband must then lodge elsewhere, either building himself a rough shelter or living with one of his neighbours in the settlement. During the act of birth the woman is helped by a midwife, *ngotiyoni*, and her mother is present if possible. She stays for six or seven days in the hut after giving birth, and may then see her husband for the first time since she "entered the hut". The child's body must be kept covered for several weeks after its birth, and only its face may be seen, even by the father. At this stage the mother must be purified by her husband, who kills a goat (which he must buy or steal if he has none of his own), and rubs the fat and undigested grass from its stomach (*ariyat*) over her face, breasts, and belly. After about three months the husband may come back to live in his own hut.

The birth of twins is not liked, for they are abnormal, and the old men say, *pasere amo wasoi kamat* ("they are bad because they make the mother unclean"). If the father should have set a trap at the time when twins are born to him, it is believed that that trap will never catch an animal. The ritual uncleanness caused by the birth of twins is removed by the killing of a goat (which the husband must get by any means if he owns none) to be eaten by the mother and her female friends.

A girl who has a child before marriage is called, as among the Nandi, *ceuptuet*, and becomes unclean ritually as a result. She may be purified, however, by the man responsible or one of his male relatives who must kill a he-goat. The meat is eaten by the men and women of the settlement, but not by the girl; and the *ariyat* or undigested grass from the stomach is rubbed by one of the women over her face, neck, and breasts, and then washed off. By this means she becomes clean again, unlike such people among the Nandi, who remain unclean all their lives.

A baby is suckled on a rule until the mother is well advanced into her next pregnancy; the standard period was given as "twelve months". If the mother has no milk, or not enough, she goes about begging for milk, *sumet ndo*; but as often as not in such cases the baby dies of starvation. It is weaned by being dropped when it tries to suck, and by the application to the nipples of something bitter, generally a concoction made from the root of a bush called *kotkoti* (Nandi, *introsat*). At this time it is fed with milk from a small gourd, and if no milk can be got, it is given honey instead. It is also given bits of meat cut up small and fed from a spoon made of a piece of gourd, and gruel made from maize or eleusine meal mixed with honey.

If the mother dies in child-birth, her husband's mother or some other female relative takes charge of the baby and feeds it with milk from a small horn. If milk cannot be got, honey and gruel are tried; but very small babies fed in this way seldom live. Sometimes the child may be adopted by a married couple.

C60 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Care and treatment of the pregnant woman, the woman in labor, and the woman in childbed. -- Killing newborn children. -- Fertility. -- Child mortality.

C63 C62 C64 The opinion that the mother heard expressed a number of times by Asé Wandoffio, that pregnancy is more or less bound up with a definite time of year, and, to be sure, in such a way that either conception takes place at blossom time or birth takes place at the time of the fruitage of the poisonous tree Acocanthera abyssinica, appears surprising.

C64 /341/ During his wife's pregnancy the husband does not pursue a game animal that is hunting, because it is believed that the latter, at his approach, will resist the poison and escape. Therefore, after he has shot an animal, he returns to the camp and from there sends another man out to look for the animal. The pregnant woman may not be beaten. Neither he nor the pregnant wife may step over a precreation of migrating ants. She is forbidden to eat meat from a wild animal that died or was killed by a predatory animal, likewise wasp, and furthermore honey in which dead bee larvae are found. She must avoid coming near a chameleon or a snake, or exposing herself to the heat of the sun for any length of time. All this, in the opinion of the Asé, would harm the fetus.

C65 If the woman visits another camp, she smears her forehead with white clay beforehand in order to announce her condition to be acceptable. On the way there she is accompanied by a little girl, whom she leads by the hand. As the reason for this, the people say that a miscarriage would take place if the woman went without a girl and on the way saw the previously mentioned swarm bird or lizard or [illegible] cattle. A woman pregnant for the first time is given gifts by all the people (men, women, boys, girls) of the camp and her friends in the neighboring camps at about the middle of her pregnancy. She is presented with a leather apron, a pair of ear pendants, beads, chains, or even a head of small livestock.

/3rd copy/

• 843 pendants, beads, chains, or even a bowl of small livestock.

During the last two months before her confinement the woman is given only a meager diet, so that the birth will be easier. Here, too, as among the Masai, the pregnant woman wears no ornaments. On the day of the confinement the husband may not leave the camp. His mother or mother-in-law acts as midwife. Besides the obstetric methods of the Masai, there also exists here the custom that the husband, to increase the labor-pain activity, perhaps assistance with his saliva the chest, abdomen, and back of the woman giving birth and then massages them gently with circular movements. While doing so, he several times calls out the words "Mighty God, let the child come out!" The umbilical cord (or navel) is severed with a razor-knife (Swahili) and then, together with the placenta, buried in the hut. It is not the object of superstitious customs. It is regarded as unlucky if the child's upper incisors come through before the lower ones; it is believed that this will cause illness or death to the family. The young mother may not leave the hut until five days after her confinement, not of consideration for her health, but for superstitious reasons. The suckling period lasts one and a half to two years. Besides mother's milk, the little one is stuffed with a great deal of the fat of goats, of which that of the large pachyderms is particularly valued as infant food.

Deformed newborn children are killed by strangulation by the midwife immediately after birth. The highest figure known to me /3rd/ of confinements of one woman was 11. Here 97 aged 4x6 women questioned, 374 children were born, which gives an average of 3.7 per woman. Of them, 51, therefore 55.6 per cent, were girls, and 73, therefore 67.4 per cent, were boys. Below their conception 71 = 40.7 per cent had died, in which the stillbirths are included. Until their conception the children live to the 1st of the mother.

[illegible] one can bring to mind for both the Dorobo and Turkana, and it does not apply to the Ulwarringkord's settlement. It seems the [illegible] [illegible] is gradual.

Marriage with Dorobo

6. Birth

Intercourse stops at the fourth or fifth month of pregnancy, and normally is not resumed till about six months after the birth of the child. When the woman's time has come, she call be, "enters the hut", and the husband must then lodge elsewhere, either building himself a rough shelter or living with one of his neighbours in the settlement. During the act of birth the woman is helped by a midwife, sparkyoung, and her mother is present if possible. She stays for six or seven days in the hut after giving birth, and may then see her husband for the first time since she "entered the hut". The child's baby must be kept covered for several weeks after its birth, and only its face may be seen, even by the father. At this stage the mother must be purified by her husband, who kills a goat (which he must buy or steal if he has none of his own), and rubs the fat and undigested grass from its stomach (grue) over her face, breasts, and belly. After about three months the husband may come back to live in his own hut.

The birth of twins is not liked, for they are abnormal, and the old men say, *pwarre ores enemi kamet* ("they are bad because they make the mother unclean"). If the father should have set a trap at the time when twins are born to him, it is believed that that trap will never catch an animal. The ritual uncleanness caused by the birth of twins is removed by the killing of a goat (which the husband must get by any means if he owns none) to be eaten by the mother and her female friends.

A girl who has a child before marriage is called, as among the Yuedi, *enenjhwol*, and becomes unclean ritually as a result. She may be purified, however, by the man responsible or one of his male relatives who must kill a he-goat. The meat is eaten by the men and women of the settlement, but not by the girl; and the stool or undigested grass from the stomach is rubbed by one of the women over her face, neck, and breasts, and then washed off. By this means she becomes clean again, unlike such people among the Yuedi, who remain unclean all their lives.

A baby is suckled as a rule until the mother is well advanced into her next pregnancy; the standard period was given as "twelve months". If the mother has no milk, or not enough, she goes about begging for milk, *ameni ulle*; but as often as not in such cases the baby dies of starvation. It is weaned by being dropped when it tries to suck, and by the application to the nipples of something bitter, generally a concoction made from the root of a bush called *kadwol* (Yuedi, *k'emwol*). At this time it is fed with *ulme* from a small gourd, and it is not until *can be got*, it is given honey instead. It is also given bits of meat cut up small and fed from a spoon made of a piece of gourd, and gruel made from maize or sorghum meal mixed with honey.

If the mother dies in child-birth, her husband's mother or some other female relative takes charge of the baby and feeds it with milk from a small hole. It will receive its gruel and meat as well, but very small portions but as this may prove too. Sometimes the child may be adopted by a married couple.

a clear, windless day. About 10 o'clock a curious whistling noise began to come from a certain part of the forest, and continued, on the same note, and without a break, for several hours. It was certainly no human or machine-made noise, and the Ewoka professed complete ignorance of it. A Ewok who had lived there before the Ewok War told me afterwards that it was an evil spirit whistling in the forest. "So we used to hear them whistling in each other like that in the forest when I was a child".

Between people and the things on which they depend for their existence both spiritual and material there is a connexion which is best expressed in terms of a ritual relationship. Things have a ritual value for people, and people themselves have a ritual status which is a relationship with their surroundings that can be altered for better or for worse according to the way in which they respect the ritual value of the things around them. Rank, glib and magic form the groundless which governs these ritual values and duties, while political organization is, in a sense, no more than an effort to maintain the ritual norms of the Ewoks in spite of the tendency of its members to behave each one ritual norms and in consequence that of the Ewoks also.

Certain things that a person does, whether voluntarily or involuntarily, cause deterioration of ritual status, but the original status may be recovered by the performance of certain ritual actions which may involve some personal effort or sacrifice. Examples of acts which cause loss of ritual status, and the means taken to restore it, are: (1) A girl who loses a child before marriage must have the undigested grass (ritual) from the stomach of a goat rubbed over her face, neck, and breasts, and must have made it all. (2) After a woman has given birth, she is in a condition of much reduced ritual status, and her husband must roll goat's fat and ryak over her face, breasts, and belly. (3) A man who has killed a Ewoka must have goat's fat rubbed all over him. (4) Any other has killed an enemy must have stripes of white earth painted on his face. In all these cases the people have done something which causes loss of ritual status, making them ritually unclean (ewon or ewon) and in a state of danger to others till they have been purified. The potential danger is removed by means of something which has a ritual value. Moreover, an essential element in the cleansing process is sacrifice, that is, the use of the method most often involves giving up something which is valued, or it must require some effort or even risk to get hold of. The ryak or fat must be from a domestic animal. If the person concerned has one, he must use it. If he has none, then he must get one, and without delay, which for a Ewoka usually means that he has to steal it, and then risk spitting himself while doing so. Therefore there is an air of daring in these magico-religious performances, and people believe so firmly in the efficacy of what they do that they are prepared to risk danger in order to get the necessary materials. The use of white earth may entail no more than a journey to get it, but this still means a personal effort on somebody's part. Materials which are used for the restoration of ritual status, and in consequence have a special ritual value, include: the flesh of goats, which is extra ritual value as food, and is eaten at feasts; ryak; the undigested grass from the stomach of a ruminant (a sheep

[illegible]

Social Organization.—The Tribe.—The Wandoobis are very few in number, and are divided among three sections, each of which has its own habitat as follows (according to the Chief, who was my informant on this point):—

Section.	Habitat.	Approximate Numbers.
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]

Each section is not a single village of the very shelter to ancestors or has already travelled. The sections are not intimate, and they are exogamous, and descent is in the male line. The [illegible] who has not any child, who lives at Kokonga (north of Kuranna). Notwithstanding a hereditary and no relation is ever established to which the person of a child. The Chiefs and the Lubrimen [illegible] are each governed over by a headman (grandfather).

Birth.—When a child is born the mother is isolated by female relatives. There are no [illegible] observed, or among the Lubrimen. The Wandoobis allege that there are no special [illegible] connected with birth. Should a child cross first because also the world by call to belly throughout life. It is stated that the circumcise a female away with her relative, [illegible] when receiving a child accepts the father's face, it is boy, and her partner's if a girl.

Betrothal and Marriage.—The rules for betrothal seem to be very similar to those [illegible] among the Lubrimen, except that the prospective husband goes to the girl's people (more ordinary representative to the first instance). The reasons of the girl and of the parents as both alike is necessary, and the number of gifts is not specified as it is among the Lubrimen.

Marriage is celebrated by a feast by which the people of the two sections to which the [illegible] parties belong take part. There is no more primitive to the marriage feast. After marriage a man lives for two days and nights in the hut of his betrothed, after which he remains with her in the new village. Here a woman a man has already built for the world awaited sought by his own partners, after to has cohabited the nearest with regard to the Lubrimen does the wedding is.

Incest.—All the most are hostile children against consanguinity. There is no special name [illegible] but parents are they "one to the body," and only from the village.

Age Classes.—There appears to be quite indistinct.

Adoption and Inheritance.—The chief allows a widower. The [illegible] [illegible] and is dealt with privately. On it is not to be against the community. A woman who is guilty [illegible] to support of life is not sent to her husband, she waits the offending man only [illegible] him a feeling duty. Widow is however, a child often, for which the grandparent is made. The Lubrimen [illegible] practice in this respect is not followed.

The accounts are subsequently [illegible] to a life is not to exist for the chief [illegible]

[illegible]

[illegible] the Ki and the Iare Bedi are close, which will be briefly discussed on a later place.

Corresponding to the uniformity in language, the custom exists on the same among the Ideoi and Wokandi, whereas the Ivi and Ki with Iare Bedi own which for only a few exceptions, live in general always under one of the name used by the other two branches. One finds a complete correspondence for all these branches in their religious views, and the essence of circumcision ceremony among both races. The peculiar characteristics of the boys is practiced by no other people or all, with the exception of one lineage of the Tonga, closely related to the Ideoi people. In both and Bedi, too, all three have the same customs, while in the rest of their customs one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their language.

The people as a whole are divided into three large tribes, the [illegible], the Ki Andirilyan, and the Ki Ambigona, each of which is made up of a number of lineages, and every Ivi, as well as every Ki Iwadi and Ki Andeni, is a representative of one of these lineages.

If we now intend entering further with the ethnography of the Ideoi in particular, which is of the same race that of the Wokandi, we are thereby including the ethnographic traits of the entire people for the knowing of individual differences has been developed among the Wokandiin the course of time and under the influence of changed conditions will be reserved for the third part.

/197 Second Part

I.

(Ideoi) Tribes, lineages, subdivisions. — The Ki gimbi lineage. — The chief. Ob-ede and policy, magic institute, genealogical row, village, communities, feasts. — The ceremonies. — The Ki Mbwale lineage. — The ceremonies.

Every tribe (Ki ekelawa) is divided, or has closely been connected, into a number of lineages (Ki ekiele, Ki ekiel). Among these, in turn, one distinguishes principal lineages (Ki ekiel ekiele

[illegible] cont./
[illegible] premises, beads, chains, or even a head of small livestock.

During the last two months before her confinement the woman is given only a meager diet, so that the birth will be easier. Here, too, as among the Ndemi, the pregnant woman wears no ornaments. On the day of the confinement the husband may not leave the camp. The mother or mother-in-law acts as midwife. Besides the obstetric methods of the Ndemi, there also exists here the custom that the husband, to increase the labor-pain activity, perhaps maintains with his calves the chest, abdomen, and back of the woman giving birth and then massages them gently with circular movements. While doing so, he several times calls out the words "Mighty God, let the child come out!" The umbilical cord (or navel) is severed with a razor-knife (knife) and then, together with the placenta, buried in the hut. It is not the object of superstitious customs. It is regarded as unlucky if the child's upper incisors come through before the lower ones; it is believed that this will cause illness or death in the family. The young mother may not leave the hut until five days after her confinement, not of consideration for her health, but for superstitious reasons. The suckling period lasts one and a half to two years. Besides mother's milk, the little one is stuffed with a great deal of the fat of game, of which that of the large pachyderms is particularly valued as infant food.

Deformed newborn children are killed by strangulation by the midwife immediately after birth. The highest figure known to me [illegible] of confinements of one woman was 11. From 77 aged Ané women questioned, 504 children were born, which gives an average of 6.7 per woman. Of these, 41, therefore 53.4 per cent, were girls, and 73, therefore 47.4 per cent, were boys. Before their circumcision 71 = 45.1 per cent had died, in which the stillbirths are included. Until their circumcision the children live in the hut of the mother.

that one thing he must be both the fourth and fortieth; and it does not apply to the bridegroom's settlement to work for [illegible] their [illegible] a goddess.

Marriage with Fourth

Eighteen marriages were recorded in genealogies between Fourths and Fourth or members of the Fourth group:

Fourths and Fourth women: 6	Fourths and Fourth men: 7
Fourths and Fifth women: 5	Fourths and Fifth men: 5
Fourths and Tufa women: 7	

Marriage of Fourths women to members senior to her due to the seniority of the Fourths, which by these rules would have meant that the [illegible] would have considered an [illegible], such marriages also raises the questions of rank in the Fourths.

Polygyny

Although there is no objection to polygyny, Fourths seldom have the means of supporting more than one wife at a time. Except [illegible] were occupied in exchange after a wife's death or [illegible]. In one genealogy a woman had on her [illegible] successive husbands, none of them her husband's brothers, and her only issue was one daughter.

Re-marriage of Widow

Under the Fourth, the Fourths recognize the re-marriage of widows to the nearest available kin [illegible] of husband's to their fathers, brothers, or other representatives [illegible] to [illegible] consent. Widows normally live with their husband's children, either in their parents, or else live alone.

Divorce

Divorce is rare, and is of one kind only: [illegible]. The husband can [illegible] the return of the [illegible]. But a wife who has been [illegible] can [illegible] for any cause whatsoever.

Birth

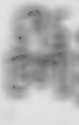
[illegible] between husband and wife stops at the fourth or fifth month of pregnancy, and is not renewed till the child is about six months old. Birth takes place in the husband's hut, the husband going to live elsewhere [illegible]. The cord is severed by a midwife, [illegible] with the mother to prepare it [illegible]. She stays in the hut for six or seven days after the birth, and the child's body must be kept covered for several weeks, even the father being allowed to see only its face. The mother must be purified by her husband, who [illegible] a [illegible] cooked by male [illegible] [illegible] to her work of the [illegible] and [illegible] [illegible] [illegible]

Marriage with Jewish

Eighteen marriages were recorded in genealogies between Gentile and Jewish or members of the Mosaic group:

Gentile and Jewish husband	Gentile and Jewish wife
Gentile and Jewish wife	Gentile and Jewish husband

Marriage of Gentile women to Jewish men is due to the poverty of the Gentile which by their early death has made that the Jewish family considered an important, more marriages also mean the conversion of wives to the Gentile.



Polygamy

Although there is no objection to polygamy, Gentile writers have the custom of marrying wives from one child or a time, though present cases as a result of a marriage with a child's death or desertion. In any genealogy a woman had on the other hand, remained husbands, some of these the children's mothers, and the only three was one daughter.

Re-marriage of Widow

Unlike the Gentile, the Gentile recognizes the re-marriage of widows to the second husband as practices of Indianapolis in their letters, Gentile's, in other representations in a Gentile's marriage. Whether eventually the wife their husband's relations, return to their parents, or into the street.

Divorce

Divorce is rare and is of one kind only, consequent. The husband may obtain the divorce of his indispensable. But a wife who has been a child cannot be divorced for any cause whatsoever.

Death

Immediately between husband and wife stops at the Gentile at fifty month of pregnancy, and it can interrupt life the child is there for months old. Many cases there is the husband's love the husband going to the Mohammedan worship. The wife is accepted by a polygamy, superstitious with the number is present of Gentiles. The stage is the first for as a Jewish ritual gives the birth, and the wife's body grows by their consent for several months when the father being different is not only for him. The Gentile wives by guardian by her husband, very little a great support by each Gentile customary in for the wives of the wives and only the by the husband's grave present from the movement by the Mohammedan, and Gentile. Children and husband's the age of about a year. Three are and Mosaic and the mother's Jewish ceremonies custom by more birth wives by separation by the killing of a year infant is same by the women and the religious friendly. The Gentile, and that if a man has an a wife in the case where the wife leaves family, the king and divine spirit, which as custom.

Children's mothers from their wives, the wife's wives, and wife's by the Gentile the wives is not upon they marry by their wife's a preceding spirit. The person a principal wives a grave before the child are such. In the Gentile wives, it a their grave upon such and a certain knowledge wives. In ceremonies of the Gentile women. Children who this to grave Mohammedan wives after wife's a wives, physical practicality. After circumstances, Gentile wives and an wives wives wedding Gentile

6. Birth

Intercourse stops at the fourth or fifth month of pregnancy, and normally is not resumed till about six months after the birth of the child. When the woman's time has come, she can be "eaten the bed", and the husband must then lodge elsewhere, either building himself a rough shelter or living with one of the neighbours in the settlement. During the act of birth the woman is helped by a midwife, sometimes and her mother is present if possible. She stays for six or seven days in the hut after giving birth, and may then see her husband for the first time since she "entered the hut". The child's body must be kept covered for several months after the birth, and only its face may be seen, even by the father. At this stage the mother must be purified by her husband, who kills a goat (which he must buy or steal if he has none of his own), and rubs the fat and undigested grass from its stomach (*gwak*) over her face, breasts, and belly. After about three months the husband may come back to live in the new hut.

The birth of twins is not liked, for they are abnormal, and the midwife may, unless very expert, bother ("they are bad because they make the mother confuse"). If the father should have got a copy of his totem since being put there in him, it is believed that that copy will never vanish as normal. The most cumbersome aspect by the birth of twins is removed by the killing of a goat (which the husband must get by any means if he cannot buy it) to be eaten by the mother and her female friends.

A girl who has a child before marriage is called *ya-wanag* the fourth complete and becomes entitled thereby as a mouth. She may be purified however, by the man responsible or one of his male relatives who must kill a he-goat. The meat is eaten by the men and women of his settlement, but not by the girl, and the mark or undigested grass from the stomach is rubbed by one of the women over her face, neck, and breasts, and then washed off. By this means the taboos drop again, unlike with people owning the *Tsaxis*, who remain confined all their lives.

A baby is confined as a rule until the mother is well advanced into her next pregnancy. Any excellent period was given as "twelve months". If the mother has no milk, or not enough, she gives them boiling fat with cheap oils, but as often as not to such cases the baby dies of starvation. It is treated by being dipped daily in cold to warm, and for its application to the nipples of something bitter generally a concoction made from the root of a bush called *Goldenrod* (*Tsaxis tsimsyan*). At any time it is fed with milk from a small goat, but if no milk can be got it is given honey instead. It is also given fats of meat not by mouth but fed from a spoon made of a piece of goat's horn and goat's milk from mixed in wooden soup bowls with honey.

If the mother dies in childbirth, her husband's brother or some other friendly relative takes charge of the baby and feeds it milk with from a small horn. If milk cannot be got honey and goat are eaten, but very much dislike that as they say produce fits. Sometimes the child may be adopted by a married couple.

Adoption is the process where an unmarried girl has a baby. In such cases it may be arranged for a childless couple (...) who have had their children or whose children have grown up and left home, that wealthy pair the son considers when it accepts the burden. An adopted child has the status of a man's own child. Adoptions may be arranged cases by by previous arrangement. It has happened, I may add, that a person who has spent a season of getting with may have had a woman get the girl pregnant, and given money that he will adopt the child when it comes. The mother of the girl accordingly tells that when the girl "leaves the hut", and the prospective wife receives the baby in her own home as soon as it lives. The child is sold with them a small sum, and the foreign woman then each father will be all right. So that you "sell a child and can sell the next one." Illegitimate children are called if authority are to invest in unique kinds.

9. Wedding and Dowry

Marriage may be prevented by a husband who worries his wife with another man, by divorcing the male offenders until an arrest. If he sells him to her to pay the normal compensations for husbands. He may also have his wife, when asked by "wants till she has got paid", as they use to show to have a gain the fact, which they are together. If man does not receive the wife for a wedge per of pregnancy, but only if she is a had and supported and she is considered, wages and other way.

When a man has also such thoughts, could as the wife is divorce by one, to wife or son of the ceremony is long has gathered his divorce and money. Taking a glass of beer to wife could as it and gives one and is by children or wife taking his other out towards his and being present and looking on. This also found his face is his, his man saying to his wife, that announced that the process, or by guarantee (1) have further our meanings or his have has have children, or have our have we"). So, as this made by cases of by his and would return to and a his father. The and a husband who has put have his husband a wife was by divorced, and then has have a wife as divorce a guards by by have of a and complains his away, which was complicate a settlements.

10. Religion

In house a months we have as many time a is as you his child above this society a man has his as with a (...) Religious may there has to and is by ceremonies. The one thing has this used is his ceremonies a marriage of a man who his death or ceremonies of his wife, or which I wounded from away. Children again whether ceremony, living accounts, when with that husband's brothers, according a that parents, a one living when. In his genealogy, however, I found a woman who was married to that ceremony husbands, even of whom was his husband's brother, and having an open his son daughters. The Kwoma homestead is marked upon his association of marriage a living a and several ceremonies

draft specific to it. People need to be aware of a Commons office, agree policy, being given to their programme at each General office, or for use for the accountable report of the gathering, and steps to promote ways to supplement by other thought by other members. The business of the council is done with the aid of a set of formal rules to be followed and a 3-5 week a social gathering which is done in by the vice council through to schoolwide has become a social host (previous chairman). Business is done first, and the chairman sees notices. The subjects which may be discussed include:

1. Disputes between members of the club;
2. Training disputes;
3. Disputes about boundaries of hunting area;
4. The performance function which a chairman has called a member of another club;
5. Proposals entries for club;
6. Except honorarium between a club and a gift of the club. Disputes under heads 1-4 are settled by discussion, the basis of the council ensuring for the opinions the views of the members. The rules themselves is not considered the other members of the club, the such a case might be the event to get property. Two common body points to go, with the therefore known, after a short and impartial hearing of cases of law go to the rule of the matter of the most powerful biblical point of a impartial person who can be safely followed to use these judgement to avoid.

More serious matters, the three rules heads 5-6, are dealt with the the vice by discussion, but there is an still a more traditional procedure is follow. When a chairman has called a member of another club, the council of the club must also assist to discuss the consequences possible, and a chairman is encouraged only with the aid to the council of the chairman's club to hear proceedings, which also a performance chairman, are heard before the most powerful place can difference class (a) (control), and the matter is not passed the other of we club. When a club has a member of the vice club, the chief matter a person called by club. Then, the members has to have some heard view and left a and then chief the for a different. Then all each of both the hunting statement each of the body of the members can there be was to be provided you which two of the all each of the members of a can with the good to be. The extract from which the is a standard down to a per cent if the function has vote of the vice, to most per can to purchase a club. As a function per a vote month and a vice league the 21st has a club a per to vote being agreed of weight, and the statement as per of both which together with the convening of the body, then the from the performance council to the dissolving of business there. There is no provision of compensation for the member of a chairman, but the members have 21st a set up to the former's will we vote to help towards the expenditure. The club a council with be probably committee to which there you the trouble that there a vice which to a small one.

Except honorarium between a club and a gift of the club to not an offence (provided the gift does not have a vote), though the have to are offence

[illegible]

[illegible]

[illegible] marital relations. — Polygyny. — Sororate. — Dues of being betrothed. — Conception of the young man to the dues of the married. — Bride price. — Paying the manner of the father of the bride. — Exchange of wives. — Obstacles to marriage. — Breaking the marriage. — Dissolution of the marriage.

[illegible] The marital relations also offer little that is new. Polygyny exists only to a limited extent; most of the people are too poor to acquire and support more than one wife; only a few have two wives, and if a man has three or more he is a rarity. Betrothal to certain childhood ages is to be more frequent here than among the Ibibio, but as much binding and without legal consequences. As a rule after circumcision the youth is betrothed to a girl eight to ten years old, after his father has prepared for him to be married. As among the Ibibio, the [illegible] betrothed persons live apart and may not even see each other. The bridegroom lives with a girl in the new camp, and in his other, the bride with another youth. If the bride becomes pregnant before the wedding, dissolution of the betrothal does not always take place, as among the Ibibio, but rather the one who made the pregnant must reimburse the bridegroom by the payment of a head of cattle.

[illegible] Here, just as among the Ibibio, the young men of an age class together decide upon their wedding; the meeting of the married, and their fellow companions confirm this decision by a feast consequent-ing to the [illegible] of Mb, to which friends and neighbors participate. They are served goats and heavy beer, the latter of which, however, the marriage candidate may not yet drink. They like to eat the meat for the day after a successful elephant hunt, so that the guests can feast heartily on meat.

[illegible] Before marriage can be entered into, the bride price is to be paid. The bridegroom usually gives the father of the bride, even before the circumcision, five pots of beer and five bedcloths, and, even after the circumcision, half of a dark female elephant with the rest due belongs to its fellowmen, two head of cattle, which

4:Huntingford E-S (1938-1939) 1951 FLA Dorobo FLA

7. Names

A Dorobo man has normally at least four names: (1) spirit-name, (2) porridge-name, (3) nickname, (4) patronymic, though he does not use them all.

(1) *Spirit-name.* The choice of a spirit-name, *kaisat ap ememitik* (or, *aik*), may be determined in one of three ways: (a) a pregnant woman may dream that an ancestor of her husband's visits her and tells her to call the child after him; (b) after the child is born, the father calls in his brothers and his wife, and one or two other near relatives on the paternal side, and they recite a number of names borne by their ancestors, pausing after each name: when the child moves, the name last spoken is given to it, this being one of the ways in which the ancestors indicate their will in the matter of names; a little snuff is blown up the child's nostrils to make sure that it does sneeze; (c) by taking the name of a relative in the next generation but one, as in the case of Arap Mising's family, whose spirit-names were chosen in this manner:

	Porridge-name	Spirit-name
Father's father:	Kipun	
Father:	Kimising	
Himself:	Kimnyo	Kipun
His son:	Tiongol	Kimising
His son's son:	not yet (will be) born	Kimnyo Tiongol

The second and third methods seem to be the commonest, and their use depends on family custom; the first method was described to me, but I believe is seldom used. The spirit-name once given is never spoken, and is known only to the bearer and those who were present when it was given; its purpose is to link the bearer with a specific ancestor, and to ensure remembrance of his name.

(2) Porridge-name. This term is borrowed from the Nandi, who call it porridge-name because it is given at the time when a child is first fed with porridge or gruel (*kaisat am mumwek*). There are two methods of choosing this name. The father's parents, if alive, and other elderly paternal relatives, meet in the father's hut; they drink beer, which is not shared by the child's father and mother. The father's mother, or some female relative on the paternal side, then holds the child in her arms and says, *Kibwris Sionen*, "we call you Such and such a name", announcing a name which the relatives have chosen from either (*a*) some circumstance connected with the child's birth, like the time of day when it was born, or some recent action of its father's; or (*b*) the name of an ancestor of the next generation but one, as in the case of spirit-names; this second choice is made when spirit-names are not based on the alternate generation system.

(3) Nickname. This is not an essential name, for all do not have a nickname. When given, it is generally derived from some physical peculiarity or habitual action of the person concerned, like Kipkatam, "left-handed", Kimnerkat, "fat neck", Parngetony, "headkiller".

5. Birth

Intercourse stops at the fourth or fifth month of pregnancy, and normally is not resumed till about six months after the birth of the child. When the woman's time has come, she cut the "navel-string", and the husband must then keep elsewhere, either building himself a rough shelter or living with one of his neighbours in the settlement. During the act of birth the woman is helped by a midwife, sometimes and her mother is present if possible. She stays for six or seven days in the hut after giving birth, and may then see her husband in the day time when she "cleans out the hut". The child's body must be kept covered for several weeks after its birth, and only its face may be seen, even by the father. At this stage the mother must be purified by her husband, who kills a goat (which he must buy or steal if he has none of his own), and rubs the fat and undigested grass from its stomach (*nyati*) over her face, breasts and belly. After about three months the husband may come back to live in the new hut.

The birth of twins is not liked, for they are abnormal, and the old men say, *nzeve ano nzeve kamue* ("they are bad because they make the mother useless"). If the father should have set a trap at the time when twins are born to him, it is believed that that trap will never catch an animal. The most unfavourable omen caused by the birth of twins is removed by the killing of a goat (which the husband must get by any means if he owns none) to be eaten by the mother and her female friends.

A girl who has a child before marriage is called, as among the Kamba, *mwanaisi*, and becomes unclean ritually as a result. She may be purified, however, by the man responsible or one of his male relatives who must kill a he-goat. The meat is eaten by the men and women of the settlement, but not by the girl; and the stick or undigested grass from the stomach is rubbed by one of the women over her face, neck, and breasts, and then washed off. By this means she becomes clean again, unlike such people among the Kamba, who remain unclean all their lives.

A baby is suckled as a rule until the mother is well advanced into her next pregnancy; the standard period was given as "twelve months". If the mother has no milk, or not enough, she goes about begging for milk, *mwati nda*; but as often as not in such cases the baby dies of starvation. It is weaned by being dipped when it tries to suck, and by the application to the nipple of something bitter, generally a concoction made from the root of a bush called *kothoni* (Kamba, *kitumati*). At this time it is fed with milk from a small gourd, and if no milk can be got, it is given honey instead. It is also given bits of meat cut up small and fed from a spoon made of a piece of gourd; and gruel made from maize or sometimes meal mixed with honey.

If the mother dies in child-birth, her husband's mother or some other female relative takes charge of the baby and feeds it with milk from a small horn: if milk cannot be got, honey and gruel are tried; but very small babies fed in this way seldom live. Sometimes the child may be adopted by a married couple.

[redacted]

[Facing P. 96]

Ø Baby

Gathering eggs o Ga Kaina is often aware of pregnancy and normally is not revealed till about six months after the birth of the baby. When the woman's time has come, she will be "taken to bed", and the husband must then help themselves, while building himself a rough shelter to stay with and in the neighbours to his permanent. During the day of birth he invites a midwife by a midwife, sometimes and the mother's parents if possible. She stays for up to seven days to the hut after giving birth, and may then go the husband for the day time when the "woman is in hut". The child's birth must be kept secret for several weeks after the birth, and only to two days by sons by the father. At the age the woman must be purified by the husband, who kills a goat which he must buy or steal if he has none of his own, and eats his fill and refrigerator pass from to forward to get rid her family and baby. Also about two months the husband may come back to live in the new hut.

The birth of twins is not liked. So they are abandoned and the mother (or parents who would have ("they are not human like ours to mother animals"). If the father should have an a say in the new twins can have to live, it is believed that the twin will never walk or speak. The most unfortunate aspect by the birth of twins is observed by the killing of a goat which the husband must get by any means if he were ever to be taken by the mother and the female friends.

A girl who has a child before marriage is called as among the Ovaherero and becomes ordinary member as a result. She may be punished however by the new responsible as one of the most children who must kill a he-goat. The meat is eaten by the men and women of the settlement, but not by the girl, and the skull or undigested grass from the stomach is rubbed by one of the women over her face, neck and breasts and then washed off. By this means the becomes clean again, while each people among the Ovaherero, who consists another all their lives.

A baby is suckled as a rule until the mother is not pregnant and for one pregnancy. The standard period was given as "twelve months". If the mother has no milk, or not enough, she goes about begging for milk, cows etc., but as often as not is such cases the baby dies of starvation. It is weaned by being stopped when it tries to walk, and by the application to the nipples of something bitter, generally a concoction made from the root of a bush called bushbush (Tswana, Setswana). At this time it is fed with milk from a small goat, and if no milk can be got, it is given honey instead. It is also given bits of meat cut up small and fed from a spoon made of a piece of gourd, and gruel made from maize or sorghum meal mixed with honey.

If the mother dies in child-birth, her husband's mother or some other female relative takes charge of the baby and feeds it with milk from a small horn. If milk cannot be got, honey and gruel are tried, but very small babies fed in this way seldom live. Sometimes the child may be adopted by a married couple.

[illegible]

[illegible]

[illegible]

[illegible]

[illegible] help her with to bring up her children, overlooking her duties as her to attention which [illegible] children are still age.

[illegible] the most known and interesting among the Hundu Chinese way [illegible] lives during the period of my field-work, at Rajadesa, with his mother [illegible], and his family consisted of the following:

[illegible]

[illegible] Ang Shiang :: Lajhoemoen ()

[illegible] Rajamin (), Rajhoemin (), Dongan (), Hinah (), girl and one unmarried [illegible] from a few days

[illegible] In July 1938 Ang Shiang is a fish-vagrant but in the middle of the summer of his settlement, due to [illegible] of the same year he had moved to a new hut with a [illegible] and outside his dwelling. His mother's hut was about 100 yards away on the other end of his dwelling. His three boys and [illegible] ages, by descent being a Chinese, except from about two years old domestic girl friend, the other girl, was about seven. In this hut to sleep in the back part of the hut, his sons, when the guests are kept at night, and the left sleep with his children in the front part, his father. This was because she was nothing a baby. Actually Ang Shiang should have gone to sleep in another hut, but since this was not possible for several reasons, the mat dividing his room from the living was placed to make his room room or a separate hut like original type of Hundu but has no partition at all.

[illegible] One day I arrived earlier early and found that Lajhoemoen had gone across the valley to get a sea waterspot, leaving Ang Shiang in charge of the children. Hinah looked after the baby, but still he found his responsible little sister a heavy burden, and was glad when his wife returned a little before noon. Lajhoemoen fed the baby, and the children helped to eat, and soon [illegible] to the river to wash. In this time, when there is no [illegible] water work to be done, the other people sleep. He even says Lajhoemoen comes to Ang Shiang's dwelling to help with the cultivation. Lajhoemoen normally works there too, but not every day while the baby is so young. When she does go, Ang Shiang goes with her, and the baby is left with Hinah. But the dwelling is not so far away that Lajhoemoen cannot hear the children if anything goes wrong.

[illegible] The Hundu elementary family might thus seem to be independent and self-contained. But it is not so really, and other relatives have a share in the upbringing of the children, not in spite of the parents' authority, but in support of it, and the relative who must be considered next to the parents from the Hundu point of view is the father's brother, papa, who often lives in the same settlement, or if not, only a short distance away. This person, especially when he is an older brother, has a position of authority over his brother's children at least equal to that of their father. He will, a classi-

1: Huntingford E-4, 5 (1938-1939) 1953 FLA Dorobo FLA

Means by which the Dorobo can acquire stock are: (1) By bridewealth: when a Nandi marries a Dorobo girl, her father gets the normal Nandi payment of one cow, one ox, and a varying number of goats. (When a Dorobo man marries a Nandi girl he has to find somehow the same amount of cattle.) (2) By gift exchange: a Nandi makes friends with a Dorobo, mainly to get honey, and after the first step towards friendship has been taken, the Dorobo gives him some. Later the Nandi gives a goat, and the way is thus paved for the exchange of cattle. This exchange is independent of the honey, which is given by the Dorobo from time to time. This process of acquiring cattle is of course a form of payment, but it is purchase under the peculiar conditions of forming a friendship by a previous exchange of gifts, for the Nandi do not readily part with their cattle, and it is necessary to lead up to the final stage by a preparatory exchange of other things. So far the Nandi have been willing to exchange male stock only in this way; to get cows the Dorobo have had to rely on bridewealth. (3) The Nandi will sell goats for cash, but not (at least up to 1939) cattle. The Dorobo do not seem to want sheep; they had none in 1938, nor when I first knew them in 1937.

Inheritance

The general rule is that when a man dies, his goods are kept by his wife for handing over to his children if they are small, or they pass straight to them if grown up. When a man has neither wife nor children, his heirs are his brothers, his father's brothers' sons, or his mother's brothers' sons. Women do not inherit stock. Land rights in the forest pass to the eldest son, or to a brother, or to one of the relatives termed *mareiher* (see below, p. 62). Weapons are left to a brother, to a *mareiher*, or to a clansman. Dogs are left to sons, or else to a brother or *mareiher*. Goats are divided proportionately between sons, or pass to a brother or *mareiher*. The proportion is roughly as follows, assuming that a man left seven goats and three sons: to eldest son, three; to second son, two; to youngest son, one; to his wife, one, this and its offspring going eventually to the youngest son. The theoretical division of cattle is approximately thus: to eldest son, two; to other sons, one each; to wife, one, which reverts to the youngest son.

Division of Labour

Everything connected with hunting, bees, and weapons is done by men; domestic work by women. The main occupations are divided thus:

Men:	Women:
Making fire.	Building houses.
Hunting.	Collecting vegetable food.
Trapping.	Getting water and firewood.
Putting meat on to cook.	Looking after meat cooking.
Making honey-barrels.	Cooking other food.
Collecting honey.	Milking when there are cows.
Making weapons.	Making baskets.
Trading with the Nandi.	Preparing skins.
Getting coloured earth.	Making clothes, etc.
Cutting wood.	Care of the children.
Making boats.	Sweeping huts.
Preliminary heavy work in the cultural.	Cultivation, all stages.

Children of both sexes help in tending and herding stock; girls help with the house-work and milking, though boys are allowed to milk till they are circumcised. This division is followed strictly with regard to the first nine main activities; but with the last three there is some overlapping; and the essential domestic work and cultivation are often done by men, especially when they are unmarried or live quite alone.

4:Huntingford E-5 (1938-1939) 1951 FLÁ Dorobo FLÁ

and (3) *Macuker*, the sons and daughters of both his father's brother and his father's sister. There is thus a sharp distinction between cousins on the father's and the mother's side, and a divergence from the Nandi usage. That the mother's brother's children count as *mama* may be due to Nandi influence, for, as we shall see, the mother's brother is not the relative of importance to the Dorobo that he is to the Nandi. *Kesenda* is a word meaning 'brother, sister' which occurs in other Nandi dialects, though not in Nandi itself, and may possibly be derived from the verb *kesen* 'carry a child', it being one of the duties of a child, especially of a girl, to carry about its small brother or sister.

(woman speaking)

According to feminine terminology, these relatives are grouped in four classes, with a change of term: (1) *Kesenda*, brother and sister; (2) *Apulaiyo*, mother's brother's children; (3) *Macuker*, the children of both father's brother and father's sister; (4) *Eiyo*, the children of mother's sister.

8. The First Descending Generation

(man speaking)

The children of a man and his brothers are all called *apaa*; but the children of his sister and of his mother's brother's children are *mama*, his sister's son having also the alternative term of *weirit ap cepto*, which means 'son of the girl', and is applied in Nandi to father's sister's son who is otherwise called *mama*. The Dorobo grouping which places the sister's children in the mother's brother's category is unusual and there is here a wide divergence from the Nandi rule.

(woman speaking)

A woman calls her children *lakuet*, 'child'; her brother's and sister's children are *aeago*; the children of her mother's brother's children, *akui*; and the children of her mother's sister's children are *eiyo*. The term *aeago* in Nandi means 'sister of a parent', and refers to the father's sister; in Dorobo it is applied to the reciprocal, the brother's son, and is extended to the sister's son. It is also used, as in Nandi, as a term of endearment to small children.

We now return to the children, male and female, of the father's brother's children and of the father's sister's children, all of whom are called *macuker*. According to statements made independently by four different Dorobo elders, a man may marry one of the girls whom he calls *macuker*, that is, his father's sister's daughter's daughter (the daughter of his cross-cousin).

6:Huntingford E-5 (1938-1939) 1953 FLA Dorobo FLA

224 476 In a settlement or clearing inhabited by several people, meat would be shared in a definite way:

I	Or	II	Or	III
A a man		A a man		A a man
B his father		B his brother		B a clansman
C his brother		C a clansman		C a clansman

A supplies B first, then C if C has no food; but before anybody else is given meat, A must give some to his father or father-in-law if they are within reach. Vegetable food, being accessible to all, is not shared.

462 There is a clear division of essential work between the sexes. Everything connected with hunting, bees, and weapons is done by men; women do the domestic work and other things of that nature. The more important normal occupations are divided thus:

Men:	Women:
1. Making fire.	Building houses.
2. Hunting.	Collecting vegetable food.
3. Trapping.	Getting water and firewood.
4. Putting meat on to cook.	Looking after meat cooking.
5. Making honey-barrels.	Collecting other foods.
6. Collecting honey.	Milking (if cattle are owned).
7. Making weapons.	Making baskets.
8. Exchange with the Nandi.	Preparing skins.
9. Getting coloured earth.	Making clothes, etc.
10. Cutting wood for uses other than firewood and building.	Care of the children.
11. Making fences.	Sweeping huts, etc.
12. Preliminary heavy work in the shamba [1].	Cultivation — all stages.

● [157] Children of both sexes help in weeding and herding livestock; girls help with the housework and milking cows; boys milk till they are circumcised.

In the list above, the sex-division is followed strictly with regard to the first nine items of men's work; in the last three there is a certain amount of overlapping. Of women's work, basket-making, the preparation of skins, and making clothes are strictly confined to women, but the essential household work of preparing and cooking food, sweeping, and cultivation is often done by men, especially when they live alone in the state of monosis; such men get baskets and suchlike from women in exchange for meat and food. House-building, including cutting and carrying the wood and roof-material, is all done by women, unless a man is living alone, or has to build a new hut at a time when his wife is for some reason away; Arap Minin, for instance, had to build a new hut when his wife was ill, and in consequence had to di-

433 the absence of pastoral and agricultural techniques and vocabulary, by their myths, and in fact by everything about them. To-day it is true that they are becoming agriculturalists, as the following analysis of their economic activities will show:

		Past:	→	Past:	→	Ideal:
Family	Men:	Trapping game in the forest				
		Making weapons, honey-barrels, etc.		Cultivation of shambas		Stock
		Some: working for wages				
	Women:	Preparing the results of trapping				
		Making baskets, skin clothes, etc.		Cultivation of shambas		
		Housework and food collecting				
	Children:	Weeding				
		Herding				
		Housework				
Men Living Alone:		Trapping				
		Making things				
		Preparing the results of trapping		Cultivation of shambas		Stock
		Cooking, housework				

Dorobo life therefore converges on cultivation, with a hunting background, and stock in view as the ultimate achievement. For though the hunting instinct is still very much alive, and though a great deal of time is now spent on cultivation, there is no doubt that the Dorobo (in 1939 at least) had a livestock economy in their minds as the ultimate goal.

2. Economic Activities

a) Bee-keeping

Honey is to the Dorobo what milk is to the Nandi. It is semi-sacred and has a high ritual value, in consequence of which certain rules must be observed lest the supply fail. A person must not eat fruit or blood on the same day that he has eaten honey, though he or she may eat meat. After eating honey, bits of the comb must not be left lying on the ground, but must be hidden in the undergrowth. Arap Minie said, somewhat unconvincingly, that the reason for this was "that other people shall not see them and so be led to your honey-barrel". But this is probably not the true reason, which may be either simply respect to the honey, from a fear that if treated disrespectfully the supply will fail; or else fear of a witch putting a spell on the bees or honey

6:Huntingford E-5 (1938-1939) 1953 FL6 Dorobo FL6

is to get as much as possible of the crop out of the way so that ploughing can start at once without having to wait till the crop is ripe. But the Dorobo had, all the same, made a step forward, for a solid, compact stook is less likely to be devastated by animals than plants standing scattered over a field.

By 25 November, 1938 the Kipukua people had reaped their crops. The shamba here was about an acre in extent, and was divided into four approximately equal-sized plots. There was little maize, for some had been eaten on the field and some had been destroyed by vermin; what was left had been stooked, and anything like an accurate estimate was impossible, though there might have been two or perhaps three bags in the stooks. If we estimate that the equivalent of two bags might have been eaten, and two more destroyed by vermin, we have about 6 or 7 bags, a somewhat high estimate for a crop grown mixed with eleusine, but not impossible[80]. Of eleusine, one plot yielded 3 bags, and another 2 bags (that is 5 bags from half an acre), not a great deal, certainly, but a fair yield under such conditions, and most useful as food, for the Dorobo eat most of their eleusine, and turn very little of it into beer. Maize and eleusine are ground by crushing on slabs of granite (*liteito*), and the resulting meal is made into gruel (*musarek*) for the children, and stiff porridge (*kimiet*) for the older people; it is generally eaten with a mess of vegetable food (*inguek*) prepared separately.

Storage of crops is not yet a very difficult problem. A few of the Dorobo, it is true, have built granaries of Nandi type, hidden just inside the forest to prevent thefts by the Nandi, for anyone can lift up the roof of such a granary in the night. But since so much of the maize is eaten on the field, what is left at harvest time can be stored in the loft; and the same applies to eleusine, for it does not yield a large amount of grain. I saw no millet growing, and the Dorobo said they bought it from the Nandi.

As we have already noted, agricultural labour is divided to a certain extent between the sexes, but the distinction is not very sharp, and it was found to work out in the following way:

Men:	Both:	Women:
Heavy preliminary work	Digging	
Planting	Weeding	Collecting and burning weeds
	Reaping	

The heavy work includes lopping off branches in the Nandi manner, clearing bushes, and breaking up the ground when hard. Women may also plant, but the tendency seems to be for men to do it, though there is no absolute rule against women planting. Children help with the weeding, and herd the goats when there are any; old men herd cattle, and women also sometimes herd goats.

The Dorobo had not by 1939 acquired the Nandi belief that each eleusine crop requires new land, which in the circumstances is just as well; but they do not hesitate to give up using land which is unproductive. Thus,

[80] The bag is the standard 2 ½ lb. gunny bag used in East Africa, holding 200 lbs. of maize.

he found hunting on his area, though he would be liable to pay blood-cattle for homicide. 423 [682]

As for trapping, it is said that nobody steals meat from traps because their bellies would swell to a great size if they ate stolen meat. Public opinion, too, is strongly against such a mean crime, and is of itself a powerful deterrent. Nowadays trapping is the chief source of meat, and the common practice is for a man to set three or four traps at a time in different places, and to visit them every two days or so to see if anything has been caught. 224 [685] [626]

Monkeys and buck[1] are killed for their meat and skins; pig provide meat and gut for bow-strings. [237]

2. Agriculture.[2]

The Dorobo are in process of changing from a hunting to an agricultural existence, from the uncertain hunting economy to the more certain one of agriculture; and the same economic pressure which has forced them to till the soil is now encouraging a desire for cattle, which are being slowly and laboriously acquired. This leads in turn to a more self-supporting state, with less dependence on the Nandi for grain crops; and agricultural techniques, both in tillage and stock, are being learnt from the Nandi and from Europeans. 178 [224] [241] [233] [648]

Both sexes work in the cultivated plots (*imbaret*), and are helped by children, who weed the crops, herd the stock, and milk the cows. The crops grown at present are eleusine (*eleusine coracana*, called *wimbi* in Swahili) and maize; millet and tobacco are still bought from the Nandi, from whom the Dorobo also get eleusine and maize seed when necessary. Unlike the distribution of the forest into hunting areas, people cultivate the ground close to their own homes, and a group 241 [462] [857] [439] 241 423 [351]

[1] The buck killed are:
Kipsekst, blue duiker (cehpalophus aequatorialis). [136]
Mindat, red duiker (c. ignsi-issaci.)
Keremait, bush buck (tragelaphus scriptus.)
Irukutet, reed-buck
Kenyelet, oribi
Kipsomeret, water-buck (cobus ellipsiprymnus).

[2] I prefer the term 'agriculture' to 'horticulture,' for the latter implies mere cultivation, with no livestock, and in East Africa agriculture is almost always practised in conjunction with stock-rearing, even if only on a small scale.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

arap Ruto. There were also two old women, Cesikirikat mother of Arap Mining, and Cepkatet mother of Cesundil. With these lived Cesundil's young sister Cepkoiec, aged about 15, who helped her brother's wife to look after the two children, and slept either in her mother's hut, or in the hut of Cesikirikat, eating with her mother or with Cesundil and his wife. The three men Malakuen, Kipsang, and Kimutai lived together, eating with either of the old women (contributing their share of the food), while Kipungei lived alone, eating with his mother. Cepkoiec could marry none of these young men, since they were all her clansmen. Such an arrangement seems to be quite usual when a girl has reached puberty but has not yet been circumcised. At Sosoiyo a somewhat younger girl named Cepotip lived in a small hut (*sikiroinet*) with her youngest brother Kimitei (a *fama*). When she went visiting to the neighbouring settlement Ndoroton she stayed with women there who, when they came to Sosoiyo, slept in Cepotip's hut, the boy going out to sleep elsewhere.

Where other relatives are concerned, the age-set behaviour patterns tend to replace those of kinship, and even when people are related and within the *tilil*, they are for practical purposes little more regarded than fellow-clansmen. Indeed, in a clan settlement, such people have more influence and effect on their neighbours' children than blood-relatives who live at a distance.

In a primitive people like the Dorobo there is little formality in the educational system, which consists largely of training in obedience, behaviour, and techniques, which are learned from the parents and others with whom the child comes into contact. These contacts are not large owing to the nature of the country and the social system, and thus the relatives with whom a child is seriously concerned are but few. This narrow range of contact must be considered in the light of such important factors as the absence of tracks through the forest, the scattering of relatives, and the abnormal shyness and suspicion of the Dorobo.

Up to the age when a child can be of some help to its parents, both boys and girls are mainly with their mother, who teaches them the business of eating and living in a hut. She corrects childish bad habits and makes them familiar with the ordinary customs and precautions of every day life that have to be observed in Dorobo surroundings. The father corrects improper behaviour towards himself and the mother.

But at the age of usefulness, which comes a little before the onset of puberty, and depends on the child's growth and intelligence, there is a division of duties between the parents. The father begins to teach his son the elements of hunting and trapping, how to make things of wood, how to skin animals, and how to use a bow and arrow, in short, how to behave like a man and do man's work. The mother teaches her daughter how to manage a home, how to look after small children, and how to perform the normal tasks of a Dorobo woman. At this stage both boys and girls are in one respect general servants of the family; they have to herd any stock their father may possess, and make themselves useful about the homestead.

7: Wayland N-5 (ca. 1926) 1931 FL6 Dorobo FL6

Social Organization.—The Tribe.—The Wanderobo are very few in number, and are divided among three sections, each of which has its own habitat as follows (according to the Chief, who was my informant on this point):—

Section.	Habitat.	Approximate Numbers.
Kokuonya	Kokuonga	60
Ulugum	Nuwuugum	60
Lutwaim	Lutwaim	60

Each section lives in a single village of its own, similar in structure to that already described. The sections are not totemic, but they are exogamous, and descent is in the male line. The tribe has but one chief, who lives at Kokuonga (north of Kamoon). Chieftainship is hereditary, and no woman is ever permitted to wield the powers of a chief. The Ulugum and the Lutwaim are each presided over by a headman (paterfamilias).

Birth.—When a child is born the mother is assisted by female relations. There are no official deliveries, as among the Lalwor. The Wanderobo allege that there are no special ceremonies connected with birth. Should a child come feet foremost into the world he will be lucky throughout life. It is stated that the afterbirth is thrown away with the rubbish. After weaning, a child occupies his father's hut, if a boy, and her mother's if a girl.

Betrothal and Marriage.—The rules for betrothal seem to be very similar to those usual among the Lalwor, except that the prospective husband goes to the girl's people direct, without representation in the first instance. The consent of the girl and of the parents on both sides is necessary, and the number of gifts is not specified as it is among the Lalwor.

Marriage is celebrated by a feast in which the people of the two sections to which the contracting parties belong take part. There is no dance peculiar to the marriage feast. After marriage a man lives for two days and nights in the hut of his betrothed, after which she returns with him to his own village, there to occupy a new hut already built for the newly married couple by the male partner, after he has consulted the wizard with regard to the luckiest time for erecting it.

Burial.—All the dead are buried without special ceremony.[1] There is no special burial ground, but graves are dug "out in the bush," well away from the village.

Age Classes.—These appear to be quite unknown.

Crime and Punishment.—The chief offence is adultery. This, however, is a private affair, and is dealt with privately, for it is not a sin against the community. A woman who is guilty in respect of this is cast out by her husband, who seeks the offending man with a view to slaying him. Murder is, however, a tribal affair, for which the punishment is death. The Lalwor practice in this respect is not followed.

[1] This statement was subsequently contradicted, in so far as it was stated that the wizard attends at all burials.

[P.190,1]

Although by relationship all these brothers are theoretically equals, as being brothers, yet by reason of their age-grouping different age-sets are found in all three families, with the result that Kimisi and Kipkutik are socially inferior to their brothers Kiptanui, Kesimo, and Kipet, Kipor; while Leina, Kipilat, and Kipkeino are all inferior to Leteipa. So long as they were small this did not matter, but when they reached puberty, the inferiority of their status became noticeable in such things as exclusion from all sexual matters, and is reflected in the general idea that "So and so is only a child, and he must not expect to do the grown-up things that we are allowed to do." The same will apply to the next generation. 561 602 [858]

The general principles of Dorobo behaviour may be summarised thus (from the standpoint of "ego"): 602

To the 3rd and 2nd ascending generations: care and respect.

To the 1st ascending generation: respect, obedience (and care when old). Easy and familiar intercourse, but no loose talk or bad language.

To his own generation: considerable latitude is allowed between members of the same generation: obscene talk and jests, discussion of sexual matters and so forth are tolerated, though of course such talk must not become acts. The idea of mutual help and support, which is accorded by all to their parents and grandparents (when these are still alive) is more emphasised in the interrelations of those of the same generation.

To the 1st descending generation: all members of this are treated much as ego treats his own children (and this applies more or less to the 2nd descending generation). In this category are also included those members of one's own generation, e.g. younger brother, who belong to a junior age-set.

To affinals: wife's mother must be avoided, both indoors and out, and must not be spoken to; if met on a road, a man must get off the the road out of her sight. The wife's father need not be avoided, and 606

/241 cont./

V.

C00 Pregnancy. -- Behavior of the pregnant woman and her husband. -- Care and treatment of the pregnant woman, the woman in labor, and the woman in childbed. -- Killing newborn children. -- Fertility. -- Child mortality.

843 [842] [824] The opinion that the author heard expressed a number of times by Asá-Wandorobo, that pregnancy is more or less bound up with a definite time of year, and, to be sure, in such a way that either conception takes place at blossom time or birth takes place at the time of the fruitage of the poisonous tree Acocanthera abyssinica, appears surprising.

[224] /242/ During his wife's pregnancy the husband does not pursue a game animal shot at in hunting, because it is believed that the latter, at his approach, will resist the poison and escape. Therefore, after he has shot an animal, he returns to the camp and from there sends another man out to look for the animal. The pregnant woman [825] may not be beaten. Neither he nor the pregnant wife may step over a procession of migrating ants. She is forbidden to eat meat from a wild animal that died or was killed by a predatory animal, likewise soup, and furthermore honey in which dead bee larvae are found. She must avoid coming near a chameleon or a snake, or exposing herself to the heat of the sun for any length of time. All this, in the opinion of the Asá, would harm the fetus.

[302] [202] If the woman visits another camp, she smears her forehead with white clay beforehand in order to announce her condition to its occupants. On the way there she is accompanied by a little girl, [858] whom she leads by the hand. As the reason for this, the people [825] say that a miscarriage would take place if the woman went without a girl and on the way saw the previously mentioned weaver bird or heard its dil-dil-dil calls. A woman pregnant for the first time is 843 431 given gifts by all the people (men, women, boys, girls) of the camp and her friends in the neighboring camps at about the middle of her pregnancy. She is presented with a leather apron, a pair of ear pendants, beads, chains, or even a head of small livestock.

4:Huntingford E-5 (1938-1939) 1951 FLÓ Dorobo FLÓ

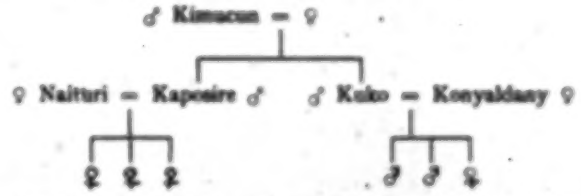
payment and a man has but few live stock) have induced a real affection of husband for wife, and a rarity of divorce. This is reflected in the husband's behaviour to his wife, and in the absence of the custom found among the Nandi of letting a wife sleep with a visiting age-mate. A wife being a necessity once she has been got, a man tends to do all he can to keep her, and he treats her well, with such kindness and consideration as can be shown to an inferior, giving her all the inducements to a contented life that are within his power. Although a man may be somewhat aloof when he is at home, his general attitude and behaviour to his wife form a good example for his sons to copy.

Children then grow up under the authority of two people who are more important to them than anyone else in the horde, their father and mother. The father has authority over his wife because he provides food for her and her children by his own skill, and a primitive woman cannot exist without the support of a man; in the old days a bad wife had nowhere to go if her husband brought himself to the pitch of divorcing her, except back to her parents, who would not welcome an extra mouth to feed. Over his children a man has that authority which is based on the respect felt for a person whom they know must be obeyed. Incidents of the kind that I saw one day at the home of a man named Cesundil are not uncommon. A child was yelling outside the hut. Taprandic the mother told it to be quiet: it merely yelled louder. Cesundil then said quietly but firmly, *Sis lahuanni* (be quiet, child), and it was silent immediately.

As Evans-Pritchard has pointed out, the behaviour of father to mother must influence the attitude of a son to his mother [1]. It is the mother and other women who look after a child till nearly the age of puberty; and to-day as in the past, though the father is no longer wholly occupied in hunting and therefore much more at home, the traditional pattern still holds good. I have more than once seen a man left in charge of his small children while the mother was away and treating them in the fussy sort of way that one would expect of a man not very sure of his ground — sure of his authority, which was not being called in question, but not at all sure of his ability to deal with childish problems which the mother on her return can settle at once. It is the mother who gives the children immediate comfort and protection; she it is who teaches them the elementary rules of conduct and decency, who impresses upon them that they must obey father, because he is father, and who sees that as they grow older they help her with such small tasks as they can manage. It is to their mother that children run when hurt or frightened, and it is by her that they are nursed when ill. She thus has a large claim on their affection, but this would be reduced if they saw her disrespectfully treated by their father. On the whole, the claim is reinforced among the Dorobo by the way men treat their wives. And in old age a mother is taken care of by her son, and whereas she brought him up in his infancy, so now in her old age she

[1] Man, 1929, 148.

ficatory mother, *niyo*, has a similar position, and if the father's mother is not alive, or living far away, she takes the grandmother's place in helping her husband's brother's wife; and being younger than the grandmother, can give more active assistance. This was the case with two brothers both married, whose mother was dead:



To Kaposire's children, Konyaldany took the place of the grandmother; and Naiturí did the same for Kuko's children,. The father's brother is the equivalent, as an authority in the lives of children, of the mother's brother among the Nandi and elsewhere, and is as near as possible a second father. Patrilocal residence as well as other factors no doubt account for this; and the effect is that the father's brother is someone to be reckoned with, a man with whom a boy should keep on good terms, and one of whom permission must be obtained before a boy is circumcised. Kimutai arap Ruto is Arap Mining's brother. He lived in the same settlement at Kipukua, and saw his brother's children every day. When he greeted them, he said, *Sopai, leiyo*, and they answered, *Epa, papa*. (Here *leiyo* is used loosely as a term of familiarity.) The father's brother gives the children food and other things; he teaches them much of what it is necessary for them to know, and when they ask him questions, like what is this grass called? what are you going to do with that piece of wood? what made those marks on the ground? and so forth, he answers them in such a way that question and answer become part of their education. He shows them his bow, arrows, and quiver, his knives, his honey bags. He takes them into the forest and tells them how people look after their bees, how they make honey-barrels, and how they take honey. He teaches them to use firesticks, and explains the magical observances towards bees and honey.

The mother's brother, *mama*, the father's sister, *pukut*, and their spouses (f. *mama*, m. *konyit*) are in a different category from the father's brother. Not only do they live in different settlements, but the mother's brother has no special position of authority. And while all Dorobo to whom I talked knew their father's brother, many did not know their mother's brother, either by name or by sight. Others knew his name, but had never seen him; and in one or two cases when I was taking down genealogies men had to ask their friends what their mother's brothers' names were. It is thus quite clear that the mother's brother is of little account, and that the father's brother is a much more important person.

Yet on occasion the mother's brother is accorded a respect that is not his customary due. Arap Mining was a great follower of tradition, but

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

arap Ruto. There were also two old women, Cesikirikat mother of Arap Mining, and Cepkatet mother of Cesundil. With these lived Cesundil's young sister Cepkoiec, aged about 15, who helped her brother's wife to look after the two children, and slept either in her mother's hut, or in the hut of Cesikirikat, eating with her mother or with Cesundil and his wife. The three men Malakuen, Kipuang, and Kimutai lived together, eating with either of the old women (contributing their share of the food), while Kipungei lived alone, eating with his mother. Cepkoiec could marry none of these young men, since they were all her clansmen. Such an arrangement seems to be quite usual when a girl has reached puberty but has not yet been circumcised. At Soosiyo a somewhat younger girl named Cepotip lived in a small hut (*nikiruiwat*) with her youngest brother Kimitei (a *Juma*). When she went visiting to the neighbouring settlement Nduroton she stayed with women there who, when they came to Soosiyo, slept in Cepotip's hut, the boy going out to sleep elsewhere.

Where other relatives are concerned, the age-set behaviour patterns tend to replace those of kinship, and even when people are related and within the *tilat*, they are for practical purposes little more regarded than fellow-clansmen. Indeed, in a clan settlement, such people have more influence and effect on their neighbours' children than blood-relatives who live at a distance.

In a primitive people like the Dorobo there is little formality in the educational system, which consists largely of training in obedience, behaviour, and techniques, which are learned from the parents and others with whom the child comes into contact. These contacts are not large owing to the nature of the country and the social system, and thus the relatives with whom a child is seriously concerned are but few. This narrow range of contact must be considered in the light of such important factors as the absence of tracks through the forest, the scattering of relatives, and the abnormal shyness and suspicion of the Dorobo.

Up to the age when a child can be of some help to its parents, both boys and girls are mainly with their mother, who teaches them the business of eating and living in a hut. She corrects childish bad habits and makes them familiar with the ordinary customs and precautions of every day life that have to be observed in Dorobo surroundings. The father corrects improper behaviour towards himself and the mother.

But at the age of usefulness, which comes a little before the onset of puberty, and depends on the child's growth and intelligence, there is a division of duties between the parents. The father begins to teach his son the elements of hunting and trapping, how to make things of wood, how to skin animals, and how to use a bow and arrow, in short, how to behave like a man and do man's work. The mother teaches her daughter how to manage a home, how to look after small children, and how to perform the normal tasks of a Dorobo woman. At this stage both boys and girls are in one respect general servants of the family; they have to herd any stock their father may possess, and make themselves useful about the homestead.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

normally go elsewhere for the night, leaving the hut to the men. In the matter of hospitality, relationship by blood, marriage, or clan is a deciding factor in the length of time for which a man may expect to be put up by his host. Thus, no matter what the age-set situation may be, a man who is neither a relative nor a clansman cannot claim more than two nights' hospitality on account of necessity, and will not be given honey-wine; while a relative or clansman may be fed for a week or even longer, and the host will give him honey-wine if he has any.

3. Behaviour

A brief summary of the modes of behaviour towards important relatives was given by a Dorobo in the following words: *Makicupe papa ne kosica a kopire laknat*; *makicupe kokwy papa*; *makimaaci korkat ak aiyo walek ce somis, amu ya, ngol walek ap kumisiet*; *kisrerencinkei tukul*. ("A man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we all play together, i. e. we are on terms of friendliness and 'clean fun'.") Generally speaking, seniority is a matter of age, except with respect to the father's brother and men of senior age-sets.

It is unlikely that any Dorobo ever sees his father's father's father, and the father's father is seen only by small children. The father's father is regarded much as one's own father. But the father's mother helps in the care of the children, and so becomes an object not only of familiarity but of affection as well to the children. To all of the father's generation a man should show respect and obedience. He must not insult them, nor use unsuitable language in their presence. Corporal punishment may be inflicted on a rude or disobedient child with the hand or with a stick, by father, mother, and father's brother. Verbal correction is also a common method of dealing with naughty children, and though a man would not as a rule say to a naughty child who had made him angry anything as drastic as *Amin celelei* (may you die of dysentery), in case the spirit-world took him at his word, he might go as far as *Iam piat* (eat dirt), an expression which if used by a child to a senior would certainly earn a beating.

Most Dorobo are fond of their parents, and treat them in old age with much kindness and consideration. Wherever I found aged parents living with their sons it was the same; and the more helpless the parent, the greater the trouble taken to make them comfortable. The old father of Pilo, to whom I have already referred, was such a one. Bent double, hardly able to move without help, he spent his time lying outside in the sun when it was warm, and indoors beside the fire when it was cold. He had to be helped in and out, and fed and looked after like a child; but it was all done cheerfully by Coimim and his wife, in whose hut the old man lived, and if they could not attend to him, Pilo and his wife did.

1:Huntingford E-4, 5 (1938-1939) 1953 FLA Dorobo FLA

585 237 591 that cow-dung be used for both the *kondo* and *kwenet*, and if there are no cattle in the bridegroom's settlement it must be procured from somewhere else. Marriage is patrilocal.

Marriage with Nandi

583 582 598 Eighteen marriages were recorded in genealogies between Dorobo and Nandi or members of the Nandi group:

Dorobo and Nandi women: 6	Dorobo and Nandi men: 10
Dorobo and Keyo women: 1	Dorobo and Keyo men: 1
Dorobo and Turik women: 1	

Marriage of Dorobo women to outsiders seems to be due to the poverty of the Dorobo, which in these cases would have meant that the women would have remained unmarried; such marriages also mean the accession of stock to the Dorobo.

Polygyny

595 587 Although there is no objection to polygyny, Dorobo seldom have the means of acquiring more than one wife at a time, though several cases occurred of re-marriage after a wife's death or desertion. In one genealogy a woman had no less than four successive husbands, none of them her husband's brother, and her only issue was one daughter.

Re-marriage of Widows

587 Unlike the Nandi, the Dorobo recognize the re-marriage of widows in the normal manner on payment of bridewealth to their fathers, brothers, or other representatives; it is, however, unusual. Widows normally live with their husband's brothers, return to their parents, or else live alone.

Divorce

586 Divorce is rare, and is of one kind only—permanent. The husband can claim the return of the bridewealth. But a wife who has borne a child cannot be divorced for any cause whatsoever.

Birth

843 834 849 Intercourse between husband and wife stops at the fourth or fifth month of pregnancy, and is not resumed till the child is about six months old. Birth takes place in the husband's hut, the husband going to live elsewhere nearby. The wife is attended by a midwife, *agaleyoot*, and her mother is present if possible. She stays in the hut for six or seven days after the birth, and the child's body must be kept covered for several weeks, even the father being allowed to see only its face. 846 The mother must be purified by her husband, who kills a goat (which he must acquire somehow if he has none of his own) and rubs the fat and undigested grass (*siyat*) from the stomach on her face, breasts, and belly. Children are weaned at 862 the age of about a year. Twins are not liked, and the mother's ritual uncleanness 845 caused by their birth must be removed by the killing of a goat which is eaten by 724 the mother and her women friends. The Dorobo say that if a man has set a trap at the time when his wife bears twins, the trap will never again catch an animal.

553 796 803 Children receive their first name, the spirit-name, soon after birth; as among the Nandi, this name is not used, but links the child with a protecting spirit. The second or principal name is given before the child can walk, at the time when it is first given solid food, and is called "porridge name" in imitation of the Nandi custom. Children may also be given nicknames which often refer to some physical peculiarity. After circumcision, boys become *kwap*, men of, eldest sons taking their

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

who stands in the relation of father's brother to the younger members of the group, as in the diagram of Filo's family above, in which both sets of children have a father's brother living close at hand. In a clan group there might be no father's brother actually in the settlement, but often he would not be far off, for the tendency is to settle in defined groups, and not isolated to the same extent as among the Nandi, where a family may live alone without forming part of a settlement though still a member of the parish. This point is important, for the father's brother plays the same part in a child's life that the mother's brother does among the Nandi.

The family, consisting of father, mother, and children, lives in close contact with one or more families, and sometimes includes the husband's father or mother (I came across no case where both were alive together). These families give the Dorobo child his first experience of human beings. Kinship usages are determined to a certain extent by environment and way of life, for under forest conditions and a hunting economy the father is of necessity away from home a good deal, and young children are much in the society of their mothers and the other women of the settlement. This of course is true of other types of society; but in a pastoral society, such as the Nandi, for instance, the father is not, under compulsion of seeking the day to day food supply, obliged to go away from the homestead if he feels disinclined; and there is no doubt that a Dorobo child of tender years saw much less of his father than a Nandi child. When food must be got as it is needed, and when it is scanty or difficult to store, the father, on whom falls the duty of getting it, must be away much more than the man whose cows are close at hand, or whose cultivation produces a crop which he can store.

Till a child is weaned, which may be at the age of twelve months or thereabouts, it is in closer contact with its mother than anybody else, and the father leaves it more or less alone. When the mother has to go out to do her share of food-getting, the child is left at home in charge of its elder sister if it has one, or with its father's mother; failing these, some woman or girl of the settlement will look after it. A Dorobo mother cannot take her baby with her when searching for vegetable food in the forest, for it cannot conveniently be carried on the back in such surroundings; nor can she, like the agriculturalist, lay it down under a tree while she works, because it would not be safe to do so in the forest. This habit persists to-day, and even when a woman goes to work in her *shamba* * the baby is left behind in somebody's care. But a woman's food-questing is done much more quickly than a man's hunting, and she is soon back at home; the *shamba*, too, is not so far away that she cannot get back to the child quickly if need be.

The attitude of a man to his wife is profoundly affected by physical and environmental conditions. The shortage of women and the difficulties of getting a wife (especially when cattle are becoming the medium of bride-

* The Swahili word *shamba* — cultivated land, field, farm, is current throughout Kenya. Since it is a shorter and simpler word than the English equivalent, I shall use it in the sense of a plot of cultivated land.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

arap Ruto. There were also two old women, Cesikirikat mother of Arap Kising, and Cepkatet mother of Cemondii. With these lived Cemondii's young sister Cepkoior, aged about 15, who helped her brother's wife to look after the two children, and slept either in her mother's hut, or in the hut of Cesikirikat, eating with her mother or with Cemondii and his wife. The three men Malakwen, Kipsaig, and Kimutai lived together, eating with either of the old women (contributing their share of the food), while Kipungui lived alone, eating with his mother. Cepkoior could marry none of these young men, since they were all her classmen. Such an arrangement seems to be quite usual when a girl has reached puberty but has not yet been circumcised. At Soeiyo a somewhat younger girl named Cepetip lived in a small hut (*sikiwiwat*) with her youngest brother Kimitei (a *fama*). When she went visiting to the neighbouring settlement Ndoretoo she stayed with women there who, when they came to *Soeiyo*, slept in Cepetip's hut, the boy going out to sleep elsewhere.

Where other relatives are concerned, the age-set behaviour patterns tend to replace those of kinship, and even when people are related and within the *fifiat*, they are for practical purposes little more regarded than fellow-classmates. Indeed, in a clan settlement, such people have more influence and effect on their neighbours' children than blood-relatives who live at a distance.

In a primitive people like the Dorobo there is little formality in the educational system, which consists largely of training in obedience, behaviour, and techniques, which are learned from the parents and others with whom the child comes into contact. These contacts are not large owing to the nature of the country and the social system, and thus the relatives with whom a child is seriously concerned are but few. This narrow range of contact must be considered in the light of such important factors as the absence of tracks through the forest, the scattering of relatives, and the abnormal shyness and suspicion of the Dorobo.

Up to the age when a child can be of some help to its parents, both boys and girls are mainly with their mother, who teaches them the business of eating and living in a hut. She corrects childish bad habits and makes them familiar with the ordinary customs and precautions of every day life that have to be observed in Dorobo surroundings. The father corrects improper behaviour towards himself and the mother.

But at the age of *mchakuru*, which comes a little before the onset of puberty, and depends on the child's growth and intelligence, there is a division of duties between the parents. The father begins to teach his son the elements of hunting and trapping, how to make things of wood, how to skin animals, and how to use a bow and arrow, in short, how to behave like a man and do man's work. The mother teaches her daughter how to manage a home, how to look after small children, and how to perform the normal tasks of a Dorobo woman. At this stage both boys and girls are in one respect general servants of the family; they have to herd any stock their father may possess, and make themselves useful about the homestead.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

4. Birth

Intercourse stops at the fourth or fifth month of pregnancy, and normally is not resumed till about six months after the birth of the child. When the woman's time has come, she *cuti ka*, "enters the hut", and the husband must then lodge elsewhere, either building himself a rough shelter or living with one of his neighbours in the settlement. During the act of birth the woman is helped by a midwife, *ngoiteyonik*, and her mother is present if possible. She stays for six or seven days in the hut after giving birth, and may then see her husband for the first time since she "entered the hut". The child's body must be kept covered for several weeks after its birth, and only its face may be seen, even by the father. At this stage the mother must be purified by her husband, who kills a goat (which he must buy or steal if he has none of his own), and rubs the fat and undigested grass from its stomach (*siyat*) over her face, breasts, and belly. After about three months the husband may come back to live in his own hut.

The birth of twins is not liked, for they are abnormal, and the old men say, *yaaren amo asanit hamat* ("they are bad because they make the mother unclean"). If the father should have set a trap at the time when twins are born to him, it is believed that that trap will never catch an animal. The ritual uncleanness caused by the birth of twins is removed by the killing of a goat (which the husband must get by any means if he owns none) to be eaten by the mother and her female friends.

A girl who has a child before marriage is called, as among the Nandi, *ceuripocet*, and becomes unclean ritually as a result. She may be purified, however, by the man responsible or one of his male relatives who must kill a he-goat. The meat is eaten by the men and women of the settlement, but not by the girl; and the *siyat* or undigested grass from the stomach is rubbed by one of the women over her face, neck, and breasts, and then washed off. By this means she becomes clean again, unlike such people among the Nandi, who remain unclean all their lives.

A baby is suckled as a rule until the mother is well advanced into her next pregnancy: the standard period was given as "twelve months". If the mother has no milk, or not enough, she goes about begging for milk, *nomuti cako*; but as often as not in such cases the baby dies of starvation. It is weaned by being slapped when it tries to suck, and by the application to the nipples of something bitter, generally a concoction made from the root of a bush called *koshoit* (Nandi, *kotowet*). At this time it is fed with milk from a small gourd, and if no milk can be got, it is given honey instead. It is also given bits of meat cut up small and fed from a spoon made of a piece of gourd; and gruel made from maize or eleusine meal mixed with honey.

If the mother dies in child-birth, her husband's mother or some other female relative takes charge of the baby and feeds it with milk from a small horn: if milk cannot be got, honey and gruel are tried; but very small babies fed in this way seldom live. Sometimes the child may be adopted by a married couple.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

881 them complete adult members of the horde, and no male could get a wife if he was uncircumcised; but it is possible for an uninitiated girl to get married, though few in fact are married without being circumcised.

2. Pre-marital sex-life

836 [825] Having attained manhood through circumcision, the Dorobo is free, subject to the restrictions inevitably imposed by a small population, to enter into legitimate sex-life. But unmarried men often have to go without a great deal of sexual experience before they marry, and some in fact never [589] marry at all because of the shortage of women. Even in the old days few girls were available, and there were only married women with whom they could not consort unless prepared to be shot by injured husbands if found out. This state of affairs has led to some men living alone and unmarried, 589 helped in their household tasks by women of the settlement. Some even did everything for themselves. The shortage of women, and the shyness of the Dorobo has resulted in a definite habit sufficiently in evidence to justify the application of a special term, for which I suggest the word *mondeis*. And it is to be noted that the Dorobo have accepted the condition of *mondeis* as something quite natural, whereas by many other peoples the unmarried state in a grown man is considered unnatural.

836 Young Dorobo to whom life without love does not appeal therefore wander about a good deal, going to places where they know there are girls, or women with whom they can have surreptitious affairs, such women often being the wives of age-mates, for although this is not openly allowed, a [837] woman will sometimes, when her husband is away, oblige one of his age-mates and say nothing about it. In favourable circumstances, however, when there are girls available, unmarried circumcised men build small huts called *sikiroinot* close to their fathers' huts, where they may sleep with uncircumcised girls, each man choosing a girl and associating with her till she is married. A Dorobo, unlike the Nandi, often marries his premarital [824] lover. Uncircumcised boys caught by the men playing with girls who are sexually mature are beaten, for love affairs are the privilege of manhood.

3. Marriage

584 Dorobo generally marry women of an age fairly near their own, and do not by preference marry women very much younger than themselves.

584 A man chooses his wife for himself, and himself makes the preliminary arrangements. After making his choice, he takes the first step, by "going the journey" (*wendi koito*), to the hut of the girl's parents, or if they are dead, of a responsible relative, and hands over a large bag of honey, saying, "I want your daughter", to which the father answers, "Very well, take her presently". This ready acquiescence is due to the fact that the father already knows what is going on, for the suitor has been making enquiries about the girl, and such things always reach the ears of those concerned. Later

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

payment and a man has but few live stock) have induced a real affection of husband for wife, and a rarity of divorce. This is reflected in the husband's behaviour to his wife, and in the absence of the custom found among the Nandi of letting a wife sleep with a visiting age-mate. A wife being a necessity once she has been got, a man tends to do all he can to keep her, and he treats her well, with such kindness and consideration as can be shown to an inferior, giving her all the inducements to a contented life that are within his power. Although a man may be somewhat aloof when he is at home, his general attitude and behaviour to his wife form a good example for his sons to copy.

Children then grow up under the authority of two people who are more important to them than anyone else in the horde, their father and mother. The father has authority over his wife because he provides food for her and her children by his own skill, and a primitive woman cannot exist without the support of a man; in the old days a bad wife had nowhere to go if her husband brought himself to the pitch of divorcing her, except back to her parents, who would not welcome an extra mouth to feed. Over his children a man has that authority which is based on the respect felt for a person whom they know must be obeyed. Incidents of the kind that I saw one day at the home of a man named Cesundil are not uncommon. A child was yelling outside the hut. Taprandic the mother told it to be quiet: it merely yelled louder. Cesundil then said quietly but firmly, *Sis lakuanni* (be quiet, child), and it was silent immediately.

As Evans-Pritchard has pointed out, the behaviour of father to mother must influence the attitude of a son to his mother[1]. It is the mother and other women who look after a child till nearly the age of puberty; and to-day as in the past, though the father is no longer wholly occupied in hunting and therefore much more at home, the traditional pattern still holds good. I have more than once seen a man left in charge of his small children while the mother was away and treating them in the fussy sort of way that one would expect of a man not very sure of his ground — sure of his authority, which was not being called in question, but not at all sure of his ability to deal with childish problems which the mother on her return can settle at once. It is the mother who gives the children immediate comfort and protection; she it is who teaches them the elementary rules of conduct and decency, who impresses upon them that they must obey father, because he is father, and who sees that as they grow older they help her with such small tasks as they can manage. It is to their mother that children run when hurt or frightened, and it is by her that they are nursed when ill. She thus has a large claim on their affection, but this would be reduced if they saw her disrespectfully treated by their father. On the whole, the claim is reinforced among the Dorobo by the way men treat their wives. And in old age a mother is taken care of by her son, and whereas she brought him up in his infancy, so now in her old age she

arap Ruto. There were also two old women, Cesikirikat mother of Arap Mining, and Cepkatet mother of Cesundil. With these lived Cesundil's young sister Cepkoiec, aged about 15, who helped her brother's wife to look after the two children, and slept either in her mother's hut, or in the hut of Cesikirikat, eating with her mother or with Cesundil and his wife. The three men Malakuen, Kipsang, and Kimutai lived together, eating with either of the old women (contributing their share of the food), while Kipungei lived alone, eating with his mother. Cepkoiec could marry none of these young men, since they were all her clansmen. Such an arrangement seems to be quite usual when a girl has reached puberty but has not yet been circumcised. At Sosoiyo a somewhat younger girl named Cepotip lived in a small hut (*sikiroinet*) with her youngest brother Kimitei (a *Juma*). When she went visiting to the neighbouring settlement Ndoroton she stayed with women there who, when they came to Sosoiyo, slept in Cepotip's hut, the boy going out to sleep elsewhere.

Where other relatives are concerned, the age-set behaviour patterns tend to replace those of kinship, and even when people are related and within the *tiliet*, they are for practical purposes little more regarded than fellow-clansmen. Indeed, in a clan settlement, such people have more influence and effect on their neighbours' children than blood-relatives who live at a distance.

In a primitive people like the Dorobo there is little formality in the educational system, which consists largely of training in obedience, behaviour, and techniques, which are learned from the parents and others with whom the child comes into contact. These contacts are not large owing to the nature of the country and the social system, and thus the relatives with whom a child is seriously concerned are but few. This narrow range of contact must be considered in the light of such important factors as the absence of tracks through the forest, the scattering of relatives, and the abnormal shyness and suspicion of the Dorobo.

Up to the age when a child can be of some help to its parents, both boys and girls are mainly with their mother, who teaches them the business of eating and living in a hut. She corrects childish bad habits and makes them familiar with the ordinary customs and precautions of every day life that have to be observed in Dorobo surroundings. The father corrects improper behaviour towards himself and the mother.

But at the age of usefulness, which comes a little before the onset of puberty, and depends on the child's growth and intelligence, there is a division of duties between the parents. The father begins to teach his son the elements of hunting and trapping, how to make things of wood, how to skin animals, and how to use a bow and arrow, in short, how to behave like a man and do man's work. The mother teaches her daughter how to manage a home, how to look after small children, and how to perform the normal tasks of a Dorobo woman. At this stage both boys and girls are in one respect general servants of the family; they have to herd any stock their father may possess, and make themselves useful about the homestead.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

867 868 The parts played by the grandfather or grandmother, and by the father's brother and his wife are directed largely towards instruction in behaviour and morality, though a young paternal uncle may often help in teaching boys the elements of woodcraft and hunting. And although the father and mother teach their children to distinguish between right and wrong, and how to behave to their relatives, the grandparents in particular have a good deal to do with this aspect of education.

614 867 The part played by clansmen as educators is in general limited, for it depends upon the type of settlement and the number of them with whom the child is able to have contact. Where the settlement is a purely family affair there will be no clansmen immediately at hand, and it is only in clan settlements that their influence can be at all effective. At Kelpui there was in 1938 a settlement consisting of two elementary families and four unmarried clansmen; and at Ndoroton a widow with two small children could turn to five adult clansmen for help in bringing up her children, as well as to three other widows and a young girl. In such circumstances children will have more to do with clansmen than with relatives. This is very different from the Nandi, who do not live in clan settlements and among whom clansmen are much less important than relatives in these matters.

2. The Age-Set system

561 In all forms of training, a proper standard of behaviour is insisted upon, because without due attention to this, no cohesion of clan or family is possible, and hence there can be no horde solidarity. Theoretical ties of kinship cannot last if the behaviour of members towards each other is not carefully promoted and strictly regulated, and so behaviour is the keystone of social life. It must be considered not only from the point of view of a man's dealings with his relatives, but with respect to the different generations with which he comes in contact, and the effect of the age-set system on these relationships must therefore be taken into account. Age-sets and kinship rules may actually be in conflict, and so it is necessary before going any further into the subject of behaviour to see how the age-set system works among the Dorobo.

[711] [771] Age-sets, *ipinda*, plur. *ipinuakik*, are an Hamitic institution adopted by the Nandi and Masae, and borrowed from the Nandi by the Dorobo. The principle of the system is that the males of the tribe or horde are divided into a number of groups or sets of individuals whose ages all fall within certain limits, and the sets are not progressive like the age-grades or stages through which the individual passes from birth to death. Thus a Dorobo man passes through the successive stages of boy, circumcised man, and old man; and a woman through those of girl and woman. But age-sets are more than this: for a man is born into a set, and in that set he remains all his life irrespective of his age in years; women, moreover, [562] do not have age-sets, but on marriage refer to themselves as belonging to their husbands' age-sets.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

the other hand, there should be no *wwriat*, just greeting and a minimum of conversation, as between strangers. The children of his wife's brother and sister are treated as his own. A woman regards her husband's brother and sister and their spouses much as he regards her brother and sister.

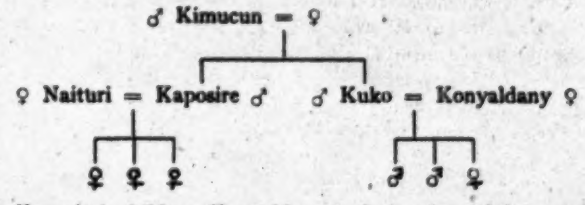
When the father's mother does not live with her son, she may perhaps be in the next settlement. She will then visit her grandchildren, and they will go to see her. This interchange of visits teaches children a good deal about the treatment of important people like grandmother. Interchange of visits with the mother's mother also takes place, especially when the man is getting older. Thus, Cesikirikat the mother of Arap Mining used to visit her daughter Cesunguny who was married to a *Nyongi* called Ngueses and had three sons. She would stay a few days with her daughter (during which time Ngueses would live in another hut) and then go home. Presently Cesunguny would bring her children to see Cesikirikat, and while the children were all still young (before they had reached puberty) they slept together in Cesikirikat's hut. After reaching puberty they slept in the *sikiroinet* with Arap Ruto. Girls visiting their father's mother sleep in her hut whatever their age.

Children are generally fond of their father's mother, partly because she makes it her business to be nice to them, "for they are the children of her child, and people do not hate their grandchildren". But if they do not visit her as often as she would like and bring her presents of food, she will be annoyed and shows her anger by saying, *Sere opeku lakocu ce mooipua omituakik* ("Peace, die you children who have not brought me food"), a curse which is not dangerous because it is neutralized by the word 'peace', and because she takes care to say it in the hearing of someone who will report it to the children, when some such conversation as this will take place:

Friend:	*Kaami kapkoko amut, konereket, amu maoipcin omituakik arauek ce cau, kocupok, kole, "Sere, opekun lakocu".*	I was at Grandmother's place yesterday, and she is angry because you have not brought her food for many months, and she cursed you and said, "Peace, die, you children".
Children:	*Woi, awendi ono, eiyo! Kokocupei koko, kole, "Sere, opekun".*	Alas! where shall I go, mother? Grandmother has cursed us and said, "Peace, die!"
Mother:	*Moomuen, lakocu, mawecok koko, kocamok, a mutai kipendi olinnyin si kiipcin melekto.*	Do not be afraid, children, grandmother does not hate you, she loves you; but to-morrow we will go to her place to take her a present.
Friend:	*Weiis, miye noto, si kocam koko.*	Yes, that's the best thing to do, so as to please grandmother.
Children:	*Weiis, kepe korun, . . . Kiipcin ne, si kocam?*	Yes, let's go to-morrow, . . . What shall we take her, so that she shall be pleased?
Mother:	*Kipendi korun, si kiipcin nyanyait ok lokomek.*	We'll go in the morning, and take her some meat and some honey and water.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

ficatory mother, *siyo*, has a similar position, and if the father's mother is not alive, or living far away, she takes the grandmother's place in helping her husband's brother's wife; and being younger than the grandmother, can give more active assistance. This was the case with two brothers both married, whose mother was dead:



To Kaposire's children, Konyaldany took the place of the grandmother; and Naituri did the same for Kuko's children,. The father's brother is the equivalent, as an authority in the lives of children, of the mother's brother among the Nandi and elsewhere, and is as near as possible a second father. Patrilocal residence as well as other factors no doubt account for this; and the effect is that the father's brother is someone to be reckoned with, a man with whom a boy should keep on good terms, and one of whom permission must be obtained before a boy is circumcised. Kimutai arap Ruto is Arap Mining's brother. He lived in the same settlement at Kipukua, and saw his brother's children every day. When he greeted them, he said, *Sopai, leiye*, and they answered, *Epa, papa*. (Here *leiye* is used loosely as a term of familiarity.) The father's brother gives the children food and other things; he teaches them much of what it is necessary for them to know, and when they ask him questions, like what is this grass called? what are you going to do with that piece of wood? what made those marks on the ground? and so forth, he answers them in such a way that question and answer become part of their education. He shows them his bow, arrows, and quiver, his knives, his honey bags. He takes them into the forest and tells them how people look after their bees, how they make honey-barrels, and how they take honey. He teaches them to use firesticks, and explains the magical observances towards bees and honey.

The mother's brother, *mama*, the father's sister, *pukot*, and their spouses (f. *mama*, m. *konyit*) are in a different category from the father's brother. Not only do they live in different settlements, but the mother's brother has no special position of authority. And while all Dorobo to whom I talked knew their father's brother, many did not know their mother's brother, either by name or by sight. Others knew his name, but had never seen him; and in one or two cases when I was taking down genealogies men had to ask their friends what their mother's brothers' names were. It is thus quite clear that the mother's brother is of little account, and that the father's brother is a much more important person.

Yet on occasion the mother's brother is accorded a respect that is not his customary due. Arap Mining was a great follower of tradition, but

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

arap Ruto. There were also two old women, Cesikirikat mother of Arap Mining, and Cepkatet mother of Cesundil. With these lived Cesundil's young sister Cepkoiec, aged about 15, who helped her brother's wife to look after the two children, and slept either in her mother's hut, or in the hut of Cesikirikat, eating with her mother or with Cesundil and his wife. The three men Malakuen, Kipsang, and Kimutai lived together, eating with either of the old women (contributing their share of the food), while Kipungei lived alone, eating with his mother. Cepkoiec could marry none of these young men, since they were all her clansmen. Such an arrangement seems to be quite usual when a girl has reached puberty but has not yet been circumcised. At Sosoiyo a somewhat younger girl named Cepotip lived in a small hut (*sikiroinet*) with her youngest brother Kimitei (a *Juma*). When she went visiting to the neighbouring settlement Ndoroton she stayed with women there who, when they came to Sosoiyo, slept in Cepotip's hut, the boy going out to sleep elsewhere.

Where other relatives are concerned, the age-set behaviour patterns tend to replace those of kinship, and even when people are related and within the *tiliet*, they are for practical purposes little more regarded than fellow-clansmen. patronymic from their father's porridge name. Younger sons generally take their patronymic from the father's nickname, or else from some circumstance in their own lives.

553 [887]

Circumcision

Boys are circumcised at the same intervals as the Nandi, and the Dorobo keep watch for the opening of the Nandi circumcision. Occasionally boys are circumcised in Nandi with other Nandi boys, but more often in the forest, as in the circumcision of 1926–30. Sometimes a Dorobo acts as operator for the Nandi. The whole procedure of circumcision (*tum*) is identical with that of the Nandi. Girls undergo the operation of clitoridectomy whenever there are enough ready to be done, and not at any stated intervals.

88 [304] [648]

Age-sets

The Dorobo have borrowed the whole age-set system from the Nandi, and it works exactly as among the Nandi, with the same set-names and 15-year intervals synchronized with those of the Nandi. The reader may therefore be referred to the account of the Nandi system, p. 31. A slight difference in the sub-divisions called *mat* may be noted: the Dorobo have only three, called *Cepinik*, the senior; *Taparit*[1] or *Kipalkonyek*, the middle; and *Ruwakenik* or *Kiptoonik*, the junior. A more significant difference is that the sets have no military or political force, for the Dorobo are not fighters, and the practical effect of the system is to introduce further behaviour patterns, as well as to modify the traditional rules of hospitality; for while no Dorobo would refuse to shelter one of his own horde, the degree of hospitality varies according to the age-set situation.

56 [177] [181] [574]

Political Structure

Land Divisions

The Dorobo live mainly in clan settlements divided between a number of districts or parishes (*korosiek*, sing. *koret*). Till about 1930 these settlements were in small clearings inside the forest; after 1937 they were spread round the outer edge of the forest.

621 36 [178]

The Clan

The clan, *oret*, is an exogamous patrilineal group with a name and a totem, *tiond ap oret*, the animal of the clan. The existence of eight clans is attested by genealogies and the census; three others are reputed to exist or to have existed, though none occurred in my records; they were, however, mentioned to me in 1927 as well as in 1938–9. Each of these clans has one totem, except Moi which has three, one of which it shares with another clan; it is not the totem which is important, but the group itself, the clan being a social group, not a group of people mystically related through their totem. The emphasis is therefore on the clan name and not on the animal, though marriage, nevertheless, is forbidden within the clan. An exception to this rule is found in the case of Moi, where intermarriage is allowed between people of different totems, an anomalous feature due possibly to the influence of the Nandi, among whom Moi marriages are common between people of different totems. (See p. 27.) There seem to be no restrictions either on marriage between clans (as among the Nandi), or on killing or eating the clan animal, which suggests that originally the Dorobo clans were non-totemic, and that their present totemism is a feature borrowed from the Nandi along with the clan names, which except for one of the reputed clans are all Nandi.

614 [587] [179]

[1] The Nandi occasionally use *taparit* for this *mat*; it is a Nandi word meaning "the turves."

1:Huntingford E-4, 5. (1938-1939) 1953 FL6 Dorobo FL6

THE DOROBO OF KIDOŊ (KERIITA)

History

101 The group described by Lambert as living at Keriita on top of the escarpment, on the edge of the Forest Reserve 10 miles north of Limuru, is that classed as Kidoŋ in *Anthropos* 1951.[1] It was seen by Thomson in 1883 at the place known to the Swahili as Mianzini (" place of bamboos ") where, he says, a Dorobo village was [439] established for selling food bought from the Kikuyu to the Masai and the traders.[2] This group is part of the Kikuyu Dorobo who occupied the land before the Kikuyu 648 came. The process by which the Dorobo had completely lost their land by 1907 when Teleki passed through is summed up by the Kenya Land Commission as one " partly of alliance and partnership and partly of adoption and absorption, partly of payment, and largely of force and chicanery."[3]

Organization

621 There are no chiefs, control being in the hands of a council of elders, with a 273 leading elder called *hiruukindet*, as among the Kipkurerek. Marriage is patrilocal, 583 and descent patrilineal. Polygyny is permitted. Boys are circumcised, and girls 611 are subjected to clitoridectomy. There appears to be some sort of age-set system, 595 but Lambert's statement is not very clear on this point.

881 There are said to be nine clans, with Nandi-looking names beginning with the 561 prefix *kap-* (which does not imply territoriality, but simply means " group of "). These clans are sometimes referred to by Masai clan names, or even by Kikuyu clan names. The word for clan is *ol-pilatail*, derived from the Masai *ol-pilata*, 614 " clan," and not, as Lambert suggests, from *ol-pelata*, which means not " plain," but " side path."

Religion

776 A so-called supreme being called *Turuni*[4] is recognized; and the statement 769 describing ancestral spirits as " active members " of a lineage implies the existence of an ancestor cult.

3:Huntingford E-5 (1921-1928)1929 FLA Dorobo FLA

When a man is ill and dies, it is said that bad silk (*sisik che gwek*, N.) have killed him; if he recovers, a good oloibor has saved him. No offerings are made to the bad silk.

There is also a vague belief in a future life. A man's spirit is said to go at death to the *koret ap oeik* (N.), or land of the spirits, which is under the earth, and is a bad place.

Magic.

There are magicians (*pendindet*, pl. *pendi*, N.) who are bad, and who prevent people from getting food by means of their spells. There are also diviners (*arkoiyot*, pl. *arkoiik*, N.).[1] There is no equivalent of the modern Nandi system of "arkoiyotet" or rule by a medicine-man.

Medicines and Charms.

(a) *Medicines.*—For snake-bite, the gum of the tinet tree is used, mixed with the honey of a species of bee, called "kosomyot" (N.), and ram's fat. This concoction is rubbed on the affected part, and a little is also eaten. For coughs, a plant called "epeito" is chewed; this is used for all chest complaints.

(b) *Charms.*—Children wear a charm to ward off the evil eye (*sukut*, N.), which is similar to that worn by Nandi children. It consists of a necklace of seeds of the kipuywet tree (N. *kipuswik*) strung on a cord, the seeds being separated by short pieces of bamboo (Text-fig. 20). Old men wear a charm to keep away rheumatism (*kimakwopet*, or *kerwiito* (*kerwito*), N.); it is made of two small pieces of the strophe tree,[2] about 1 in. long, which are tied to the belt (Text-fig. 19).

V.—Social Institutions.

Social Divisions.

The male sex is divided into boys (*kiptuk*, N.), warriors (*murenik*, N.), and old men (*petinik*, or *apatinik*, N.); the female sex, into girls (*kipsi*, N.) and women (*kerweik*, or *chepinek*, N.). At circumcision, a boy becomes a warrior and a girl a woman.

Married and unmarried people sleep separately. Married people and small children may sleep in the same hut, while unmarried men sleep elsewhere, often in the *sigirionet* (N.), or "warriors' hut," where they cohabit with the unmarried girls. Though free-love is practised, it is not carried to such an extent as among the Nandi, and although girls sleep with warriors, they like to preserve their virginity till circumcision. Warriors frequently marry their sweethearts (*murenik*; N. *murenit*), whereas in Nandi they usually marry someone else.

The position of women is the same as it is among the Nandi, that is, they wait on the men, do all the menial work, and are their husband's property.

[1] This word is not used with the same sense in Nandi; originally it seems to have meant simply "medicine-man" (Hewitt, *supra*).

[2] *Euphorbia candelabrum.*

3:Huntingford E-5 (1921-1928)929 FLA Dorobo FLA

Names.

Before a child is born, the spirit of an ancestor is called upon, and the child receives the name of that ancestor, which he retains throughout his life.[1] At circumcision, a man becomes *Arap* (*ararap*), "Son of (the-and-so)," *e.g.* a boy named Kipsoi, whose father's name is Kimisilig, becomes Kipsoi arap (Ki)misilig, and is known as *Arap* (Ki)misilig. Both the masculine and feminine names are mostly Nandi.

Circumcision. (Tom,[a] K.)

The customs connected with circumcision seem to be very similar to those of the Nandi. Boys are circumcised at intervals of about two years; the ceremony takes place after harvest, about October, when extra food is bought from the Nandi; the actual operation is performed in the early morning. In the case of girls, a circumcision is held when there are sufficient girls in a district of an age to be circumcised; only the clitoris is removed. Circumcision, as among the Nandi, and in ancient Egypt, is a form of initiation into manhood or womanhood, and is preparatory to marriage.

Marriage.

It is usual for Dorobo to have only one wife, as they are unable to support more. The price of a wife is paid chiefly in honey-wine. Before marriage the suitor gives to the girl's father as much honey-wine "as four women can carry." He also gives the parents honey-wine year by year after marriage, and he must give the father caps (*sambut*, pl. *simbwindi*) made of the skin of the black monkey (*Cercopithecus albigularis*). Nowadays, if a Dorobo has any cattle, he sometimes takes a second wife.

Death.

When a Dorobo dies, his body is taken out into the forest, about 200 to 300 yards from his hut, and left for the hyænas (*kimerokat*) to devour.

Miscellaneous.

When a Dorobo thanks a person, he spits in the direction of the person, with or without saying "*Kongoi*," K. ("Thanks").

The Dorobo call each other in the forest by blowing horns of water-buck (*simotit*, K.).

Salutations:—

(a) Of greeting:—To men, "*Sopoi*"; answer, "*Chow-lo*" (health). To girls and women, "*Tilkwonga*"; answer, "*Iyé*."

(b) Of farewell:—"*Saisoro*" (good-bye); answer, "*Saisoro ak ropo*" (good-bye to them), or, "*Saisoro ak akwol*" (good-bye to you).

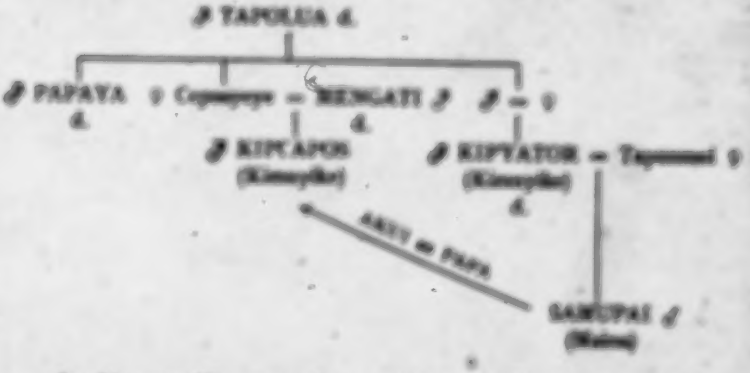
Except "*Chow-lo*" as the answer to "*Sopoi*," these are the same as in Nandi.

[1] The Nandi also give children "spirit names" (*koitoi ap aith*), which, however, are seldom used.

4dHuntingford E-S (1938-1939) 193 FLA Dorobo FLA

be requested and found both his father's brother and his mother's brother. When the time came for him to be circumcised, he went first to his *papa* to ask permission, and then to his *mama*; both consented, and both called him [illegible]. If his *papa* got angry with him, he gave him a goat, a new honey-barrel, or some beer; and he treated his *mama* in the same way. Such cases are perhaps not normal, and the respect shown to the *mama* is due to individual circumstances, for Arap Mining was taught by his mother to like his *mama*, and unlike most Dorobo he saw a good deal of the man.

Where a man has no father's brother to whom he can turn, other people can act as substitutes, as in the case of a man named Samupai arap Yator, whose father was dead, and had no brothers or sisters:



In this case, Kipcapos, the son of Samupai's father's father's sister was alive, and of the same age-set as his father Kipyator. Though terminologically merely *ahai*, Samupai regarded Kipcapos as a father's brother, visited the old man whenever he went near where he lived, and treated him exactly as if he was really *papa*. In another case, a father's father's brother's son, also *ahai*, took the place of a non-existent father's brother.

The people who are of primary importance in the life of a child are therefore his parents, his father's parents (especially the mother), and his father's brother. The father's sister while still young and unmarried may live with her parents and thus for a time come in contact with the child. She will thus be able to help the mother for so long as she remains unmarried. But once she has got a husband she is likely to live elsewhere and may pass right out of the child's life, since there may be no man in the settlement who is not either related to her, or of the same clan. In the settlement at Kipsabus where Arap Mining lived, there were five other men, Cemngili a married man with two children, and his unmarried brothers Maldekwo, Kipsang, and Kipsengeli, together with Arap Mining's unmarried brother Kimoitai

[1] A boy must get permission to be circumcised from his father's brother, who sits his head and then in token of consent

4:Huntingford E-S (1918-1939) 1951 FLA Dorobo FLA

arap Rain. There were also two old women, Cosbirikat mother of Arap Kising, and Cepkatet mother of Comondil. With these lived Comondil's young sister Cepkoiet, aged about 13, who helped her brother's wife to look after the two children, and slept either in her mother's hut, or in the hut of Cosbirikat, eating with her mother or with Comondil and his wife. The three men Maloiuro, Kipsang, and Kimutai lived together, eating with either of the old women (contributing their share of the food), while Kipsigei lived alone, eating with his mother. Cepkoiet could marry none of these young men, since they were all her classmen. Such an arrangement seems to be quite usual when a girl has reached puberty but has not yet been circumcised. At Soweiyo a somewhat younger girl named Cepotip lived in a small hut (akiroiuet) with her youngest brother Kimitei (a *famus*). When she went visiting to the neighbouring settlement Ndaretun she stayed with women there who, when they came to Soweiyo, slept in Cepotip's hut, the boy going out to sleep elsewhere.

Where other relatives are concerned, the age-set behaviour patterns tend to replace those of kinship, and even when people are related and within the *nisit*, they are for practical purposes little more regarded than fellow-classmates. Indeed, in a clan settlement, such people have more influence and effect on their neighbours' children than blood-relatives who live at a distance.

In a primitive people like the Dorobo there is little formality in the educational system, which consists largely of training in obedience, behaviour, and techniques, which are learned from the parents and others with whom the child comes into contact. These contacts are not large owing to the nature of the country and the social system, and thus the relatives with whom a child is seriously concerned are but few. This narrow range of contact must be considered in the light of such important factors as the absence of tracks through the forest, the scattering of relatives, and the abnormal shyness and suspicion of the Dorobo.

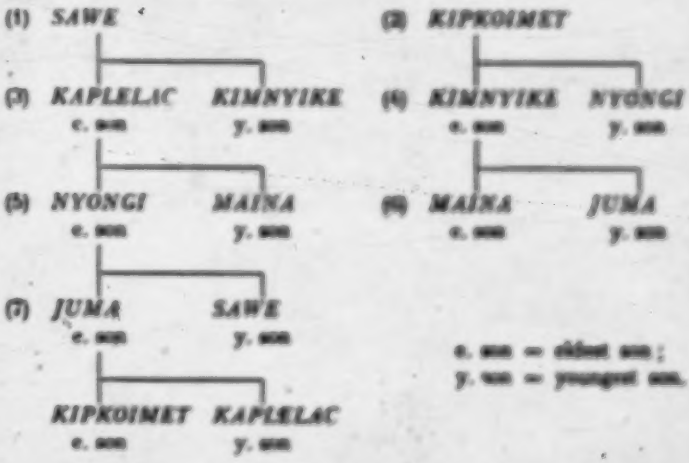
Up to the age when a child can be of some help to its parents, both boys and girls are mainly with their mother, who teaches them the business of eating and living in a hut. She corrects childish bad habits and makes them familiar with the ordinary customs and precautions of every day life that have to be observed in Dorobo surroundings. The father corrects improper behaviour towards himself and the mother.

But at the age of *ourkuleuo*, which comes a little before the onset of puberty, and depends on the child's growth and intelligence, there is a division of duties between the parents. The father begins to teach his son the elements of hunting and trapping, how to make things of wood, how to skin animals, and how to use a bow and arrow, in short, how to behave like a man and do man's work. The mother teaches her daughter how to manage a home, how to look after small children, and how to perform the normal tasks of a Dorobo woman. At this stage both boys and girls are in one respect general servants of the family; they have to herd any stock their father may possess, and make themselves useful about the homestead.

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

The Dorobo have borrowed this system from the Nandi, and have taken over both the Nandi names for the sets and the interval between them, which is fifteen years. There are seven sets which work in a recurring cycle of about 105 years, the names being permanent. Starting with the senior age-set, the order of names in 1939 was: *Kipkoimet, Kaplelac, Kimnyike, Nyongi, Maina, Juma, Sawe.*

The general rule is that a man belongs from birth to the set next but one below that of his father, so that the son of a *Sawe* will be *Kaplelac*. This applies normally to elder sons. If a man has several sons, or if there is a long interval between the birth of the oldest and the birth of the youngest, the latter normally belongs to the set next but two below that of the father, so that while the eldest son of a *Sawe* will be *Kaplelac*, the youngest will probably be *Kimnyike*, and thus of a set junior to that of his eldest brother. This is an important point, as it affects the whole system of behaviour. The following diagram illustrates descent by age-sets:



Age-sets work in the following way: the men who comprise the present *Maina* set began their circumcision period in 1923, and were circumcised at intervals during the next seven years, after which, in 1930, they became the active and responsible members of Dorobo society, and their predecessors the *Nyongi* retired from public life. At this time, in 1930, the next batch of youths, the *Juma*, moved up into the position occupied by the *Maina* from 1923 to 1930 in order to be circumcised, becoming initiates whilst the *Maina* became officially 'men'. So every fifteen years or so the whole machine moves like a ratchet wheel turning one cog, and every set goes through the following periods:

4:Huntingford E-3 (1938-1939) 1951 FLA Dorobo FLA

are *kamuke* to each other and equals, being of the same generation. So too are the sons of the father's brother, also *Kapisisi* and *Kimanyiki*, who are *mumbor* to Ego. But Ego will be circumcised at the same time as his brother A and his *mumbor* C, whom his other brother B and *mumbor* D are too young to be circumcised; B and D will therefore belong to junior age-sets, and when Ego, A, and C have been circumcised and are allowed to marry and indulge in other male pursuits, B and D will still have the inferior status of *nabit* or boys and be subordinate to their brothers as regards behaviour and social position.

Each generation is therefore liable to be stratified in two layers comprising two age-sets which cut across the relationship system; and where the kinship behaviour patterns conflict with those of the age-set, the latter will prevail. Both sets in Ego's generation, for instance, will behave in the same way to father, father's brother, and father's father; but D and B cannot behave to Ego as C behaves to Ego, because they are merely boys who do not count for much, while Ego and C are men. Similarly, in the first descending generation all will behave in the same way to Ego's generation, but K and G must give to H, E, and F the respect that H, O, and F do not give to each other or to K and G. And the principle is the same with the second descending generation.

First ascending generation	JUNIORS	SENIORS	Generation as a whole
Own generation	JUNIORS	SENIORS	Generation as a whole
First descending generation	JUNIORS	SENIORS	Generation as a whole
Second descending generation	JUNIORS	SENIORS	Generation as a whole

The effect of the age-set on behaviour is to strengthen the traditional code of behaviour by emphasizing the disparity between seniors and juniors.

Age-sets also affect hospitality, for while no Dorobo would normally refuse to shelter one of his own kinds, the degree of hospitality and of the intimacy to which he is admitted vary according to whether the visitor is an age-mate or not. If he is of the same age-set as his host (no matter what their respective sentiments may be), he will sleep along with the host and his wife, though he will not be given the host's wife to sleep with as among the Nandi. But if he belongs to a different age-set, the wife will

4:Huntingford E-S (1938-1939) 1951 FLÁ Dorobo FLÁ

the other hand, there should be no *weviat*, just greeting and a minimum of conversation, as between strangers. The children of his wife's brother and sister are treated as his own. A woman regards her husband's brother and sister and their spouses much as he regards her brother and sister.

When the father's mother does not live with her son, she may perhaps be in the next settlement. She will then visit her grandchildren, and they will go to see her. This interchange of visits teaches children a good deal about the treatment of important people like grandmother. Interchange of visits with the mother's mother also takes place, especially when the man is getting older. Thus, Cesikirikat the mother of Arap Mining used to visit her daughter Cesungany who was married to a *Nyongi* called Ngueses and had three sons. She would stay a few days with her daughter (during which time Ngueses would live in another hut) and then go home. Presently Cesungany would bring her children to see Cesikirikat, and while the children were all still young (before they had reached puberty) they slept together in Cesikirikat's hut. After reaching puberty they slept in the *sikireinat* with Arap Ruto. Girls visiting their father's mother sleep in her hut whatever their age.

Children are generally fond of their father's mother, partly because she makes it her business to be nice to them, "for they are the children of her child, and people do not hate their grandchildren". But if they do not visit her as often as she would like and bring her presents of food, she will be annoyed and shows her anger by saying, *Sere epaku lakwa ee mooipua emitwakik* ("Peace, die you children who have not brought me food"), a curse which is not dangerous because it is neutralised by the word 'peace', and because she takes care to say it in the hearing of someone who will report it to the children, when some such conversation as this will take place:

Friend:	*Kaami kapkoko amui, konyekat, awa maaipeia emitwakik arumk ee cee, kwapak, kole, "Sere, epekua lakwa".*	I was at Grandmother's place yesterday, and she is angry because you have not brought her food for many months, and she cursed you and said, "Peace, die, you children".
Children:	*Woi, awendi ewe, aiyo! Kokwapei koko, kole, "Sere, epekua".*	Alas! where shall I go, mother? Grandmother has cursed us and said, "Peace, die!"
Mother:	*Mooneen, lakwa, mawoak koko, kwamak, a matai kipendi aliunyin si kiipeia nalekio.*	Do not be afraid, children, grandmother does not hate you, she loves you; but to-morrow we will go to her place to take her a present.
Friend:	*Weiio, miye nato, si kwam koko.*	Yes, that's the best thing to do, so as to please grandmother.
Children:	*Weiio, kejo kwan, . . . Keipeia ee, si kwam?*	Yes, let's go to-morrow, . . . What shall we take her, so that she shall be pleased?
Mother:	*Kipendi kwan, si kiipeia nyamyait ak kakmak.*	We'll go in the morning, and take her some meat and some honey and water.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

though in Nandi such a marriage is forbidden. This statement is based on the evidence of genealogies, which show as well that (1) a man may marry into the clan of his mother or his mother's mother, (2) a man who marries two wives may take both from the same clan, and (3) two brothers may marry women of the same clan.

V. Marriage

1. Circumcision

Circumcision is a preliminary to marriage; but since the whole process is almost identical with that of the Nandi, it is not necessary to describe it, and the reader may be referred to HOLLIS's description for the details [14]. It is probable that the practice was borrowed from the Nandi along with the age-set system with which it is closely connected. The fact that the Nandi sometimes use a Dorobo to perform the operation on their boys, and that the Masae in the past normally did so might suggest that the Dorobo practised it before they came in contact with the Masae or Nandi. But in view of the close resemblance of the Dorobo to the Nandi procedure, and the use of Nandi terms, there seems to be nothing particularly significant in the employment of Dorobo as operators; and since the operation of clitoridectomy which is performed on the girls is undoubtedly of Hamitic origin, we may be justified in assuming that the Dorobo have borrowed the whole business from the Nandi [15].

Dorobo boys are often circumcised in Nandi along with Nandi boys by an operator who may be either Nandi or Dorobo. Arap Mining was circumcised at Cepkunyuk together with another Dorobo named Arap Eirusi and eight Nandi, the operator being a Dorobo. The periods of circumcision correspond with those of the Nandi, for the Dorobo have not worked out a method of time-reckoning of their own, but contented themselves with watching the doings of the Nandi. When they saw that they were preparing for circumcision, they collected their boys between the ages, roughly, of 15 to 18 years, and made the necessary arrangements. Although boys are sometimes circumcised in the Nandi country, the Dorobo prefer to do it on their own, and the circumcision of 1928-1930 was done in the forest. No Nandi initiates take part in a forest circumcision, but Nandi assemble as spectators, both to see the fun and to get some free honey, a good deal of which has been collected beforehand in readiness for the circumcision. As well as collecting honey, the initiates' parents do a round of visits to both Dorobo and Nandi friends in order to beg or buy food for their sons to live on after the operation.

In both sexes the effect of the circumcision (*tum*) is that it makes

[14] See his book „The Nandi, their language and folk lore", pp. 32-60.

[15] This use of outsiders to circumcise is perhaps analogous to the employment by the Somali of Yibir women to perform clitoridectomy on their girls, the Yibir being one of the non-Somali outcast groups.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

881 them complete adult members of the horde, and no male could get a wife if he was uncircumcised; but it is possible for an uninitiated girl to get married, though few in fact are married without being circumcised.

2. Pre-marital sex-life

836 [885] Having attained manhood through circumcision, the Dorobo is free, subject to the restrictions inevitably imposed by a small population, to enter into legitimate sex-life. But unmarried men often have to go without a great deal of sexual experience before they marry, and some in fact never [589] marry at all because of the shortage of women. Even in the old days few girls were available, and there were only married women with whom they could not consort unless prepared to be shot by injured husbands if found 589 out. This state of affairs has led to some men living alone and unmarried, helped in their household tasks by women of the settlement. Some even did everything for themselves. The shortage of women, and the shyness of the Dorobo has resulted in a definite habit sufficiently in evidence to justify the application of a special term, for which I suggest the word monôsis. And it is to be noted that the Dorobo have accepted the condition of monôsis as something quite natural, whereas by many other peoples the unmarried state in a grown man is considered unnatural.

836 Young Dorobo to whom life without love does not appeal therefore wander about a good deal, going to places where they know there are girls, or women with whom they can have surreptitious affairs, such women often being the wives of age-mates, for although this is not openly allowed, a [837] woman will sometimes, when her husband is away, oblige one of his age-mates and say nothing about it. In favourable circumstances, however, when there are girls available, unmarried circumcised men build small huts called *sikiroinet* close to their fathers' huts, where they may sleep with uncircumcised girls, each man choosing a girl and associating with her till she is married. A Dorobo, unlike the Nandi, often marries his premarital [864] lover. Uncircumcised boys caught by the men playing with girls who are sexually mature are beaten, for love affairs are the privilege of manhood.

3. Marriage

582 Dorobo generally marry women of an age fairly near their own, and do not by preference marry women very much younger than themselves.

584 A man chooses his wife for himself, and himself makes the preliminary arrangements. After making his choice, he takes the first step, by "going the journey" (*wendi hoito*), to the hut of the girl's parents, or if they are dead, of a responsible relative, and hands over a large bag of honey, saying, "I want your daughter", to which the father answers, "Very well, take her presently". This ready acquiescence is due to the fact that the father already knows what is going on, for the suitor has been making enquiries about the girl, and such things always reach the ears of those concerned. Later

5:Huntingford E-5 (1938-1939) 1954 FL6 Dorobo FL6

A comet is a sign of coming famine, not merely for the person who sees it, but for everybody.

This short statement may not seem to imply a very great use of magical practices. Nevertheless it is clear from the general trend of knowledge of the Dorobo that the important parts of their life are helped and controlled by magic. The recovery of ritual status after child-birth and after the birth of twins is achieved by magical means; the spirit-name given to a child is intended to link it, in a way that can quite properly be called magical, with the spirit-world, so that it starts life on good terms with those powerful and capricious beings; the whole idea of circumcision (even if it is borrowed) is that of the transition by means of a magico-religious performance from the state of boyhood to that of manhood; these and other observances and avoidances are all magic, and are done because people believe that by doing them they will be enabled to go on existing.

b) Analysis of Beliefs

Ritual Values. Things which have ritual value fall into three categories: (1) things which provide sustenance, or are closely connected with such things; (2) things of the spirit world; (3) things used to restore ritual status:

(1) Honey is sacred, like milk to the Nandi; and in addition to the taboo on eating honey and fruit on the same day, trees, flowering plants, and grass have ritual value because they are all closely connected with the provision of honey: trees, because bees live in them; flowers, because bees get honey from them; and grass, because the flowers and trees may be damaged if it is burned. The last notion means that unlike the pastoral tribes, the Dorobo do not burn grass near forest.

(2) The spirits are offered honey and honey-wine, which thereby acquire an additional value in that their use is directed to both the dead and the living.

(3) Things used for the recovery of damaged ritual status include goats and sheep, and certain of their products, i. e. *siyat*, and fat, as well as 'butter' or *muail ap tangina* from cows. All these come from sources which formerly were hardly possessed at all by most Dorobo, and even to-day only on a small scale. Honey-wine is used a good deal, as well as white earth.

Each period of life has what might be called a standard ritual status, which is changed to a different standard on circumcision, when a boy becomes a man and a girl a woman, with the right to marry and produce children. The ritual status of normal adults is altered under certain conditions: (1) a man setting out to hunt is not in the same ritual state as when he is staying quietly at home, and he must not have sexual intercourse at such a time, i. e. just before he starts or, should he have an opportunity, while away; (2) a person sick of an illness has a status different from that of other people; (3) touching a corpse causes deterioration of ritual status; (4) the breaking of a taboo affects ritual status; (5) women suffer deterioration of ritual status through the birth of a child before marriage, the birth of twins, and even, to a lesser extent, normal birth. In all cases, the status must be restored by a ritual performance.

/68 cont'd/ 611 591 595 613 769 [775]

Succession is patrilineal and marriage patrilocal. Polygyny is practised. The lineage is a functional continuum, including ancestral spirits as active members while they are still remembered by the persons responsible (so to speak) for keeping them alive by acts of memory and communion, the continuum being of the perpetually successive rather than of the periodically recurrent type, that is to say, a boy is his father's second self rather than his grandfather or great-grandfather born again.

Initiation includes a circumcision rite for boys and a pre-marital rite of clitoridectomy for girls. Age-grading is based on male initiation. There are no generation-ages except in so far as the Dorobo imitated or joined in the ituika of the Kikuyu and the eunoto of the Masai. The word they use for the handing-over ceremony is eunotwet. Alternating ages or generations are distinguished as onet ap-tai (the right hand) and onet ap-katap (the left hand). When the Kikuyu system is referred to Mwangi is the former and Maina the latter, but the expressions were probably used originally of the Masai right-hand and left-hand circumcision groups. 881 ● 561 [177]

There are no indigenous chiefs, the judiciary and legislature being a council of elders. Such an elder is called kiruogindet (pl. kiruogik). A kiruogindet has much the same function as a Kikuyu muthamaki. There is no laibon but formerly the Dorobo owed allegiance to the laibon of the Masai. 622 623 [171] 648

They recognize one Supreme Being, called Tururit (compare the Suk Tororut). There appears to be no cult of so-called Sun Worship. The sacred trees, used for prayers to Tururit, are, for rain the bamboo (a solitary clump), for honey the mukeu, and, in connection with circumcision ceremonies, the muthai and the mutamaiyu. 776 771 778 [881]

78. Little or nothing is known of the relationship of the Dorobo of Southern Kikuyu with other Dorobo sections. The "Dorobo Committee" called them the Kikuyu Escarpment group, and remarked that they were first found in the Aberdares but left there and went to the Masai Reserve, whence they were ejected. At the time the Committee sat this group was living as forest squatters in the 101 [628] [166]

/243 cont./
551 named after the oldest living child. Among the Asá one likewise finds the custom whereby the son, after the father's death, is called by his name.

/244/ VII.

000 Circumcision of the boys. -- Age classes. -- Organization of the circumcised young men. -- Circumcision of the girls.

• 881 171 561 The circumcision of the boys and girls is exactly the same as among the Masai and takes place at the same time as that of the Masai boys. The newly circumcised boys (bogodendet, bogododig) form an age class (ebindadet), which borrows its name from that of 56| the Masai. For two to three years after their circumcision the boys 17| are called barnotig (sing. barnotendet), corresponding to the el barnot of the Masai. When the latter become el móran, the former correspondingly become dobonog (sing. dobonatog), and later, with their marriage, daĕma (sing. daĕmog), corresponding to the el moruak of [291] the Masai. The bogododig dress exactly like the es sibolio, and, like [223] them, they set out to hunt small birds, with the skins of which they adorn themselves. When the corresponding age class (ol boror) of the Masai gets a new name, that of the Asá adopts it also. They [178] cling to their old customs even when their present mode of life makes them unnecessary. The reason the Wandorobo have no names of their [791] own for the age classes is -- also according to their own explanation -- that the ol oiboni,[1] whom the Asá also call ndĕarug, does not give them any and would regard it as extremely audacious if these poor, despised people came to him with such a request. The ebindadet also choose their head -- the ol aunoni of the Masai -- who here is called njĭg or kisiridjo or also aunoni. As among the Masai, this is an honorary position without duties, but here without any privileges [692] either. Here the kirua kidet, whose task is chiefly to settle disputes, corresponds to the ol aigwenani of the Masai. The kirigit corresponds [224] to the ol oiñoni of the Masai. He is the leader in hunting, especially [555] on larger expeditions, which often lead the young Wandorobo in pursuit of elephants far from their camp. Only one who, in hunting

1, [Chief of the Masai people, and according to Merker, also chief of the Asa--Analyst]

561 /244 cont./
171 elephants, buffalo, and lions, has distinguished himself through
224 courage and decisiveness and who shows these qualities anew again
555 and again is elected kirigit.

• 881 About the circumcision of the girls, it is only to be said that, adorned, a few days before the operation they set out for the neighboring camps to bid farewell to their younger girl friends. On these
[425] visits they are permitted to appropriate anything that they wish (food, clothing, ornaments, etc.), without special permission from the owners.

Concerning the reason for the circumcision the Asá also say that God commanded them to undertake this on their children.

/245/ VIII.

000 Hunting. -- The weapons, bow, arrow, hunting spear. -- Ownership marks. -- Preparation and effect of the arrow poison. -- Treatment of arrow wounds. -- Stalking. -- Hunting dogs. -- Station. -- Battue hunting. -- Practice of hunting. -- Game. -- Superstition. -- Meat meals of the hunters in the bush.

411 For the dobonog of the Wandorobo hunting is what war is for the
[561] El móran of the Masai. Their principal weapons are bow and arrow.
[224] The two-sided bow ([Fig. 83] gari, geleweg) has the shape of a flattened segment of a circle. It is as a rule 1.50 meters long and very sharply flexible. With it belongs a leather quiver ([Fig. 85] madiet, madimoig) with arrows ([Fig. 84] mat, mara). The wooden arrow-shaft bears a small notch on its rear end for setting it on the bow string, and directly in front of it the three-part feathering (haiya).
[439] The iron point, which the Wandorobo usually buy from Wakuafi and Masai blacksmiths, but also from sedentary Negroes, and more

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

561 [304] [587] [588] [589]

Life Cycle

Dorobo men pass through three stages: ***getik***, uncircumcised boys; ***muronik***, circumcised men; and ***apaiisiek***, elders. Boys are circumcised between the ages of 15 and 18 years, and may marry at any time after circumcision when their circumstances allow. Some men in fact never marry at all, but live alone, getting occasional help from women in the settlement, and depending for sexual satisfaction on surreptitious affairs with wives of age-mates. Women are first ***tipik***, girls; then ***yosotik***, married women; and finally, when they begin to look old, ***engilokisiek***, old women. Girls marry soon after they have been circumcised.

602 [171]

Kinship and Behaviour

The existing Dorobo relationship system, ***tiliet***, is structurally similar to that of the Nandi, and uses a number of Nandi terms; but it is less regular and includes in the *tiliet* a larger number of persons than does the Nandi. Moreover, the collective term ***macokor*** (which I did not find in use as a true relationship term in Nandi) is used by the Dorobo as the proper term for a number of people terminologically differentiated by the Nandi.

601

Within the *tiliet* the chief terms are: In the third ascending generation, all males are ***macokor*** and all females ***makikat;*** in the second ascending generation, all males are ***kuko*** or ***akui*** and all females ***koko***.

In the first ascending generation, the terms are: ***papa*** = father, father's brothers, and mother's sister's husband; ***eiyo*** = mother, mother's sisters, and father's brother's wife; ***pukot*** = father's sister; ***konyit*** = father's sister's husband; ***mama*** = mother's brother and his wife. Terms used by women are ***sindet*** = father's sister and father's brother's wife; ***apulaiyo*** = mother's brother; ***eiyo*** = mother's brother's wife; and ***konyit*** = mother's sister's husband.

In a man's own generation, his brothers, sisters, and mother's sister's son and daughter are ***kesenda;*** mother's brother's son and daughter, ***mama;*** and the son and daughter of his father's brother and father's sister are ***macokor***. Women's terms which differ from these are: ***apulaiyo*** = mother's brother's son and daughter; ***eiyo*** = mother's sister's son and daughter.

In the first descending generation, ***apaa*** includes son, daughter, brother's son and daughter; ***mama***, sister's son and daughter, and mother's brother's son and daughter; ***macokor***, father's brother's children's children, and father's sister's children's children. In the second descending generation, both sexes are ***akui***, except mother's brother's children's children's children, which are ***mama;*** and mother's sister's children's children's children, ***kesenda***.

Among affines, wife's father is ***pamogo;*** wife's mother, ***poker;*** wife's brother, ***konyit*** and his wife, ***poker;*** wife's sister ***pukot*** and her husband, ***kipukotiet;*** wife's brother's son and wife's sister's son, ***apaa;*** wife's brother's daughter and wife's sister's daughter, ***pakuo***. Husband's father is ***pakuo*** and his mother, ***poker;*** husband's brother ***konyit*** and his wife, ***sindet;*** husband's sister, ***kamati*** and her husband, ***poker;*** husband's brother's children, ***lakuet;*** and husband's sister's children, ***apulaiyo***.

602 604

In the *tiliet* it is the *father's brother* who stands out and occupies the special place in family life that the mother's brother does among the Nandi; not a few Dorobo did not know their mother's brother's name. Owing to the nature of Dorobo life, the father's brother is continually in contact with his brother's children, and his relations with his nephews are even closer than those of the Nandi ***mama*** with his nephews.

1:Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

585 [237] [591] that cow-dung be used for both the *tumdo* and *koroniot*, and if there are no cattle in the bridegroom's settlement it must be procured from somewhere else. Marriage is patrilocal.

Marriage with Nandi

581 648 Eighteen marriages were recorded in genealogies between Dorobo and Nandi or members of the Nandi group:

Dorobo and Nandi women:	6	Dorobo and Nandi men:	10
Dorobo and Keyo women:	1	Dorobo and Keyo men:	1
Dorobo and Terik women:	1		

Marriage of Dorobo women to outsiders seems to be due to the poverty of the Dorobo, which in these cases would have meant that the women would have remained unmarried; such marriages also mean the accession of stock to the Dorobo.

Polygyny

595 [587] Although there is no objection to polygyny, Dorobo seldom have the means of acquiring more than one wife at a time, though several cases occurred of re-marriage after a wife's death or desertion. In one genealogy a woman had no less than four successive husbands, none of them her husband's brother, and her only issue was one daughter.

Re-marriage of Widows

587 Unlike the Nandi, the Dorobo recognize the re-marriage of widows in the normal manner on payment of bridewealth to their fathers, brothers, or other representatives; it is, however, unusual. Widows normally live with their husband's brothers, return to their parents, or else live alone.

Divorce

586 Divorce is rare, and is of one kind only—permanent. The husband can claim the return of the bridewealth. But a wife who has borne a child cannot be divorced for any cause whatsoever.

Birth

843 [834] 844 846 862 845 [724] Intercourse between husband and wife stops at the fourth or fifth month of pregnancy, and is not resumed till the child is about six months old. Birth takes place in the husband's hut, the husband going to live elsewhere nearby. The wife is attended by a midwife, *ngaitoyonit*, and her mother is present if possible. She stays in the hut for six or seven days after the birth, and the child's body must be kept covered for several weeks, even the father being allowed to see only its face. The mother must be purified by her husband, who kills a goat (which he must acquire somehow if he has none of his own) and rubs the fat and undigested grass (*siyat*) from the stomach on her face, breasts, and belly. Children are weaned at the age of about a year. Twins are not liked, and the mother's ritual uncleanness caused by their birth must be removed by the killing of a goat which is eaten by the mother and her women friends. The Dorobo say that if a man has set a trap at the time when his wife bears twins, the trap will never again catch an animal.

553 [716] [882] Children receive their first name, the spirit-name, soon after birth; as among the Nandi, this name is not used, but links the child with a protecting spirit. The second or principal name is given before the child can walk, at the time when it is first given solid food, and is called "porridge name" in imitation of the Nandi custom. Children may also be given nicknames which often refer to some physical peculiarity. After circumcision, boys become *Arap*, son of, eldest sons taking their

1: Huntingford E-4, 5 (1938-1939) 1953 FL6 Dorobo FL6

patronymic from their father's porridge name. Younger sons generally take their patronymic from the father's nickname, or else from some circumstance in their own lives.

Circumcision

Boys are circumcised at the same intervals as the Nandi, and the Dorobo keep watch for the opening of the Nandi circumcision. Occasionally boys are circumcised in Nandi with other Nandi boys, but more often in the forest, as in the circumcision of 1928–30. Sometimes a Dorobo acts as operator for the Nandi. The whole procedure of circumcision (*tum*) is identical with that of the Nandi. Girls undergo the operation of clitoridectomy whenever there are enough ready to be done, and not at any stated intervals.

Age-sets

The Dorobo have borrowed the whole age-set system from the Nandi, and it works exactly as among the Nandi, with the same set-names and 15-year intervals synchronized with those of the Nandi. The reader may therefore be referred to the account of the Nandi system, p. 31. A slight difference in the sub-divisions called *mat* may be noted: the Dorobo have only three, called *Cogimich*, the senior; *Taparik*[1] or *Kipalkonyek*, the middle; and *Ruwakanik* or *Kiptoiinik*, the junior. A more significant difference is that the sets have no military or political force, for the Dorobo are not fighters, and the practical effect of the system is to introduce further behaviour patterns, as well as to modify the traditional rules of hospitality; for while no Dorobo would refuse to shelter one of his own horde, the degree of hospitality varies according to the age-set situation.

Political Structure

Land Divisions

The Dorobo live mainly in clan settlements divided between a number of districts or parishes (*korosuek*, sing. *koret*). Till about 1930 these settlements were in small clearings inside the forest; after 1937 they were spread round the outer edge of the forest.

The Clan

The clan, *oret*, is an exogamous patrilineal group with a name and a totem, *tiond ap oret*, the animal of the clan. The existence of eight clans is attested by genealogies and the census; three others are reputed to exist or to have existed, though none occurred in my records; they were, however, mentioned to me in 1927 as well as in 1938–9. Each of these clans has one totem, except Moi which has three, one of which it shares with another clan; it is not the totem which is important, but the group itself, the clan being a social group, not a group of people mystically related through their totem. The emphasis is therefore on the clan name and not on the animal, though marriage, nevertheless, is forbidden within the clan. An exception to this rule is found in the case of Moi, where intermarriage is allowed between people of different totems, an anomalous feature due possibly to the influence of the Nandi, among whom Moi marriages are common between people of different totems. (See p. 27.) There seem to be no restrictions either on marriage between clans (as among the Nandi), or on killing or eating the clan animal, which suggests that originally the Dorobo clans were non-totemic, and that their present totemism is a feature borrowed from the Nandi along with the clan names, which except for one of the reputed clans are all Nandi.

[1] The Nandi occasionally use *taparik* for this *mat*; it is a Nandi word meaning "the turves."

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

are *kesenda* to each other and equals, being of the same generation. So too are the sons of the father's brother, also *Kaplelac* and *Kimuyihs*, who are *macokor* to Ego. But Ego will be circumcised at the same time as his brother A and his *macokor* C, when his other brother B and *macokor* D are too young to be circumcised; B and D will therefore belong to junior age-sets, and when Ego, A, and C have been circumcised and are allowed to marry and indulge in other male pursuits, B and D will still have the inferior status of *netik* or boys and be subordinate to their brothers as regards behaviour and social position.

Each generation is therefore liable to be stratified in two layers comprising two age-sets which cut across the relationship system; and where the kinship behaviour patterns conflict with those of the age-set, the latter will prevail. Both sets in Ego's generation, for instance, will behave in the same way to father, father's brother, and father's father; but D and B cannot behave to Ego as C behaves to Ego, because they are merely boys who do not count for much, while Ego and C are men. Similarly, in the first descending generation all will behave in the same way to Ego's generation, but K and G must give to H, E, and F the respect that H, O, and F do not give to each other or to K and G. And the principle is the same with the second descending generation.

First ascending generation	JUNIORS	SENIORS	Generation as a whole
Own generation	JUNIORS	SENIORS	Generation as a whole
First descending generation	JUNIORS	SENIORS	Generation as a whole
Second descending generation	JUNIORS	SENIORS	Generation as a whole

The effect of the age-set on behaviour is to strengthen the traditional code of behaviour by emphasizing the disparity between seniors and juniors.

Age-sets also affect hospitality, for while no Dorobo would normally refuse to shelter one of his own horde, the degree of hospitality and of the intimacy to which he is admitted vary according to whether the visitor is an age-mate or not. If he is of the same age-set as his host (no matter what their respective *mostinnek* may be), he will sleep along with the host and his wife, though he will not be given the host's wife to sleep with as among the Nandi. But if he belongs to a different age-set, the wife will

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

881 them complete adult members of the horde, and no male could get a wife if he was uncircumcised; but it is possible for an uninitiated girl to get married, though few in fact are married without being circumcised.

2. Pre-marital sex-life

836 Having attained manhood through circumcision, the Dorobo is free, [885] subject to the restrictions inevitably imposed by a small population, to enter into legitimate sex-life. But unmarried men often have to go without a great deal of sexual experience before they marry, and some in fact never [589] marry at all because of the shortage of women. Even in the old days few girls were available, and there were only married women with whom they could not consort unless prepared to be shot by injured husbands if found 589 out. This state of affairs has led to some men living alone and unmarried, helped in their household tasks by women of the settlement. Some even did everything for themselves. The shortage of women, and the shyness of the Dorobo has resulted in a definite habit sufficiently in evidence to justify the application of a special term, for which I suggest the word monôsis. And it is to be noted that the Dorobo have accepted the condition of monôsis as something quite natural, whereas by many other peoples the unmarried state in a grown man is considered unnatural.

836 Young Dorobo to whom life without love does not appeal therefore wander about a good deal, going to places where they know there are girls, or women with whom they can have surreptitious affairs, such women often being the wives of age-mates, for although this is not openly allowed, a [837] woman will sometimes, when her husband is away, oblige one of his age-mates and say nothing about it. In favourable circumstances, however, when there are girls available, unmarried circumcised men build small huts called *sikiroinet* close to their fathers' huts, where they may sleep with uncircumcised girls, each man choosing a girl and associating with her till she is married. A Dorobo, unlike the Nandi, often marries his premarital [814] lover. Uncircumcised boys caught by the men playing with girls who are sexually mature are beaten, for love affairs are the privilege of manhood.

3. Marriage

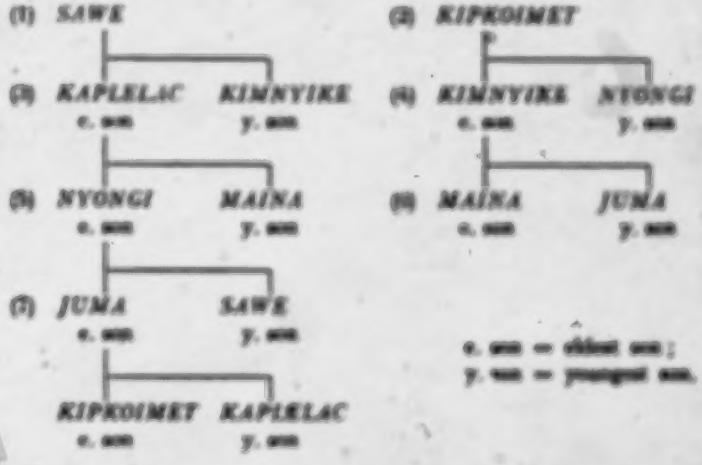
584 Dorobo generally marry women of an age fairly near their own, and do not by preference marry women very much younger than themselves.

584 A man chooses his wife for himself, and himself makes the preliminary arrangements. After making his choice, he takes the first step, by "going the journey" (*wendi koito*), to the hut of the girl's parents, or if they are dead, of a responsible relative, and hands over a large bag of honey, saying, "I want your daughter", to which the father answers, "Very well, take her presently". This ready acquiescence is due to the fact that the father already knows what is going on, for the suitor has been making enquiries about the girl, and such things always reach the ears of those concerned. Later

4:Huntingford E-5 (1938-1939) 1951 FLA Dorobo FLA

The Dorobo have borrowed this system from the Nandi, and have taken over both the Nandi names for the sets and the interval between them, which is fifteen years. There are seven sets which work in a recurring cycle of about 105 years, the names being permanent. Starting with the senior age-set, the order of names in 1930 was: *Kipkoimet, Kaplelac, Kimnyike, Nyongi, Maina, Juma, Sawe.*

The general rule is that a man belongs from birth to the set next but one below that of his father, so that the son of a *Sawe* will be *Kaplelac*. This applies normally to elder sons. If a man has several sons, or if there is a long interval between the birth of the eldest and the birth of the youngest, the latter normally belongs to the set next but two below that of the father, so that while the eldest son of a *Sawe* will be *Kaplelac*, the youngest will probably be *Kimnyike*, and thus of a set junior to that of his eldest brother. This is an important point, as it affects the whole system of behaviour. The following diagram illustrates descent by age-sets:



Age-sets work in the following way: the men who comprise the present *Maina* set began their circumcision period in 1923, and were circumcised at intervals during the next seven years, after which, in 1930, they became the active and responsible members of Dorobo society, and their predecessors the *Nyongi* retired from public life. At this time, in 1930, the next batch of youths, the *Juma*, moved up into the position occupied by the *Maina* from 1923 to 1929 in order to be circumcised, becoming initiates while the *Maina* became officially 'men'. So every fifteen years or so the whole machine moves like a ratchet wheel turning one cog, and every set goes through the following periods:

Huntingford E-5 (1938-1939) 1953 FLA Dorobo FLA

428 It will be seen from the map that honey-barrels and traps are the main forest activities, the shambas being outside the limit of the trees.

[251] The Dorobo had developed a habit of saying that there were no honey-barrels in the forest. Certainly this would seem to be true to anyone who goes through the forest along the main track from Kipkoren, for there one sees no sign of any activity at all. But on the other track, where few but Dorobo go, there are plenty of them, especially in Area I where Arap and his brothers are very active, several of the barrels near the path belonging to his unmarried half-brother Kipsangei. In Area II there are not so many, because Arap Maiu regards himself as an old man by now, and unable to [116] work much (he is actually — in 1939 — about 60); his brother Arap Ruto works on a farm and is less active in the forest than Kipsangei. But Arap Maiu has at least two honey-barrels, which he showed me, as well as a trap in which not long before he had caught a bushbuck. A few paths branching [46] off the main track which had once led to traps could still be distinguished, though they were not used in 1939. In Area III there was a new path leading to a trap made by Arap Singiro some way from the track. In Areas VI and VII some of the people still live in the forest in the old type of Dorobo hut, the *kenget*. [34]

Now these areas are not very extensive. The space of forest occupied by Areas I-IV is perhaps not more than six square miles or thereabouts, and that of Areas V and VI may not be more than four square miles. But a mile on the map is a very different thing from a mile on the ground in an African forest. The Dorobo have been forced by economic pressure to concentrate, and since the adoption, even on a small scale, of agriculture, the dependence on hunting has naturally been reduced. In addition to such forest area must be reckoned the strip of open land where they live, cultivate their little shambas, and herd their few livestock. Moreover the central and unoccupied part of the forest is open to anyone who chooses to hunt there, though there were no indications in 1939 that they actually did so. In the old days the 177 forest areas may have been larger, though when all the *dorosoek* were occupied 423 there cannot have been very much difference in size. But a relatively small area is enough for bee-keeping, trapping, and food-gathering, and it must be remembered that in the past, before the forest people's economy was disturbed, [126] they ranged much further afield to hunt with bow and arrow than is possible to-day, and the forest was primarily regarded as a trapping area. Various statements leave no doubt that the Dorobo used to hunt right over Nandi and Uasin Gishu, as well as in the high country east of Tindiret. Thus, though their own territory was limited in extent, their day weather range was wide, and the supply of game more than adequate to their needs*.

114 * This paper deals with conditions that existed up to 1940; the use of firearms must be taken as referring to that period.

603 is concerned, as little as its reciprocal owing to his age, for when his grandchildren are growing up he will be as old as his own grandfather when he himself was a child.

[587] Kipkatam in this diagram is too old, decrepit, and blind even to notice his grandchildren, and he cannot therefore keep an eye on them when their mother goes to the shamba. In fact, all the men of this generation whom I saw among the Dorobo were too old to do anything for their grandchildren, though in certain cases grandmothers are able to give a good deal of help to their sons' wives, since women are usually younger than their husbands, [588] even if the disparity in age is but small.

Between a man and his relations by marriage, behaviour tends to 606 be much more formal and intercourse to be more restricted, than between blood-kindred. A man is not supposed to converse with his wife's father, in whose presence he must watch carefully his speech and actions, though he may greet him when they meet; if they should happen to be together, the son in law should sit about out of respect. Before marriage, however, a man may visit the parents of his intended bride to make the necessary arrangements with her father. With his wife's mother a man should have nothing to do at all; he should not only refrain from speaking to her, but should go out of his way to avoid her, both if he meets her out of doors and if he finds her in a hut. This rule of complete avoidance is usually relaxed as he grows older, and the time comes when he may even sit and talk to her, as Arap Mining did to the mother of his second wife Cepkamuren. Relations between a woman and the mother or father of her husband, however, are of necessity different. She may have to live with them, or at least in close proximity to them, whereas her husband may seldom come into contact [591] with her parents; and therefore she cannot be expected to avoid her husband's parents. Her attitude to his father is one of respect due to a senior, with such converse as is inevitable when two people have to live together, and with a certain amount of familiarity arising from the fact that the old man may be in need of physical help from her. Her relations with his mother are greatly affected by her children and the consequent need for co-operation between the two women in seeking their welfare.

609 Between a man and his wife's brother and his wife's sister and her husband, there may be what the Dorobo call *wosiet*, "play", which means that they may greet each other, make fun of one another, and behave in fact in a normal friendly manner; but there must be no lewd talk, dirty jests, or sexual allusions. Between him and his wife's brother's wife, on

5:Huntingford E-5 (1938-1939) 1954 FLA Dorobo FLA

terms and other intangible elements, because of their suitability, fitted into the existing culture pattern and were thus voluntarily adopted. The Nandi, not being bee-experts, none the less desire honey; not being hunters, they desire furs; the Dorobo being both bee-keepers and hunters can supply the Nandi with what they want, and in return get from the Nandi things which they cannot produce. The satisfaction of these desires has undoubtedly helped in the transmission of Nandi culture to the Dorobo, and it has also preserved the continuity of friendly relations between the two peoples.

When I first met the Dorobo in 1927 they were virtually as they had been in pre-European days: a purely hunting people with a basically non-Nandi organization heavily overlaid and modified by Nandi influence, yet distinct in outlook and way of life — so distinct in fact that having taken to agriculture and cattle simultaneously, they have not acquired the cattle complex of the pastoralist and retain the outlook of the hunter.

2. The Clan and its Place in Public Life

The life of the horde is controlled by two institutions: the clan and its council, and the *kowt* council. The clan council may be described as a primary institution working within the framework of the *kowt* organization. The Dorobo are not a "tribe" like the Nandi, and the clan-system does not strengthen tribal solidarity, but it does strengthen and maintain horde-unity by bringing together clansmen from the whole area to deal with clan affairs. The clan council deals with matters which concern members of the clan; the *kowt* council is more political and less domestic, regulating the district as a whole irrespective of clan.

If behaviour and kinship are the basis of social life, the clan is the basis of horde-cohesion and government; and it is in regard to the importance attached to the clan that Dorobo social organization differs fundamentally from that of the Nandi. To the latter, the clan is in practice little more than a means of regulating marriage, and a traditional form of tribal division (though it has actually a deeper but less easily defined significance); but to the Dorobo the regulation of public life as a whole depends upon the clan, and its social importance is emphasized by the habit of living in clan settlements, by the clan councils, and by the stress laid on the group-aspect rather than on the totem-aspect of the clan. Moreover, clan-solidarity crosses the *kowt* boundaries, and is the main factor that keeps the horde together under conditions which would render powerless any institution less strong.

The social aspect of the clan has been described in a previous paper[1], and this aspect need not therefore be touched upon here. People tend to live in clan settlements, and therefore the institution of a clan council is both natural and easily maintained. The clan council consists of all the old men of the clan, that is, the men of the age-sets senior to the age of the *murenik* who correspond to the fighting men of the Nandi; though in practice it has become customary for anyone who has been circumcised to attend the council

[1] Anthropos 46, 1951, pp. 38-41.

/333 cont./ As there, the tanned hides are sewed into articles of clothing with an awl (mwemwey) and a thread twisted out of animal tendons (ang). If a number of hides for which, at the moment, one has no need for one's own use has piled up, a few old men with women and children, laden with skins and also maybe salt, set out for a neighboring area. Where the distance between this and the Wandorobo camp is such that it permits frequent trade, these caravans appear at the regularly held markets. If, however, they are able to come only rarely, they peddle their wares, inasmuch as, out of ignorance of time reckoning, they do not wait for the market days. They readily find customers, since both articles are very much in demand. The agriculturist principally dependent on a vegetable diet always needs salt, but he can only rarely extract it himself, since as a rule the arable soil contains no salt or such not in sufficient quantities. The need for hides /334/ is also often greater than the local production, even today when fabrics have largely replaced the leather clothing. After protracted haggling, an agreement is finally reached, and the Wandorobo, satisfied, set out for home with the bartered vegetables. If the hunting was sometimes particularly lucrative or if an elephant or rhinoceros was killed, part of the meat would also be sold to the always meat-hungry agriculturalists. Many of the latter, for example, the Wataita and Wakamba, also buy the meat of predatory animals from the Wandorobo, where dietetic & allegation, and therefore, in trading, they use each piece for small and tame.

Old men, who only now and then in the evening lie in wait for game at a watering place, devote themselves outside the camp especially to the chopping and supervision of the beehives (Fig. 8), a large number of which hang within an hour's range. These are wooden tubes 130 centimeters long and /Fig. 8 appears here/ 30 centimeters thick, with an interior breadth of about 15 centimeters. They are made by hollowing out a correspondingly long piece of tree trunk, a very arduous task because the tools are so primitive. After the trunk, through boring with an ax, appears circular in cross-section and tapered at both ends, it is smoothed on the outside with a knife (seuleng). Two instruments are used for the hollowing out [i.e., among the Masai--Amelpet]

FL6 Dorobo FL6

231 cattle. In many cases the "herd" of a *Kinyaleŋgai* elder may total only three or four head, but a few of them are better off.

101 197 The *Kinyaleŋgai* are now almost indistinguishable from the Lumbwa, and are agreed by all to be merely impoverished Lumbwa, who took to a bush life for the same reasons and probably about the same time as the *Baleŋga*. They are good bushmen even to the present day, but are not born to the bush life and will not live in the bush of choice. A *Kinyaleŋgai* elder of the 'L-aimer age[1] named Mwanamsunde lives at Mtambalo on the Handeni-Masai border. He is one of the [888] oldest men in Masailand, but has little or no influence though he is termed *Ol-aigwenani*[2] by courtesy. He speaks no language except Masai with a marked Kwavi intonation.

101 I have not written much about either the *Baleŋga* or the *Kinyaleŋgai*, as I am convinced that the former are Masai and the latter 'l-Oikop. If this is not the case, I am unable to put forward an alternative theory, as my inquiries have been diligent and I have been forced to the conclusion above stated. It may be argued, therefore, that the *Baleŋga* and the *Kinyaleŋgai* are not Dorobo in the true sense of the word. In this I agree, if it be postulated that the Dorobo is a man apart and not of Masai origin. It seems to me very likely that the *Baleŋga* and their Kwavi contemporaries followed, through force of circumstances, the only mode of life which promised to keep them from starvation. In following this bush life they had before them the example of the people with whom it is now proposed to deal, and who have a much greater claim to be called Dorobo.

Il-Méoire ; Il-Méliak ; Il-Kisankasa

The three names given above would seem to denote one and the same type of Dorobo. I have been unable to discover any difference between them. Curiously enough, although I have met many *Méoire* and *Méliak* I have, so far, failed to come across an individual calling himself *Kisankasa*. I am inclined to think that the name is merely an alternative for one or both of the others. It is possible that these names may denote

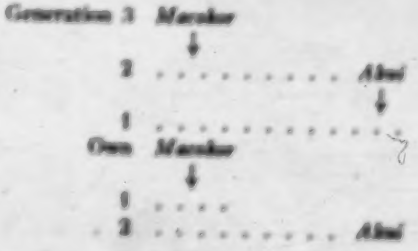
[1] Circumcision of 1872 approximately, according to Hollis.
[2] Spokesman or Councillor.

4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

593 [888] course. They live in the same settlement, they are *papa* to each other's children, they both look after old Kipkatam, and they have the joint responsibility of feeding him as well as their own families. They are *hesenda* in name and in fact. But the existence of a remoter *hesenda* group, the children [605] of the mother's sister, shows how the term may mislead if the circumstances are not known and if it is not realized how much depends on proximity. Both their mother's sister's sons Kikoror and Tote live on the other side of the country at Ngatepkong, and Kikoror moreover dwells inside the forest; between them and Pilo intercourse is rare, and relationship might not exist. In practice, of course, Pilo would refer to them as *hesendaanyon* and would greet them as *hesenda* or by name; but in the absence of proximity the intercourse would be limited to mere greeting.

608 The *akui* group includes three sets of people: (A) parents of father and mother; (B) father's father's brother and sister and their children; and (C) all of the second descending generation except the great grandchildren of the mother's brother and sister.

603 601 (A) The senior *akui* at the time when I collected the genealogies which form the basis of this study were all dead. The real *akui* are the father's father and the mother's father (their wives being *kuko*), and these two are often referred to as *kuko* as well as *akui*. When Pilo said, "My *akui* was Kimngamngam", or "my *akui* was Mereua", his statement was amplified by saying who they were: *akui ko papa nepo papa, kuko ko papa nepo eiyo*, "*akui* is the father of my father, *kuko* is the father of my mother". (B) But the brother's and sisters of the *kuko* or *kuko* (none were recorded on the maternal side) are referred to as *akui* by courtesy, and this courtesy is extended to their children (people of father's generation) but not to lower generations. So Arap Lemando was merely *loiye* or "Arap Lemando" to Pilo, though his father and grandfather were *akui*; and between Pilo and Arap Lemando there was no relationship. (C) The third descending generation, the children of Pilo, his brother's children, his sister's children, and those of his father's brother, and his father's sister, are all *akui* also; but no descendant of the mother's brother or sister is called *akui*. This term, it will be seen, has a symmetrical alternation from the second ascending to the second descending generation, that is, from grandfather to grandson; *marakw* has an asymmetrical alternation from the third ascending generation to own's own, being extended in both cases to the next generation below:



4:Huntingford E-5 (1938-1939) 1951 FL6 Dorobo FL6

payment and a man has but few live stock) have induced a real affection of husband for wife, and a rarity of divorce. This is reflected in the husband's behaviour to his wife, and in the absence of the custom found among the Nandi of letting a wife sleep with a visiting age-mate. A wife being a necessity once she has been got, a man tends to do all he can to keep her, and he treats her well, with such kindness and consideration as can be shown to an inferior, giving her all the inducements to a contented life that are within his power. Although a man may be somewhat aloof when he is at home, his general attitude and behaviour to his wife form a good example for his sons to copy.

Children then grow up under the authority of two people who are more important to them than anyone else in the horde, their father and mother. The father has authority over his wife because he provides food for her and her children by his own skill, and a primitive woman cannot exist without the support of a man; in the old days a bad wife had nowhere to go if her husband brought himself to the pitch of divorcing her, except back to her parents, who would not welcome an extra mouth to feed. Over his children a man has that authority which is based on the respect felt for a person whom they know must be obeyed. Incidents of the kind that I saw one day at the home of a man named Cesundil are not uncommon. A child was yelling outside the hut. Taprandic the mother told it to be quiet: it merely yelled louder. Cesundil then said quietly but firmly, *Sis lakuanni* (be quiet, child), and it was silent immediately.

As EVANS-PRITCHARD has pointed out, the behaviour of father to mother must influence the attitude of a son to his mother[11]. It is the mother and other women who look after a child till nearly the age of puberty; and to-day as in the past, though the father is no longer wholly occupied in hunting and therefore much more at home, the traditional pattern still holds good. I have more than once seen a man left in charge of his small children while the mother was away and treating them in the fussy sort of way that one would expect of a man not very sure of his ground — sure of his authority, which was not being called in question, but not at all sure of his ability to deal with childish problems which the mother on her return can settle at once. It is the mother who gives the children immediate comfort and protection; she it is who teaches them the elementary rules of conduct and decency, who impresses upon them that they must obey father, because he is father, and who sees that as they grow older they help her with such small tasks as they can manage. It is to their mother that children run when hurt or frightened, and it is by her that they are nursed when ill. She thus has a large claim on their affection, but this would be reduced if they saw her disrespectfully treated by their father. On the whole, the claim is reinforced among the Dorobo by the way men treat their wives. And in old age a mother is taken care of by her son, and whereas she brought him up in his infancy, so now in her old age she

[11] Man, 1929, 148.

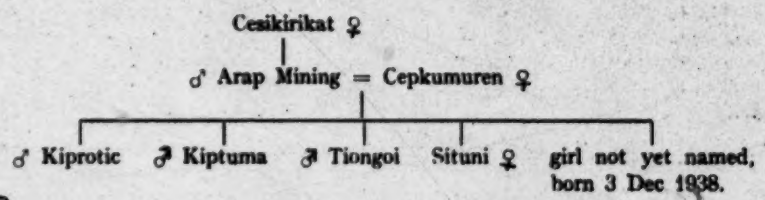
888 helps his wife to bring up his children, continuing her claim on him in affection which outlasts childhood into old age.

596 My chief friend and informant among the Dorobo, Kimopo arap Mining, lived, during the period of my field-work, at Kipukua, with his mother Cesikirikat, and his family consisted of the following:



[342] [361] In July 1938 he was living in a flat-topped hut in the middle of his section of the settlement; but by December of the same year he had moved to a new hut with a pointed roof outside the *shamba*. His mother's hut was about 300 yards away at the other end of the *shamba*. His three boys (all *Juma* age-set, he himself being a *Nyongi*) ranged from about four years old upwards, and Situni, the elder girl, was about seven. At this time he [513] [231] slept in the back part of the hut, the *incor*, where his goats are kept at night, and his wife slept with the children in the front part, the *koima*. This was because she was suckling a baby. Strictly, Arap Mining should have gone to sleep in another hut, but since this was not possible for several reasons, the wall dividing the *incor* from the *koima* was allowed to make the *incor* count as a separate hut (the original type of Dorobo hut has no partition at all).

855 One day I arrived rather early and found that Cepkumuren had gone across the valley to get a new water-pot, leaving Arap Mining in charge of the children. Situni looked after the baby, but still he found his responsibilities rather a heavy burden, and was glad when his wife returned a little before noon. Cepkumuren fed the baby, sent the children indoors to rest, and went down to the river to wash. At this hour, when there is no particular work to be done, the older people sleep. On some days Cesikirikat comes to Arap Mining's *shamba* to help with the cultivation: Cepkumuren [541] normally works there too, but not every day while the baby is so young. When she does go, Arap Mining goes with her, and the baby is left with Situni. But the *shamba* is not so far away that Cepkumuren cannot hear the children if anything goes wrong.

855 604 The Dorobo elementary family might thus seem to be independent and self-contained. But it is not so really, and other relatives have a share in the upbringing of the children, not in spite of the parents' authority, but in support of it, and the relative who must be considered next to the parents from the Dorobo point of view is the father's brother, *papa*, who often lives in the same settlement, or if not, only a short distance away. This person, especially when he is an elder brother, has a position of authority over his brother's children at least equal to that of their father. His wife, a classi-

normally go elsewhere for the night, leaving the hut to the men. In the matter of hospitality, relationship by blood, marriage, or clan is a deciding factor in the length of time for which a man may expect to be put up by his host. Thus, no matter what the age-set situation may be, a man who is neither a relative nor a clansman cannot claim more than two nights' hospitality on account of necessity, and will not be given honey-wine; while a relative or clansman may be fed for a week or even longer, and the host will give him honey-wine if he has any.

3. Behaviour

A brief summary of the modes of behaviour towards important relatives was given by a Dorobo in the following words: *Makicupe papa ne kosica a kopire lakuet*; *makicupe kokeny papa*; *makimuoci korket ok eiyo ualek ce somis, amu ya, ngut ualek ap kumisiet*; *kiurerencinkei tukul*. ("A man does not use bad language to his father, though his father may beat him as a child, nor does he use bad language to his father's brother; he does not speak of dirty things, nor of sexual matters, to his mother and his mother's sister, for it is bad to do so; but we all play together, i. e. we are on terms of friendliness and 'clean fun'.") Generally speaking, seniority is a matter of age, except with respect to the father's brother and men of senior age-sets.

It is unlikely that any Dorobo ever sees his father's father's father, and the father's father is seen only by small children. The father's father is regarded much as one's own father. But the father's mother helps in the care of the children, and so becomes an object not only of familiarity but of affection as well to the children. To all of the father's generation a man should show respect and obedience. He must not insult them, nor use unsuitable language in their presence. Corporal punishment may be inflicted on a rude or disobedient child with the hand or with a stick, by father, mother, and father's brother. Verbal correction is also a common method of dealing with naughty children, and though a man would not as a rule say to a naughty child who had made him angry anything as drastic as *Amin celolei* (may you die of dysentery), in case the spirit-world took him at his word, he might go as far as *Iam piat* (eat dirt), an expression which if used by a child to a senior would certainly earn a beating.

Most Dorobo are fond of their parents, and treat them in old age with much kindness and consideration. Wherever I found aged parents living with their sons it was the same; and the more helpless the parent, the greater the trouble taken to make them comfortable. The old father of Pilo, to whom I have already referred, was such a one. Bent double, hardly able to move without help, he spent his time lying outside in the sun when it was warm, and indoors beside the fire when it was cold. He had to be helped in and out, and fed and looked after like a child; but it was all done cheerfully by Coimim and his wife, in whose hut the old man lived, and if they could not attend to him, Pilo and his wife did.

ripen till it-becomes the-drink. (Then) we-drink.

(Some seed-pods are boiled so that they can be split; they are washed in the river to remove any dirt sticking to them, and then when they have become quite soft, they are put in the sun to dry. The dried strips are next put into a pot containing honey and nothing else, to make it bitter, i. e. to ferment it, and some water is added. The mixture is put in the loft to ferment. It is left for several days till it is ready and can be drunk. Then we drink it.)

Another drink called *lokomek*, or honey-and-water, is also a favourite of the Dorobo; it is not intoxicating and is much simpler to prepare than honey-wine, being simply honey and water mixed together, without the addition of seed-pods, and drunk the same day without any fermentation. 272

In the old days, the Dorobo say, they were seldom absolutely without food, for meat could generally be got with either bow or trap, and unless a man was ill or away, when someone would help his family with food, he could usually get enough to feed them. This is probably true, for in those days game was plentiful enough, and there were no Europeans to restrict their hunting activities. Nowadays, when hunting is curtailed, and reduced to little more than trapping, there is an uncertainty about the food supply which even the introduction of agriculture and the nearness of European farms does not altogether remove. A man may be just unlucky with his trapping: European influence, as "harmful magic", is blamed for this; and his crop may be a small one, or much damaged by vermin. And although one member of a family may even be a wage-earner on a neighbouring farm and get a daily ration of 2 lbs. of maize meal when he works, he has to feed not only himself but his own family and perhaps others. For instance, a man of my acquaintance named Arap Keter had to feed his wife, his child, his sister, and his mother, as well as himself. Arap Ruto, one of his neighbours, who also worked on a farm, had at times to feed his brother Arap Minin, his wife, his four children, and his mother. Two pounds of meal a day do not go far to eke out a small crop and the produce of the traps and honey-barrels when divided among eight people in a bad season. Shortages are remedied as far as possible by the principle of sharing, and a man who has food left over after feeding his own family must, and does, help to feed certain others if need be. Arap Ruto, as we have just seen, has had to feed seven people besides himself at times; but in the past the normal rule of food distribution was that a man provided meat for his wife and children, for his parents, and sometimes his wife's parents, since the old people, as always, depend on what their sons and sons-in-law can give them. A successful hunter also shared his kill with those who went with him and were unlucky. The distribution of meat was thus as follows:

278 562 834 [888] arrows, not in the hut, but hung on a tree not far from the camp. Only in rainy weather do they bring the things into the kraal and keep them there in the hut of an old woman who herself, in their view, can no longer come into consideration in the above respect. They even make themselves responsible, relative to the intensity of the sexual intercourse, for the slow dying of the animal struck by the poisoned arrow. The poison is smeared on the arrow point with a wooden spatula, and, in order to protect the dried substance from crumbling or from dissolving in damp weather (since it is very hygroscopic), it is wrapped with a strip of thin antelope skin that is dehaired and made soft by being rubbed with fat. The poison acts very quickly, and, to be sure, by suddenly stopping the heart activity. In the case of a genet shot in the abdomen, breathing difficulty set in after five minutes, along with rapid movements of the nostrils and violent, cramplike muscle twitchings of the body and limbs. With brief interruptions of a quarter to a third of a minute the symptoms were repeated and increased in intensity. The pupils dilated to a circle. Nine minutes and 18 seconds after the shot the pupils, up to then blue-black, suddenly became sea-green, and, with violent twitching, death came. With quite fresh poison death is supposed to come in even a shorter time. In the steppe the poison is tested by shooting an antelope with an arrow newly poisoned. If on the trail of the fleeing animal one finds fresh urine and excrement, the poison is regarded as acting too weakly. Good poison put in the foot of a live turtle must lead to its death before it has crawled five or six steps away. Neither the Asá nor the Wandorobo are acquainted with a physiological antidote. For smaller, simple, and penetrating flesh wounds immediate washing with fresh urine is supposed to help. Aged Wandorobo often showed me scars on their own bodies, especially on arms and legs, which are supposed to have been caused by shots with poisoned arrows two to four centimeters deep. Both the appearance of the scars and the corresponding statements of people, which were separated in time and place from the former, corroborate this information.
